The Nation.

NEW YORK, THURSDAY, JANUARY 3, 1907.

The Week.

The week's news puts two Presidential candidates in the attitude of being "willin'." One is Mr. Bryan, who had formerly been suspected of readiness to sacrifice himself in the White House. But the formal launching of Secretary Taft's Presidential boom is quite another affair. It involves both an interesting personality and a very complicated political situation in the Republican party. Mr. Taft has undoubtedly impressed himself upon the country as a man in whom is the stuff of a statesman. In an unusual degree, he combines ability with good nature. Nor is there lack of downright courage in him, as the country learned when he went to Ohio in 1905 and boldly attacked the Republican boss. That act has apparently cost him the support of the Republican organization in his own State, but if Mr. Taft is to succeed at all, it will be not as an Ohio politician, but as a national figure. His square announcement, in his speech in Maine last September, that he was in favor of a thorough revision of the tariff, would fix general attention upon his candidacy if that large question comes to the front, as it easily may. Politically, Secretary Taft's chief handicap would lie in his being thought of as an official Administration candidate; for such are generally in disfavor.

Secretary Root's overhauling of the State Department is on every account praiseworthy. He is introducing in the records the same methods that almost revolutionized the Record and Pension Office of the War Department when he was at its head. It seems to be Mr. Root's forte to take official machinery which excellent predecessors had either regarded as reasonably satisfactory, or else had given up as hopeless, and make it genuinely efficient. Neither Mr. Root nor any of his predecessors has been able to induce Congress to establish a system of promotions for merit in the State Department, and the progress of this reform depends altogether upon the temper of the Executive. A good deal has been accomplished by filling vacancies in high positions from the grades below. The average of experience in the diplomatic and consular services is doubtless being increased. There remains, however, the almost impassable gulf between the classified and the appointive services in the State Department. The corps of consular clerks created a score of years ago with the idea of providing trained men who could move up into important consular positions remains a rather pathetic memorial to the false hope that special training would prevail over political influence. Mr. Root and the President deserve unstinted praise for every instance in which they have recognized merit apart from other considerations, and helped to build up an honorable diplomatic tradition. Their good work, however, in no way lessens the need for a regular statutory reform along the lines of the bill which Senator Lodge has offered in several recent Congresses.

The Appalachian and White Mountain forest reserve projects, belong to that great class of measures which every one knows to be deserving, but which stand a poor chance of early adoption. The arguments in favor of the forest reserves are of general application. Government control of such tracts prevents wasteful lumbering, secures a timber supply for the future, safeguards watersheds from freshets, increases the value of water-powers, protects against forest fires, and is in every way a wise and far-sighted policy. Why, then, restrict such benefits to one section of the country? There is not a single national forest reserve east of the Mississippi River, though States like New York and Pennsylvania have reserves of their own. The rivers flowing into the Pacific have their headwaters protected by vast tracts of forest preserved from indiscriminate lumbering. Those flowing into the Atlantic, though their present commercial use is tenfold greater, rise in regions where the commercial lumberman generally has full sway. As the Senate committee reported last year, the New Hampshire rivers "contribute more largely to the prosperity of other States than to hers. She ought not to be expected to burden herself with debt for the benefit of her neighbors; nor can they be expected to purchase lands outside their own borders for the creation of a forest reserve." As for the Appalachian reserve, "the various States in which it is proposed to locate this reserve have already by legislative acts conferred upon the United States Government the right to acquire title to these lands and exempted them from taxation. They cannot, because of the proposed location of the reserve in more than one State and their own lack of funds, be expected to go much further." State co-operation is thus assured, and the project simply waits upon Congress.

If George W. Perkins and Charles S. Fairchild really committed forgery in the third degree, it is well that the grand jury has indicted them for that crime. The excuse that their intentions were excellent, or that benefit rather than harm was the result to their policyholders, amounts, as Recorder Goff remarked, to nothing more than a recommendation to mercy. It is no bar to indictment. Forgery is forgery, and crime, crime. The beating of that truth into the heads of the people is one of the most valuable functions of courts and prosecuting officers. Hence we can but consider the proceeding most wholesome. It will tend to heighten the feeling that there is one law for both rich and poor; and the times need nothing more urgently. The particular transaction upon which the indictment is based was perceived by all right-minded men, as soon as Mr. Hughes brought it out at the insurance investigation, to be essentially dishonest. To cheat the Prussian authorities, to deceive the public, by pretending that shares were sold which were not actually sold, and to attempt to obtain new business on the strength of these false pretences, were acts repugnant to the moral sense. That the grand jury has found it repugnant also to the Penal Code, merely shows that the law reinforces morals.

The report of the committee on the race riot in Atlanta cannot give satisfaction to fire-eaters of the Tillman school who believe in letting blood every now and then to suppress negro crime and teach the colored man "his place." It is now shown that not a single negro killed belonged to the dissolute classes, but that all were absolutely innocent men who left wives and children. In no way concerned with the criminals whose vile deeds aroused the anger of the populace, their lives were sacrificed to blind hysteria and brutal race passion. Can any one think that such indiscriminate killing will awe anybody or stop any peculiar kind of crime? The low black criminal will be emboldened, if anything, for he and his kind got off scot free. Atlanta, thanks to the weakness and incapacity of her police and officials, must be ranked as a place where, according to the testimony of her own citizens, innocent men and women may be done to death by reason merely of race prejudice.

The growing difficulty of getting a serious hearing in the press for serious discussions is well illustrated in the reports of the meeting in this city of the Association for the Advancement of Science. To judge by the accounts in most of the newspapers, the chief question agitating the assembled savants last Thursday was whether Mr. Rockefeller

could or could not afford to eat oysters! The story told on that subject of absorbing interest by one of the ex-tempore debaters, was "played up" in headlines as if it were the most important thing in the entire session. Nor is this perverse reporting of sober addresses a new thing. The journalistic search for the bizarre, the unexpected, the sensational has gone such lengths that any lecturer utters a paradox or indulges in a humorous aside at his peril. We know what happened to Dr. William Osler. Such incidents could be multiplied indefinitely. It has got so that a professor or lecturer with a weighty subject to treat, shudders as he sees the reporters come in. He foresees the distortion, the misunderstanding, the false impression, almost certain to follow. Now, we are not blaming the reporters. They know that such hunting for the trivial or the sensational is "what they are there for." The true reproach strikes back to the newspaper managers, and, behind them, to the public, ever demanding the novel, the queer, or the blood-curdling. It is the general habit of mind that is really at fault. The phenomena of newspapers are only a part and a symptom of that. If the power of steady attention to serious topics of thought is being gradually broken down, as many signs indicate, we need not be surprised if the attempt is made to turn the Advancement of Science into a new kind of vaudeville. We are not certain, either, that the withers of the scientists themselves are wholly unwrung. Apparently, they cannot altogether escape the drift of the times; some of them seem to strain for a sensation with the yellowest of journalists.

At the meeting of the New York State Teachers' Association in Syracuse last week, Commissioner Andrew S. Draper spoke with disapproval of what may be called "trade unions" among teachers. He admitted that salaries are inadequate, but he could not believe that the interests of education would be forwarded by "any combination of teachers with some other combination which operates through politics." In this period, when the cost of living is rising so rapidly, the teacher is at a greater disadvantage than almost any other member of the community. The tradesman gets higher prices and sells more goods; the lawyer and the doctor may increase their fees and enlarge their practice; the manual laborer is receiving higher wages for less work; but in many cases the pay of the teacher remains where it was fixed ten or even twenty-five years ago. His case excites no deep pity, because his $500 or $1,500 is enough to keep soul and body together. The difficulty of his situation, however, is that in order to discharge his duties properly and render the most efficient service, he must buy books, pictures, and other instruments of culture; and he must occupy a fairly prominent social position, must entertain and be entertained. On the income of a mechanic, he must live like a professional man who earns three or four times as much. He must vie with the ill-paid clergyman in keeping up appearances. It is the wretchedness of the money return that keeps men of energy and resource from taking up teaching. However attractive the work itself may be, a man will turn elsewhere in order to get enough for the ordinary comforts of life. If something is not done to improve the condition of teachers of all grades, from primary school to university, the profession will become the last refuge of those who are too dull for business and too lazy to toil with their hands.

With the ordinary ill-informed and sentimental outcry against vivisection of animals we have no sympathy. Studies of the effect of disease and of surgical operations on the guinea-pig and the rat have done much for the progress of medicine, much for the alleviation of human suffering and the prolongation of human life. Yet we must protest against the torture of animals for merely trivial investigation. In a paper read before the American Association for the Advancement of Science in this city last Saturday, John B. Watson of the University of Chicago told how he tried to discover whether rats have a sixth sense unknown to man, a sense of direction. To this end he put a rat in a box from which the only outlet was by a maze, and he kept it there until it was thoroughly familiar with the intricacies of the exit. Then he removed its eyes, but it managed to get out. Next he extirpated the olfactory nerve, but the rat still threaded the maze. As the escape might have been due to a sense of touch, Mr. Watson froze the rat's feet. Finally, he covered its head completely with collodion. We do not labor under the delusion that the rat suffered as a human being might under the circumstances, but we submit that this cruelty was so nearly purposeless as to be wholly unjustifiable.

Another victim of the *de luxe* edition habit is seeking redress through the courts in this city. She (for it is a woman) began with a set of President Roosevelt's writings, cheap at $6,000. The book-agent thought it but a short and easy step to Thackeray and Shakespeare at $10,000 apiece. But when she held off, he handsomely came down to $12,500 for the two. The agent, who apparently did not know when he had enough, tried to wring $1,500 more out of her; and now she wants the whole contract annulled, on the ground of fraud. She has discovered that her precious Roosevelt is worth not more than $1,500, and that the Thackeray and Shakespeare are by no means as represented. The agent had told her that the editions were limited and extremely rare, and that they were "extra-illustrated." She complains, however, that the agent has simply bought "well-known and easily procurable copies" of these several authors, removed the bindings, changed the title-pages, interleaved "certain illustrations of a showy character, but intrinsically of little value," and has then rebound the editions attractively. The trick is an old one, and is being played every day in New York upon people who have the misfortune to be both rich and silly. In their minds, such phrases as "limited edition," "large paper," "crushed levant," "hand-tooling," and "extra-illustrated" are a sure index of value. Without going into questions of fine paper and binding, we may observe that sane men do not care to buy their books already extra-illustrated. To some persons it is a pleasure to ransack heaven and earth for extra-illustrations—the joy of the chase. But buying the illustrations in a lump may be compared to the sport of scooping trout out of a tub with a landing-net.

King Leopold's efforts to influence public opinion in this country with regard to the Congo by inviting American capital to its development, have not attained the desired result. Even 2,500,000 acres of mining property, 741,000 acres of forest, and 2,470,000 acres of rubber-producing land have not sufficed to blind this country to certain moral issues connected with the Congo. Last week an appeal signed by prominent clergymen and business men of this city was forwarded to the Secretary of State, urging him to bring to bear the "moral support" of this nation on the question of eliminating the "measures and practices of flagrant inhumanity" which King Leopold's own commissioners have found existing in the Free State. An arduous tax in kind which forces the majority of natives to pass almost their whole time in collecting rubber for the state or the operating companies, a system of land appropriation which has restricted the natives to the soil on which their villages are located and deprived them of the liberty of migration, unspeakable atrocities committed by native sentinels exercising unrestrained authority in the villages, gun in hand, and still more iniquitous, because official, atrocities committed by punitive expeditions sent out by the concessionary companies to enforce the payment of the rubber tax—these make up a list of crying evils for which the moral

sense of the world refuses to find compensation in the rapid development of Boma on the European model, or the large number of steamboats afloat on the Congo. The time is certainly opportune for making the voice of this country heard in the matter. The Belgian Parliament has just finished discussing the ultimate annexation of the Free State, and, protest as King Leopold or Belgium may that the question is one that purely concerns themselves, the debates have been largely shaped by the campaign that has been carried on in Great Britain; and the action taken by the Chamber of Deputies has been chiefly dictated by deference to the opinion of the world.

The provisions of the new public worship law passed by the French Senate on Saturday turn out to be much more moderate than preliminary accounts led one to expect. The Government obviously seeks to avoid all appearance of a punitive policy against the Church. The new measure permits the celebration of public worship in accordance with the provisions of the Associations Law of 1901 or with the law of 1881 regulating public meetings; this, of course, in addition to the form of worship contemplated by the Separation Law of 1905. The new measure also squarely meets the chief objection raised against the Briand circular dealing with the law of 1881, namely, that as the mere personal interpretation of the present Minister of Public Worship, it offered no permanent legal guarantees. Justifying those provisions of the law which provide for the immediate taking over by state and commune of the bishop's houses, presbyteries, and seminaries, the Ministerial declaration states:

> As soon as it appears certain that the faithful, as well as the clergy, at least for a period whose duration cannot now be foreseen, will abstain from the formation of public worship associations, it would be vain to wait any longer.

But till the end of the period, "whose duration cannot now be foreseen," the Government is prepared to wait. It is opposing patience to patience, and keeping its hands off. A final instance of self-restraint appears in the provisions of the law dealing with pensions and subsidies to ministers. It had been said that these would be all suppressed; but it is only the temporary subsidies that are abrogated in the case of recusant priests. The pensions granted to priests over forty-five who have served for more than twenty years, are continued, and a very large class is saved thereby from real privation that might have led to the rise of a hostile public opinion.

Enemies of war might draw consolation from the results of a popular vote recently taken by the Paris *Petite République* on the question who are the most celebrated Frenchmen in history. The poll was headed by Louis Pasteur, with Victor Hugo second, and Gambetta third. Only fourth place went to the man whom nine out of ten foreigners would unhesitatingly place at the head of the list—the man of Austerlitz and Waterloo. Is the military spirit dying out in France? Or is the general public neglecting the text-books and picking its favorites from among the names that occur most often in the newspapers? This would seem to be indicated by the other names that occupy a prominent position in the list—Lazare Carnot, Thiers, Curie of radium fame, and Dr. Roux. Gambetta and Thiers, though not contemporaries, are often mentioned in a discussion of Church and State or relations with Germany; but how can Napoleon possibly be connected with any one petty issue of our own times? The very magnitude of the word probably caused many Parisians to overlook it, while others undoubtedly felt ashamed to vote for Napoleon, because it would be so commonplace. That Pasteur should occupy first place is not strange—once the fact is known. Pasteur was both the scientist and healer, which are only the modern expressions for the priest and the prophet; and these latter have always impressed the imagination of mankind. He was priest in his character of keeper of the mysteries of a world unseen except through the microscope, and prophet in the wide horizon he opened to the potential preservation and prolongation of human life. Utopias nowadays are based on statistics, and the man who can reduce the average rate of mortality appeals to an instinct certainly as powerful as any in the heart of man.

The full details of the new Transvaal Constitution have now been made public. Its main features are an elected Assembly of sixty-nine members; a nominated council which, after four years, may be made elective; manhood suffrage for all white citizens; a Ministry of not more than six members; the cessation of Chinese labor under present conditions; and a land settlement board, terminable in five years or earlier by agreement. There is no express provision forbidding any ordinance such as the existing one in relation to Chinese labor, but there is a requirement that the Government of the Transvaal "shall reserve any law providing for the introduction under contract, indenture, or license, of laborers into the colony from places outside of South Africa," for the King's pleasure. This reservation is treated by the Liberal press as a "new charter of industrial freedom for the Transvaal," for it is certain that it will never again be the King's pleasure to consent to servile contract labor in South Africa. There is the same reservation of any law imposing disabilities or restrictions upon "persons not of European birth or descent," which are not also imposed upon Europeans. "By these reservations," says the London *Tribune*, "the Government do their utmost to secure the British ideal of one law for all persons under the British flag, be they white, black, brown, or yellow." But the English Government has not contented itself with simply preventing future importations of Chinese. Those now in South Africa practically as slaves will be repatriated as rapidly as their three-year contracts expire, and it is estimated that the whole system will be at an end by July 1, 1908. Thus there will be abolished with all possible speed the crowning disgrace of the Balfour Ministry—its truckling to the wealthy South African mine-owners from the very beginning of the troubles with the Boers. It cannot, of course, be said that unlimited self-government has been bestowed upon the Transvaal, so long as Great Britain retains a veto power over legislation, or so long as the Council is appointive. Yet the good faith of the Liberal Government is clear in this piece of constructive legislation, which confers substantial home rule upon the Transvaal within four years of the time it was ablaze with armed hostility to England.

The twenty-second annual meeting of the Indian National Congress began last week in Calcutta. Since it is the most important unifying force in the diversified population of India, any large scheme of autonomy must naturally centre about it. The Congress has enjoyed the favor of the Government because of its adherence to a legal and peaceful propaganda; it may indeed be regarded as a creature of the Government, for the broad system of university education was instrumental in bringing together representatives of the higher classes from all parts of India, and giving them in the English language and English culture a medium for common action. The president, Dadabhai Naorogi, summed up aptly the forces working in favor of Indian autonomy. There was the sympathetic attitude of the British Premier, and of the Secretary for India, John Morley; the general "revival of liberty and liberalism in Great Britain," which manifested itself only the other day in the grant of self-government to the Transvaal; and the stirring of subject peoples, which has resulted in a constitutionalized Russia and Persia. The Congress wisely does not expect the immediate establishment of autonomy; but the signs of the times point to marked progress in the direction of its hopes.

WEALTH IN USE.

James Graham Phelps Stokes's rebuke of the Young Men's Christian Association for teaching how to invest, and how to care for property, gives fresh point to an old question, partly economic, partly moral. Concerning the personal attitude of this estimable inheritor of wealth, and his enthusiastic wife, we would not say one word of dispraise. They display a devotion to higher things which to blasé men and pleasure-loving women is both a reproach and a challenge. It is the renewal of ideals in such as they that makes one hopeful for the future. So long as aspiration and resentment of cruelty and wickedness burn in the hearts of chosen youth, the world will neither stagnate nor decay.

Yet the duty of examining, before accepting, the views of even the best people on earth remains and will remain the same. The burden of Mr. Stokes's arraignment of the Young Men's Christian Association is that, in the matter to which he refers, its course is not Christian. To instruct the young about dividends and real estate investments, much more to "receive dividends produced by the labor of others," is, Mr. Stokes asserts, "very distinctly contrary to the teachings of Jesus." He adds that there can be no real love of neighbor, if a rich man lives in comfort upon wealth which his neighbors "need far worse."

Now, on this we may be permitted to remark, what many thoughtful and devout Christians have pointed out, that the doctrine of wealth taught, or rather implied, in the New Testament, is defective. It is so, just as its astronomical doctrine is defective—simply because the conditions of the time made full perception of the truth impossible. The modern idea of wealth in use had never come into the ken of the New Testament writers. Great riches were, to them, an accumulation of jewels, or other personal belongings, which could be used only for selfish enjoyment. Even the man who had lands and flocks and herds was thought of merely as one to whom much flowed and from whom nothing came. In a word, the conception of capital as a fructifying source of development and employment and social good, was unknown in Judæa two thousand years ago. Hence it could not figure in the teachings of the New Testament. Christian morality had to do with the life, the motives, the brotherhood, whether of rich or poor; but had not, and could not have, anything directly to say about an economic world of which it never dreamed.

This is the reason why so often some practices of a modern industrial society are said to be "distinctly contrary to the teachings of Jesus." Taken literally, that is true; but we are not to take any saying literally which would surely result in mischief, suffering, and real inhumanity. "Sell all thou hast and distribute unto the poor." Would it be for the good of mankind if our rich men were to take that command as applying to themselves, and obey it to the letter? Clearly not. Suppose a man had $100,000, and should distribute it all among the needy. That sum would be swallowed up, and the owner's power to be useful to his fellows at once dissipated. But let him put it into some productive industry, paying wages of, say, $10,000 a year, and more absolute benefit would be conferred than by the indiscriminate distribution of $100,000, while the process might go on indefinitely, resulting in many times $100,000 being paid out to stimulate self-help and thrift.

One is almost ashamed to recur to such elementary truths, stated again and again by Mill and others, but it sometimes seems as if even elementary truths were in danger of disappearing in a wash of sentiment. With the misuse of wealth, let us deal as occasion demands. Against the barbaric conception of riches which so many of our new-made millionaires display, let us employ every form of protest—ridicule, exposure, satire, hot denunciation. But let us try to keep our heads throughout, and not be betrayed into oversight of the necessary part which great capital plays in keeping modern society and government going; let us not fall into notions that would, if carried out, cause us to revert to the status of savages. And it must not be forgotten that loose talk about the sin of having large property, which, in a time like this, passes as amiable but inconsequent, might easily, in a period of depression, translate itself into riot and social disruption.

OLD CLERKS AND CIVIL PENSIONS.

If notoriety be a good thing, then the superannuated Government employee has been enjoying a succession of "banner years." He had been let alone up to the beginning of the twentieth century, privileged to potter about the departments, and draw his pay once a month. Suddenly he found himself a subject of grave concern. Cabinet officers and bureau chiefs annually spread their views regarding his "habits, customs, virtues, vices, and future." Committees sat and wrangled over his fate. Sometimes they reported plans for dealing with him—which never became law, however. Secretary Hitchcock declared in 1904 that if the aged clerks were removed from his department, he would be able to do the work with a force 25 per cent. smaller. The House Appropriations Committee last year devised a plan for eliminating the septuagenarian clerk entirely from the public service after June 30, 1913. The clerks' own spokesmen are prompt to suggest a civil pension as a cure for all existing ills. For all that, the general problem of superannuation remains unsolved.

The report of a special committee appointed by the National Civil Service Reform League, copies of which have recently been sent to members of Congress, comes nearer to a plain basis of facts than most of the discussion that has gone before. The situation looks grave enough in the abstract. Last year it was stated that in the District of Columbia alone there were 1,687 clerks of sixty-five and over, receiving average salaries of $1,235, and 586 clerks of seventy and over, receiving average salaries of $1,243. "We must prevent," said Congressman Littauer last year, "the development of the civil service into a civil pension list." But the committee, headed by Horace E. Deming, shows that relatively the situation appears much less grave. In its summary of results the following propositions are clearly stated:

> The retention of employees in the civil service of the United States is no longer than in the service of the great railroads.
>
> Only 1.2 per cent. of the employees in the executive civil service throughout the country are over seventy years of age.
>
> The number of these is not increasing.
>
> The tendency of the civil service law and rules is to decrease the number of old employees.
>
> The separations are enough to change the whole service on an average once in 12.5 years. By far the greater part of the resignations are among the competitive appointees seeking better places outside.
>
> Only 5.1 per cent. of employees now in the service who are over sixty-five years of age entered through competition by examination.
>
> The Government's loss . . . expressed in salary, equals only $1,200,000 a year.

These facts do more than show that the situation is not so alarming as had been supposed. They also demonstrate that civil service reform is not responsible for the "dead wood" in the departments. Of the employees of sixty-five and over, no less than 94.9 per cent. entered the service without competitive examination. This is natural enough when one considers the fact that the Civil Service law dates back only to President Arthur, and that a man who, at thirty, took the first examinations for appointment held by the Civil Service Commission, would not yet be sixty. Spoilsmen and place-hunters have been only too glad of late years to hold the "civil service" responsible for decrepitude in office. "We had a simple way of regenerating the service," they said. "The men we put in office were not the worst in the world. They had demonstrated energy and initiative in the political field. And there was no chance of their going stale because we overhauled the whole lot every time another party or faction came in. Now you reformers have locked the door leading out of the civil service, and patrol the

door leading in. It is your fault if we have a job-lot of incompetents inside, and it is up to you to find a way out of the difficulty." The Democratic Convention of 1896, which put itself on record as in favor of civil service reform, but opposed to life tenure in office, expressed the doubts which were felt by many casual observers.

We must grant, of course, that in a service completely covered by the rules, all the superannuated clerks would ultimately come from the competitive class. For these men the Civil Service League believes that something must be done in the near future. A civil pension it rejects. This city's experience with its police pensions would alone be sufficient to make us dread the experiment on a national scale. If the men too old to work must be looked after by a Government which has hitherto permitted the impression that employment is permanent, and saving almost unnecessary, then the best plan is the Australian requirement that every successful candidate for a place must take out a deferred annuity policy in some reputable company. But the simple plan of paying clerks what they are worth would logically be enough to regenerate the service. The aged clerks, says the committee, do work worth $1,200,000 less than that of younger men paid the same salaries. Very well, cut down the aggregate salaries by that amount. It will be an incentive for the younger men to save, and at the same time will remove the old from the status of mere pensioners, whom their superiors are too soft-hearted to discharge. In the execution of such a policy there are obvious difficulties, but its suggestion may be a step toward supplying the needed corollary to the achieved reforms in the selective machinery of the civil service.

THE DISAPPEARING TRAMP.

"Dusty Rhodes and Weary Willie are no more, except as they exist in the comic supplement," declares the superintendent of a Louisville Rescue Mission. "There are tramps and bums today, but they are not of the same type that roamed the country five years ago." Five years is a short time in which to accomplish even a minor social revolution. Had the gentleman harked back some eight years further to the days when "armies" of the unemployed were on the march, he would have been able to point a more striking contrast. But his observation fits in with that of other qualified persons who assert that recent years have witnessed rather an extraordinary shifting and overturning in what is often called the "under-world." The Louisville authority says:

> The tramp or wanderer of to-day, as a general thing, comes from a good family, and at one time probably held both a good business and social position. Ninety per cent. of the men that come into Hope Rescue Mission, as boys attended Sunday-school. In fact, there are no tramps today. Instead, there is a great army of men and boys who are drifting from one city to another. But the tramp that used to camp along the roadside is practically a thing of the past.
>
> On the other side, the police officials of every city have been talking of the rise of the "yegg," or criminal tramp. The bank-robber and burglar was at one time a highly skilled craftsman, doing his work with a finish that only too often identified the artisan. He lived, so to speak, in a style befitting his station, and for that reason the police were more likely to know him and be able to find him. "But what can you do," they now ask pathetically, "when the bank robber comes into town ragged and on foot, with no tools but a cake of soap and a vial of nitro-glycerine, does his job, and steals a ride on a freight train to get away? Nobody knew him before or after; he has no recognizable peculiarities. Outwardly he is only a common tramp."
>
> The droll tomato-can tramp of the comic papers was once a reality, or at least as much a reality as any of the other conventional figures of our national humor. Is it competition that has killed him? Pressed relentlessly by the outright criminal and the fallen scion of good family, has he gone the way of the small dealer and the circuit rider? Or has he simply discarded a few of his odder traits and dropped to plain raggedness? Or is the "yegg," perhaps, only the old tramp himself imbued with a new and criminal ambition? All these are possibilities, but the qualities that made men tramps are older and more enduring than the pyramids. The tramp wandered about the country, not simply because he was possessed of an inherited *Wanderlust*, like the gypsy; nor because he plied a trade that necessitated moving about, like the tinker or peddler; nor because, like the itinerant printer of other days, he was intellectually curious, and wanted to see the world and earn a living by the way. His grievance against the world of cities and shops was general, not particular. His hand was against no man's, but, if any man's hen-roost happened to lie across his path, he would not actually push the chickens away. He was as free from malevolence as he was from steadfastness. It is known that a beggar can greatly increase his receipts by employing a printed appeal instead of an oral whine. Yet only the very élite of their profession have the enterprise to use such means, and those who do, copy the three or four metrical and other pleas already in use rather than compose new ones of their own. The same inertia was characteristic of the tramp's threats and revenges. With matches in his pocket, he might exert himself enough to burn a haystack or a barn when the farmer's wife refused him a "hand-out." But elaborate schemes of either revenge or plunder were beyond him. He might go on for weeks without a single actual infraction of the law, aside from his habitual lack of visible means of support. He was, in short, the product of ineradicable traits, complete aimlessness and laziness.
>
> One wonders whether the old freemasonry of the road is to be ended with the passing generation of tramps. Because nobody in particular was looking very hard for "Weary Willie," he developed the habit of indicating his movements through the country by signs and symbols carved on the railroad water-tanks and such places. His sense of fellowship led to the marking of hospitable and inhospitable houses, sources of plunder, lodging places, and the like. The new classes of tramps are much less apt to keep up this kind of lore. The criminal does not want to tell the interested public where he is going; the carpenter, clerk, or insurance agent who has seen better days does not know how. A noble art would thus stand in danger of being lost but for one fact. That is the improbability that the tramp of "type," as the biologists say, will stay suppressed. More aggressive competitors may temporarily crowd him out of his living or drive him to more active methods. But let the pressure be momentarily taken off, and he is certain to reassume his old place.

HONORING A PROFESSOR.

Prof. Ernst von Bergmann, the great German surgeon, celebrated his seventieth birthday on December 16. As the occasion was the signal for a striking demonstration of public regard, it is worth while to consider Prof. Von Bergmann's career and the honors which have just been paid him. Beginning in 1864 as instructor in surgery at the University of Dorpat, he served as a military surgeon in the wars between Prussia and Austria, Germany and France, and Russia and Turkey. He was called in 1878 to the University of Würzburg, and was requisitioned in 1882 by the University of Berlin. There he was one of the most distinguished teachers; and scholars from all countries came to sit at his feet. In surgery, there are two fields in which Von Bergmann has distinguished himself. Lister's antiseptic methods in operations he supplemented by aseptic bandaging. His teaching that a fresh gunshot wound is aseptic and is best treated by a simple bandage and by trust in nature, has saved the lives of many thousands of soldiers who would have died from the infection that results from probing. Von Bergmann's surgical treatment of diseases of the brain is his second great achievement, thanks to

which parts of the brain are now accessible to the knife in a manner not dreamed of only twenty years ago. In fine, he has contributed more to the development of surgery than any other German.

This is in outline the record which provoked tributes from the leading German newspapers. A further indication of the pride which Germany takes in her savants is the fact that no less than forty delegations from all parts of the Empire called to congratulate Von Bergmann and the nation upon his attainment of the Scriptural three score and ten. From ten o'clock until three they filed past, bringing gifts of every kind. The University of Munich, the Society for First Aid to the Injured, the Red Cross, the Central Committee for the Education of Physicians, the German Samaritan Society—these were but a few of the organizations whose officials presented themselves.

Official recognition of the anniversary was also not lacking. Emperor and Empress telegraphed congratulations. The War Minister and the Minister of Education were represented by high Government officials, the one in recognition of Von Bergmann's service in war-time and the other of the relation of the Government to the University of Berlin. On the literary side, no less than four important scientific works were published by way of commemoration. The eighty-first volume of the monumental "Archives of Surgery" and Prof. Franz König's "Tuberculosis of the Human Joints and Skull" were specially dedicated to Von Bergmann. Dr. Walter von Oettingen's "Studies" in military sanitation during the Russo-Japanese war appeared with an enthusiastic dedication to the author's former instructor, noting the importance of his discoveries in the field of military hygiene. The other side of Von Bergmann's activity was recognized in a volume, dealing with the social value of the saving of human life. Next, the septuagenarian submitted to the tortures and pleasures of a great banquet, at which over 500 distinguished persons were present on the invitation of the Berlin Medical Society. Last, but not least, Professor Von Bergmann's wife and daughters were present on this occasion and worthily toasted in recognition of what the *Ewig Weibliche* has done for him.

We have dwelt on the details of this remarkable event, surpassed only by the tributes to Virchow during his lifetime, because the celebration shows clearly how high the university professor still stands in the life of the German people. The Empire has developed into a great industrial country, flooding the world with the product of its factories. Thus its citizens have become known as the "Yankees of Europe." But the respect for the man of learning has in no way suffered; if anything, it has increased. To the average graduate of a university the possibility of becoming a distinguished professor still seems the fulfilment of the loftiest ambition. Far from being regarded as a cloistered life, devoted only to musty books and abstract theories, the career is recognized as one which brings not only the highest social standing, but also necessitates close touch with everything affecting the state. Virchow, for instance, besides being a great teacher and scientist, was a city councillor, a Liberal of the Liberals, with the keenest interest in all political matters. Nor was he ever rebuffed or told, as a mere "closet philosopher," to return to his tomes. His words on all questions affecting national affairs were listened to with respect; his influence was of the widest.

The same has been true of Von Bergmann. "He is devoted to his profession of university teaching, and takes pride in being a widely sought surgeon; but he is not wholly absorbed by it," writes one of his eulogists. He has not only had time for art and music and drama, but has been one of the "foremost citizens of Berlin the city," "one of the leaders of those who work for the public weal." In national matters, too, his word has "had the respect of all those highest in authority." Thus there has been a remarkable relationship between the professor and the state. The latter has known how to honor a scientist, and the scientist, recognizing his responsibility, has freely given himself to the advancement not merely of his countrymen, but of all mankind as well.

In all this there is much to make Americans reflect. True, in not a few instances the achievements of our men of letters or science have been recognized before death. President Eliot, for instance, must know what people think of his priceless services to the republic. But in most cases, the tributes have been local in character or confined solely to that particular branch of learning in which the scholar is conspicuous. If in this day of materialism, of worship of our captains of industry, there are those who would exalt our intellectual leaders, the honors to the German surgeon suggest one way in which the achievements of the hero of the laboratory may be acclaimed.

PSYCHOLOGICAL RESEARCH.

The annual meeting of the American Psychological Association, held in this city last week, in connection with the American Association for the Advancement of Science, has directed public attention again to the progress of psychological research. There was an exhibition of the newer methods employed and results achieved in the various laboratories throughout the country.

Experimental psychology is a term not very well-defined. By some it is supposed to mean physiological psychology. But that is concerned chiefly with determining the correspondence between psychical processes and functions of the brain, and its method is primarily objective. Experimental psychology gets its data originally from the self-conscious subject, and seeks to correct the irregularities and errors of individual observation by objective tests of various kinds. It is not satisfied with the experience of a single observer, but puts its questions to the "group," and so is largely statistical. It eliminates "the personal equation" by testing these data through the use of accurate instruments. Its field of research is much wider now than formerly; for it takes into consideration varieties of age, sex, and race; compares the psychical processes of man with those of the lower animals; and deals with problems concerning language, æsthetics, and even religion.

Some of these phenomena were considered incidentally by Weber and Fechner in the first half of the last century; but experimental psychology had no independent standing as a science until 1878, when Wundt founded his famous laboratory at Leipsic, where so many European and American "experimentalists" have been trained. His example was speedily followed by Müller at Göttingen, by Martius at Bonn, and ten years later by Ebbinghaus at Berlin. Within fifteen years there were laboratories of experimental psychology in several European countries, and no less than sixteen in America. Though Münsterberg came to Harvard from Germany, the chairs of experimental psychology in this country are mainly occupied by Americans, who, as might have been expected, have shown proficiency in a science which calls for extraordinary mechanical ingenuity and dexterity. A considerable percentage of the members of the Psychological Association are devoting their energies to experimental work.

It is particularly during the last ten years that the scope of experimental inquiry has been enlarged. At first the principal matters considered had reference to sensations. There were discussions of the differential perception of colors in the spectrum, geometrical illusions, the influence of rhythm on the pulse and circulation, and similar subjects. Later investigations have been concerned with such widely different matters as the influence of tea and of hashish on psychical processes, the psychology of the telegraph operator, respiration in relation to attention, and the development of voluntary motion in the child. At the meeting of the Association in 1905 there were occasional digressions into animal psychology. One paper dealt with the variations in the

nests of a spider and the measurement of the variability of instinct, another on the psychology of the ant-queen, and one adventurous member discussed the sense and intelligence of the Japanese dancing mouse. This year also a number of papers were read on similar topics.

It is no disparagement of the ingenuity and industry of the experimentalists to say that the value of the results thus far achieved by them has not been proportionate to the labor expended. It has, we grant, been an undoubted advantage to have psychology taken out of the department of *belles-lettres*. The science is no longer obscured and hampered by an overweight of metaphysical speculation. Indeed, about ten years ago there was a great revival of interest in psychology in its larger sense, and a series of treatises appeared in Germany, France, England, and America such as had never been equalled in the whole history of philosophy. Then, too, many of the discoveries of the experimental psychologist have been found of immediate practical utility in the arts and in pedagogy. It may be said that all the facts collected and reported will one day be parts of a wide philosophical generalization.

But although it is probably too soon to estimate the value of what the specialists are doing, much of their time is spent over that which seems very trivial. Physiological psychology is as yet in its infancy; and among psychologists there are very few at work on the anatomy, histology, and physiology of the brain. Here is a field in which there lies far more undiscovered treasure than in the heaps of statistics regarding, for example, "mental faculty" and "sensation-measurements" in school children and university students.

THE MODERN LANGUAGE ASSOCIATION.

NEW HAVEN, December 29.

One of the largest and, from the point of view of general interest, most enjoyable meeings of the Modern Language Association was held this week at Yale University. The character of the papers was even farther removed from the dry-as-dust productions on specialized philological subjects than were those of last year. Of the twenty-three papers, ten were in the field of English literature, and that mainly modern; and six might be roughly grouped under the head of the technique and criticism of literature in general. The foreign literatures were rather meagrely represented, German having four papers and the others only incidental reference. Linguistics could claim only two papers, and but one of these was of purely specialized interest; the other was an interesting discussion of the familiar Southernism "You all" by Prof. C. Alphonso Smith of the University of North Carolina. Professor Smith showed that the expression was applied only to a plural subject, that it is not equivalent to "all of you," but to "you persons," "you and your folks," etc. The accent is always on "you," thus distinguishing it from the universal idiom "you all" with the accent on the "all." Of the colleges and universities represented, Yale headed the list with four papers, and Princeton through her preceptors followed with three. Harvard, in contrast to her large representation last year, presented only one paper, and Johns Hopkins none. The South was represented with three papers. Canada presented one paper, as last year, from McGill.

The Association was welcomed by President A. T. Hadley in an address in which he declared that, owing to the decline of the ancient languages, especially Greek, in the secondary schools and the colleges, the modern languages should be so taught that they should have the cultural value in the training of the student that the older languages had. In the evening Prof. H. A. Todd of Columbia, president of the Association, delivered his address on the function of the doctor's degree in the study of modern languages in America. In his view the training for the degree should develop breadth of view, soundness of method, and constructive power. At least one year, preferably the second, should be given to study abroad. The thesis should be an object lesson in scholarship, even to the humble but necessary details of proof-reading. It should be printed as part of the requirement of the degree, and should combine the solidity of the German with the lucidity and charm of the French dissertation.

A paper of somewhat surprising interest was read by Prof. Kenneth McKenzie of Yale on the forbidding topic, "Means and End in Making a Concordance." The subject was presented with such clearness and cogency that the Association was prepared to fall in with Prof. A. S. Cook's resolution that a Concordance Society be established and a constitution be adopted. A special meeting of those interested was held and the Society was organized. The object of the Society is to furnish subventions which will induce publishers to undertake the publication of such concordances of modern authors as are most needed. An endeavor will be made to bring the Society up to a membership of one hundred, and, by charging a fee of $5, to make possible the publication of concordances as soon as they are ready to print. Already Professor McKenzie is busy on a concordance of the *Rime* of Petrarch, and Profs. Lane Cooper and C. S. Northrup of Cornell are at work on one of Wordsworth. Prof. Brander Matthews of Columbia read a paper on the five-act scheme of the drama, protesting against the odor of sanctity in which it has been revered and urging the logical superiority of the three-act scheme.

At the close of the Friday morning session Dr. C. P. G. Scott opened a discussion on spelling as approved by the Simplified Spelling Board, and Prof. Calvin Thomas presented the following resolutions for adoption by the Association:

I. That the Modern Language Association hereby approves the plan of campaign adopted by the Simplified Spelling Board in its effort to promote the gradual simplification and rationalization of English orthography, namely, to recommend to the public from time to time and in the case of selected words and groups of words,

(1.) The dropping of useless, silent letters, as the *ue* in *catalogue*, the *ugh* in *though*.

(2.) The bringing of meaningless anomalies into line with the prevailing anologies of the language, as *metre* into line with *diameter, thermometer*, etc., and *centre* and *theatre* into line with the great multitude of words like *letter, river, father*.

(3.) The reduction of unphonetic combinations of letters to simpler terms as the *ed* in *dropped* to *t*, the *æ* in *mediæval* to *e*, the *ph* in *phantom* to *f*.

II. That the members of the Association be requested, while reserving the right to reject any proposed simplification that they do not approve, to manifest their interest in the cause by using and encouraging the use, so far as they can, of such simplified forms as they do approve.

III. That the forms recommended by the Simplified Spelling Board in its published list of 300 words be used hereafter in the publications of the Association. The author of a monograph shall, however, always be consulted beforehand, and shall always have the right to direct that his work be printed in the spelling which he prefers.

The presenting of the resolutions came as a surprise to most of those present, and was followed by a rather warm discussion, and by such an interplay of motion and amendment that certain members failed to understand the question, and voted in favor of the third clause when they would otherwise have voted against it. The vote of 56 to 31, though not representing the exact sentiment of the Association, has established for the ensuing year the simplified spelling as official.

On Saturday morning Prof. J. B. Henneman of the University of the South gave a good illustration, in a paper on ballads heard and collected in eastern North Carolina, how original and valuable work towards preserving ballads which are becoming extinct may be done by undergraduates. One of Professor Henneman's students took down from the lips of an illiterate old woman ten ballads, which had been transmitted by oral tradition from her English ancestors. These ballads have suffered in transmission, the metrical form has in places given way to prose, and the tone has, on the whole, been vulgarized, as by the presence of oaths not found in the corresponding ballads in Child's collection, but they still possess a rude vigor. There is evidently much ballad material still to be discovered in the South, especially in the two Carolinas, Alabama, and Louisiana. Prof. J. W. Cunliffe of McGill gave a brief but convincing summary of a paper on the masque, in which he disputed Brohanck's thesis that the English masque goes to France, and not to Italy, for its origin.

In this necessarily limited correspondence it is impossible to do justice to the papers read. Many of those of which no mention has been made held the attention of good-sized audiences. The president for the ensuing year is Prof. F. N. Scott of the University of Michigan, and as next year a joint meeting is to be held with the Central Division, the place will be some town in the middle West.

CHICAGO, December 29.

The Central Division of the Modern Language Association of America held its twelfth annual meeting at Chicago, December 27 to 29; the members were the guests of the University of Chicago. In the absence in Europe of the chairman, Prof. E. P. Baillot, Prof. G. E. Karsten

presided. At the formal opening of the sessions on Thursday evening, Prof. Nathaniel Butler, Dean of the College of Education of the University of Chicago, welcomed the association. Following Professor Butler, the French consul to Chicago, M. Merou, and the German consul, Dr. Wever, each spoke briefly of the close relationship existing between English and modern European languages and literatures. Unfortunately Professor Baillot's address, "The Pessimism of Our Days," did not arrive from Europe in time to be read.

The departmental sessions, a comparatively new feature of the annual meetings, were a marked improvement upon those of former years. This improvement was due in part to the fact that more time was devoted to them than formerly, an entire afternoon being set apart for the discussion of subjects connected with the teaching of modern languages. Then, too, the topics were more carefully chosen, while the discussion itself received definite direction from speakers selected in advance to open it.

At the business session the Central Division, after considerable argument, voted to print the proceedings in accordance with the rules of the Simplified Spelling Board. The report of the committee appointed a year ago to consider some method by which duplication of dissertation subjects might be avoided was considered and referred to the executive council of the Association. Professor Karsten of the University of Illinois was elected chairman for the ensuing year; Prof. C. B. Wilson of the State University of Iowa, secretary.

The social element which in these annual gatherings has come to occupy so large a place, received its usual emphasis.

AMERICAN HISTORICAL AND OTHER ASSOCIATIONS AT PROVIDENCE.

PROVIDENCE, December 29.

Five national learned societies—the American Historical Association, American Economic Association, American Political Science Association, American Sociological Society, and the Bibliographical Society of America—held their annual meetings this year at Providence, December 26-29. In addition, the New England History Teachers' Association held a semi-annual meeting at the same place in conjunction with the American Historical Association. For societies which, like these, deal with the same general field, a common meeting place and occasional joint sessions are to be commended; for while the combined programme offers an almost bewildering variety of topics, the opportunity to share in the offerings of more than one society is a great advantage. The attendance at Providence exceeded that at any previous joint meeting, the proportion of younger scholars being especially gratifying; the provision of rooms and of other facilities was ample, and the audiences at the public sessions large.

To compare, save in the most general way, the programmes of the several associations would be a difficult and not very satisfactory task. The Political Science, Economic, and Sociological associations have, from the nature of their subjects, a distinct advantage, so far as the public is concerned, over the historical group, in that the matters which they discuss have, or may easily be made to have, a practical bearing on current events and contemporary situations. Men and women at large are certain to be more interested in such topics as protection and Trusts, the regulation of railway rates, and the government of dependencies, than in any purely historical subject. It was interesting to notice, however, that the historical programme, though presenting on first inspection few topics of marked significance, called out a good attendance of members, and evoked as general and spirited discussion as took place elsewhere. Of discussion of any sort, however, there was comparatively little: the programmes were crowded, and would have been more crowded still had all the papers announced been presented. Even the round-table conferences of the Economic Association were slimly attended.

One point at which the different associations may be compared is afforded by the addresses of the presidents. Not even the American Historical Association, the oldest and largest of the societies, has yet succeeded in giving to its presidential address the character and weight which attach to the addresses of the presidents of the British Association or the American Bar Association; and the address this year of Judge Simeon E. Baldwin did not rise above the general level. It was a well written, but dry and rather superficial, discussion of the importance of the religious element in history. Prof. J. W. Jenks, for the Economic Association, touched a more popular vein in treating the modern standard of business honor; but beyond pointing out the special need of honorable dealing on the part of corporations, and the desirability of harmonizing public and private moral standards as closely as possible, the address did not plough deeply. The presidential address of Dr. Albert Shaw, on the other hand, was an extremely well-put statement of the problems which now await the political scientist, and of the bearing of the study of political science upon current political and governmental activities; while that of Dr. Lester F. Ward was an equally thoughtful and concise statement of the development of sociology as a science, and of its claim to a place at the head of the scientific hierarchy.

Both papers and discussions showed, as a rule, independent thought and investigation, and a willingness to question accepted theories that could not be easily sustained by facts. Prof. Edward A. Ross of Wisconsin, in a discussion of "Western Civilization and the Birth Rate," entered his frank dissent from the whole doctrine of the general desirability of large families, and urged that, while there were undoubted perils in the present movement for restriction, the movement itself seemed to be a salutary one, and the evils in its train either minor, or transient, or self-limiting, or curable. A discussion of child labor in the United States was notable for the severe condemnation, by Prof. Samuel M. Lindsay of Pennsylvania, of the recent action of the National Civic Federation in attempting to minimize and discredit the Federal statistics of child labor; action which, he declared, "was palpably intended as an apology for employers who have resisted legislation to protect childhood, violated existing agreements, evaded existing legislation, and shown a lack of concern for the children of the nation."

Dr. George L. Beer of Columbia, whose studies of the commercial relations between the American colonies and England have made him the foremost authority on that subject in this country, contributed a valuable paper on the new colonial policy of Great Britain from 1760 to 1765. Miss Susan M. Kingsbury of Simmons College, whose admirable edition of the "Records of the Virginia Company of London" has just appeared, offered an instructive comparison between the Virginia Company and other trading companies of the time; while Prof. C. H. Van Tyne of Michigan, in an historical discussion of sovereignty in the American Revolution, dealt another blow at the misinterpretation and distortion of unquestioned historical facts, which courts and lawyers have long been guilty of, though unwittingly, in their efforts to enforce the national view of the Federal Constitution.

The Political Science Association devoted two sessions to a discussion of various phases of the government of dependencies, the most interesting of the papers being, perhaps, that of Alleyne Ireland on "The Need of a Scientific Study of Colonial Problems." Of the other papers of this association, special mention should be made of one by Rear-Admiral F. E. Chadwick on the new charter of Newport, R. I., and another by Prof. J. Q. Dealey of Brown, on recent Constitution-making in the United States.

The American Historical Association emphasized its concern for the proper teaching of history in schools and colleges by a joint session with the New England History Teachers' Association, and by a conference on history in the college curriculum. The joint session was devoted to a discussion of the report of the committee of eight on history in elementary schools. As the report is not yet complete, its provisions need not be entered upon here, further than to say that the committee has in hand the preparation of a complete and detailed course of study in history for elementary grades. The deliberations of the conference were less fruitful, the discussion of the assigned topic, "The Sequence of College Courses in History," bringing out wide diversity of practice and opinion. A conference on the special problems of State and local historical societies, particularly with reference to the condition and treatment of archives and the marking of historic sites, showed that encouraging progress was being made along both of these lines. The work of the Public Archives Commission, and of State and local commissions and commissioners, is beginning to bear fruit.

The two sessions of the Bibliographical Society were held in the beautiful building of the John Carter Brown Library, and were largely given to papers and discussions of direct historical bearing. Thus, at the first session, George P. Winship reported on the efforts which are being made to locate all copies of early Americana; Clarence S. Bingham of the Rhode Island Historical Society, on the need of a bibliography of American colonial newspapers; and T. L. Cole of Washington on the plans for a union catalogue of American colonial laws. The chief obstacle, apparently, to the speedy carrying out of all three of these large undertakings is the lack of adequate pecuniary resources. The second

session was given to a consideration of plans for an international catalogue of the current literature of the social sciences, participated in by representatives of the various associations interested. The comparatively small number of members in attendance was itself an advantage, in that it gave to each session the character of an informal conference. Not to be outdone by its sister associations, a committee of the society recommended the establishment of a periodical as a medium of communication between members.

The presidential address before the Sociological Society has been already referred to. The only other paper comparable to it in weight was that of Prof. A. W. Small of Chicago, on "Points of Concurrence among Sociologists." Some twenty-one such points were enumerated. The discussion of this paper, more than of any other, brought out the prime difficulty which confronts sociologists at the present time, namely, the lack of agreement as to what, precisely, sociology is. Professor Ward, for example, puts it at the apex of a scientific pyramid, with practically the whole sum total of human knowledge as its proper view. Professor Dealey would have us believe that it transcends all other subjects in importance, since it concerns both the individual and society in general; by inference, therefore, every one should study it. Professor Small pointed out that the primary task of sociology was to discover and formulate laws of those processes in society which differ in degree or kind from processes found in earlier orders in the scale of evolution; while Prof. J. E. Hagerty of Ohio State University thought that wider observation and less introspection was the crying need. The lesson which the discussion apparently enforced was the necessity of more accurate definition, particularly in the direction of method.

Most of the commissions and committees of the Historical Association reported commendable progress from year to year in their assigned fields. The Public Archives Commission begins to see the end of its large task of describing the character and condition of State archives, while the transcription of documents in the Public Record Office and other depositories, done under the direction of the commission for the Library of Congress, goes on apace. The Justin Winsor prize was awarded to Miss Anna H. Abel of the Women's College of Baltimore, for an essay entitled "History of the Events Resulting in Indian Consolidation West of the Mississippi." It was voted to award this prize biennially hereafter, in alternation with the Herbert B. Adams prize.

The newly elected presidents of the several associations are: Historical, Dr. J. Franklin Jameson of the Carnegie Institution; economic, Prof. J. W. Jenks of Cornell; political science, Frederic N. Judson of St. Louis; sociological, Dr. Lester F. Ward of Brown. A graceful act of the Historical Association was the election of James Bryce as an honorary member. The associations meet next year at Madison, Wis.

Correspondence.

AN EARLY SPELLING REFORM.

To the Editor of The Nation:

Sir: The present active discussion that is going on among us with regard to the spelling of English, and also at the same time in France about changes in the orthography of their language, may render the following citation from Howell's Letters—not our fellow countryman W. D. *Howells* but James *Howell*, the well known English letter-writer of the seventeenth century—of interest to some of your readers. It is an "Advertisement" to the first edition (1645).

Among other Reasons which make the English Language of so small Extent, and put Strangers out of Conceit to learn it, one is, That we do not pronounce as we write: which proceeds from divers superfluous Letters that occur in many of our Words, which adds to the Difficulty of the Language. Therefore the Author hath taken Pains to retrench such redundant unnecessary Letters in this Work (though the Printer hath not been so careful as he should have been) as among multitudes of other Words may appear in these few, *done, some, come:* Which though we to whom the Speech is connatural, pronounce as Monosyllables, yet when Strangers come to read them, they are apt to make them Dyssyllables, as *do-ne, so-me, co-me:* therefore such an *e* is superfluous.

Moreover, those Words that have the *Latin* for their Original, the Author prefers that Orthography rather than the *French*, whereby divers Letters are spared, as *Physic, Logic, Afric,* not *Physique, Logique, Afrique: Favor, Honor, Labor,* not *Favour, Honour, Labour,* and very many more; as also he omits the *Dutch k* in most Words; Here you shall read *Peeple,* not *Peo-ple, Tresure,* not *Treasure, Toung,* not *Tongue,* &c. *Parlement,* not *Parliament, Busines, Witnes, Sicknes,* not *Business, Witness, Sickness; Star, War, Far,* not *Starre, Warre, Farre,* and Multitudes of such Words, wherein the two last Letters may well be spared. Here you shall also read *Pity, Piety, Witty,* not *Piti-e, Pieti-e, Witti-e,* as Strangers at first sight pronounce them, and abundance of such like Words.

The new Academy of Wits, called *l'Academie de beaux Esprits,* which the late Cardinal *Richlieu* [sic] founded in *Paris,* is now in hand to reform the *French* Language in this Particular, and to weed it of all superfluous Letters, which makes the *Tongue* [sic] differ so much from the *Pen,* that they have exposed themselves to this contumelious Proverb, *The Frenchman doth neither pronounce as he Writes, nor speak as he Thinks, nor sing as he Pricks.*

Aristotle hath a topic Axiom, that *Frustra fit per plura, quod fieri potest per pauciora;* When fewer may serve the Turn, more is in vain. And as this Rule holds in all things else, so it may be very well observed in Orthography.

It is worth noting how many of the changes advocated by Howell have been made, without Literature receiving any violent shock. That he does not with the word *Tongue* follow his own precepts, is a droll oversight. Grace Norton.

Cambridge, Mass., December 26.

THE PARENTAGE OF PRESIDENT DUNSTER.

To the Editor of The Nation:

Sir: It will interest American genealogists to know that the date of the baptism of Henry Dunster, first president of Harvard College, has been ascertained by William Hewitson of Bury, Lancashire, who contributes an article on the subject to the December number of *The Clavian,* the magazine of the Bury Grammar School. Mr. Hewitson identifies him with the Henry, son of Henry Dunster, who was baptized at Bury, November 26, 1609. It is certainly curious that the baptism has escaped notice, as it appears to have done, in the country where Dunster did his work and is best remembered, the more so as it was known from Dunster's own telling that he was a Lancashire man, and that a letter (dated 1640), printed by Dr. Chaplin, in his "Life of Henry Dunster," gives the residence and name of Dunster's father, and the names of several brothers and one sister. These facts being known there should have been no difficulty in finding further genealogical particulars of the family. Unfortunately, those interested in Dunster relied on extracts made from the Parish Register of Bury by the person who was parish clerk in 1854. These were presumably intended to be complete, but they were only a selection, and were not accurately copied. At a later date another inquiry was made of a later parish clerk, and again an incomplete and inaccurate copy of the Dunster entries was supplied. Neither list contained the president's baptism. The complete register, as published by the Lancashire Parish Register Society, contains all the family of Henry Dunster as we know it from the letter of 1640.

The case may be taken as a warning not to trust to parish clerks, who are rarely competent to read a seventeenth-century parish register. Nor are parish clergymen much better. The numerous parish register societies now existing in England deserve more support from America than they have so far received. One of the most successful of these is the Lancashire Parish Register Society, which shows an excellent return for the guinea subscription. The Hon. Secretary is Henry Brierley of Thornhill, Wigan, who would be glad to receive the names of new subscribers. The more subscribers there are to these societies the more registers can be printed, and the less will Americans and others at a distance need to rely on the tender mercies of illiterate parish clerks.

The will of the father of President Dunster is not referred to by Mr. Hewitson, but it is preserved in the Chester Probate Register, where I saw it the other day. He describes himself as a yeoman. There is nothing of special interest in it, but it gives the name of a daughter Alice, who is not named in the letter of 1640, and shows that the wife, who was living in 1640, had died, and that the widower had remarried. The date of the will is October 6, 1645, and it was proved by the two daughters (Elizabeth and Alice) December 14, 1646. The parish register records the burial on September 16, 1646, of Henry Dunster of Baleholt. Ernest Axon.

Hatherlow, near Stockport, England, December 22.

Notes.

The Clarendon Press will soon have ready for publication "The Shirburn Ballads," taken from a manuscript volume owned by Lord Macclesfield, of Shirburn Castle, Oxfordshire. Andrew Clark, the editor, says of the volume that it "has preserved a

number of pieces, of no slight value, which certainly are not found in the great collections; and which, possibly, are found nowhere else. Further, it bridges over the gap between early ballads and post-Restoration ballads, and shows that many of the ordinary issues of the black-letter press of Charles II.'s and James II.'s reigns had been in common circulation under Elizabeth and James I. . . . It is, above all, a singularly representative collection, embracing ballads of almost every type in circulation, and so presenting us with just the library which was found in most English households in Shakespeare's time."

Two products of the Cabinet may be mentioned here together. One, Secretary Taft's "Four Aspects of Civic Duty" (Scribner's), contains the Yale lectures on "The Responsibilities of Citizenship." The other is the regular Government edition of the "Speeches Incident to the Visit of Secretary Root to South America."

Edith Wharton's new novel, "The Fruit of the Tree," begins with the January issue of *Scribner's Magazine*. The "Military Memoirs" of Gen. E. P. Alexander of the Confederate army also begin, with an account of the Battle of Bull Run. Two of the buried cities of Ceylon, Polonnarua and Dambulla, are described by Rosalie Slaughter Morton.

Under the title, "Books, Culture, and Character" (Houghton, Mifflin & Co.), J. N. Larned, late librarian of the Buffalo Public Library, has collected a few addresses on such subjects as "The Test of Quality in Books," "Hints as to Reading," "Public Libraries and Public Education," and the like. The addresses are incidental, as it were, to his office. They are neither erudite nor "literary." But they are commendable for the plain common-sense and simple clear-sightedness with which they resolve some of the confusions and sophistries of the day. His test of literary quality, for instance, is as right-minded as it is unfashionable: "Does the book leave any kind of wholesome and fine feeling in the mind of one who reads it?" And equally pertinent is his plea for a return to a moral and humanistic teaching of history. Such views may seem commonplace; but it is well to have them recalled from time to time to the consciousness of a supersubtile generation.

If English is not well taught in our schools and colleges, it will not be for lack of information and advice on the subject. Many books and articles on the subject are being printed, Houghton, Mifflin & Co. have recently issued "The Higher Study of English," by Prof. Albert S. Cook of Yale, and "Talks on the Teaching of Literature," by Prof. Arlo Bates of the Massachusetts Institute of Technology. Professor Cook's book is made up of four occasional papers and addresses: "The Province of English Philology," "The Teaching of English," "The Relation of Words to Literature," and "Aims in the Graduate Study of English." As he deals very little with technical details, but dwells rather on aims and ideals, his work appeals to the general reader as well as the teacher. Professor Bates's "Talks" are founded upon lectures delivered in 1905 before the Summer School of the University of Illinois. In eighteen chapters entitled "Some Difficulties," "Preliminary Work," "The Study of Prose," "The Study of the Novel," etc., he attempts a fairly comprehensive treatment of matters concerning which, as he says, "so many teachers are in doubt." He is a believer, we may note in passing, "in thorough courses in English grammar" for pupils of the lower grades. In the *Educational Review* for November and December, Prof. Charles Sears Baldwin of Yale discusses Freshman English. He begins with a statistical survey, showing exactly what courses are given in the colleges. The second paper is constructive. In it he lays down sound doctrine as to composition.

The larger opportunity of freshman English is not best realized by confining freshman themes to topics from literature. On the contrary, such restriction often hampers individual expression, and always hampers the natural service of rhetoric to all studies. . . . Because writing must be learned in part from great writers, or more vaguely because composition is "English," some schools have shut their pupils up to futile attempts upon the life of Burns or the character of Julius Cæsar. . . . That a pupil can write more readily on moths, carpentry, automobiles, on chivalry or socialism, is a bent not to be deplored nor checked. He will become no more literary for writing on Lady Macbeth.

In *School and Home Education* for December, Margaret H. J. Lampe offers an answer to the question, "What Poetry Do Children Like?" In the *Pedagogical Seminary* for December Mary Ella Coppersmith has "Suggestions on Teaching English" in the grammar school. She maintains the theory that "young children can be taught to write well."

The pleasantest word in Professor Saintsbury's second volume of the "Minor Poets of the Caroline Period" (Oxford University Press), is that the work is to be extended to a third volume. We have already observed that, in our opinion, Professor Saintsbury is most usefully engaged in editin these excellent reprints of what is probably the least known portion of English literature since the middle of the sixteenth century. We have here the works of Shakerley Marmion, Sir Francis Kynaston, John Hall, Sidney Godolphin, Philip Ayres, John Chalkhill, Patrick Carey, William Hammond, and William Bosworth—poets of the mid-seventeenth century for the most part, but extending back to 1600, and well onward in the period of Dryden—makers of heroic poems, whose influence may be seen in Keats and elsewhere, but which are little read at the present. In some cases, as Godolphin and Kynaston, the works have never been reprinted, and are practically inaccessible. They have considerable historical value and even sufficient intrinsic interest to warrant their reproduction in these handsome but not over-expensive volumes. Professor Saintsbury has not, it must be admitted, gained the reputation for that kind of accuracy which is of the first importance in this editorial work, and occasionally one is troubled by doubts. We agree with him in thinking the best service is done to literature by standardizing the spelling, but why then should such inconsistencies of printing as the following be found on a single page (11): "Spiced," two syllables; "nourished," three syllables; "looked," one syllable; "mourn'd," one syllable? Let us add that in general the system of marking syllables is more regular than this, and that errors of a really serious kind are apparently very rare. Indeed, much labor and expense have entered into the making of the book; the Syndics of the Press have even gone so far as to have photographic copies of rare books and MSS. prepared for the editor's use in correcting his text.

The Oxford Edition of "The Complete Poetical Works" of Goldsmith is just published by Henry Frowde. The fact that Austin Dobson supplies an Introduction and notes is a sufficient guarantee of the excellence of the editing. The volume, as Mr. Dobson explains, is a reprint, "extended and revised," of the "Selected Poems" of Goldsmith, issued by the Clarendon Press in 1887. The Introduction is a succinct and critical memoir, revised in accordance with the latest discoveries regarding Goldsmith's varied and troubled life. The notes, however, are the feature of chief value. No student of eighteenth-century literature and life can ignore them; for they are a perfect mine of information, curious and interesting, regarding Goldsmith and his contemporaries. The writings of Goldsmith are full of references and allusions to current events and persons in the public eye. Mr. Dobson, whose knowledge of the period is unrivalled in minuteness and accuracy, tracks even the most subtle allusion and supplies an illuminating commentary. It may almost be said that in these notes Goldsmith, his friends, and acquaintances live again. "Retaliation," with the "Postscript," is a poem of only 174 lines; but Mr. Dobson devotes twelve solidly printed pages to the elucidation. The bibliographical memoranda are also copious and extremely valuable. One matter which deserves special commendation is Appendix C, in which Mr. Dobson—anticipating the "New English Dictionary"—traces the use of the epithet "sentimental" from Sterne's first employment of it in a private letter of 1740 to its general acceptance in the latter part of the century.

In "Greek Morality in Relation to Institutions" (London: Blackie & Son), W. H. S. Jones essays an examination and discussion of the testimony of Greek writers to Greek morality. He treats the subject from four points of view, morality as it relates to religion, to society, to the family, and to the private individual, adducing, at the end of each chapter, a convenient collection of illustrative passages. The last sixteen pages of the book are of special interest to students of Attic tragedy, inasmuch as they contain analyses of all passages in these authors dealing with moral questions.

The Ingersoll Lectureship at Harvard furnishes an annual booklet on some phase of the subject of immortality. The lecturer for 1906 was the Rev. Dr. Charles Fletcher Dole, and his address bears the title "The Hope of Immortality: Our Reasons for it." (Thomas Y. Crowell & Co.) Complaint has been heard in some quarters that certain of the appointees under the Ingersoll bequest have possessed altogether too mild a faith in the doctrine they were supposed to discuss. Dr. Dole is at least a believer in immortality. He de-

clares that it has always been easy for him to see the obstacles in the way of faith, and that he has not been guilty of evasion of arguments on the other side; but when all has been said of the impossibility of demonstration of a future life and the inherent difficulty of the faith itself, he finds that his natural bias toward confidence in the rationality of the universe has held its ground, and maintained the immortal hope as one of its essential elements. The subject is treated as a religious conviction, as "part of the integrity of religion itself." Belief in the life to come is declared to be inseparable from theistic faith. Some of the considerations advanced to support the author's thesis are as old as Plato, and some will carry no great weight; but Dr. Dole has handled a hard subject in a thoughtful, sympathetic fashion; and the reasons for cherishing the immortal hope he has presented in a manner that gives no offence, but rather inspires the respect of earnest minds.

Clara Spalding Ellis has collected some two hundred testimonies to belief in personal immortality, which she publishes under the title "What's Next? Or Shall a Man Live Again?" (Richard G. Badger.) The deponents are from all walks of life except the ministry, the views of clergymen being excluded. Vigorous assertions of faith in a future life from trust magnates, officers of the army and navy, and prominent merchants appear on the same page with the confessions of authors, scientists, and musicians. Men of affairs would appear to have been somewhat more willing to declare their belief than educators and writers. Americans only were interrogated, and collations from living American authors on the subject of immortality occupy somewhat more space than the answers to the editor's letter of inquiry. Such a compilation has, of course, no evidential value, and it may be questioned whether the result is worth the pains. It is of no great importance what a magnified haberdasher, a popular actress, or the governor of a Western State, thinks of immortality, but now and then a testimony appeals to something deeper than curiosity, as this of the late President W. R. Harper of the University of Chicago:

I am going before my work is finished. I do not know where I am going, but I hope my work will go on. I expect to continue to work in the future state, for this is only a small part of the glorious whole.

The "Almanach de Gotha" for 1907 (its 144th year) comes to us as usual and takes its place among the books reserved for reference.

Guasti's paradox, that the age of the "Decameron" was profoundly ascetic, is the text of Charles Dejob's erudite work, "La Foi Religieuse en Italie au quatorzième siècle" (Paris: Fontemoing). Poetry and prose, edict and chronicle have been searched for testimony in regard to the religious feeling of the Trecento, and Professor Dejob's researches indicate that, while faith was then as yet undisturbed, it was soon to wither as a result of the growing decay of morals in public and private life.

A recent issue in the series of small books called "Les genres littéraires" (Paris: Paul Delaplane), Léon Levrault's "La Fable, Évolution du genre," presents an interesting example of the study of literary evolution which has lately been much in vogue in France. The author has already treated several other literary types in earlier volumes of this same series. The first chapter deals with the fable in general and its earlier examples up to the time of the Romulus collection. The rest of the book is devoted to the evolution of the fable in France alone. It is a clearly written, well-printed volume of 150 pages.

Some years ago the California Association of Teachers of German published an outline of a three-year course in German for the guidance of teachers in California high schools. In October, 1905, the Association, in view of the changed conditions of German instruction in the schools of the State and of the progress that had been made in point of method, decided to issue a new declaration of principles, more in keeping with present-day theory and practice. The committee intrusted with the formulation of these principles presented a preliminary report at the meeting of the Association held at Berkeley in December, 1905, which was discussed and adopted, and has recently been issued in pamphlet form. As we understand it, the report was in large measure prepared by the chairman of the committee, Prof. Hugo K. Schilling of the University of California. Because of its brevity and the modesty of its form, this little book may miss the recognition it deserves, and fail to accomplish what it otherwise might. The attention of teachers of German should therefore be particularly directed to it. The principles promulgated are those that have come out triumphant in the discussions and experiments of the past fifteen years in Germany and other European countries. But the members of the committee evidently thoroughly understand the conditions that prevail in American schools. Such a piece of pedagogical writing augurs well for the future of instruction in modern languages, not only in California, but in the country at large.

The University of Leipzig has inaugurated a noteworthy innovation in the shape of popular lectures for students of all the faculties on Biblical subjects, followed by replies to questions from the audience. The lectures have been delivered so far by the members of the theological faculty, among these being Dr. Albert Hauck, the Church historian, and Dr. Ludwig Ihmels, the head professor of systematic theology.

Miss Emily Penrose, recently appointed Principal of Somerville College, Oxford, is a granddaughter of Dr. Thomas Arnold of Rugby. Her father, the late architect of St. Paul's, London, is commemorated in Athens, where he long ruled the British School of Archæology, by the Penrose Library. Miss Penrose vacates the Principalship of the Royal Holloway College, which she has held since 1898. Till that year she had been Principal of Bedford College in London. This last-named position she was called to fill almost immediately after her graduation in 1892 from Somerville College. She was the first of her sex to win a first class in *Literæ Humaniores*, and her doing so created some momentary confusion in the ranks of those who had been maintaining that distinction in that school was not for womankind.

A book of value to libraries has just been issued by the Library of Congress—an index to portraits (about 120,000) contained in printed books and periodicals. The work was compiled with the coöperation of many libraries for the Publishing Board of the American Library Association, and edited by William C. Lane, librarian of Harvard University, and Nina E. Browne. The collection of material was begun in 1897. A list of the works indexed includes about 1,181 titles, or some 6,216 volumes. The indexing of current periodicals is in most cases brought down through 1904, but not further.

A committee of the Library Association of England reports that this year the entries for library examinations exceed all previous records by nearly 100 per cent., indicating that "at last the more intelligent and active assistants have awakened to the value of the professional certificate as an aid to advancement." These certificates occupy in England much the same place as library school diplomas in this country; and the enlarged number striving for them is attributed to the recent action of several of the leading libraries in making professional and educational fitness the chief conditions of appointment.

The proposition to secure Government grants for public libraries is still being agitated by English librarians. The matter was recently made the chief point of discussion at a meeting of the Northern Counties Library Association, and a resolution in favor of such grants was passed with but three dissenting votes. Grounds on which the passage of the measure is advocated are, that the library is an integral part of the educational machinery of the country, and should therefore have the same standing before Parliament as the scohol; that local support could be very much stimulated by national aid; that the educational standing of any community is of interest not only to the people of that community, but to the whole nation; and that it is often in just those places where there is the least local interest and initiative that the library is most needed.

In an editorial, the *Library Journal* takes the position that in general rural libraries should not aim at a larger collection than ten or twelve thousand volumes. More than this, it says, will rarely be needed, and every volume means added expense. The ideal library, which can have but one attendant or at most two, should be a happy combination of the public with the private library, in which readers may see about them a collection of books attractively arranged, an ideal not fulfilled by the formality of the stack system.

Under the heading "Starveling Libraries," the Indiana State Library *Bulletin* issues a warning against that over-enthusiasm for library extension which leads to the planting of libraries in communities too small or too poor to give them proper support. Referring to the boast of one of the Eastern States that every town in it has a public library, the editor quotes with approval the statement of a prominent librarian from this same State, that it would be in a far better condition with regard to library service if it had half as many libraries and each correspondingly better supported. The proper solution of the library problem for such communities, he claims, is either the

county library system with widely scattered deposit stations, or travelling libraries maintained by the State.

Protestant Germany is preparing to celebrate, March 12, the three hundredth anniversary of the birth of the great hymn composer, Paul Gerhardt, the author of "Befiehl du deine Wege." He was born in Gräfenhainichen, in what is now the province of Saxony, in Prussia, where a memorial house is being erected for charitable work. A fine edition of his hymns has been issued for the nominal sum of 75 pfennigs.

Fredcrick William Maitland, Downing Professor of the Laws of England at Cambridge University, died on December 21 at Grand Canary, whither he had gone for his health. Born on May 20, 1850, he was educated at Eton and Trinity College, Cambridge. He was called to the bar by Lincoln's Inn in 1876, and was elected a bencher some years later. In 1884 he was appointed Reader of English Law at Cambridge, and four years later he was elected to the Downing professorship. In addition, he had been elected an honorary Fellow by his old college (Trinity), and had received honorary doctorates in law from the Universities of Oxford, Glasgow, and Cracow. He was a corresponding member of the Royal Prussian and the Royal Bavarian Academies. In the field of comparative jurisprudence and the history of English, as well as in international law, he made large contributions to our knowledge. Among his works are: "Glouccster Pleas," 1884; "Justice and Police," 1885; "Bracton's Notebook," 1887; "History of English Law" (with Sir Frederick Pollock), 1895; "Domesday Book and Beyond," 1897; "Township and Borough," 1898; "Canon Law in England," 1898; "Political Theories of the Middle Ages" (translated), 1900, and "English Law and the Renaissance," 1901. For the Selden Society, in the work of which he was deeply interested, he edited a number of volumes, including "Select Pleas of the Crown, A. D. 1200-1225," "Selections from Manorial Rolls of the Thirteenth Century," and the "Year Books of Edward II." At the annual meeting of the society in 1905 Lord Alverstone, the president, said that Professor Maitland's work on these year-books had been a complete revelation to him, not only from the point of view of history, but also from that of the interest and amusement which they afforded. In this issue we review Professor Maitland's edition of the life and letters of his old friend and connection by marriage, Sir Leslie Stephen.

At a meeting in Glasgow, December 18, in aid of a scheme for the preservation of the "Auld Brig" of Ayr, immortalized by Burns, Lord Rosebery made a characteristic speech. Referring to the influence of the poet, he said that even Scott had never dwelt in the hearts of the Scottisb people as Burns had done. His strongest argument, however, for the preservation of an "object of national and antiquarian interest" was the following:

> Unless the Old Brig were saved, they might have it purchased by some great American multi-millionaire, who would have the stones numbered, and the Old Brig put up in his back garden in Chicago.

The recent gift of the municipality of Venice of one thousand lire ($200) towards the erection of the Shakespeare Memorial in London is a noteworthy illustration of the growing spirit of international comity. The letter enclosing the donation wished the movement every success, and testified to the high honor in which the memory of the great poet was held in that city.

The original Account Book kept at J. J. Audubon's Philadelphia office while the octavo edition of his "Birds in America" was being issued, contains some facts which may be of interest to collectors. The first edition of Audubon's "Birds," 435 plates, the birds all shown life-size, four volumes folio, was published in England from 1827 to 1838. The accompanying text was issued from 1831 to 1839, in five volumes, octavo, under the title of "Ornithological Biography." The second edition of "Birds," 500 plates, forming, with accompanying text, seven volumes, octavo, was published in Philadelphia from 1840 to 1844. It originally appeared in one hundred parts, each containing five plates and text, the price being $1 per part. Complete sets in parts as issued are now very rare, a set having been sold privately a few years ago for about $500. No. 1 was ready December 3, 1839. The first edition of the plates for this issue was 300 copies only. On January 18, 1840, a little more than a month later, 300 additional copies were printed. Again on March 12, 325 copies; on June 6, 200 copies; and on January 9, 1841, 350 copies more, making in all 1,475 copies. The total edition of No. 2 was 1,345, and of No. 3, 1,339. The work was, as these figures indicate, an instant success. On July 8, 1840, Audubon wrote:

> Our list of subscribers has increased so rapidly that our present edition is now making up to one thousand copies; we have not yet, however, a quantity of numbers sufficient in hand to supply the demand, and even at this moment have not a complete set on hand.

No. 11 was the earliest to run 1,000 copies in the first printing. This was the uniform first issue up to No. 24, of which one edition of 1,250 was printed. This issue continued uniform up to and including No. 50, with the exception of Nos. 3, 28, 29, and 30, of each of which 1,500 copies seem to have been printed. The plates of these three numbers were lithographed and printed in New York by Endicott. All the other lithographs were made by J. T. Bowen, in Philadelphia. Subscriptions evidently began to fall off, as with No. 51 the edition was reduced to 1,150, and again reduced with No. 57 to 1,050, which remained constant as far as the record goes, which is to No. 84 only. This shows why (as has been well known) the later volumes are scarcer than the earlier. The above figures all refer to the plates. Of the text, which was printed by E. G. Dorsey, 1,200 copies formed the first edition of No. 1, and 1,000 copies of No. 2 and succeeding numbers up to No. 23. With No. 24, the edition was increased to 2,000 copies. The earlier numbers were reprinted in February, 1841. With these data some zealous bibliographer can get together several copies of the earlier numbers, and by comparison, perhaps, discover some corrected errors which will enable him to distinguish the first and second editions.

At the auction at Sotheby's, London, December 14 and 15, Congreve's first publication, "Incognita, or Love and Duty Reconcil'd, a Novel," 1692, a fine copy in the original calf, brought £115. In May, 1903, a copy in similar condition brought £61. Peele's "Battle of Alcazar," first edition, 1594, brought £60; a copy of the original Boston edition of Hubbard's "Narrative of the Troubles with the Indians in New England," Boston, 1677, with the correct "White Hills" map, £100; a collection of autograph letters of Marshal Turenne and others of his time, three folio volumes, £222; a collection of manuscript, in all thirty-three pieces, in the autograph of Jonathan Swift, in large part unpublished, £510; Napoleon's original draft, in his own hand, of his proclamation to the French army, just after the battle of Rivoli, three pages folio, £130; Machiavelli's works, given by Sir Martin Frobisher to George Daye, and containing an interesting inscription in Frobisher's autograph, dated March 26, 1585, £49; an autograph letter of Sir Walter Raleigh, enclosed in a copy of Prince's "Worthies of Devon," £80; the letter of Keats to John Taylor, asking him to obtain a passage for Leghorn, and accompanied by a little scrap of paper containing instructions as to the distribution of his effects in case the vessel should be lost, together with a lock of Keats's hair and two sketches by Severn, £560; Charles Lever's correspondence, memoranda, notebooks, and other manuscripts, £185; Catnach Press Ballads, £76; George Peele's "Battell of Alcazar," 1594, £60; Shakespeake's "Midsummer Night's Dream," 1600, £250; "Merchant of Venice, 1600, £380; "Sir John Oldcastle," 1600, £60; "A Yorkshire Tragedy," 1619, £100; "King Lear," 1608, £300; Goldsmith's "Vicar of Wakefield," 2 vols., 1766, £92; Blake's ten original drawings in color to illustrate Milton's "Paradise Lost," £2,000.

LIFE OF LESLIE STEPHEN.

The Life and Letters of Leslie Stephen. By Frederick William Maitland. New York: G. P. Putnam's Sons. $4.50 net.

"Can you not praise the dead man sufficiently unless you tell lies about him?" So Stephen once asked. To this inquiry Professor Maitland, with a literary art and a moral delicacy which are all his own, has given the best of practical answers. He has composed a biography which thrills in every line with affection and admiration for his hero, but never lies. In truth, it is loving sympathy alone which enables a biographer to tell the truth, and the whole truth. Why should any one wish to conceal the weaknesses or the peculiarities of a friend when he knows that the truth will set before the world the nobility of the man? We assuredly follow Professor Maitland's wish in directing the attention of our readers chiefly to the qualities, moral and intellectual, which gradually made Leslie Stephen the first among English critics and thinkers, and one of the most influential among English moralists. His character deserves examination not only because of his own eminence, but because it presents a singular paradox in the combination of qualities which rarely coexist.

Something, at least, of Stephen's nature may be connected with a feature of his physical development. He was not exactly

a delicate child, but his health caused anxiety both to parents and doctors. They dreaded over-excitement of his mind. Even as he approached manhood he could hardly be called strong. When, however, he passed to Cambridge, he developed into one of the hardiest athletes in a university full of vigorous men. The transition from comparative weakness to great strength is a singular one; and in Stephen's case this strength remained through life, connected with a physical irritability or excitability which is not generally the accompaniment of great muscular power. Moreover, his moral and intellectual character seems to repeat the paradox of strength combined with irritability, and also with intense sensitiveness. As to this matter, ample evidence is provided by his friends and by Stephen himself. Take his own characterization of himself:

I am, like my father, "skinless," oversensitive, and nervously irritable. . . . Even when alone in my family I am sometimes as restless as a hyena.

Turn, on the other hand, to these sentences written by George Meredith after Stephen's death:

One might easily fall into the pit of panegyric by an enumeration of his qualities, personal and literary. It would be out of harmony with the temper and characteristics of a mind so equable. He the equable, whether in condemnation or eulogy. . . .

Each statement is absolutely true. There is the strength of the intellectual athlete, the mental keenness of the scientific thinker, the equable mind of the exquisitely fair critic. There stand, on the other side, the excitability which even in matters of work and thought rendered Stephen, to use his own metaphor, like the hoop that must go at full speed, or drop; and the oversensitiveness which made him feel with excess the harshness or unfairness of a reviewer. If you look deeper, the same contrast is still traceable. A stern truthfulness which makes a man look all the hardest facts of life in the face, a habit of treating the imaginative side of religion and morals with a logical precision which some people think hardly suitable for the subject, are found linked with a passionate love of poetry and of certain kinds of beauty. Then, too, the bravery of the boldest of Alpine climbers is united with detestation of war; and a far from sanguine estimate of the possibilities of human nature or of life is joined to an infinite capacity both for receiving and exciting affection. "I have sometimes thought," writes Maitland, "that there was emotion enough in [Stephen] to equip two or three first-class sentimentalists. . . . If Stephen does not indulge in emotion for its own sake, that is not because he has not been tempted, but because he has manfully said his *Vade retro*."

One other contrast remains which is possibly not quite sufficiently emphasized by Professor Maitland, though he clearly recognizes its existence. Stephen held no religious dogma against the innocent enjoyments and the ordinary ambitions of life, yet in a true sense he was an ascetic. The only pleasures he thought worth anything were simple manly pleasures. The joys, for example, of an Alpine climber, of happy family life, or of true friendship. He contemned ordinary comfortable self-indulgence. For petty objects and petty pursuits, above all for worldly pomps and vanities, he had no care whatever. He might well be described as one of the most unworldly of men.

All his most characteristic traits govern his conduct, at every turning point in his life. Thus there is something which perplexes even the English readers of 1906 in Stephen's taking of orders and in his mode of discharging conscientiously the duties of a clergyman. To any one used to the ideas prevalent in English universities, and old enough to remember the state of feeling fifty years ago, the whole matter, as indeed Professor Maitland conclusively shows, hardly needs explanation. Becoming a clergyman of the Church of England was in his case an undoubted mistake. But it was, as far as outsiders dare judge, an error, not a fault. It is clear that he took the step honestly. He was one of those well-conducted and serious-minded men who possess the virtues becoming an English clergyman. Add to this that the education of young men, and especially of undergraduates at the English national universities, has, according to tradition, always been treated as the discharge of clerical duty and equivalent to a cure of souls. This view, though open to criticism, has given to Oxford and Cambridge, as also to English public schools, their best and most eminent teachers. Paley, Dr. Arnold of Rugby, J. H. Newman, Benjamin Jowett, to take four men widely differing, each performed some or the whole of his life's work as at once a clergyman and a teacher. That Stephen, who may no doubt have appeared to donnish contemporaries to be a mere boating rough, conscientiously and in many cases effectively performed the clerical duty of teaching and fostering all that was good in undergraduates, is absolutely certain. Nor was there any inconsistency in the combination of enthusiasm for athleticism with unflagging zeal for the promotion of a high moral tone and a strenuous life among his pupils. At the time when Leslie Stephen gave new life to Trinity Hall the belief in muscular Christianity was at its height. If his energy raised the college boat to the head of the river, it also inspired his boating pupils with high ideals. Thus writes one of them, himself a clergyman:

His university life was a grand life of doing good to men at a critical time. . . . Pretty nearly every one of us in those days would have done anything for Stephen.

If Stephen's life as a clergyman had a seriousness which might easily escape the attention of many, even among his contemporaries, his surrender of the clerical position was marked by great courage. In 1865 or 1866 the indelibility of orders was a doctrine practically held and accepted by almost all English clergymen. The clergyman who attempted to throw off orders was himself often haunted by a suspicion or superstition that he was playing the part of a soldier who deserts the army during a war. This was the true nemesis of faith. We can trace its working in the actual life of John Sterling as told by Carlyle, and in the imaginary career of Markham Sutherland, the hero of Froude's novel. Leslie Stephen, when he dared the bold step of retreating, on conscientious grounds, to a layman's position, described his feelings in a private memorandum written in shorthand only for his own eye, and published by Maitland. It contains, among other things, these words:

I can scarcely believe that two and a half years ago I was still reading prayers as a parson, and that little more than a year ago I was preaching. I now believe in nothing, to put it shortly; but I do not the less believe in morality, etc., etc. I mean to live and die like a gentleman, if possible.

"He found it," as his biographer adds, "quite possible to live and die as a gentleman, and better." He escaped the failure of Sterling; he never even came near the ruin of Markham Sutherland. He did more than this. He with a few other brave men opened the path now made easy through a change of law and of social sentiment by which Englishmen may without blame retreat from a clerical position. Nor did his zeal on behalf of honesty and freedom end here. He had the courage to avow openly the adoption of beliefs opposed to the religious teaching of his time, and certainly not even now accepted by the mass of Englishmen. With theological matters we have here no concern. All that it is necessary to note is the rigid honesty of a man who was endowed with more sensitiveness than most of us, and to whom honesty therefore was certain to bring much pain.

Turn now to the last phase of a noble life. Stephen's belief in morality was based upon an intense belief in the sacredness of family affection, and all that family affection involves. The death of beloved ones, twice and even thrice, shook, if it did not shatter, his happiness. But his belief in human affection never failed. Add to all this the enduring courage with which he bore the last strokes of fate. The painfulness of a fatal illness did not disturb the equability of his judgment. He was not by nature sanguine, he was no optimist, yet almost within sight of death he was not blind to the happiness of life. He writes to a friend whom he completely trusted:

I take a rather more cheerful view than you do of my life. If the superior intelligence of whom you speak, asked me how I had liked it, I should say, not only that I have had times of exceeding happiness, but that I have been continuously happy, except for certain periods. If one's happiness temperature could be marked thermometrically, I could say that for many years mine never sank to zero—where unhappiness begins—except for moments.

Here, if anywhere, one sees the essential equability of Leslie Stephen's judgment.

Mr. Maitland, with rare (but for the world unfortunate) self-restraint, has resolved not to criticise Stephen's books, and this on the ground which Mr. Maitland's readers will think hardly tenable: that he does "not possess and cannot now acquire the requisite knowledge or the requisite taste." Without attempting the task from which Mr. Maitland shrinks, one may without presumption dwell on one or two aspects of Leslie Stephen's literary labors.

Writing of his friend's later years, Mr. Maitland says:

The time had come when he was being told in the newspapers that he was "the first of English critics," and so forth; the "George Eliot," in particular, brought a chorus of praise. He could not but know that his position among English men of letters had become quasi-decanal. . . . He was an honorary doctor of Oxford, Cambridge, Edinburgh, and Harvard. Once

more he was a fellow, an honorary fellow, of Trinity Hall.

He reached, in short, by something like general consent, a rank which somewhat resembles the primacy which in the England of the eighteenth century was assigned to Dr. Johnson. His conception of a "National Dictionary" was as wide as it was thoroughgoing. Of the "lives" by him to be found either in the "Dictionary" or in the "Hours in a Library," one may venture to say they are all but perfect. As a critic his preëminence came to be a matter of universal acknowledgment. His "English Literature and Society in the Eighteenth Century," his "George Eliot," and his "Hobbes," are masterpieces. Every one can see that not only his knowledge but his insight increased as his life drew towards its end.

But these works are his lighter labors. To understand Leslie Stephen's position as a thinker one must study his "English Thought in the Eighteenth Century" or his "Science of Ethics." The first of these books, which should be read with his "English Utilitarians," shows how nearly he approached to an historian of supreme skill in tracing the devious current of human thought. In the "Science of Ethics" he attempted to connect together—and, as some would say, succeeded in the attempt—the truths contained in the utilitarianism of Bentham and the truths contained in modern theories of evolution. What will be the verdict finally passed on his philosophic speculations, it would now be rash to say. His system, if so it is to be called, is no doubt like other ethical systems, imperfect; but the "Science of Ethics," like the works of all great moralists, is full of fertile ideas which are assuredly destined to live. Moreover, Stephen was primarily a moralist, and even a preacher. His sermons—for his later writings are often nothing else—though full, as sermons rarely are, both of insight and humor, are often, as witness the essay on forgotten benefactors, addresses of extraordinary impressiveness. With him, the conduct of life was always a matter of supreme interest. In truth, everything he writes, at any rate as a moralist, will appeal to the sense, to the honesty, and to the seriousness of the English people.

STUDIES OF AMERICAN HISTORY.

History of the United States, from the Compromise of 1850 to the Final Restoration of Home Rule at the South in 1877. By James Ford Rhodes. Vols. VI., VII. New York: The Macmillan Co. $2.50 each.

With these volumes Mr. Rhodes completes his task. His original intention was to tell the story to the first inauguration of Mr. Cleveland as President, but he now says in his preface:

> To write purely a narrative history from 1877 to 1885 or to 1897 would be to shirk a duty and to miss the significance of the period; and, for attacking the social questions involved, I feel as yet a lack of basic knowledge.

So he purposes to make a systematic study of the history of Europe during the last two centuries, "in order to bring to bear the light which the experience of those countries may throw upon our own progress since 1877." The writing is thus merely suspended, and a later volume may be expected.

Of Mr. Rhodes's success in his published volumes there can be only one opinion. He has written a history of an eventful, even critical, period, that will long remain a standard; and he has to a remarkable degree met the principal requirements of modern historical methods. Great industry in compiling his authorities, marked capacity for weighing them, clear arrangement, and a balanced judgment of men and events—such qualities have resulted in a series of notable volumes, in a dispassionate tone. Never attempting the florid or eloquent, he never falls to the dull or turgid. That there are defects and omissions is not to be denied; specialists may find faults in every chapter. But, as a whole, the work has been well done. It describes a period of sectional difference and strife, in a manner that will appeal to the whole country.

It does not follow that Mr. Rhodes is without definite opinions or is backward in expressing them. On the contrary, his pages bristle with praise and blame. Their value lies in the fact that they have been judicially bestowed. The criticism of Sumner will offend the admirers of that great character of great limitations, but the praise will also show that the writer has not blamed hastily. The condemnation of Blaine for his tricky explanation of his abuse of a public trust brushes aside that web of apologies that his biographers have thrown over him, and he stands forth as a "tattooed man" indeed. No good word for Ben Butler as a legislator has crept in to soften the severe judgments rendered on his military career. The Credit Mobilier scandal is carefully sifted, and the few who were really guilty are now pilloried for all time. If in these matters Mr. Rhodes has not uttered the final word, he has offered one that will stand the tests of present knowledge.

These closing volumes open with the struggle over the Fourteenth Amendment. Had the powers then in control shown greater wisdom and tolerance, many of the reconstruction troubles could have been avoided. The South admitted defeat, and was ready to take up activity under new conditions; but the course of Johnson and of the radicals in Congress alienated the ablest Southerners. Mr. Rhodes blames Johnson for obstinacy, Stevens for harshness, and Sumner for overlooking the essential elements of the question of race. Congress carried its policy, and the people of the North supported Congress. It fell to Johnson to execute the reconstruction acts in States as yet unrepresented in Congress. He was sincere, but never were the evils of military government so convincingly displayed.

With ignorance enfranchised and intelligence disfranchised the results in the South were deplorable. Rascality of office-holders, continual interference from the outside for political reasons, and the economic necessities of the Southern people drove them to mistaken measures of defence. Southern "outrages" were greatly exaggerated; but the "bloody shirt" proved an effective political issue to the dominant party long after there was any cause for waving it. State after State accepted the hard conditions, and, framing a Constitution to meet them, was readmitted into the Union. In the face of this struggle over reconstruction the removal of Stanton and the impeachment trial of Johnson were mere incidents. Mr. Rhodes gives full credit to the courage of those Republicans who voted against impeachment. He has studied his sources with care; he mentions the reply of Stanton to Johnson, which appears never to have been sent to Congress; but he has overlooked the protest of the Democrats of the House against impeachment (prepared by Representative Eldredge) which the House refused to receive or to permit to be spread upon its journal.

The election of Grant by an overwhelming majority promised a better condition. Unfortunately, the man was too open to bad influences. His original Cabinet was not unlike the first Cabinet of Jackson in its incongruity and low standard of ability; and when he did select able and upright men, like Hoar and Cox, he easily crossed their purposes and made their retirement a matter of course. The personal character of Grant is developed as the story of his rule proceeds, and without a strident note of excessive praise or extreme blame. His extraordinary consorting with Gould and Fisk, his neglect of civil-service reform, his blindness to open dishonesty among those closest to him, his simplicity in political affairs, and his pathetic trust in his own abilities in civil matters, undermined public confidence as well as his reputation. Mr. Rhodes acquits him of any dishonesty, but is without mercy in describing the conditions surrounding him. It required something approaching a martyrdom to restore Grant in the affections of a people whose admiration for the soldier was clouded by a deep distrust of the President.

Unfortunately, the Republican party was as much involved as was Grant in the misgovernment of the South. To protect the negro was a praiseworthy object; but the means employed consolidated opposition in the South, and led to shocking abuses. The real intent of the leaders at Washington was to build up a Republican party in the South. The existence and maintenance of this organization involved so many experiments in government and expedients in law, so much that was shamelessly dishonest, that the reader sickens of the story. Mr. Rhodes writes with the advantage of having visited the South in 1872, the year of the cessation of the Ku Klux Klan operations, and of the last Presidential election in which the Republicans obtained the electoral vote of most of these States. With the radicals in control in Washington, and with the presence of Federal troops under the direction of Grant and Sheridan, the conquered States had no opportunity for overturning the corrupt and ignorant governments imposed upon them. Much should be forgiven communities suffering under such disabilities, and the highest praise is not too great for the men who had the courage to meet and to better the conditions. The opinions expressed by Mr. Rhodes of Lamar, George, Chamberlain, and their like, will be accepted as just.

In dealing with economic questions, Mr. Rhodes is not at his best. Dishonesty was prevalent in public life. It was a period of speculation, large Government expenditures, and recuperation from the exhaus-

tion of war. The Credit Mobilier was only one incident, and the Tweed stealings could be found on a smaller scale in many cities. Offices given in reward for political activity, perquisites, peculation, and shady adventures under cover of Government privilege—the list of instances would be a long one. Greater stress could be laid on the influence of the tariff and a currency fluctuating in value in producing these unfortunate results; moreover, the foreign commerce of the country should not be ignored. By throwing away the fair opportunity offered to reduce tariff duties after the war, the Republican party has become the party of extreme protection.

The seven volumes relate the story of the emancipation of the slave and the efforts made to give him rights equal to those of the white man. Mr. Rhodes's condemnation of negro suffrage as conferred after the war must be read to be appreciated. In a later volume we shall look for an account of what the negro has done in spite of the reconstruction policy, and the disabilities imposed upon him by his political activities. That will be a fitting close of this model history.

Twenty Years of the Republic, 1885-1905. By Harry Thurston Peck. New York: Dodd, Mead & Co. $2.50 net.

The return of the Democratic party to power in 1885, symbolizing as it did the complete disappearance of the slavery issue from American politics, was originally chosen by James Ford Rhodes as the closing point of his History, which began with the compromise of 1850. Professor Peck takes 1885 as a beginning, but it is a curious circumstance that his book should appear soon after Mr. Rhodes, changing his view regarding the critical point in recent history, decided to end his record nearly ten years earlier. Cleveland's inauguration, however, more truly marks the opening of the present era, in which the trust question perhaps supplies the leading motive, than it marks the ending of the civil war period.

The writer who attempts to discuss living men and pending measures with anything like real historical perspective has set himself a hard task. Most of the events which Professor Peck describes have been too recently in partisan controversy for any interpretation of them to secure general acceptance. A page of his excellent index, chosen at random, shows twelve references to living Americans and only four to men who are dead. The author has tried to get a detached view. He keeps to the past tense as consistently as though each day's newspaper did not bring fresh information about some of the men whom he characterizes. Yet the suggestion of journalism in his pages is ineradicable.

Professor Peck writes entertainingly. He has woven the events of five Presidential terms into a racy and eminently readable narrative—qualities not impaired by a tendency to snap judgment, a habit of rather sweeping generalization, and a love for unusual words. Mistakes which crept into this history as published serially have been corrected. There remain slips which seem to show lack of familiarity with the minutiæ of government machinery rather than downright blundering. There are blind references to public documents, for instance, identified by serial number without indication of the Congressional session. Similarly, the record of 500 private pension bills a day passed in Congress during Cleveland's Administration is dwelt upon as if it were not surpassed several times every winter under Cannon's speakership. Most of the characterizations of public men, notably that of Mr. Roosevelt, are happily done; and some of the brief interpolated discussions of public questions, like that of the tariff on page 206, are both apt and illuminating. Quotations from contemporary documents, even when they merely refresh the reader's memory, add to the interest. Such papers as Mr. Bryan's Chicago speech, William Allen White's editorial, "What's the Matter with Kansas," and Cleveland's letter on "Perfidy and Dishonor" will be found in liberal quotation.

John Calvin, the Organizer of Reformed Protestantism. By Williston Walker. New York: G. P. Putnam's Sons. $1.35 net.

This volume in the series entitled "Heroes of the Reformation" gives us at once an authoritative and popular account of John Calvin. Professor Walker brings no novel information; the ground has been trodden too thoroughly; but he takes us to the primary sources and presents the results of adequate learning, mature reflection, and independent judgment. Of all the leaders of the Reformation Calvin is the object of greatest contention; in his person, his theology, and the organization which he instituted, he has been subject to unsparing abuse and unqualified praise. In our own age, which seeks to understand and not to judge, he is given his rightful place, and the picture which emerges from the pages of Professor Walker is luminous.

Though Calvin belonged to the second generation of the Reformers, he is ranked among the most influential leaders in the gigantic struggle of the sixteenth century. Had not Luther and Zwingli gone before he could not have done his work, but he was far more than a builder on other men's foundations. He was born in the town of Noyon in Picardy, in 1509. His family, originally humble, had risen in worldly success and the social scale, so that his father was able to offer his sons the highest advantages which France afforded. Calvin, through his father's influence, received benefices in the church while still a little boy, and with his years his ecclesiastical income increased. At fourteen he entered the University at Paris, where he took high rank; he studied further in the Universities of Orleans and Bourges and again in Paris. In all he distinguished himself, not only in ecclesiastical learning, but also in law; for his father intended him for the legal profession, and Calvin, notwithstanding his own reluctance, dutifully obeyed. On his father's death, however, he returned to the classical studies which commanded his interests.

His first book, published when he was twenty-three, was a commentary on Seneca's "Treatise on Clemency." It was written in Latin of singular clarity, brilliance, and cogency, revealing a range of reading almost marvellous in a man of Calvin's years. The book also shows Calvin's high sense of moral values and his sympathies with the ethics of the Roman writer. Though he rejects Stoicism, he yet shows no inclination towards the doctrines of the Reformation, and speaks of Christianity as "our religion," meaning by this the Catholic faith.

The account of Calvin's conversion leaves much to be desired. The father before his death had quarrelled with the Chapter of the Cathedral at Noyon, and Calvin's older brother had completely broken with it. How much Calvin was influenced by these events we do not know; but his conversion would appear to have been the outgrowth in part of his humanistic studies and in part of acquaintance with Reformed leaders. He himself always regarded it as the direct act of God, describing it as sudden and overwhelming. From a devoted adherent of the Catholic faith, he suddenly became its thoroughgoing opponent.

With the clearness of a Frenchman, trained in law, he presented in his "Institutes," first published in Latin in 1536, the most logical theological treatise of the Reformation. In this work Calvin set forth his position which was to remain unchanged throughout his life and which affected profoundly the Protestant Church in Western Europe. The book was repeatedly revised by its author; the definitive edition appeared in 1559. Before the close of the century eight editions had been issued in England, with many editions besides in French, Italian, Dutch, Spanish, and German. Starting from the conception of God, Calvin follows the Scotus idea of God's will as the fundamental element in his being. To ask why God wills is to suppose something greater than that will, which is impossible. From this single point Calvin perceives the universe and all history to unfold itself, with a rigor that carries his thought to its ultimate conclusion. Yet with this line of philosophical development he combines the truths found in his study of Holy Scripture, which he regards as the ultimate source of all religious authority. This authority, however, is not objective or external, for it is only as appropriated by the believing spirit that it becomes the voice of God. The doctrine of predestination, though involving him in repeated controversy, was at once the source of joy and courage. Over against the authority and the might of the Roman Church he places the assurance that we are the elect of God the omnipotent—in which confidence God's children may fearlessly face all powers of earth and hell.

Called to Geneva by the reformer Farel, Calvin found himself very early in a position of leadership. In Geneva the Reformation was almost wholly political, and the history of the struggles of parties is necessary for an understanding of his attitude. To him there came a vision of a city organized on Christian principles, with Church independent of State. To a degree unknown in Germany he advocated the freedom of the ecclesiastical organization and the independence of the State itself, but over both was to reign undisputedly the law of God. His twenty years in Geneva were a period of uninterrupted labor and contention, but in the end he was triumphant, and died in the consciousness that his ideas had prevailed. Notwithstanding the bitter antagonism which he constantly excited, he won innumerable friends, de-

voted to him as the pure exponent of the Gospel of Jesus Christ.

The event which perhaps has been most discussed was the burning of Servetus, and for this the modern apologist finds no excuse save in the temper of the times. As a matter of fact, not only did the leaders of the Protestant Church, including even the mild Melanchthon, commend Calvin for this act (Servetus had already been condemned to death by the Catholic Church), but the deed finally completed Calvin's triumph in Geneva, securing his position for the remainder of his life. Servetus himself exhibited the same spirit: he not only inscribed words like "scoundrel," "fool," "cheat" upon the very document which contained Calvin's charges, but he made to the Council the extraordinary proposition that Calvin should be tried and condemned to death.

Calvin drew to himself from Scotland, England, Holland, Germany, France, and Italy a multitude of Protestants who sought Geneva in part as a safe refuge and in part for the inspiration of Calvin's presence and teaching. Through these followers his theology became the dominant type in all the churches of the Reformation, except where Lutheranism prevailed. His organization of the Church also was most widely followed, except in England, where for various reasons it failed to obtain a hold.

Calvin had the nature of the natives of Picardy: he was vehement, impulsive, almost hysterical in his fits of anger, yet equally capable of acts of generosity and calm wisdom—the kind of man concerning whom no one may remain neutral; all must range themselves as friends or enemies. His system had the defects of its qualities. The logic of the Freuchman, which has been increasingly manifest during the last century and a half, was Calvin's. He could make little allowance for human nature, but the logic of ideas must, in his thought, prevail. His adherents were men who, capable of grasping his point of view, obtained in it that lofty intellectual satisfaction which comes from philosophical systems complete and clear. In this respect no other body of theology of the Reformed Church can compare with it; but, like all such systems, it on the one hand repelled men who dissented from its fundamental presuppositions, and on the other hand exasperated those who could understand it only in fragments. Like all such systems also, it furnished an ultimate explanation of the infinite facts of our universe, but in such one-sided fashion as to give the glimpse of only a portion of life.

In like manner Calvin's life task, the organization of the Christian city, was impossible of realization. For a little while, under the influence of his genius, Geneva could be moulded to his will; but the will of no man, however wise or well informed, can set forth the norm of human society, with its varying estimates of values and its varying needs. It was no vision of a new Jerusalem, descending to the earth and gathering all nations within itself, which Calvin saw, but a Puritanic community formed on narrow lines and directed to relatively petty ends. Thus it was neither possible nor desirable that Calvin's work should achieve the material results which he had intended, but as an inspiration to pious men, as a source of courage for many who had to fight the bitter fight, as a mighty influence entering into the tangled mass of Western civilization, it succeeded.

Calvin is too completely out of the characteristic mood of our own day to excite our love, yet we cannot withhold our admiration for the frail student who, by the clearness of his intellect and the power of his will, unaided by other resources, made himself so powerful a force in the development of thought and institutions.

Honoré de Balzac. By Ferdinand Brunetière. Philadelphia: J. B. Lippincott Company. $1.50 net.

This contribution to the French Men of Letters Series constitutes the fitting terminal chapter of the insistent and sometimes dogmatic criticism of the late Ferdinand Brunetière. Consequently, this monograph on Balzac is much less a definitive pronouncement on the "Comédie Humaine" than an illustration of the difficulty of interpreting the many-sidedness of genius in the terms of an *à priori* system, inelastic because of its very pretensions to scientific completeness and precision. Throughout the volume there runs the suggestion of almost constant struggle with the subject, a struggle which characterized, it may be remembered, the endeavor of Rodin in his much-discussed portrait-statue.

But Brunetière's primary contention is unassailable; it may be too often reiterated in more or less roundabout phrase in the course of the book; still, "the representation of what constitutes the daily course of human existence . . . is the first law of a form whose purpose and principal object are to give an exact copy or representation of life" (p. 134). Herein undouhtedly lies the explanation of Balzac's appeal to a generation whose interest in romantic character or situation suffered a temporary chill in the atmosphere of positive nineteenth-century life. What renders Balzac's treatment of his theme supremely vital is that the man himself, for all his reactionary professions or posing, was essentially and incurably of his own generation, symbolized incarnate in the person of a *bourgeois* king. The perpetual obsession of money as the motive energy of modern society found its motto in Guizot's famous "Enrichissez-vous!"

It might analogously be maintained that the melodramatic element in Balzac's fiction (which Brunetière seems disposed to slur over or to minimize) demonstrates no less clearly the pressure of prevailing literary conditions or practice. Balzac yielded to it not in the depiction of character so much as in stage-setting or situation; we note it in "La Vendetta," "Illusions Perdues," "La Fille aux yeux d'Or," "La Cousine Bette," and perhaps most of all in "Le Curé de Village." But why should this prove incompatible with the opinion that the firm basis of the colossal structure is observation of life read in terms of genius? "La société française allait être l'historien, je ne devais être que le secrétaire." When has the society of any epoch enjoyed the services of such a secretary?

In the estimation of the æsthetic valuc of Balzac's work (ch. v.) there appears, initially, a certain amount of confusion. While granting that intensity of emotion marks some of the great scenes of the "Comédie Humaine," the critic brings them into comparison with alleged kindred episodes in "Les Mystères de Paris" and "Monte Cristo" (p. 124), thus suggesting a close relation between the pathos of romance and the pathos of real life. What reader feels the samc kind or degree of poignancy in the two death scenes of L'Ahbé Faria and Cousin Pons? In this chapter, also, one misses anything approaching definite reference to the quality in Balzac's work so thoroughly understood by Dr. Brandes, namely, the power of vivifying touch which gives to the myriad details of a description the complete and instantaneous impression of a presentation to the eye; nowhere is this better exemplified than in the many pictures of places, here spoken of as Balzac's "geography," in which, it should he added, each locality stamps itself on the memory with untransferahle color and force. Under all this discussion there would seem to be latent the desire to wrest Balzac from his surroundings, to isolate him in literature, and in so doing to dwarf not only the influence but actually the worth of his admittedly great Romantic contemporaries. On no other conjecture is it possible to explain such a *boutade* as the following: "What, then, is 'Les Misérahles,' which I see the same judges valuing so highly, but a 'detective story'?"

Other chapters take up, from Brunetière's well-known point of view, Balzac's social doctrine, ethical teaching, and subsequent influence on fiction in France and elsewhere; hut the offhand detaching of Balzac's political and religious views as negligible reduces to the uninterestingly simplified terms of Brunetière's narrower conception a question which Balzac strove to present in its manifold, yet integral, complexity. Yet the last chapter, which traces the influence of "La Comédie Humaine" at home and abroad, shows Brunetière, the master of historical criticism of literature, once again at his best in the department of study with which our generation inseparably connects his name.

A German Pompadour, being the Extraordinary History of Wilhelmine von Grävenitz, Landhofmeisterin of Wirtemberg. By Marie Hay. New York: Charles Scribner's Sons. $3.50 net.

A good literary style applied to a romantic, even exciting, story must save Miss Hay from the reproach of treating an episode that belongs to history after a manner that belongs to fiction. She reverts to the dramatic presentment of historical events that was known as the *nouvelle historique* in the seventeenth century, merely assuring her readers, in guardedly general terms, that manuscripts have passed through her hands authenticating her story. It might, however, have been just as easily derived from the facts given in Spittler's "Geschichte Wirtembergs." The result is delightful, and far hetter reading, for incident, for style, for local color, than the vast majority of current novels.

Wilhelmine von Grävenitz was a German adventuress of the early eighteenth century—the gilded days of Teutonic rococo. She made the conquest of Eberhard Lud-

wig, Duke of Wirtemberg, and became the presiding goddess of his court. Then followed a series of curious and dramatic incidents, for which the reader must be referred to the book, that closed with the disgrace of the favorite towards the end of Eberhard Ludwig's long reign. As the merit of the book lies in its style, an example of this must be given. Wilhelmine still a girl, enters the village church, and listens to her music master playing the organ:

The organ was silent for a moment, and then through the stillness of the shadowy aisle floated the first notes of an *Ave Maria*, which Wilhelmine knew well and had often sung when no disapproving element of Protestant burgherdom was near. Instinctively she came in at the appointed bar for the voice's commencement—*Ave Maria, gratia plena*—she sang, and her powerful notes echoed through the cathedral with all the sombre glory which lay in her great contralto voice. The player at the organ immediately softened his music to a mere accompanying whisper, which yet supported the voice, greeting it with the newly awakened soul of the organ. *Ora pro nobis peccatoribus*—she sang, and surely the Mother of God must have listened to so wonderful a tone-prayer? *Nunc et in hora mortis nostræ, Amen.* And the organ wandered on, repeating the Amen again and again in a solemn, dreamy deepening of chords, which the beautiful voice followed and answered with that certainty and ease which belong to a few of the world's singers when they sing to the accompaniment of one with whom they are in perfect musical and sympathetic understanding.

Drama.

Collected Works of Henrik Ibsen. Entirely revised and edited by William Archer. 11 vols. Vols. II., III., VI., and VII. New York: Charles Scribner's Sons. $1 each.

Four volumes of the long promised new edition of Ibsen are now at hand. There will be eleven in all, but they are not published in order. Those now on the market contain "The Vikings," "The Pretenders," "Brand," "The League of Youth," "Pillars of Society," "A Doll's House," and "Ghosts." The general title of the edition indicates that it is complete, and it is the first in English to make such pretension. The list of plays does not, however, contain "The Tumulus," a product of Ibsen's youth; the mediocre romantic play "Olaf Liljekrans," and the much more important "Catiline," in which the genius of Ibsen first showed its characteristics. Two of the plays now included, "The Feast at Sol haug" and "Love's Comedy" have not, to our knowledge, been previously published in English. The latter, in verse and the first of Ibsen's works to take its subject from modern society, was partly translated before by Mr. Archer. A third play now added to those in the previous edition by Archer is "Brand." The play is of special interest because it was the first to meet with success and general recognition. The translation of it is thoroughly good, and repeatedly approaches the splendid vigor of the original. At times it is rugged, but so is Ibsen's verse.

From the title one would infer that the plays have been thoroughly revised. Traces of this polishing are not numerous, but where found they commonly mark an improvement. The translations as they now stand presumably show Mr. Archer's utmost power of reproducing the original; and with the originals, not with the previous editions, our comparison must be made. Our conclusion is that while Mr. Archer's version has many excellences, a translation conveying to English readers an adequate conception of the form as well as the ideas of Ibsen is yet to be made.

The dramatist employs the language of a real world, the brisk staccato utterances of men and women, thoroughly alive and nervously active. Furthermore, he possesses what so many of his friends as well as of his foes doubt, namely, humor. It reveals itself in the subtlest and most charming ways, generally through some quaint turn of phrase. Ibsen's language is much more direct—much more English, one might almost say—than that of his translator. The diction of Mr. Archer is too often circuitous and stilted. When, for instance, Ibsen speaks of "fine food," (dejligmad) Mr. Archer makes it delicious dishes." When in "Ghosts" Manders says that Engstrand was "quite crushed" (knuset), Mr. Archer writes "quite overwhelmed with contrition." In another passage, which exhibits an ill-judged attempt at crispness, Archer's Manders exclaims: "You shock me unspeakably!" But the Manders of Ibsen remarks with dignified comical indignation: "I am on the verge of being offended at you, Mrs. Alving." And the excellent German translation may be cited in corroboration: "Es fehlt nicht viel und ich bin empört über Sie, Frau Alving." Each such failure may be insignificant, considered by itself, but when added together in the production of a total impression they mean much.

Mr. Archer is much more successful when writing of Ibsen. The introduction to each play throws valuable light both on the plays and their author. Together, these introductions will form a pretty complete review of Ibsen's life, as well as of his art. They are bibliographical and biographical, and at the same time spiced with personal reminiscences. Of course they have nothing absolutely new to offer, for the field has already been completely covered by Dr. Rudolph Lothar's comprehensive work; by the writings of Henrik Jaeger in Norway, Hellen Lingren in Sweden, and George Brandes in Denmark; and, above all, by the bibliographical researches of J. B. Halvorsen. All this material and much more has been at the disposal of Mr. Archer, reducing his task largely to one of compilation. But his introductions form, nevertheless, the first systematic survey of Ibsen in English.

"The Road to Yesterday," which was played, for the first time in this city, in the Herald Square Theatre on Monday evening, deserves a few words of hearty welcome because it is an effort to get away from the beaten tracks, and because it affords varied, excellent, and intelligent entertainment. Idealistic and scientific Chicago—profoundly impressed by the mention of Mahatmas and apparently unacquainted with Pythagoras—hailed it as a great work in practical illustration of the theories of Oriental and other mystics concerning reincarnation, but the originality of it is quite independent of any such formidable purpose as that. The joint authors of it, Beulah M. Dix and Evelyn G. Sutherland, have only used a very old theatrical form, the dream play, in a novel and ingenious manner. Their actual achievement is not quite so good as their conception, but this is one of the cases in which inconsiderable defects in the performance should not be suffered to distract attention from merits of design. Briefly, the plot is as follows: A young American girl, saturated with mediæval romance, is greatly overwrought by a hard day's sightseeing during a first visit to London, and falls asleep, after an animated family discussion of the legends of Midsummer Eve. Naturally, she has uneasy dreams, in which she is the heroine of a romantic melodrama. Her friends and relatives figure as their own ancestors of three hundred years before. She herself is conscious all the time that she is dreaming, but is unable to break the spell of sleep or escape from adventures alternately harrowing and comic. Incidentally, there is some capital satire upon the many absurd conventions of theatrical romance. The idea is clever, and, on the whole, is worked out adroitly. A play that is imaginative, ingenious, satirical, plausible, and interesting is so rare that it would be ungracious to dissect it in search of minor faults. In one way it provided a significant object-lesson in the complete inability of most of the members of a cast, of more than common excellence in the modern parts of the play, to adapt themselves to the changed conditions of the mediæval romance. If their training had taught them how to interpret these properly, the representation would have been thrice as effective.

Beerbohm Tree's production of Shakespeare's "Antony and Cleopatra" at His Majesty's Theatre in London last week was one of the most beautiful spectacles ever seen on the stage. But the acting was subordinated to the scenery. Shakespeare's forty-two scenes were reduced to thirteen.

The death is announced in London of Charles Hamilton Aidé, who was long a prominent member of theatrical and literary society in England, and achieved considerable success as a dramatist. He was the author of "Philip," in which Henry Irving made one of his successes in the early seventies. He wrote also "A Nine Days' Wonder," in which John Hare made a great hit as Mr. Vavasour; and in 1890 he provided George Alexander with "Dr. Bill," an adaptation from the French, which enjoyed much popularity both in England and this country. He was author of many poems, ballads, and novels.

Music.

The Profession of Teaching Music. By Wilhelm and Carrie Eylau. Leipzig: R. Voigtländer.

Voice Production in Singing and Speaking. By Wesley Mills. Philadelphia: J. B. Lippincott Co. $2 net.

The fact that the first two pages of the Eylau book are decorated with the portraits of its authors raises a prejudice which is, however, mitigated by three brief testimonials as to the value of its contents by such eminent authorities as Prof. Hugo

Riemann, Dr. R. Batka, and Dr. G. Münzer, written, we are assured, "quite contrary to German custom," after inspection of the manuscript. It would have been well if these preliminary readers had advised the authors to rewrite a considerable part of the text, eliminating bombast, and infusiug greater clearness here and there. It would also have been advisable to allow some one conversant with idiomatic English to revise the translation, correcting words, expressions, and sentences like "theorie," "virtuos," "an useful," "when the soloist has discharged his programm with sweeping effect, that is quite enough," etc.

For the contents of the volume we have little but praise. The authors declare that ninety-nine out of every hundred students of music (most of whom start with hopes of fame and wealth as performers) end by being teachers; and they admit that the countless failures on the concert-stage are less the fault of these pupils than the result of their teachers' incompetence and lack of interest. The aim of their little volume is to explain what the profession of teaching music really means, and what a vast sphere of action it embraces. The authors try to show how even technic can be spiritualized; they point out, in a few eloqueut pages (54-56), why it is the teacher's task to nourish the pupil's interest in his art; they dwell on the dangers of incorrect practice at home. The best teacher, they assert, is recognizable by the simplest methods. Such a teacher will "never bring up an exercise by itself, but always as a link in the whole development." Particularly illuminating are the remarks on pp. 114 and 129-132 as to what is required of a player who wants to be able to interpret correctly pieces like Grieg's "Spring," or "Melancholie," or Schumann's "Abendlied."

Reviewers of books on voice culture are likely to be shy of those which profess to be based on scientific principles. Such works are usually the product of charlatans who try to hide their ignorance by displaying pictures of thyroid and arytenoid cartilages and making a halo of physiological terms around their directions. It is not in this category that Dr. Mills's book belongs. It is the product of one who, by the testimony his pages bear, is thoroughly and equally versed in anatomy and music. His experience as a practising laryngologist made him acquainted with the extent of the ruin that may be wrought hy incorrect methods of using the voice. He sums up his attitude in these two sentences:

> The physician to-day who treats disease without reference to anatomy and physiology is, at best, but a sort of respectable charlatan. Why should students and teachers of voice-production be content to remain, in the advanced present, where they were hundreds of years ago?

The author is doubtless right in holding that the reason why great singers and speakers are rare to-day is because we do not pursue right methods for a sufficient time; but we caunot follow him in the assertion that in the matter of breath control our singers are far behind those of the old Italian period. We doubt if any other age produced more wonderful "hellows" than those with which, in our time, such singers as Lehmann, Nordica, Alvary, Jean de Reszke, and Caruso have been blessed. But this is a mere detail; what is more to the point is that Dr. Mills gives lucid directions as to how all can improve their lung power. He regrets that schools pay so much attentlon to the use of the pen and little or none to the use of the voice, though most persons talk more than they write. He dwells much on the spccial importance of hygiene in these strenuous days; explains why a disordered stomach mars the voice, and points out the evil done to the vocal orgaus of those who have sung in choirs without adequate vocal training. He makes the very sensible suggestion that teachers should have consultations in doubtful cases, like those of medical men. In conclusion, it should be said that while the greater part of this commendable volume is devoted to questions of vocal physiology and hygiene, the artistic side is by no means neglected. A single page (272), for example, contains two aphorisms of the highest value even to famous artists, some of whom are very apt to ignore the truths embodied in them:

> A continuous *forte* ceases to be a *forte*, in reality, since the ear and the mind weary under it, and all the effect of contrast is lost.
>
> When a building is large, nearly all effects should be increased—*e. g.*, all pauses lengthened, the tempo taken a little slower, the contrasts made stronger, etc—rather than the volume of tone increased.

Having succeeded in capturing a good Parisian tenor, Mr. Conried of the Metropolitan Opera House is able to give more attention to French opera than during the last two seasons. Gounod's "Roméo et Juliette" and "Faust," Berlioz's "Damnation of Faust," and Bizet's "Carmen" are among the prominent offerings this year; and last Friday night there was a revival of Delibes's "Lakmé," with Sembrich and Rousselière in the leading rôles. Three previous attempts (the first in 1886) had failed to give it a place in the brief list of popular favorites, yet it has sufficient charm to entitle it to an occasional revival. While its quaint Oriental melodic intervals do not intoxicate our senses with their exotic fragrance, as they did two decades ago, they have by no means lost their charm. There is, moreover, a good deal of original melody in the score, especially in the second act; but, so far as it is orchestral, it is lost in the vast spaces of the Metropolitan, for which the perfume of this music is too faint. The heroine of the story is a Buddhist priest's daughter, who falls in love with a British officer and poisons herself when she finds he must return to his army and his sweetheart—a plot which obviously contains the germs of Puccini's "Madame Butterfly." "Lakmé" will be repeated on Saturday afternoon.

A new book by Felix Weingartner has just been issued in Leipzig by Breitkopf & Härtel: "Ratschläge für Aufführungen der Sinfonien Beethoven's." It will probably create something of a sensation, for Weingartner is a conservative interpreter of the classics, yet in this treatise he endorses the changes in the orchestration of Beethoven suggested by Wagner. Wagner's central thought was that some of Beethoven's musical ideas were ahead of his time; in other words, that certain orchestral instrumeuts of his time did not permit of his scoring his melodies as he indubitably would have scored them if the improved instruments of our time had been at his disposal. Weingartner reviews the nine symphonics page by page, commenting on phrasing, modification of tempo, tone-coloring, etc., giving hundreds of hints to students and younger conductors—hints based on a special study and experience of two decades.

Art.

Storia dell' Arte Italiana. By A. Venturi. Vol. I. From the beginnings of Christian Art to Justinian. 1901; Vol. II. From Barbaric Art to the Romanesque. 1902; Vol. III. Romanesque Art, 1904; Vol. IV. Sculpture of the Trecento and Its Origins, 1906. Milan: Ulrico Hoepli. 18 lire a volume, each of which contains from 500 to 900 half-tone illustrations.

There are certain advantages in reviewing this gigantic work in mid course. Its qualities accentuate themselves as volume is added to volume, and one may more fairly judge by the recent instalments than by the earlier. As the scale of the work broadens and the highroad of the fourteenth century is reached, it becomes increasingly evident that the work is no history in the ordinary sense, being too inclusive and without subordination of the less to the more important. It is, however, a survey and a commentary of an extraordinarily useful and stimulating sort. To find its prototype, one must go back a century and more to Tiraboschi's "Storia della Letteratura Italiana." Like his predecessor, Professor Venturi has been inspired by a consuming antiquarian zeal, is interested rather in the cultural than in the technical aspects of his súbject, and carries off his enormous task with unflagging freshness and enthusiasm. And these two great scholars also agree in seeing with the historical rather than the critical mind. But we must not press the parallel unduly. In so far as Professor Venturi's work has not been of a pioneer type, but has involved the digesting of a vast amount of special treatises in many languages, it is a more difficult task than Tiraboschi undertook. And if one could count as surely upon the author's connoisseurship as upon his amenity and breadth of view, the volume before us would seem well-nigh perfect.

It is the first comprehensive treatise on the subject that has completely availed itself of modern photographic processes of reproduction. It might fairly be described as a corpus of half-tone cuts of Italian art, with an elaborate commentary. Practically no important monument has been omitted, and generally the record is exhaustive. Take, for example, the late twelfth-century bronze doors of the cathedral at Beneventum. One plate gives the portal in its setting, showing that the two doors contain each thirty-six panels with bas-reliefs. Then follow twelve plates presenting each four panels on a scale sufficient for iconographical study. A final plate depicts the splendid lion handle and a single bishop, who represents sixteen colleagues omitted as unimportant in the illustrations, but duly enumerated in the text. Twenty-four pages of description surround and frame the cuts. The same thorough method is followed with scores of monuments, and merely as a handy compendium of il-

lustrations these volumes should be on every art-historian's shelves.

This very richness of illustration—about a cut to a page—brings about certain defects of structure. In a sense the text has had to be written to the cuts, and its amplitude is determined not by the importance of these, but by their number. Thus the principle of composition becomes quantitative, chiefly, and one meets such discrepancies as 45 pages devoted to a comparative nobody like Tino di Camaino, while Giovanni Pisano gets but 77, and Arnolfo di Cambio claims a full measure of 93. One could wish, then, that Professor Venturi had had the courage to print running descriptions of a minor sort in smaller type apart from the general text. This would have made the work both more readable and more convenient for reference. As it is, it is a book rather for consultation than for consecutive reading, although many students will pick it up—with difficulty, for the volumes weigh about five pounds apiece—and peruse the chapters for simple pleasure. Wherever the subject-matter permits, the text is enriched by documentary and literary citation, being in this respect almost as remarkable a mine for the student as we have seen the illustrations to be. Again, barring the routine descriptive portions, the text is very interesting, having many of the qualities and defects of Symonds's equally discursive treatise on the Renaissance. Professor Venturi's History is indeed so packed with information, so thoroughly humanized in its manner, that one could wish it available in English for the larger public.

In dwelling upon a certain diffuseness and lack of proportion in this work, we have perhaps done it less than justice. As a matter of fact, there is nothing haphazard in the arrangement. The monuments are consistently grouped by artists and schools. Each chapter constitutes such an overhauling of its subject as has not been given for years, and the author never fails to have considerable contributions or retractions to offer to the accepted classifications. At every point a specialist may profit by following Professor Venturi. In fact, he has set problems which connoisseurship will hardly unravel within our generation. His conclusions are often as likely to provoke dissent as to gain acquiescence. In either case they are the product of an affectionate familiarity with the matter, yet in these chapters one feels constant misgivings as to the connoisseurship of the author. There is a shade too much of original investigation for what purports to be a history; untried positions are taken somewhat cavalierly, and the wise reader will be on his guard not to accept suggestions as facts—so persuasive is Professor Venturi's manner and so imperceptible his transition from tentative theory to certitude.

If asked to give examples of this matter, we might fall back on the traditional phrase, "too numerous to mention." But let us take merely one or two. The arguments (vol. iv., p. 113 ff.) for assigning the famous bronze St. Peter, in St. Peter's at Rome, to Arnolfo, seem quite nugatory. It is stated, for instance, that the draperies between the knees fall in angles more acute as they are lower. But this is a characteristic not of Arnolfo, but of drapery generally, which hangs upon two points. The ascription, in short, which is Wickhoff's also, is in itself plausible, but the arguments therefor are lamentably weak. In compensation, as it were, Professor Venturi adds to the work of Arnolfo the magnificent fragments of an Adoration of the Kings obscurely stored away in Sta. Maria Maggiore, Rome. The instance illustrates capitally his foibles as a connoisseur and his fine *flair* as a discoverer. Another capital instance of this combination of an alert and correct taste with deficient critical caution is the discussion of the massive heads which serve as brackets for the second row of arches outside the Baptistery at Pisa (vol. iii., p. 994 f.). These are unqualifiedly assigned to Nicola Pisano (or d'Apulia, as we must now call him) on the strength of their expressive and monumental simplicity. Supino's statement that these heads were pretty certainly done after the restoration of 1278, and probably by Giovanni Pisano, is met by an offhand conjecture that the restoration may, nay, must have begun above the arcade which these heads adorn. The note in which this plea is advanced (vol. iv., p. 169) is a marvel of inconclusive casuistry. Fortunately, the book contains the materials for correcting this surmise. One has merely to run over the plates of these fine heads to perceive that they are all tinged with a Gothic sentiment we should not expect to find in Nicola. More specifically a comparison of the splendid mask in the Pisan Museum (vol. iii., plate 885) with the head of a prophet at Siena by Giovanni Pisano (vol. iv., plate 120) is pretty nearly conclusive as to the derivation of the Pisan heads. Slight technical differences between the two faces are due to the fact that the figure at Siena is some fifteen years later in date. Let us say, promptly, that we do not hereby attribute the Pisan heads to Giovanni Pisano, but merely believe (with Supino) that they are of his school.

In all the volumes architecture is treated from the point of view of the painter or sculptor, and an almost complete absence of ground plans and structural sections is a serious defect. In many ways it would have been better not to discuss architecture as such, but merely the decorative arts. On the other hand, the minor arts—jewelry, ivory carving, enamelling, illumination are handled with uncommon fulness. These chapters present to the student most useful matter otherwise accessible only in scattered or expensive sources.

If we have seemed to dwell ungraciously on certain shortcomings of this great work it is because its positive merits will appeal immediately to every reader. Students simply must have it, and general readers can ill afford to pass it by. It would, in fine, be difficult to give another instance of so laborious a task conducted with so fine and sane an enthusiasm, and with so consistent a regard for the cultural aspects of the subject. Surely Professor Venturi in offering this book to the thousands who love Italian art may well say

Vagliami il lungo studio e il grande amore.

For a generation and more students and the cultured laity will honor that plea and bear his name in reverent gratitude.

The two papers of greatest general interest in the December *Burlington* are both concerned with Velasquez. Sir J. C. Robinson treats of that artist's earliest works, the *bodegones*, or still-life pieces (though they all contain figures), which are an eternal lesson to those who imagine that the great Spaniard's technical mastery can be acquired without his discipline. If we had similar examples of the work that Frans Hals produced before he was thirty, the lesson might, perhaps, be driven home and clinched, and we should see less of the sheer sloppiness that too often passes for freedom of handling with the half-educated artist, dazzled by the splendor of the later achievements of these giants. Herbert Cook writes of a "Rediscovered Velasquez," the interesting early portrait of the idiot Calabaças or Calabacillas, apparently one of the first painted of the series of portraits of Philip IV.'s court fools, and connected by Mr. Cook with one of the latest, the "Bobo di Coria." The resemblance of feature in the two portraits is not only "plausible"; it is, allowing for the difference of age, quite striking, and the presence in the later picture of the two gourds, or calabashes, may fairly be thought a rebus on the name by which the "booby" was commonly called. Dr. W. Martin's article on "How a Dutch Picture was Painted," is somewhat disappointing. The information he gives us is welcome as far as it goes, but it goes so short a way. On what sort of a ground was the outline in white chalk or "pencil" drawn, and what does he mean by a pencil? Was the first painting a *frotté* or a solid dead-coloring, and was the after painting done opaquely or with glazes? To such important questions we get here no answers. Other articles are on "Cretan Embroidery," "Lace in England Before the Time of James I.," "The Parisian Miniaturist Honoré" (thirteenth century), etc. The most important of the illustrations, outside those of the articles on Dutch and Spanish painting, is a lithograph by C. H. Shannon, "The Morning Visit," well designed and graceful in line, but without much grasp of the structure of the human figure.

Prof. Adolf Michaelis of Strassburg deserves the thanks of all who are interested in archæology for "Die archæologischen Entdeckungen des neunzehnten Jabrbunderts" (Leipzig: Seeman). After an initial chapter dealing with our knowledge of ancient works of art up to the end of the eighteenth century, he gives a clear and readable account, in ten chapters, of all the great discoveries in Italy, Greece, Egypt, and other Oriental countries from that time down to the year 1905. The book is without illustrations, but the author refers to the pictures in the well-known handbooks of Springer and Winter. A list of sources and a complete index further increase the usefulness of the book.

The account of Eleusis written in French by Demetrios Philios, director of excavations there from 1882 to 1894, has just been translated by Hamilton Gatliff under the title "Eleusis: Her Mysteries, Ruins, and Museum." (London: S. Appleton.) A queer state of things is revealed in the preface. There the translator disclaims any responsibility as to the historical and archæological opinions expressed by the author and then prints a letter from Dr. Philios in which he refuses to authorize the trans-

lation without the corrections made necessary by the new discoveries of the last eight years, which he himself now has no time to supply. Thus we are assured at the outset that the work is out of date; and a reading of the version, only 79 pages printed on thick paper, makes us wonder just why Mr. Gatliff desired to make a book of it.

Kenyon Cox is exhibiting at the American Fine Arts building in this city a large allegorical painting, "The Beneficence of Peace," which he has recently completed for the Essex County Court House, Newark. This composition contains seven figures, the charm of several of which Mr. Cox has seldom surpassed.

Paul Cornoyer is holding an exhibition of his recent work in Powell's Gallery, in this city. He reveals considerable freshness of vision and sureness of handling. For continued progress Mr. Cornoyer needs to add to the delicacy of his art a more assertive and enlivening accent.

An exhibition of water colors by F. Hopkinson Smith is open from January 7 to 26 in Noé's Gallery, in this city.

The American Art Association of Paris, organized in 1890 under the name "American Students Association," has issued an appeal for $300,000. Of this sum $75,000 is wanted for land, $100,000 for building and equipment, and $125,000 for endowment. The object of the association is to further the interests of Americans who are studying art in France.

Walter Appleton Clark, the artist and illustrator, died last Thursday in this city. He was born in Worcester, Mass., in 1876, and studied under H. Siddons Mowbray and William M. Chase. In 1900 he won a silver medal for his exhibit at the Paris Exposition; and in 1901, another for his work shown at the Pan-American Exposition. He was an instructor in the Art Students' League of this city, and he was also connected with *Scribner's Magazine*, for which he had designed a number of effective covers. Among the books which he illustrated is Percy Mackaye's modern version of Chaucer's "Canterbury Tales." F. Hopkinson Smith's "Oliver Horn," and John R. Spears's "Slave Trade."

The collection of paintings owned by H. S. Henry of Philadelphia will be sold at auction this month at the American Art Galleries in this city. There are seven Corots, among them Nymphs Playing with a Tiger and Ville d'Auray, from the Borie collection; three Rousseaus, two Jules Duprés, three Daubignys, among them Moonlight at Villerville Farm, and two Diazes. Tryon is represented by Le Retour à la Ferme, formerly owned by William Schaus; Going to Market, and The Farriers; Millet, by a pastel, The Shepherdess, and an oil, The Coming Storm; Decamps by The Horse Race in Rome, from the Secretan sale; Delacroix by The Springing Lion, Tiger and Serpent, Arab Mounting His Horse, and The Release of Princess Olga; Fromenti by The Falconer.

At Christie's auction rooms in London on December 15, the following drawings were sold: Birket Foster, Cologne at Sunset, £50; A Road Scene, with cottages and sheep, £173; T. S. Cooper, A Group of Cattle, £105. Among the paintings were the following: H. Fantin-Latour, Chysanthemums in a Vase, £162; T. S. Cooper, The Old Clachan of Aberfoil, £131.

Science.

The Nervous System of Vertebrates. By J. B. Johnston. 180 figures. Philadelphia: P. Blakiston's Sons & Co. $3 net.

For ten years the author of this work, professor of zoölogy in West Virginia University, has been widely and favorably known through papers upon the histologic structure and functional relations of the brains of certain lower vertebrates. In the present volume, the first (excepting the translations of Edinger's "Vorlesungen") in this country purporting to deal comprehensively with the subject, "the attempt has been made to give an account of the nervous system as a whole, to trace its phylogenetic history, and to show the factors which have determined the course of evolution. . . . The functional point of view, which is the chief characteristic of the present book, brings the treatment of the nervous system into close relation with the work of recent years on the behavior of animals." Most of the text is somewhat technical for reproduction here; examples of the author at his best occur on pp. 69, 150-153, and 173. He hopes that the descriptions will be "intelligible to students who have had one year of work in zoölogy or medicine, including the anatomy and embryology of some vertebrate." The reviewer, however, is skeptical as to the adequacy of such preparation for comprehension of considerable portions of the work. Certainly the book will be of great use to all engaged in instruction or research.

At the end of each chapter are brief suggestions as to "Demonstrations or Laboratory Work," and a "Literature" of the subject of the chapter. This bibliography of perhaps two hundred titles by one hundred and twenty writers would have occupied less space and been more convenient if brought together at the close of the volume; in the case of papers, also, readers are entitled to the numbers of the volumes and pages referred to. The index unfortunately lacks at least forty entries.

Most teachers as well as pupils would welcome a larger number of illustrations of representative brain forms. Of the illustrations, more than one-half are original. To facilitate comprehension many are schematic, but there is no reason to doubt their accuracy, especially in view of the coöperation of the managing editor of the *Journal of Comparative Neurology*, C. Judson Herrick. For combined instructiveness and artistic excellence special praise is due figures 145, 147, 148, and 150, representing, respectively, the fibre-tracts in the lamprey, shark, bony fish, and salamander.

It would be easy to point out omissions in the text and topics which deserve more adequate treatment. Mention should have been made of the exceptional secondary fusion of the olfactory bulbs in all frogs and toads and certain reptiles and birds; contrary to the implication on p. 31, in Ceratodus, the olfactory tracts are distinct. In the account of the callosum, there is no intimation that the "fifth ventricle" in man, and perhaps some other primates, is formed otherwise than as in mammals generally. Not infrequently, there is inadequate demarcation between statements and views that are well established, highly probable, and purely hypothetic.

Unlike some who affect to regard all nomenclature as trivial, ignore etymology, and leave their readers to infer their preferences, our author invites comment by the discussions of the subject in the preface and in the second chapter. Very commendable is his uniform designation of parts and developmental stages of the central nervous system by neural rather than medullary; the nearly consistent employment of dorsal, ventral, lateral, caudal, and cephalic, with their adverbial forms, dorsad, cephalad, etc., applicable alike to man and other vertebrates; and the occasional use of mesad, and of callosum, strietum, etc., without the superfluous corpus. In enumerating (p. 14) the definitive segments of the brain our author follows His and others in replacing the familiar prosencephalon by telencephalon, and metencephalon by the clumsy and inconsistent myelencephalon; but it is gratifying to note that he completely ignores the "isthmus rhombencephali," the intrusion of which, by the anatomist above named, constituted a piece of neurologic *gaucherie*. Yet satisfaction with certain features of the author's terminology is alloyed by his indifference to the labors of his predecessors in that regard. So far as appears, the sole basis for the consideration of that subject is the Basle Anatomical Nomenclature [B N A], the set of terms adopted at Basle in 1895 by the Anatomische Gesellschaft. The author of the present volume is an English-speaking anatomist; yet apparently he is unaware that dorsal, dorsad, etc., were proposed in 1803 by John Barclay, the preceptor of Richard Owen, and that, in 1877, Pye-Smith urged the desirability of single-word terms and dropped from thalamus the "misleading and cumbersome qualifiers." He is an American, yet apparently he is also unaware that these and other simplifications were definitely submitted to the American Association for the Advancement of Science in 1880. He is a member of that Association and of the Association of American Anatomists, yet he is apparently unacquainted with the several reports of committees of those bodies (and of the American Neurological Association), some of them antedating the [B N A]. The paper and presswork are excellent and typographic errors few; of these the most deplorable is pontial for pontile as the adjective from pons.

Last week the American Chemical Society (in connection with the American Association for the Advancement of Science) held its thirty-fifth general meeting. The members were guests of Columbia University and of the College of the City of New York. About one hundred papers, mostly on highly technical topics, were presented to the various sections. In addition, time was found for several formal addresses, luncheons, a subscription dinner, excursions to nearby chemical works, and a smoker at the Chemists' Club. On this occasion the retiring president, Dr. W. F. Hillebrand, of the United States Geological Survey, made

his final official address. The meeting at the new buildings of the City College was semi-popular, and was attended by many who were not members of the society. There was a discussion of the conditions at Niagara and of the possibility of success of the movement for the preservation of the scenic effect of the falls and the prevention of the further use of the waters for electrochemical industries. He was followed by Dr. C. F. Chandler of Columbia, who gave a most interesting account of the wonderful advances in chemical manufacture made possible through the use of the almost unlimited electrical power generated at Niagara. The production of aluminium in commercial quantities, artificial graphite, electrolytic sodium and caustic soda, calcium carbide, carborundum, chromium, manganese, and many other substances was considered by Dr. Chandler and illustrated by a complete display of samples.

E. A. Mann reports to the Sydney (Australia) section of the Society of Chemical Industry a newly discovered source of alcohol. There thrives in Western Australia a plant, Xanthorhœa Presissii, commonly called the "grass tree." As it has been of no known use, it has been allowed either to grow at will, or, if the land was needed for other purposes, it has been indiscriminately destroyed. Lately, small quantities of it have been successfully used as a source of picric acid ($C_6H_3N_3O_7$); and as the tree is resinous, attempts have been made to use it as a source of gum for varnishes. This gum, however, is good only for a very low grade of work. Charles Harper has tried interesting experiments on the interior core of the grass tree in making a cattle fodder. He has produced a "meal" which is not only an excellent fodder, but which contains carbohydrates of the following composition:

Reducing sugars (calculated as dextrose), 10.25 per cent.
Non-reducing sugars (calculated as cane sugars), 15.86 per cent.
Other carbohydrates, 24.76 per cent.

Owing to the presence of interfering substances, it was impossible to isolate pure sugars from the meal, but when a water extract was made from the meal, the sugar in solution was readily fermentable by yeast, and produced alcohol equal to 18.3 per cent. of the weight of the sugar present. Every bushel of the meal from the grass tree yields 1.24 gallons of "proof spirit"—49 per cent. alcohol. A bushel of rye or oats yields 2.08 gallons and a bushel of potatoes 1.26 gallons. The grass tree, therefore, will be a valuable addition to the present supply of substances used in making alcohol.

The next total eclipse of the sun occurs January 13-14, but no American expeditions have set forth to capture the corona when it flashes forth over the wilds of Mongolia and the Gobi desert. Russian, German, and French parties have already established stations along the track of anticipated shadow; but the difficulty of reaching good positions at this season, with the probability of wintry cloud, have deterred our astronomers from attempting the trip. Some months ago, Prof. D. P. Todd of Amherst College published the local conditions and predictions of this eclipse in the *American Journal of Science*, from which it would appear that the region between Tashkent and Samarkand is most promising. Jisak lies nearly in the centre of the track of totality. In this paper the indicated data have been calculated for eleven stations, and one other, unnamed, between Yarkand and Cherchen. Seventeen months after the last eclipse, August 30, 1905, this coming one is expected to show an entirely different corona, its type and figure completely altered. From one point of view, it is especially to be regretted that no American expeditions are in the field, since this is the last eclipse available for observation in five years. Unlike this 1907 eclipse, whose track lies wholly upon land, the eclipses of 1908 and 1911 fall entirely across the Pacific Ocean, with possible stations only on two or three difficult islands. Those in 1909 and 1910 are visible too near the North and South Poles for good observation, so that with the present month active eclipse observation must lie dormant until 1912, when Brazil will become the scene of the dark pathway.

Prof. Henry Fairfield Osborn of the American Museum of Natural History will sail for Egypt on January 5 to look for remains of prehistoric ancestors of the elephant in the Sayoum Desert. He expects to make excavations about seventy miles southwest of Cairo, not far from the Sayoum Oasis. Accompanying Professor Osborn as assistants will be Walter Granger and George Olsen of the Museum's staff. In 1902 members of a British surveying party unearthed the bones of a small animal, which, they were sure, belonged to a prehistoric elephant. Morris K. Jesup, president of the American Museum, hearing of the discovery, has organized the expedition, which Professor Osborn is to lead.

The *Geographical Journal* for December opens with an attempt by J. L. Myres to interpret the distribution of the Alpine races in Central and Eastern Europe, both in modern times and in successive periods of antiquity, in the light of palæogeography. Major Sykes concludes his account of a recent journey in eastern Persia, in which he shows the terrible state of decay into which the country has fallen. There seems to be no hope of a change for the better so long as the present rivalry between Great Britain and Russia exists. If an agreement between these Powers could be reached it is probable that the Persians themselves would pull their State out of its rut and create a new order of things. The remaining contents are notes upon a bathymetrical survey of the lochs of the Lochy Basin, Scotland, and an illustrated account of a visit to the active volcano of Smeroe, in Java.

The principal contents of *Petermann's Mitteilungen*, number ten, are an account by R. Payer of his exploration of the little known Jauapiry region in central Brazil, and an ethnographical sketch of some Caucasian tribes by N. A. Busch. There is also a lengthy review by K. Sapper of Dr. Böse's important work on the geology of the Mexican States, Chiapas and Tabasco. A map of the Acre district shows the new boundary between Brazil and Bolivia, and also that still in dispute between Brazil and Peru.

Herbert J. Webber, who has been in charge of the plant-breeding experiments of the Agricultural Department at Washington, has resigned in order to conduct work in plant biology at Cornell University. He has produced new varieties of long staple upland cotton, and has developed a hardy orange.

The death is announced of two distinguished Continental men of science: J. A. C. Oudemans, born at Amsterdam in 1827, professor of astronomy at Utrecht; and Prof. Albrecht Thaer, of Giessen, an authority on matters agricultural.

Ocean and Inland Water Transportation. By Emory R. Johnson. New York: D. Appleton & Co. $1.50 net.

The entire lack of general treatises upon the subject of water transportation will incline teachers and students of the subject to extend a warm welcome to this latest addition to the Appletons' "Business Series." The book forms a companion volume to Professor Johnson's "American Railway Transportation," and rounds out a more complete survey of transportation problems than any other English or American writer has yet given us.

The most valuable portions of the volume are the chapters devoted to ocean transportation. Upon this subject the author has drawn freely from Dr. J. R. Smith's "Organization of Ocean Commerce," but he has also gathered at first hand a large amount of other material never before available. He considers the history and present types of ocean carriers; water highways and terminals; the freight, passenger, mail, and express services; competition and combination in the industry; fares and rates; marine insurance; and governmental aid and regulation. His task is chiefly that of simple description, and his work may be accepted as a reliable and useful, if not attractive, manual upon the subject with which it deals.

Canals and inland waterways are considered almost exclusively with reference to the conditions existing in the United States. Professor Johnson has seen no reason to modify the general conclusion expressed by him in 1893, in his monograph upon "Inland Waterways," that it is worth our while to develop these auxiliary highways of commerce; but displays, perhaps, a little less enthusiasm upon the topic. For the Great Lakes, of course, and for some of the larger rivers, the question never admitted of serious doubt; but the canal presents a more difficult problem, and in neither this book nor his earlier monograph does our author contribute much to the elucidation of the subject.

Particularly useful is the treatment of competition and combination, and of cooperation between ocean and rail carriers. The reasons that have led railroads to reach out for permanent connections with steamship lines, and the results of such unions, are clearly set forth. Our author sees therein nothing injurious to public interests, and predicts that the coördination of rail and ocean service will become increasingly close as time goes on.

Far less satisfactory is his discussion of shipping subsidies. It is something, indeed, that a book written in

Pennsylvania should not contend that the only way to restore the American merchant marine to its former proud estate is to grant subsidies for the construction or the navigation of ocean-going ships, or for both. But while Professor Johnson is not misled by the sophistries of the subsidy grabbers, he does not give sufficient importance to the inevitable vices of the subsidy system, does not attach enough weight to the tariff upon iron and steel as a factor in the decline of our shipping interests, and exaggerates the economic and military advantages of a large merchant marine. He informs us, to be sure, that "the blood of our forefathers courses in our veins"; and quotes some winged words of President Roosevelt's about "the duty of bearing one another's burdens, not only as among individuals, but also as among nations." Noble sentiment, truly; but not enough to incline some of us to the burdens the subsidy hunters would have us assume.

The Censorship of the Church of Rome

and Its Influence Upon the Production and the Distribution of Literature

By GEO. HAVEN PUTNAM, Litt.D.

2 vols., 8vo each, net $2.50

Volume I. *Ready January 12th*

A Study of the History of the Prohibitory and Expurgatory Indexes, Together with Some Consideration of the Effects of State Censorship and of Censorship by Protestants

The author has attempted to indicate the influence exerted by the Censorship of the Church on the undertakings of authors, professors, publishers, and booksellers in each one of the European States in which the regulations of the Index came into force. In the final chapter is presented a summary of the conclusions reached by certain representative Catholics of to-day in regard to the present literary policy of the Church of Rome.

The Nation.

NEW YORK, THURSDAY, JANUARY 10, 1907.

The Week.

The first thrust of the probe into E. H. Harriman's railroad operations certainly struck deep. What was laid bare at the sittings of the Interstate Commerce Commission in this city last Friday and Saturday was, in its way, as sensational as anything uncovered by the insurance investigation. We get a better idea than we ever had before of that "higher sphere" in which Mr. Harriman moves. These revelations, suitably followed up, will put us in the way of understanding many a financial transaction of recent years that has been shrouded in mystery. What will most startle the public, we imagine, is not the disclosure of the enormous and unchecked power reposed in Mr. Harriman by directors and executive committees, abdicating their functions, but the discovery that the Union Pacific has been used practically as a huge speculating machine. We now see it buying and selling stocks like any Wall Street plunger, some of the purchases having apparently no relation whatever to the Union Pacific's immediate needs or future plans—except as its controlling spirits needed to influence the stock market or take vengeance on anybody who, like Stuyvesant Fish, got in their way. Few are aware that the investigation is made under authority of a statute twenty years old. It was the Interstate Commerce Act of 1887 which empowered the Commission to "inquire into the management of the business of all common carriers," and to "require the attendance and testimony of witnesses and the production of books, papers, tariffs, contracts, agreements, and documents." Thus are old instruments found adequate to new needs. And such reinvigoration of neglected laws is one of the most useful things that executive or prosecuting officers can set about. Much of the clamor for new statutes would be stilled if the old ones were put energetically into effect. When President Roosevelt's record comes to be made up by the historian, it may easily appear that greater praise will be given him for summoning forth the latent vigor of old laws, than for getting new ones written in the statute-book.

There had been intimations that Gov. Hughes's message to the Legislature would be "sensational." It is not, unless it be sensational to display a love of justice, with a desire to make the government of the State clean, vigorous, and efficient. In coming out unequivocally for a speedy recount of the ballots in the New York city Mayoralty election of 1905, Gov. Hughes shows the sagacious and just quality of his mind. As the Governor says, this is not a question of either parties or personalities; but when doubt clouds the title of a public official chosen at a time when popular passion runs high, it is of the utmost importance that the whole transaction be laid bare, every allegation met, every suspicion quieted. Only so can the Hearst charges be dissipated; while, if they prove to be well-founded, we cannot know the fact too soon, and act accordingly. The impartiality with which Gov. Hughes deals with elections may be seen in what he says of the need of checking corruption. His specific recommendation of a law "imposing a limitation upon the amount that may be expended by a candidate to procure his election" looks very hard at the scandal of an expenditure of $250,000 by Hearst. In urging the amendment of our ballot laws, with the abolition of the party column and the adoption of practically the Australian system, Gov. Hughes takes advanced but sensible positions. So, too, his recommendation that the direct primary may be given a trial, here and there, will please those who see value in this method of political reform. It is, however, the Governor's recommendations regarding the State Railroad Commission which will attract most attention. That refuge of incapable politicians Mr. Hughes proposes to abolish outright. This is an open challenge to the bosses of his own party, who have so long had that and other pickings as their own. The Governor would have a new Commission, to replace both the Railroad and the Gas Commissions, whose jurisdiction and powers should be accurately defined by law, the whole to be made a Public-Service Corporations Commission. In creating it, the idea is to make State supervision and regulation a reality. The details of his proposals we cannot discuss; but they evidently come from a man in earnest, who has thought long and deeply on the subject, on many aspects of which he speaks as an expert, and who is bent on marking his Administration by reforms that will not be spectacular, but which he hopes to make thoroughgoing and beneficial.

Commissioner-General F. P. Sargent, in his annual report, gives countenance to the two favorite propositions of those who would restrict immigration: First, that the bars ought to be put up to prevent our getting more aliens than we want or need; and, second, that the Government should deal sternly with the pernicious activities of individuals and corporations that have been secretly hiring labor abroad. That is the anomaly of the whole immigration agitation. It proceeds on the premise that we are getting too many laborers, and yet it cannot blink the fact that a most urgent demand for laborers exists in many sections of this country. If a million foreigners are coming here every year to take jobs away from the American workman, bread out of the mouths of his children, why is it necessary for large employers to plot and plan, send secret agents to Europe, and surreptitiously pay the passage of foreign workmen? Of course, unequal distribution of arrivals is at the root of our difficulties, and this is a side of the problem which organized agencies are only beginning to attack systematically. The statistics of this year's report show precisely the same tendencies as last year's, a gross increase in the mass of immigration, accompanied by a further falling off in the arrivals from Ireland, England, Germany, and Scandinavia. The Jewish, Hungarian, and Italian immigration evidently has not reached its limit; but the "peril" thus far is confined to the few centres where the arrivals are for the time congested.

If good institutions may be perverted to bad ends, so may foolish ones be reclaimed for wise purposes. The Bureau of American Republics is a case in point. Taken up as a kind of salvage from the wreck of the first Pan-American Congress, and kept in feeble life as a means chiefly of providing salaries, it is now about to be erected into a symbol of international peace. That is the intent, at any rate, of Andrew Carnegie's gift of $750,000 for a permanent building at Washington to house the Bureau; and we hope and believe such will be the effect. It is a fitting sequel to Secretary Root's tour through South America, with his far-sighted efforts to make real the idea of the family of nations. President Roosevelt happily characterizes the project as a complement to the Temple of Peace at The Hague.

One of the alternative proposals by the ship-subsidy people is what they call a "cargo" subsidy. This is actually to depend upon freight carried, not passengers or mails or speed. Were the plan strictly applied, with a bounty direct upon every ton of freight sent abroad in American bottoms, we should know exactly what we were spending our money for; and should be able to test the familiar plea that, once the business got started, the bounty might safely be cut off. But Canada's experience at present shows how hard it is to shake

off the bounty leeches when once they are allowed to fasten upon the Treasury. As is well known, the Canadian Government has been paying a bounty to manufacturers of iron and steel. The gift has been made outright, instead of, as with us, disguised as a tariff duty. In this way, nearly $10,000,000 has already been expended. Under the law, these bounties were to cease at the end of next June. By that time, the Canadian iron and steel business was to be able to go alone; but a bill is now before Parliament to extend the bounties for four years more. The Government is favorable to it, and the Opposition dares not attack it. Thus the Dominion is in for a further outlay of from $15,000,000 to $25,000,000 to help along a private industry. We in the United States would do well to observe that there are no tracks backward from the lair of the bounty lion.

"How we are governed," used to be a stock title for elementary works on civil government. "How we govern," is a title that, we fear, would never sell a book, for nobody cares very much how we regulate the affairs of our various dependencies. But the brief summary which the correspondent of the Indianapolis *News* at Washington has made of our colonial "system," if system it can be called, might find a market in the columns of a comic paper, were it not for the serious issues involved:

> The War Department governs the Philippines, the canal zone, and Cuba, and, with the assistance of the State Department, keeps an eye on Santo Domingo. The Interior Department governs Hawaii, Alaska, and the Territories within what is called the boundary of the United States. The islands of Guam and Tutuila are governed by the Navy Department. Porto Rico is practically without any protecting department at its back. The officers of the Porto Rican Government report to the Interior Department, but that department has no responsibility for the government of the island. Hawaii, Alaska, and Porto Rico each has a delegate in the House of Representatives, as have the Territories of Arizona and New Mexico, but this delegate has no vote. He may introduce bills and he may speak, but he cannot make a motion. The Philippines, Guam, and Tutuila and the canal zone are not represented in the legislative body at all.

Alaska is really the lucky member of the family, having a brand-new delegate at Washington this winter. But one boon is apparently enough for a Congress to grant. Neither the Porto Ricans nor the Filipinos are likely to receive this winter any of the favors they ask.

Prof. Hugo Münsterberg of Harvard must, as we read the cable dispatches from Germany, have been grievously misreported. He is quoted, for instance, as declaring that the sending of James Bryce as Ambassador of Great Britain is likely to make Baron von Sternburg's task in Washington more difficult, "inasmuch as Mr. Bryce enjoys the sympathy of all Americans, and must shortly take a foremost place in diplomatic life in Washington." Such nonsense could surely not have fallen from the lips of the gifted author of "Die Amerikaner." He cannot be ignorant of the fact that, in all England, Germany has had no warmer friend than James Bryce. He has never failed to work for friendly relations, whether in the Government or out of it. Mr. Bryce it was who welcomed the German journalists to London last summer in an admirable address. His name was appended to the appeal for concord between the two nations, which was headed by Lord Avebury. Professor Münsterberg is further reported as saying that the improved relations between the United States and Germany are due, for one reason, to the "close familiarity of Baron von Sternburg with President Roosevelt"; Mr. Bryce will end this close familiarity by his mere appearance in Washington. Since when has modern diplomacy become a matter of individual friendship with the head of the state to which a man is accredited? Relations between great countries are not affected by the outcome of horseback rides or tennis games, save in novels of the type of "Mr. Barnes of New York." It is the spirit in which one nation treats another that counts, and the readiness to settle differences of opinion like sensible, well-mannered people. Any one who stops to think of the ties that bind this country to Germany will find them innumerable, and of the closest. They concern our business relations, the presence among us of a large German-American population, and our kinship in matters musical, artistic, and educational. Can those ties be loosened because Mr. Bryce, long denounced by jingo Englishmen as a pro-German as well as a pro-Boer, is to represent England in Washington? Professor Münsterberg must recall that in the days when Cleveland and Harrison were in the White House there was no Sternburg and no Bryce at Washington; yet no one talked of unfriendly relations between the United States and Germany, or even dreamed of them.

"Talk about commercialized politics," said a civil engineer the other night, "or the commercialized theatre, or press—why, none of them can hold a candle to commercialized engineering." In explanation, he averred that his profession is suffering from the evils of monopoly. A few great corporations not only control nearly all the work done, but dictate the technical methods to be followed. The result is the raising of almost insuperable barriers to new men and new ideas; the practice becomes routine and stodgy; the absence of real competition works the same harm to engineering that it does to any other pursuit. Certainly it is an important question which is raised by this complaint from within the engineering ranks. We know that this point of view is not isolated. Many engineers would agree in general with the impetuous critic whose language is cited above, even if they might regard his indictment as too sweeping. On the professional side, it is a matter for engineers themselves to discuss. What the relations of special talent should be to employing corporations, what the obligations of a man to the severe demands of science when they are in conflict with mere money-making—these topics can be most fruitfully debated by those set for the maintenance of a high standard of engineering ethics. But the public is deeply concerned in the practical effect of it all. If engineering has become so commercialized that we are not getting the best possible work, it is of the highest consequence that we should know the causes and find, if possible, the remedies. To get the backing of the big corporation, you must previously find favor with a certain firm of engineers, and also make arrangements to float your securities through a given bond and stock concern. Monopoly, we may be sure, will work its deadening effects in a profession as fatally as in trade or manufacture. If pressure from without does not compel the adoption of the most advanced methods, and the putting out of the finest possible product, professional pride will prove an inadequate motive.

Certain schoolboys say they will fight in the courts the movement—now widespread—to suppress secret fraternities in high schools and academies. At the "national conclave" of the Phi Delta Kappa, held this week at San José, the valorous president announced that funds were being raised to carry a test case to the courts if the school authorities of Portland and San Francisco adhere to their announced plan of driving out the organization. We fancy, however, that sensible parents may step in with a decision sustaining the teachers. The high school fraternity is becoming a public nuisance. The boys, of course, are aping their older brothers in college. They have their jewelled badges, their grips, their pass-words, their initiations, their meetings, and all the other pretentious flummery of the college fraternity. They spend their time, energy, and money on dances for their girl friends, and on "national conventions." The fraternity system has many grave drawbacks in college; in school it is intolerable. Debating and literary societies, unless under pretty strict supervi-

sion, are subject to serious abuse; but the fraternity is taken with such pathetic seriousness by the lad in his teens that in many towns the only way to deal with it is to abolish it, on the simple and sufficient ground that it interferes with legitimate school work.

The failure of Prince von Bülow's manifesto to achieve its purpose of solidifying the opposition to the Clericals should surprise no one. The radical Liberals are too devoted to their principles to be caught by such chaff. Those leaders of the Clericals who assert that the new Reichstag will differ but little from the old have reason for their belief. The most that could possibly be done would be to deprive them of thirty seats, four of which would go to the Poles, to whom Von Bülow is also opposed. No one really expects that any such defeat will overtake the Centre; if it loses ten seats many persons will be surprised. Among the Social-Democrats, twenty-seven seats may be endangered; but there are others which the party hopes to capture for the first time. There is a possibility that the Liberal Left can, with the Socialists, win sixty seats from all the reactionaries, of which thirty would go to the Liberals; but to accomplish this the Liberals will have to display an aggressiveness lacking of late years, and have the aid of what we should call a "tidal wave," of which there are now no indications. The country as a whole is eager for more liberal and progressive government, for social legislation of all kinds, for a Reichstag which shall really be a responsible parliament, with a responsible Ministry. It wishes an end of government by the selfish protected interests and the reactionary Clericals, and desires, for one thing, ballot laws by which the will of the people may properly be registered. Meanwhile, many a voter who is not a believer in Socialist doctrines supports the party of Bebel as the best way of expressing his desire for greater freedom.

Following the appearance of a Constitution for the Transvaal, comes one for the Orange River Colony. According to a statement of Winston Churchill in the House of Commons, the letters patent will probably be issued before the reassembling of Parliament after the holidays. The issues involved in the grant of self-government to the colony south of the Vaal are, of course, much slighter from the material point of view than those of its northern neighbor (the white population in 1904 was only about 143,000, and there are no mines); but there is interest in the fact that this is the first instance of responsible government being bestowed on a dependency with an overwhelming non-British population. Of the outcome, the Colonial Under-Secretary had no fear. He believed that the Boers had abandoned the old ambition to create in South Africa a united state independent of the Crown, and that they had accepted that other ideal which was represented by the Dominion of Canada and the Commonwealth of Australia. To refuse a constitution on the ground that the Dutch would command a certain majority, he thought would be "an insult, a fatal blunder, and a breach of the spirit of the terms of peace." The upper chamber is at first to be appointed. The lower house, of 38 members, is to be elected on a voter's basis and by manhood suffrage, one member for every 1,058 adult males.

An interesting phase of the contemplated substitution of Southampton for Liverpool as the English terminus of the White Star and Cunard Lines, with Cherbourg as a port of call, is the part such a step would play in strengthening the much-discussed Anglo-French *entente*. In establishing their Channel service, the two British lines are reported to aim at entering into competition with the German lines for the rich passenger traffic between this country and the southern part of the Continent, which goes largely by way of Cherbourg. That port is sure to profit by the new move on the part of British enterprise, and closer commercial relations, followed by a corresponding increase in political friendship, should follow. As it is, the question of facilitating trans-Channel communication is being actively discussed in both countries, and among other measures the Channel tunnel scheme has been revived. A bill for its construction has been recently introduced into the Commons, but has been received by part of the press with distrust, based on fear that it would involve sacrificing the impregnability of the kingdom. Thus the *Spectator* suggests, instead, a line of train-ferries, which would meet many of the needs the tunnel is intended to cope with, including the cementing of the *entente*. The diversion of American traffic to Cherbourg by means of British ships would tend towards the last desired result.

The death of Stefan Vassilievitch Anikin, founder of the Group of Toil in the first Russian Duma, and one of the ablest Radical members of that body, removes the second of a triumvirate of leaders who were chiefly concerned in directing the revolutionary movement among the peasants. These were Anikin, Onipko, and Zhilkin, of whom the second is now a life prisoner for complicity in the last Kronstadt uprising. To the popular eye it was Alyadin, of the powerful voice and English clothes, who stood out boldest among the peasants in the Duma; but it was the other three who carried on the unspectacular work of organization and agitation. Before their advent there had existed a definite cleft between the peasant masses and their intellectual but doctrinaire leaders. This, Anikin and his associates were largely successful in bridging. They brought agitation down from the lofty realm of theory and harmonized revolutionary principles with the peasants' immediate needs. On the future of the revolutionary movement Anikin's death, we believe, will exercise no appreciable effect. That movement has gone far beyond the possible control of any man such as Russia has so far produced. Onipko in prison, Anikin dead, Alyadin a fugitive, Milyukoff still under the ban, Muromtseff out of favor—the new Duma will still find voices sufficient to its grievances and demands.

Practically extinct in America, the "dime novel" is said to be ravaging Germany. According to Johannes Siebert, most German boys prefer an Indian story to any other book. Their hearts beat fast as they read the adventures of trappers and settlers, gaze with awe into wigwams, and hear the howls of the wolves. This interest began with the publication, in 1823, of "The Spy," by Cooper, followed soon by his other stories. Since these novels, however, did not seem quote suitable for boys, they were *bearbeitet* for the young folks. Later, the adapters began to construct their own plots and incidents, out-Coopering their model in his most adventurous moods. The results, says Siebert, are terrible to contemplate. There are in Germany about 500 "Grosso" firms, with 3,000 travellers, to sell such books. An edition of 700,000 is not an unusual thing. They are adorned with glaring illustrations, and one may buy such a volume of perhaps 250 pages for less than a dime.

Some of the ingenious tricks by means of which Italy, notwithstanding strict legal enactments against the sale of art treasures to foreigners, is being despoiled, are described in the *Nuova Antologia* by Professor Valentin. The valuable paintings of the Galleria Sciarra were smuggled out of the country by an operetta company, which took them along, rolled up as part of its "stage decorations." They, of course, received no special attention. A Botticelli was exported in the stuffing of a sofa; another old master was rolled round an umbrella and concealed by its cover, while the famous cope of Ascoli (which J. Pierpont Morgan subsequently restored) had been taken out within an alabaster column. The officials are lax in inspection even in Rome, where the "forestieri" frequently manage to acquire mementos under the very eyes of the custodians, especially in the Forum.

SOUTHERN LEADERSHIP.

Edgar Gardner Murphy, himself a Southerner of note, has contributed to the *Sewanee Review* a timely article on "The Task of the Leader" in the South. In this matter the whole country has a vital interest. What is to be the attitude of public men in the old slave States towards the race problem? Is it to be merely destructive, after the manner of Tillman and Vardaman, with the apparent object of reducing the negro to a condition of vassalage, or exterminating him? Or is it to be a desire to do justice? Is it to perceive that the presence of masses of uneducated and undisciplined people is a menace to be met, not with the revolver, but with statesmanlike and constructive measures? Upon the answer to these questions depends to a large degree the domestic health of the nation.

Within the last two decades the South has undergone an amazing industrial development. The diversification of its industries has proceeded swiftly, and has been followed by an increase in general prosperity such as this section never knew before. This economic revolution has been accompanied, as most Northerners are now aware, by a change in the character of Southern leaders. The poor white has come into his own; or, as Mr. Murphy puts it less bluntly,

> The older leaders and their older leadership are yielding place to new in a white population, which has not so largely the qualities of a gentle culture, which has never known the negro at his best, and which is tasting for the first time the intoxications of industrial and political ascendency.

Can this new leadership be trusted to grapple with the problem in a really scientific spirit? Will it apply itself with a single mind to the transforming of the colored masses into orderly, contented, educated, and industrially valuable citizens? And what means will it employ to attain these ends? Here is the crux. Every one knows that the South has men capable of constructive work of the highest kind. Is the solution of its specific problems to be intrusted to them, or to the politician who is as eager to keep alive the race troubles as the Northern demagogue is to set one class against another?

Mr. Murphy belongs to the group of Southerners who feel the call to aid in moulding public opinion along the lines of calmness and justice. In the paper before us he has spoken with ability and fearlessness. He is under no misapprehensions as to what is needed, or as to what is at the bottom of the recent increase in race hostility, and his words deserve the widest publication. He longs for the day when his section of the country may "be occupied with something else beside the negro," and he adds:

> We shudder at "negro domination." Yet the man who is really putting the negro over us, who is enshrining him like a hideous tyranny within the apprehensions and imaginations of our children, and who places him as a spectre of gloom by every fireside, is not the demagogue of the North, but the demagogue of the South; magnifying every incident of the long, unhappy quarrel of the sections, harping upon every symbol of the estrangement of our races, and forcing us into so morbid a preoccupation with our peculiar and provincial difficulties that the South, if his guidance became supreme, would become perforce not only the land of one party, but the land of one idea, of one interest, of one subject, because the land of one all-consuming passion.

Fortunately, Mr. Murphy sees a change coming, and this despite the recent humiliating spectacle offered by Hoke Smith—turning demagogue in order to win the Governorship of Georgia. He finds the industrial rise of the South is bringing gain as well as loss, is doing much to free the South from its isolation. Southern universities are speaking with more freedom and directness, are emancipating themselves from the domination of politicians, reactionary ecclesiastics, and unenlightened public sentiment. The reconstruction of the common school system also makes for a sounder public opinion. Mr. Murphy finds, too, that, in practically every State, younger men, representing lofty ideals, are beginning to take an active part in political life. They are not numerous enough for immediate success, and they must yet face many defeats before achieving a victory. Indeed, Mr. Murphy exemplifies in himself, as did the late Chancellor Hill of the University of Georgia, the new leadership, which, he contends, "confident and controlled, will yield no place to that feverish sense of insecurity which is so doubtful of its institutions that it mistakes madness for zeal and murder for justice. . . . Its preferred mood is not tragedy, but sanity."

As for the negro, Mr. Murphy makes a masterly and unequivocal appeal for justice. We can do no better than to quote him again, as proof that this is the kind of leadership the South needs:

> Here is this colored man, whom you and I know to be "a good negro"—industrious, sensible, self-respecting. He is making his way. He counts for something; we know him and we know we can trust him. He is right here with us on the soil of the same State. Do we want him? We do. Do we want him to stay? We do. How shall we deal with him? Treat him justly. Give protection to his life and property. Give his children a chance. Let *him* vote. It is his due, and it will help other negroes to be like him.

PROSPERITY AND MISGIVING.

In the comprehensive review of the financial situation from a dozen great money markets of the world, published by the *Evening Post* on the last day of the year, the noteworthy fact was the unanimity with which assertion that prosperity is to-day unprecedented was coupled with a note of warning or misgiving. Various reasons, most of them vague enough, were assigned for this feeling; in general, the dominant idea appeared to be that trade activity had reached such a pitch that neither capital nor transportation could keep pace with it. In these suggestions of doubt one might trace much the same sentiment that inspired Secretary Shaw to advise prayers against any greater prosperity, or James J. Hill to declare that the railway situation of to-day threatens commercial paralysis. Both of these intimations were based on conditions which nothing but extraordinary prosperity could have created.

The *Journal of Commerce* published last week the views of numerous economists and practical financiers on the question whether we are approaching a financial crisis. With prosperity admittedly at high notch, one might imagine such an inquiry to partake of the absurd; but the experts to whom it was put take it seriously enough, and do not agree in their answers. Prof. W. G. Sumner of Yale asserts that in the economic outlook he "cannot see the slightest cause for apprehension." "In times of great prosperity," he proceeds, "speculation becomes over-confident and rash. I see no signs of any such error now." Prof. J. Laurence Laughlin of the University of Chicago is not so sure. His comment is:

> In conclusion, there seem to be no immediate evidences of a crisis in the very near future. But no reform of our currency, no combination of large financial interests, will prevent the inevitable overexpansion in due course of time, which must finally be followed by liquidation. Even now the materials for overconfidence may be gathering. The speculation in real estate, which is usually the latest phenomenon of a high range of prices, is already more or less apparent.

Prof. J. B. Clark of Columbia, remarking that if the familiar periodicity in panics is observed again, 1913 would be the year for the next one, concludes his review by predicting that "recklessness now—general infection with the virus of a speculative fever—will cause the crisis to arrive at its scheduled date and with all needed severity."

So much for students of economics; the practical men display similar variation of opinion, with, however, more unanimity in doubt. The most optimistic view is that signs "point toward continuance of the prosperous times at least for another year." Stuyvesant Fish, on the other hand, goes so far as to declare that "in point of time a great industrial crisis is due, and there are many indications of its being imminent." Among these are the dearness of money because of high prices, waste of

capital, and decreased efficiency of labor; absorption in Wall Street speculation of an undue proportion of the country's capital, and growing distrust by the people of methods prevalent in the investment markets. Taken as a whole, the statements plainly show that all classes of the community are pervaded with the idea that a change of some kind may not be far distant.

What is to be said of this? First, no doubt, that experienced men accept it as an axiom that profits and volume of business never expand indefinitely, and that a check is apt to come when, as today, the "boom" has outstripped existing facilities of production—labor, transportation, and capital. To that extent, the judgment of practically all trained observers in the business world would doubtless be in unison. It is when the nature and severity of the possible reaction are considered that agreement ceases. "Trade reaction" and "industrial crisis" are by no means synonymous terms. We passed through an unmistakable trade reaction during the second half of 1903; the surest sign being that in the period monthly iron production was cut down one-half, in spite of which reduction unsold supplies increased nearly half a million tons. Yet this was scarcely a financial or economic crisis; nor could that term be fairly applied to the similar contraction of business during 1900. In neither instance was the great forward movement, characteristic of the first half of the "cycle of prosperity," seriously interrupted. Such a crashing-down of the credit structure as occurred in 1893, for instance, is a different matter.

Reactions such as those of 1903 and 1900 will be frequent; not improbably something of the sort is not far ahead. To discern sure indications of a severe industrial crisis is not so easy. More people than Mr. Fish have been made uneasy by the abnormal state of the recent money market; and both home and foreign bankers have ventured the assertion that these phenomena, taken by themselves, closely resemble those which preceded the troubles of 1873 and 1890. On the other hand, actual impairment or abuse of credit, as distinguished from mere overstrain on capital, was really the fundamental danger sign of those two years. That overstrain appeared as fully in commercial as in purely financial affairs: an entire community had not only been indulging in extravagance, but was exceptionally involved in debt. In this respect it may be questioned whether the present situation provides a parallel. For the rest, Professor Clark is probably wise in holding to the "twenty-year interval" as a means of taking our present economic reckoning. If tradition be followed in this generation, we still have half-a-dozen years to wait before the first-class crisis.

THE TROUBLES OF PUBLISHERS.

In the *Contemporary Review*, John Murray takes the so-called "book war" now raging in England as an occasion to bring out a number of elementary truths connected with tho making and uttering of books. The article is a plea for the publisher, but only in a reasonable and dignified way. Its conclusions are rather familiar: that the publishing business is largely a speculative, laborious, and unthankful one; that profits are not what the man in the street or the man with the manuscript imagines they are; and that in the never-ceasing quarrel between publisher and author there is justice on both sides.

Mr. Murray really seems to prove his case that the average publisher is no mediæval baron; but certain figures and facts he quotes give rise to the doubt whether the publisher, like the mediæval baron, supposing we were to come across one now and then, is not an anomaly in the commercial world. The publisher does not take advantage of the successful author or of the unsuccessful author; but is he not the medium by which the unsuccessful author takes advantage of his more fortunate comrade in letters?

> How many novelists' books sell to the extent of over 10,000? Probably not more than a score or two, all told; and the larger number of new novels do not sell beyond 1,000 or 2,000. In such cases the result is very different. To produce 1,000 copies of an ordinary novel costs about £85; add, say, £50 for advertising, and we have a total of £135. If the whole edition be sold the gross yield is £148, leaving £13 for author and publisher; 2,000 in like manner would cost, with advertising, £160 or £170, and would yield just over £300.

Now, all novelists are divided, as Gilbert K. Chesterton might argue, into two classes, those whose books sell, and those whose books do not sell. Sell, in this instance, would mean 10,000 copies and over; failure to sell would mean 1,000 or 2,000. The first means profit; the second, absence of profit, or actual loss. How, then, does the publisher make his living? Publishers have been known to live in comfortable houses, to wear fine raiment, to join good clubs, to play a useful part in public movements calling for considerable material sacrifice, to go abroad for a part of every year. It seems hard to escape the conclusion that the lucky "score or two" of British authors whose books sell above 10,000 not only contribute to maintain their publishers in that station of life to which they may be called, but actually make up the losses connected with the publication of all the books of all the unsuccessful writers. Is the publisher, then, an institution for robbing Hall Caine to pay John Smith? And why should Winston Churchill (speaking quite impersonally) bear the cost of whole department-store counterfuls of novels about the Carpathian Mountains, and Western heroes with Gibson chins, and undergraduate Samsons slaughtering corporations with the jawbone of a boss? What would happen to the publishing business if Robert Chambers should decide to print and distribute his own novels, without any intermediary?

The answer would be that the author could not call to his aid the advantages the publisher at present possesses for marketing his wares. It needs experience to decide what the public taste demands, or else to create demand. That is, there is the deciding on the availability of a manuscript, and there is the advertising of the finished product. Yet, what does Mr. Murray say on these points?

> A book becomes popular (in the sense of large sales) when it comes to be talked about in society, at the clubs, and in general conversation everywhere. But how is this renown to be achieved? Not by advertising alone; not by the notice of any distinguished person alone. but by some subtle combination of all these forces which no man can control.

The writer quotes the example of Mr. Gladstone, who "took the greatest pains to promote the success of three books published by my firm . . . by means of reviews, of speeches, and of personal recommendation." The firm lost about £600 on one work, and made about £50 on the other two. And again:

> Mr. Gladstone's world-wide reputation made his pamphlet on the "Vatican Decrees" sell by tens of thousands; but even his personal popularity could not make his translations of the Odes of Horace sell by hundreds.

And when we come to the value of the publisher as an Author s Guide to Public Taste, we find this to be Mr. Murray's opinion:

> The man who could foretell with any approach to accuracy of detail the prospects of one new book in ten would be worth his weight in gold. He has not yet appeared above the horizon.

Yet there is little doubt that if authors were to take charge of advertising their own books they would make as good a showing as the publishers at present succeed in making. Why is it that most book advertisements are so infinitely below the breakfast-food advertisements? The man who writes about the food displays a richly modulated mood that changes with every theme. Age cannot wither nor custom stale his fifty-seven varieties. But when it comes to books, it is too often the "rich, red blood" of the mountain, or the "salt tang" of the sea, or the "winsome grace" of the girl who was born in Montclair and is heiress to the throne of Fakonia. Even a dignified subject will not save the book advertiser. We have in mind an elaborate work of reference that

really deserves the good reputation it has gained, which was ushered into being as a something made up of any number of "thousands of pages," and any number of "millions of words," embracing a record of the "History of the World from the Day of Creation to the Death of Paul Leicester Ford." Assuredly, an author, academic unworldling though he might be, would warm up to praise of his own work in loftier and more persuasive terms.

THE PROBLEM OF OLD LETTERS.

A French writer, Lucien Descaves, has been discussing the question what to do with the letters which one receives from prominent people. Shall we burn them or keep them? No third choice is commonly supposed to be left open; but M. Descaves shows the possibility of a *tertium quid*. This he indicates by telling of a novel plan of a friend of his, who had picked up a lot of interesting letters in a package of miscellaneous old manuscripts sold at the Hôtel Drouot. These letters had come from the pigeon-holes of the editor of an influential Paris newspaper. They had been written to him, in the course of forty years, by many whose names were famous in art or literature or politics. There they were, all carefully arranged in alphabetical order, docketed, annotated. Thiers, Louis Blanc, Jules Ferry, Rochefort, Heredia, Loti, Maupassant—these were but sample signatures. A veritable *trouvaille!*

What was the lucky purchaser to do? He was certainly under a terrible temptation. Some of the letters, he at once perceived, were of a sort to impair, if not destroy, the reputation of their writers. Others would, if put into print, cause distress to the persons who wrote them, or to their families. Still others were of a nature to offend no one, while having real significance for the literary and political history of the times, though the hour to publish them had clearly not arrived. Well, M. Descaves's friend elected a course as unusual as it was honorable. The letters that would surely injure reputations he sent back to their authors, or to the authors' legal representatives. Those that might merely annoy were likewise returned. The remainder he kept for—"ma foi, I do not well know. I will see about it. There is almost a politico-literary history in it."

Such delicacy is worth signalizing in an age which is given to scraping old letter-boxes bare. France has been no less a sinner in this respect than Germany or England or our own reticent country. An authentic letter, exposing some great man's weaknesses, blasting some one's fair repute, revealing base motives in some public man, tearing open old wounds, renewing ancient quarrels, and reviving forgotten scandals—this surely constitutes the great modern besetment of writer and publisher. "Break every seal," Tennyson might well assert to be the motto of biographer and editor to-day. No land, no press, is exempt. Sainte-Beuve deplored the "culte des vieux papiers" which had been set up in his day, with the result that "everything is printed." What would he have said of some of the monumental indiscretions that have been committed since? The sale and publication of the Gambetta love-letters were not prevented by the questionable example set by Browning's son. It would appear that any grandniece of a famous man is nowadays under a peculiar obligation to bring to light any screed of his reflecting upon him. We have just seen with what a relish Lord Lovelace has printed a letter calculated to damn the memory of his grandfather! He would not even make for Byron the excuse that Scott did, namely, that he "managed his pen with the careless and negligent ease of a man of quality."

Letter-writing is not so entirely a lost art that the problem of disposing of old letters does not still press upon us. Even prudent politicians continue to write imprudent letters, forgetting the advice of Martin Van Buren—who had doubtless learned in suffering what he taught in song—"Walk eleven miles rather than write a letter." Once he has written, the statesman who wishes, too late, that he had expressed it differently, has various recourses. He may adopt the Blaine tactics of appending, "Burn this letter." He may beg "Dear Maria" to return any letters of his which she may have kept, and which were written to show, as Mr. Dooley says, that "an Irishman doesn't lose annything by bein' a Raypublican." Or, he may imitate Lord Palmerston, who once made an editor a consul for possessing "inconvenient information."

It is, however, the literary use of old letters, not the political, which oftenest raises nice questions. If there is nothing more interesting than biography, in biography there is nothing more interesting than self-revealing letters, written without thought of publication. But precisely there the difficulty comes in. Is one at liberty to publish what the original writer plainly regarded as private? And if we may ignore his feelings, on the ground that he is dead, are we to give no heed to the feelings of others, which may be lacerated? It is all very well to say, Let the truth be known, but not all truth is fit to be made known. Usually, we imagine, the problem resolves itself into a question of less or more; of proportion and selection; of careful weighing the value of information about those who are gone from earth, as against the mischief of hurting those who are still on the earth. A wise general rule would be to apply to the publishing of old letters the recognized tests of good breeding. One of them is the shock which it gives to a well-bred man to find that he has caused pain to any one. Too much biography is written on the theory of Dr. Johnson that the aim of a certain writer was to "give pain to somebody"; and for giving pain there is nothing like dragging out an old letter, which perhaps should never have been written, and certainly should never have been printed.

THE AMERICAN LANGUAGE AGAIN.

Perhaps spelling reform is responsible for a revival of the notion that a linguistic secession is impending, and that presently the speech of America will cease to be called "English." At any rate, the press on both sides is having more to say than usual about differences of usage. As typical of this discussion, we may take an article by Enid Campbell Dauncey, which Littell's *Living Age* reprints from the *Monthly Review*. For a parallel to the present evolution, she goes back some thousands of years, recalling that, "when the Assyrian tongue emerged from its antecedents, it is known that the *literati* of ancient Babylon preserved the classic language of Akkad in its purity with fierce and narrow jealousy, looking upon the innovators as common barbarians, and contriving to keep the ancient Akkadian alive, or half-alive, in strict rituals long after the new language had become the medium of intercourse of the people." In the same way, she believes, the progress of the barbarous American language is being blindly resisted now.

Every orthodox text-book of rhetoric contains parallel lists of words in which American usage differs from English. That there are colloquial differences enough to embarrass and confuse and sometimes horrify newly arrived travellers, is the common experience. Yet is the list of words which all Englishmen use in one way and all Americans in another so portentous after all? This question is suggested by the examples cited by the writer just quoted. She finds one cause of divergence in a national "megalomania" which leads us to call things by names bigger than they deserve. Thus:

> "City" is universally used to define a town or village; "physician," doctor; "college," board-school; "store," shop; "stateroom," cabin; "saloon," public-house; "rock," stone or pebble; "gun," pistol, and so on *ad infinitum*.

All these, we presume, are fairly entitled to be called "Americanisms," like some thousands of others between the covers of Bartlett; but to say that any one of them is in "universal" use, betrays an acquaintance with Brother Jonathan of the comic papers rather than with live Americans. "City" is applied to a village, and "college" to a board-school in those States where lax

and foolish Legislatures bestowed the legal right to use those terms in inappropriate places. There are incorporated cities in the West of 200 population or less, but there are mere "towns" in New England as large as Durham, or Salisbury.

"Saloon," like "sample-room," represents an effort of the dram-seller to make his calling at least sound respectable. "Rock" belongs to the Southwest. At least ten times more Americans "throw stones" than "heave rocks." "Gun" for pistol belongs to the "gun-fighting" class. "Physician" is not synonymous with "doctor," because some doctors are surgeons; but we would challenge any British visitor to find an American so afflicted with megalomania as to call in agony for a "physician." "Cabin" and "stateroom" are not synonyms either, especially in a country where many people still live in cabins. That leaves only the use of "store" for "shop," to which, if we concede it to be a crime, a majority of Americans might have to plead guilty.

The Englishman who crosses the ocean cannot, as a matter of fact, make out a more plausible case for his distinction of language than the educated American could by travelling a thousand miles or less in almost any direction and studying the speech he finds there. "'Corfee' for coffee, 'dorg' for dog, 'gorn' for gone," add, says our writer, "a great air of novelty." But they also seem novel to the Westerner or Southerner who enters the native home of the Yankee. The lines of the Limerick,

> Once she drank up a quart,
> Which was more than she ought,

are perfect rhymes to some of us who put an "r" in neither "ought" nor "quart"; to others who put that letter in both; while to the majority the line is only a joke.

At a campaign meeting here a few years ago a spirited ballad was read in the refrain of which "purse" and "boys" were made to rhyme. They would not have rhymed in old England, or in New England, or in the South or West. But on Broadway "poise" and "boise" made a combination with which not even the most delicate ear could find fault.

One of the examples always cited in the English-American parallel columns to which we have referred is the name for the hired passenger vehicle. "Cab" is given as the English and "hack" as the American version. But the hired freight vehicle, which is a "truck" here and a "dray" in divers other parts of the United States, is entitled to just as much notice. Even when we borrow words from abroad we do not use them consistently. A Chicago man who recently moved to New York complained that here the words "café" and "buffet" were absolutely reversed in meaning. In Chicago, a "buffet" served food, a "café" merely potations; here the "café" became a restaurant and the "buffet" a bar.

It might be profitable to inquire whether the differences of speech between our transatlantic cousins and ourselves are becoming greater or less as intercourse between the two countries becomes closer. But by all means let the investigation embrace also the differences between the various members of this commonwealth. In the days of "bleeding Kansas" it is said that when the pro-slavery men controlled a river crossing they would tie a cow near the bank, and if any immigrant called it a "keow," drive him back at the point of the pistol. When the Abolitionists held a ford, they returned the compliment by keeping a tame bear; all those who called it a "bar" being assumed to be friends of slavery. Thus local pronunciations have played a part in our—perhaps apocryphal—history. If the international distinctions are enough now to define a separate language, how many may we not find in a land where the very swallows in their annual migration become successively "buhds," "boids," and "burds"?

PHILOLOGISTS AND ARCHÆOLOGISTS AT WASHINGTON.

The American Philological Association and the Archæological Institute of America met together at Washington this year, January 1 to 5, by invitation of the George Washington University. The attendance was unusually large, and though none of the papers read—fifty-three in all—were epoch-making, or road-breaking, their average of excellence and interest was reasonably high.

Both the Philological Association and the Archæological Institute have, despite themselves, a distinctly classical trend. The former society was founded on a generous platform that supported philology in the widest sense, and this platform has never been changed. But the era of specialization has dawned. There are still a number of Orientalists on the membership list of the Philological Association, but most of them prefer to present their papers before the Oriental Society. The Modern Language Association has also drawn off a number. But the society shows no lack of vitality, nor any signs of suffering from the alleged decadence of classical studies, or especially of Greek studies, in this country. A majority of the papers presented at this meeting were on Greek subjects. Of the others one only was concerned with the history of text, one only with ancient religions, two (by a single person) were on Sanskrit subjects, two on inscriptions, two on traces of Latin literature in English, and one on a pedagogical theme. Only a single paper was on a topic of ancient history. The Archæological Institute is also constituted as a general archæological society, and some of the early work in American archæology done under its auspices will not be forgotten. Moreover, it is making an endeavor to revive and increase its former glories in this field. The papers presented at the Washington meeting were of widely varied theme and content, surveying the early works of mankind, if not from China to Peru, at least from western Asia to Mexico. The title of one of them, by Edgar L. Hewett, fellow of the Institute in American Archæology, might seem a proper subject for investigation by the Philological Association: "Itlatlalnamictiliz Tepoztecatl." But the Institute was the founder of the American Schools of Classical Studies at Athens and at Rome, and the active work of these schools cannot fail to give a sufficient classical twist to the programmes of its meetings.

The two societies met three times in joint session. At the first of these the celebration of the recent incorporation of the Institute by Act of Congress was held, with brief addresses by various representatives of the Institute in its different spheres of activity. At the second, on Wednesday evening, the president of the American Philological Association, Prof. Elmer Truesdell Merrill of Trinity College, Connecticut, delivered the annual address, "On Certain Roman Characteristics." He discussed the nature of "classical" traits and tendencies, and pointed out that the Romans were devoid of all of these, but would have made pretty good Americans. At the third joint session papers were read by representatives of each body, and the Philological Association demonstrated that it had not surrendered its hold on archæology.

The Institute retains its chief administrative officers, but appoints two additional associate secretaries, Prof. F. W. Shipley of Washington University at St. Louis for the Middle States, and Prof. H. R. Fairclough of Stanford University for the Pacific States, in addition to Prof. Mitchell Carroll of George Washington University for the Eastern States. It also puts into the field a Director of American Archæology, who is to have charge of all its investigations in this line. The Philological Association, which makes an annual change in its highest administrative officer, elected as president for the ensuing year Prof. F. W. Kelsey of the University of Michigan, and raised to the vice-presidency Prof. E. B. Clapp of the University of California, who will serve as colleague to Prof. E. D. Perry of Columbia University. A scheme for a revision of the constitution was proposed to the Association, and lies over for a year for report and consideration. By it the Association would be organized in three sections, Eastern, Central, and Western (it already has a Western Section in the Philological Association of the Pacific Coast). The Association would then hold biennial meetings instead of annual, and the sections would meet separately in the alternate years, and, if they saw fit, at other times also. The next joint meeting of the Philological Association and the Institute will be held at the University of Chicago December 27 to 31, 1907.

At the meeting of the Managing Committee of the American School of Classical Studies in Rome, the resignation of the Director, Richard Norton, on account of ill health, was accepted, and Prof. Jesse Benedict Carter of Princeton, who is now serving as professor in the school, was elected Director for three years.

A pleasant feature of the meeting was the reception given the members by President Roosevelt at the White House, on Friday afternoon. In a brief, but characteristic, address the President pointed out that there was no fear that this country would not have enough material prosperity, but every reason to be anxious that it should appreciate the less material things, and should do its share in productive scholarship.

The eighth annual meeting of the Philological Association of the Pacific Coast was held December 27 to 29 at the University of California, Berkeley. The programme included papers by W. A. Merrill, S. A. Chambers, J. H. Senger, E. B. Clapp, H. C. Nutting, A. W. Ryder, Barry H. Cerf, B. P. Kurtz, R. Dupouey, J. T. Allen, H. K. Schilling, H. W. Prescott, and A. L. Kroeber of the University of California; J. Elmore, B. O. Foster, J. E. Matzke, H. R. Fairclough, and A. T. Murray of Stanford; J. E. Church, University of Nevada; and W. F. Bade, Pacific Theological Seminary. The following officers were chosen for 1906-1907: President, H. R. Fairclough, Stanford; vice-presidents, H. K. Schilling, University of California; J. E. Matzke, Stanford; secretary and treasurer, Leon J. Richardson, University of California.

M. RIBOT, ACADEMICIAN — A PRIZE NOVEL.

PARIS, December 21.

Perhaps the French Academy, which is a conservative body, intended honoring the few remaining Conservative Republicans when it elected their chief representative, Alexandre Ribot. All parties were represented yesterday at his solemn reception among the Forty Immortals. In his inaugural discourse M. Ribot spoke deprecatingly of the scant literary baggage which he brings to his seat. It consists almost entirely of his Parliamentary discourses. In figure he is such a man as was seen oftener in America before the war than now. He has that look which makes a man called "distinguished," in spite of an almost professional simplicity. He is correct in his gestures as in his dress, tall, hawk-nosed, slightly stooped, decidedly old-fashioned and unaffected, but stately.

The answering discourse of reception was given by one much younger as a man, though several years older as an Academician, Paul Deschanel. M. Deschanel reminded M. Ribot that he was born in the misty North; that he began as a barrister under the Empire by a regulation lecture on the English Lord Erskine (it was published as a book); that from the very first adoption of the Republican Constitution, in 1875, he began his political career. When Panama shook the Republic to its foundations, M. Ribot as the safe man became head of the Government. Such are a few of his defeats and triumphs. In the late years he has been, though not a Catholic, fighting a losing battle against the attempt to organize religion by the arbitrary power of the State—against "the free Church in the sovereign State," according to the latest formula.

In his own longer and more complete discourse, M. Ribot went on to say that "in our day the new edict of Nantes" is turning like the old, crushing then Protestants, now Catholics "when least dangerous."

The annual Goncourt prize of the Académie des Dix has been awarded to a novel with a key—"Dingley, l'Illustre Écrivain," by the brothers Jérôme and Jean Tharaud. Of these hitherto unknown authors, one has for antecedents diplomatic service along the Danube and a position as secretary to Maurice Barrès of the "other" Academy. The Goncourt brothers intended that their prize should be awarded with a particular view to independence and singularity of thought and style. No one—English and Americans least of all—can complain this year. Dingley, celebrated writer, is very obviously none other than Rudyard Kipling.

Dingley "seemed born at the world's dawn, in times when the senses of men rivalled those of beasts." He knew fame at an age "when a man's strength is entire enough to love it"; but now, past forty and fearing his fame may have no morrow, he looks out for something likely to last in the minds of his countrymen. Like Disraeli, he goes empire-building—out to South Africa, where he imagines soldiers of the Queen are trained into heroes after recruitment from the slums by a sergeant's promises and gin.

In vain Mrs. Dingley, with the common sense inherited from her French ancestors, who were emigrants to America, seeks to inspire in her husband fear of such an apostleship of selfish, harsh Imperialism—"forget not the trees and the beasts." Dingley holds fast, and, with wife and infant son, sets out for South Africa, documenting himself by the way. But he assimilates only such human documents as nourish the Imperialist brain cells, which are now most vital in him. In vain O'Reilly, who has been there, explains to him that the most resonant cavalry charge is only "a flight forward," due to the instinct of self-preservation. In vain Dingley himself inspects the transport Vulture, with the homesick men and horses in its nauseating hold—do not the men begin singing his own war-songs?

There is, by the way, a rather French stimulant to Dingley's imagination in the person of a Hindu girl whom he sometime took away from a Calcutta opium den; she, reciting legends of man's early day in hieratic pose and ornament, keeps brightly burning within him that ideal light which quenches the shadows of reality. The encounter of a squadron of battleships, British flag a-flying, finishes the lasting intoxication of this herald of England's strength.

At Cape Town Dingley hurries to the front, while Mrs. Dingley and little Arthur remain behind with a family of Afrikanders, of whom the grandmother, a pioneer, silently hates the conquering English; the father is loyal to the Queen; and the son, who has studied at Oxford, is off fighting with the Boers. Child Dingley falls sick from miasms of the concentration camps; and Dingley, thanks to the Afrikander son, who holds him prisoner, gets back just in time. His agonizing wait at Bloemfontein is told in that nightmare style, absolutely clear and naked, which is so congenial to Goncourt art. Arthur dies, Dingley falls harder than ever under the sway of Imperialism, and Mrs. Dingley is left alone and disconsolate. The Afrikander son is captured, arms in hand; and not the entreaties of grandmother and father, not those of his wife, not the remembrance of kindness in his own cruel need, can move Dingley to intercede for the life of the prisoner—the Imperial Moloch must not be cheated of its prey. Back in London, before the cinematograph which reproduces the execution scene, deafening British applause assures Dingley that now he is indeed the romancer first in the hearts of his countrymen. S. D.

Correspondence.

AN ADMIRER OF THE PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: I am glad we have a President who has ideas of his own on public questions and is not afraid to express them. I am also glad he has men like Root and Taft in his Cabinet, who also stand for individual ideas. Whether the President and his advisers are always right is to me of far less importance than to have them possessed of convictions. I have been opposed to Republican doctrine for a long time on most questions of importance, and am so opposed to-day; but I more strongly object to the no-account policy of the Democrats since Cleveland's Administration. I am sick and tired of opposition that has no life, purpose, or sincerity except to oppose.

Theodore Roosevelt, while subject to the imperfections that must come from such an impetuous fund of life and energy directed in so many ways, has an average of great and good deeds to his credit. It is this average that tells. He has done lasting good to this country and the world by persistently stirring up investigation and recommending legislation against the great corporations. The development of these vast organizations for the control of capital and industry has been the worst danger that has ever threatened this country. The remedy no one has suggested or yet apparently dreamed of, not even the President himself. But he has forced the issue that the unjust conditions under which many of these great combinations have obtained such power should be exposed. But for his attitude there never would have been a public opinion behind Hughes in the insurance investigations. The rotten methods are being uncovered to-day as never before; and it is only by discovery of the nature of the disease that a remedy can be provided.

Persistent, constantly presenting some new phase of the subject; where he is faced by a gang of politicians who propose to question his policy, going off to some other attack; he has followed a new plan of warfare that I admire. Cleveland was my ideal, but his stubborn front gave us only the glorious spectacle of one strong man defying an army for a principle. But Roosevelt has achieved results. You may say he compromises with men of all sorts. It is the result that tells. "No compromise" is an ideal attitude, but we do not find it in the life of any man who accomplished anything. Ministers, professors, business men,

rulers—all must concede something to the variations of public conscience when it comes to constructive coöperation. Individuals may lead only by a proper consideration of those who are to be led; and this is destructive of high ideals except those that are hid deep down in the heart of things and inspire the best acts and purposes. So this is why I admire aud shall support Theodore Roosevelt.

BENJAMIN SPAULDING.

Boston, Mass., December 29.

EFFECT OF TARIFF ON WOOL.

TO THE EDITOR OF THE NATION:

SIR: Conditions have so changed since the enactment of the McKinley tariff that if ever the imposition of a duty on raw materials, like wool and hides, was justifiable, it certainly is no longer so. The population of the country, which needs to be clothed, has nearly doubled in the interval, whereas there has been no such increase in the number of cattle and sheep. In the *American Wool and Cotton Reporter* of December 27 tables of the wool production of the country from 1840 to 1906 are published. A comparison of 1886 and 1906 shows an increase of only ten million pounds of wool, viz., from 302 millions to 312. As this is evidently inadequate to provide for the number added to our population in these twenty years, the result is shown on another page of the same issue, treating the consumption of worsted and woollen yarns. The reviewer says:

The only point to be considered, in remarking on the small volume of business compared to former years, is the almost universal use of a percentage of cotton yarns in mixed effects for these weavers. Where the call was formerly almost entirely for the worsted yarn, only about two-thirds of the business is now done in the worsted and the balance in cotton or other cheap grades of yarn. The goods market has been the sole cause of this change, it being practically impossible for the commission houses to get a price from their customers which would warrant the weaver in using all worsted yarns.

One of the consequences of our legislation, therefore, greatly enhancing the cost of wool, has been the increased use of cotton by manufacturers of so-called woollen goods. Speaking for the knit-goods industry, I am forced to believe from experience and observation that there is more cotton than wool used nowadays. In the clothing industry I have been informed by manufacturers that the deterioration of wool cloths has been carried to such an extent that now there are cloths in the market of which but 10 per cent. is wool. If, on this statement of facts, it can still be thought that our tax on wool is beneficial and advisable, there is no argument conceivable to the mind of man which would convince persons holding such an opinion of the contrary.

MAX LOWENTHAL.

Rochester Knitting Works, Rochester, N. Y., January 3.

JOHN CABOT'S FIRST MAP.

TO THE EDITOR OF THE NATION:

SIR: In the course of some studies on the earliest explorations of the northeastern littoral of North America, I have to-day come across evidence, amounting in my opinion to absolute proof, that the island with the inscription "Litus incognitum" on Waldseemueller's World Map of 1507 is in form a first-hand copy of the long-lost chart made by Cabot in 1497. I identify the coast line of this map with that between Penguin I. and Catalina Hr., Newfoundland, on Popple's map of 1733. If my conclusions are accepted, Cabot's landfall on June the 24th, 1497, at Cape Bonavista, is placed beyond dispute, and the extent of his exploration—from Cape Freels, around Bonavista Bay, to Catalina Harbor in Trinity Bay—approximately determined. Waldseemueller's maps of 1507 are reproduced by Fischer and Wieser in a work published by H. Stevens, Son & Stiles in 1903.

G. R. F. PROWSE.

Brandon Hills, Manitoba, December 12.

AN ENGLISH VIEW OF THANKSGIVING.

TO THE EDITOR OF THE NATION:

SIR: The following letter to the editor of the *Oxford Magazine*, which appeared in the issue for December 5, may be of interest to your readers. C. H. C. W.

Cambridge, Mass., December 30.

SIR: Can you allow me a few lines to express disapproval of the conduct of the Dean and Chapter in allowing a Thanksgiving Day service in the Cathedral? We may be as friendly as we will to the Americans in Oxford, as men, but surely it behooves us to remember that their national festivals are held to celebrate the defeat of our arms. On these occasions they are rebels and traitors, and to encourage them is to be guilty of treasonable practice. I am, sir, etc., LOYALIST.

AN INQUIRY FOR UNPUBLISHED DOCUMENTS.

TO THE EDITOR OF THE NATION:

SIR: May I inquire through these columns whether any of your readers possess, or have knowledge of, unpublished documents bearing upon (1) the early trade relations between Louisbourg and New England; (2) the methods of privateering employed during either siege, or any incidents connected therewith; (3) the disposition of French prisoners taken at the siege of 1745, and especially anything relating to the Marquis de Maisonfort, commander of the Vigilant; (4) the New England forces at the siege of 1758.

I should encroach too much upon your space if I attempted to set forth here the purpose of these inquiries; but I should expect to satisfy any one who would be willing to furnish information on these points, as to the use that will be made of it. MARY H. ROLLINS.

74½ Pinckney Street, Boston, December 29.

A DISCLAIMER.

TO THE EDITOR OF THE NATION:

SIR: Pray permit me to state that my communication to the *Nation* of December 20, regarding the "Plan of the National Museum," was an expression of my private and individual opinions, and was not intended to reflect the views of any of the societies or other organizations of which I am a member. At the time the letter was written, it did not occur to me as a possibility that it could be regarded otherwise than as a personal expression, for which I alone am responsible.

W. T. HORNADAY.

New York, January 1.

Notes.

The Macmillan Co. expects to publish in March the "Life and Letters of Edwin Lawrence Godkin," edited by Rollo Ogden. The work will be in two volumes, and will be based largely upon material not before printed.

There is to be a new series of thin-paper books, the Large-Print Edition, issued by Doubleday, Page & Co. As the name indicates, the distinguishing feature of the volumes will be the large type used. The series is to begin with "Wuthering Heights," and all the Brontë novels are to follow.

John W. Luce & Co. issue Blake's "Marriage of Heaven and Hell," in a thin pocket-volume, offering a good opportunity to those who wish an easy introduction into the writer's so-called prophetic books.

The attempted resuscitation of Oscar Wilde is continued in two new publications. One, issued by John W. Luce & Co., contains "Recollections of Oscar Wilde" by Ernest La Jeunesse, André Gide, and Franz Blei; the translation is by Percival Pollard. A more instructive volume, published by Brentano's, contains his lecture on "Decorative Art in America," together with a series of letters, reviews, and interviews. Richard Butler Glaenzer edits the book, providing notes, and an introduction written from a sympathetic and æsthetic point of view.

The English "Who's Who, 1907" (The Macmillan Co.) reaches almost to two thousand pages, although the tables of information, which used to go with the book, are crowded out into a separate publication, the "Who's Who Year-Book." It might seem that all American names could be omitted, now that these are so accessible in the American volume. But we have no intention of quarrelling with the most useful reference book after the dictionary.

We take pleasure in recording the prompt appearance of Whitaker's "Almanack" and "Peerage" for 1907.

"The Record of the Celebration of the Two Hundredth Anniversary of the Birth of Benjamin Franklin, under the Auspices of the American Philosophical Society, held at Philadelphia for Promoting Useful Knowledge"—the full title is sufficient description of a handsome memorial volume, which is to be followed by another of the same nature. It contains the speeches and letters brought out by Franklin's bi-centennial in Philadelphia last April.

In two well-intentioned volumes Fitzgerald Molloy has brought together a series of interconnected biographies which he calls "Sir Josbua and His Circle" (Dodd, Mead & Co.). The material is old enough to any one at all familiar with eighteenth-century memoirs, and it cannot be said that Mr. Molloy's attempts to be vivacious are always highly successful, nor does it inspire confidence to describe scenes as if the writer were present and spoke from memory of "wistful eyes" and the like. Yet

the subject itself is attractive, and the book may be recommended to those who wish through a single work to get a moderate acquaintance with the most interesting group of men and women in English letters.

The fair and frail ladies of the Restoration are presented to our attention again in a handsome edition of the "Memoirs of Count Gramont," edited by Allan Fea and published in London by Bickers & Son (imported by Charles Scribner's Sons). The period has not been neglected—from Mrs. Jameson's "Beauties of the Court of Charles II." and Peter Cunningham's "Story of Nell Gwyn" down to the recent "Court Beauties of Old Whitehall," by W. R. H. Trowbridge, and Allan Fea's own "Some Beauties of the Seventeenth Century." Of the Gramont "Memoirs" there have been innumerable editions since Abel Boyer's translation early in the eighteenth century. Mr. Fea's text is that which Sir Walter Scott issued anonymously in 1811, corrected by the late Henry Vizetelly's version of 1889. The excuse for this new edition is, of course, the pictures, for which Mr. Fea has ransacked private galleries and public collections. The book contains a dozen photogravures and seventy-six half-tone plates, some of them containing two portraits. Mr. Fea's Introduction is practically nothing but a bare statement of the sources of these pictures. He has found a number of new portraits and discovered some mistaken attributions. In appendixes he gives Cunningham's Chronology of the "Memoirs," and a sketch of Barbara, Duchess of Cleveland, drawn mainly from Steinman's "Althorp Memoirs" and from the Letter-book of Philip, Earl of Chesterfield, in the British Museum. Mr. Fea also supplies copious footnotes—almost too copious. It was hardly necessary, for example, to quote at length from Bishop Gilbert Burnet and Voltaire in support of Gramont's statement that on the return of Charles II. the people "exhausted themselves in festivals and rejoicings." Notes, however, are easily skipped. The book is beautifully printed in large, clear type. The half-tones are not always distinct, partly because many of the originals are dimmed with age. The photogravures are excellent.

H. Buxton Forman has again tried his hand at editing Keats, this time "The Poetical Works" in a single volume for the Clarendon Press (Henry Frowde). This edition differs in aim from his exhaustive Library edition and the complete Variorum edition, which he prepared for Gowans & Gray of Glasgow. The object is "to supply in handy form an authoritative text of the whole body" of Keats's work in verse. The footnotes contain the more important variants, but by no means all. Mr. Forman has chosen from the great mass of cancelled passages and manuscript copies such readings as are "likely to be helpful to those who would form a conception, not only of the results which Keats arrived at, but also of the steps by which he attained them, so far as those steps may be said to have a true literary or psychological value." Thus "Lamia," "Isabella," "The Eve of St. Agnes," "Ode to a Nightingale," and "Hyperion," among Keats's more notable productions, are fully annotated, while such inferior poems as "Otho the Great" and "The Cap and Bells" receive less attention. The Introduction is extremely valuable as a succinct bibliography of Keats. Mr. Forman describes in detail the several *editiones principes*, and the manuscript sources, such as letters and transcripts of poems by Keats himself, by members of his family, and by friends There is also a nine-page list of books consulted in preparation of the edition. The whole forms a pretty complete guide to the student of Keats. It is interesting to note that in 1906, eighty-five years after Keats's death, Mr. Forman has succeeded in unearthing sixteen lines of "The Eve of St. Mark," which appear for the first time in this edition. They are shown in facsimile; but they add nothing to the poet's reputation. The typography of this substantial volume is all that could be desired.

W. Robertson Nicoll's "Key of the Blue Closet" (Dodd, Mead & Co.) is a book of miscellaneous essays dealing in a sane, genial way with the conduct of life. Mr. Nicoll has followed his own precept, that "to look aright on human beings we must wear the spectacles of an indulgent kindness." His method is to take some phrase in common use or some significant incident, and to give it a general and wider application, always seriously and practically, but with a great deal of humor and a singularly wide range of anecdote and quotation. There is a certain resemblance to A. C. Benson's writing in Mr. Nicoll's quiet observation and humanity, his constant use of anecdote, and his easy references to the latest book he has been reading. There is, too, always a personal quality, like that of letters and diaries. The style is direct and, on the whole, even, though it lacks the charm of Mr. Benson's, and in places is rather elliptical. It ought to be a compliment to say that this book is thoroughly sound, genial, and interesting, without being in the least clever, and without any of the little tricks of paradox and epigram that appeal to our decade.

"Thomas Hill Green, a memoir, by R. L. Nettleship, with a short preface specially written for this edition by Mrs. T. H. Green," is a separate reprint of the memoir which Nettleship included in his edition of the Oxford philosopher's works. So admirable an account of a great man well deserves the wider circulation which one hopes it may obtain in this independent form. Those already familiar with it will turn with some eagerness to the new preface by Professor Green's widow. Unfortunately, it is even shorter than the title-page might lead one to expect. It is merely explanatory of the republication, and adds nothing to our knowledge of the man.

A Life of Helen Keller has just been added to their Anna Library (books sold for two cents) by the Christian Literature Society of Madras. A Bombay paper congratulates its Indian readers on the publication. It is confident that the story of the heroic struggles and undaunted perseverance of this young blind and deaf student will prove an inspiration to many another who feels handicapped in the effort to gain an education.

Students of our early history will be interested in the third volume of the publications of the Bostonian Society, just issued. The first paper in this volume is an account of the preparations for the successful expedition to Nova Scotia in 1710, drawn mainly from Sewall's Diary and the official documents. It contains sketches of the prominent men in the colony, and many incidents which throw light on the customs of the time, as well as the method of conducting meetings of the council. A proclamation calling for volunteers says that they would be permitted to keep their firearms, which accounts for the old Queen Anne muskets found hanging over the kitchen fire-places in so many New England farm-houses at a later date. Lowell had these weapons in mind when he wrote one stanza in "The Courtin'":

> Agin the chimbley crook-necks hung,
> An' in amongst 'em rusted
> The ole queen's-arm thet Gran'ther Young
> Fetched back f'om Concord busted.

The other papers are upon Faneuil Hall, some reminiscences of Boston in 1813, and condensed biographies of the subscribers to a fund raised in 1657 for building the first Town House, headed by Gov. John Endicott. A photogravure of the list, as well as several illustrations and a map of the harbor in 1711, adds to the value and attractiveness of the volume.

The mystery of Mohammedan civilization has seldom been read so clearly and described so picturesquely as by André Chevrillon, in his "Crépuscule d'Islam" (Paris: Hachette et Cie). His book, practically on Fez, is wholly admirable in its class—sketches of things seen and perceived in a comparatively short stay, by a traveller with eyes unclouded by over-familiarity. He is thus an impressionist, but his impressions and the ideas which went with them of the land and the people of Morocco, their present condition and their possible future, are stamped with truth. A longer stay might have dulled the sharpness of the outlines, but a still longer one and a thorough study of the Muslim faith and literature—he appears to have had no knowledge of Arabic to speak of—would only have brought him back to the same results. It is the rarest thing for one who is not an Orientalist to come so close to the secret of Islam as M. Chevrillon has here done. The country itself stands out before us in his descriptions, portrayed in delicate, suggestive French, exhausting the wide color vocabulary of a painter in words. The changeless helplessness of the people, demoralized by the universal ailment of sloth, their lack of any conception of the possibility of a new thing—of a world other than as Allah created it, their shrinking collapse under pressure or wild flare into fanaticism if the nerve of their religion be touched, the absolute sapping through sensuality of all vital energy—these, too, are made plain. And yet the calm of it all and the beauty! At first this land of dreams seems a refuge from the gradual uglification (*enlaidissement*) of the earth by our industrial civilization, but with knowledge of the reality behind and beneath, that artistic selfishness must depart. Says M. Chevrillon, "J'ai fini par comprendre que tout vaut mieux que la présente stagnation putride." It would be well if more travellers had eyes to see the same rotting stagnation behind the Oriental magic; the glory and the havoc of the East. But this is a very exceptional book.

An admirable study of savage life is given by W. H. R. Rivers in "The Todas" (The Macmillan Co.). The Todas are a non-Aryan people of the south of India, who have been little exposed to outside influences and have maintained their institutions substantially intact. Mr. Rivers (who has worked with Dr. Hadden in Torres Straits) goes into minute detail in the description of customs and beliefs, rightly holding that things apparently unimportant may prove to be significant. The most interesting of the Toda ceremonies are those connected with the cult of the buffalo; they are elaborate, and represent the real religion of the people. The volume contains also much valuable material concerning the social organization of the Todas, their sacred days and places, and their funeral and marriage ceremonies. Mr. Rivers confines himself to what he has himself seen or has heard from trustworthy persons. He has added a bibliography, a glossary, and an index.

We have a similar study from Mr. Dudley Kidd, who follows up his earlier Kaffir researches ("The Essential Kafir") with a second book, "Savage Childhood, a Study of Kafir Children" (The Macmillan Co.). He restricts himself to the period from birth to the dawn of puberty, and finds that a stout volume does not exhaust his material. Though his subject is the child, its training, amusements, and mental qualities, he of necessity introduces information on many related points, and his book may be relied on as accurate in its statements of fact. His conclusion is that Kaffir children are very much like their white cousins, so that a study of them is a study in general child psychology. It is to be hoped that he will supplement this work with a volume on the adolescent period of Kaffirs; it is a question of interest how far the intellectual quickness of the child is maintained or increased in the young man or the young woman.

The Bible, either the whole or a part, is now published in more than five hundred languages. During the last year eleven new versions were added, and translation or revision work is now in progress in over a hundred languages. The larger part of the editions for the Far East are printed in Japan. The annual circulation of the British and Foreign Bible Society alone is about six million copies. Scriptures for the blind in fifteen different languages are also published by this society.

Evidence of the wide influence of critical studies of the New Testament is had in Edward H. Hall's "Paul the Apostle, as Viewed by a Layman" (Little, Brown & Co.). The view here presented is that of the historical spirit, of just and sympathetic appreciation of a great, though very human, actor in an important crisis in the world's spiritual life. Critical scholarship since Baur has been laid under tribute, and the opinions of such students as Pfleiderer, Hausrath, Wernle, and Weizsäcker have been diligently compared and carefully estimated. Paul as a man of his time, weighted with the crudities of Jewish theological speculation and led frequently into inconsistencies by the strength of his religious fervor, is very well described in Mr. Hall's chapters on "The Mystic" and "The Theologian"; and the problems which faced Paul are made graphic in the section on his missionary activity. The author's limitation would appear to be lack of grasp of the importance of the service which Paul rendered to early Christianity. The greatness of Paul's work and influence does not find sufficient explanation. It needs a good deal of an enthusiast to portray the great apostle with any competency, though fair-minded criticism, such as Mr. Hall's, may render good service in scattering misapprehensions and awakening slumbering minds to existing problems and to the complexity of personalities which have been treated to easy and insufficient classification.

Biblical history and literature are such vast themes, and the literature dealing with the various phases of the subject is now so extensive, that a manual of introduction to the study should serve a useful end. This is the purpose of the "Outlines for the Study of Biblical History and Literature," by Frank Knight Sanders and Henry Thatcher Fowler (Charles Scribner's Sons). The volume, one of the Historical Series for Bible Students, contains chronological outlines for the entire period of Biblical history, brief sketches of the history, with references to the Scriptural sources, and concise descriptions of the literary character of the various books of the Bible. Endeavor is made to refer the student to the more important passages in the literature of recent Biblical criticism, and thus lead to discriminating use of the best authorities. These bibliographical references are the most valuable feature of the book, and, though they are by no means exhaustive, others than amateurs will find them useful. It is remarkable that even in a "Selected Bibliography" the translation of Gunkel's enlightening "Legends of Genesis" should not find mention. As is the case with most works in English covering both the Old and the New Testaments, the treatment of Old Testament subjects is much superior.

The first specimens of a Christian literature in the ancient Nubian language have recently come into the possession of the Royal Library in Berlin. Prof. Karl Schmidt, of the theological faculty of the University in Berlin, brought with him from his *studienreise* last summer in Egypt the first papyrus fragments of this literature, every specimen of which had been lost, and the existence of which was known only from translations and references in foreign writers. The language of these texts, the Nubian, has not been used for literary purposes for many centuries.

To those who possess the requisite learning there is a peculiar pleasure in the classical versions turned out by English university men. It is an artificial garden, if you will, but has its delights for a taste frankly artificial. One of the best of these volumes is H. A. J. Munro's "Translations into Latin and Greek Verse," edited, with a photogravure portrait of the great Lucretian and with a prefatory note, by J. D. Duff (Longmans, Green & Co.). One might find much to comment upon in these pages. Most striking, perhaps, is the contrast between the pliancy of Greek and of Latin in following the sinuosities of English sentiment, as shown, for instance, in the double rendering of Shakespeare's "To be or not to be." The tone of the original is reproduced with curious felicity in the Greek, whereas in the Latin we get something impressive and effective, but quite different from the English. This is felt in the first line:

Esse iuvet necne esse, hoc in discrimen agendumst.
Ἔστ' ὦμεν ἢ μή; τοῦτ' ἐπισκεψώμεθα

On the other hand, the Latin falls in admirably with the slow and solemn cadences of such poems as Gray's "Elegy," which is translated in full.

A translation of "The Works" of Heine in twelve volumes has just been issued by E. P. Dutton & Co. As a matter of fact the edition is not complete, for it does not include some of Heine's less important writings, and in the pieces which are translated certain passages which might offend English and American readers are omitted. The first eight volumes, the prose, are from the hand of the late Charles Godfrey Leland. Very early in his career he translated Heine's "Reisebilder" and in 1890, at the instance of William Heinemann, the London publisher, he undertook the completion of the task. Of the merits and demerits of Leland's translations of Heine it is hardly necessary to speak at this late date. The "Pictures of Travel" have been before the public for half a century. In extenuation of any shortcomings, it may be urged that Heine is peculiarly difficult to translate. The charm, the subtlety, the allusiveness, are certain to evaporate in the process. These difficulties Leland understood and accepted. Finding perfection beyond his reach, he took considerable liberties with his author, cutting out, as he says, "the passages which modesty would taboo." It would be easy also to point out inaccuracies and infelicities. Nevertheless this may be said: if it is not always Heine, it is at least Leland—full of life and interest. When Leland died and left the undertaking to others, Mr. Heinemann engaged the late T. Brooksbank to translate the poetry. Now Heine's poetry is even more formidable than his prose. The exquisite simplicity of some of his verses cannot be transferred to another language. One can admire the courage of Mr. Brooksbank, but not the result of his labors. By a curious oversight at least a third of his effort was devoted to poems which Leland had already translated in the first volume of "Pictures of Travel." There is thus a considerable duplication. The work of Mr. Brooksbank is, as a whole, not superior to Leland's, but his translation of the familiar "Lorelei" is more successful in conveying the spirit of the original. He died, however, before he had a single volume through the press, and Margaret Armour (Mrs. W. B. Macdougall) did the last three volumes. It is enough to note that her verse is no improvement on that of Mr. Brooksbank. Those who want Heine's verse in translation must get it in bits here and there, from Emma Lazarus and others. Yet granting all defects, this edition stands as the best presentation in English of the bulk of Heine's writings.

In "Petrarchismo e Petrarchisti in Inghilterra" (Palermo: G. P. Lauriel), Irene Zocco presents us with a monograph which, though far from exhausting the field, shows much first-hand reading, and is a creditable study, readable, intelligent, and occasionally novel in its views. The writ-

er is apparently at a disadvantage in not knowing the work done on the subject by Koeppel, Sidney Lee, and others, and, except for the help afforded by the essay of Segrè on Wyatt and Surrey, has plainly made most of her discoveries unaided. She traces the evolution of Petrarchism in England, from Wyatt and Surrey, through Watson, Sidney, and Spenser, to Shakespeare. Her most novel conclusions are that Euphuism is to be ascribed to the influence of Petrarch's sonnets, and that Shakespeare's dedications are Euphuistic. She points out that two of Sidney's sonnets, whose source has been hitherto unknown, are translations from Parabosco. The monograph is worthy of the attention of students of Elizabethan literature.

The H. W. Wilson Company of Minneapolis has begun the publication of quinquennial "Guides to Periodical Literature," the first issue including the years from 1900 to 1904. Some sixty-seven magazines are listed, the index running in a continuous alphabet for authors and titles and general topics. Some of the periodicals seem too trivial for such a record, whereas neither of the English quarterlies is represented. But on the whole the work bears all the marks of being well planned and carefully edited.

It is humiliating for American librarians, after all the pride they have taken in the "open-shelf" system, and just at the time when their arguments for it seem to be obtaining favor abroad, to be compelled to confess that it is proving a failure; but in our larger cities an increasing number of librarians are coming to this conclusion, and in one way or another are limiting and safeguarding access to the books. Of all the problems of library administration, the loss of books from the shelves is perhaps the most serious and vexatious. Its worst effect is not in the value of the books taken, or even in the loss of privileges suffered by the public in consequence, but in the change necessitated thereby in the attitude of the librarian towards the public. To compel the librarian to be a police officer on the lookout for thieves, is to take from library work itself its greatest charm. Apart from the mere safeguarding of the books, however, much may be said on the educational side in favor of the closed stack with only a limited number of books on open shelves. Access to a large collection, where the only classification is by subject, and the good, bad, and indifferent are thrown together without discrimination, means only added confusion to the unscholarly reader. Such a reader stands ten times the chance of making a wise selection when he is limited to a room in which there are only one-tenth as many books, and that tenth a selection of the best. This does not mean that the books in the closed stacks are to remain unused; through the catalogue, reading lists, and bulletins, they are all readily available to the reader who wants them. While serious doubts are thus cast on the wisdom of the open stack in this country, it is gaining ground in England and on the Continent. The plan has been introduced into several of the leading libraries of the kingdom, including some of the borough libraries of London; and those librarians who have introduced it are enthusiastic over its workings. Losses of books reported from the open shelves are almost too trivial to be noticed. One library, with a circulation of 450,000 volumes, reported a loss for the year of only two volumes.

RECENT VERSE.

For many readers, the publication of the "Lyrical Poems" of W. B. Yeats, complete in one volume (The Macmillan Co.), will be a literary event of considerable magnitude. Yet to one looking at the volume critically rather than Celtically, the doubt arises whether it will greatly help to solidify Mr. Yeats's standing, already respectable, as a poet of originality and distinction. The difficulty is that while the characteristic properties of Mr. Yeats's poetry—the voices and presences in nature, the Rosy Cross, the Celtic twilight, and all the "old unhappy far-off things" of Irish legend—powerfully impress the imagination in a slender book of verse, yet in a stout volume of collected poetical writings they become a little monotonous. That the poet should be "changed into a hound with one red ear" once imparts a pleasurable thrill of glamourie, but when this striking metamorphosis has occurred twice and thrice, it becomes a little ludicrous, and the poetic energy escapes in vapor. And so despite the continuity of the poetic sense that informs the book, and despite the consistent growth that it shows in workmanship, in felicity of tone and image, the pieces in it do not so much reinforce as neutralize one another. It seems doubtful whether in the mass Mr. Yeats's lyrical poetry can be appreciated save by a cult or will be remembered save by the curious. Yet there are fine things in the volume, none finer, perhaps than that vivid, mystical narrative, "The Wanderings of Oisin," written a score of years ago. Yet we imagine Mr. Yeats as a lyric poet is more likely to be remembered for the things in which he is least "Celtic," for such pieces, for example, as this, in which the magic of the wavering verse springs rather from a haunting, spiritualized simplicity than from a conscious "symbolism":

When you are old and gray and full of sleep,
And nodding by the fire, take down this book,
And slowly read, and dream of the soft look
Your eyes had once, and of their shadows deep;

How many loved your moments of glad grace,
And loved your beauty with love false or true;
But one man loved the pilgrim soul in you,
And loved the sorrows of your changing face.

And bending down beside the glowing bars
Murmur, a little sadly, how love fled
And paced upon the mountains overhead
And hid his face amid a crowd of stars.

Wistfulness and waywardness have sometimes seemed to be the characteristic moods of the most characteristic poets of the present day. Mr. Yeats has perhaps turned the lurking wistfulness of a self-satisfied age to better account than any one else; of the waywardness that wilfully turns its back on the age to seek strange satisfaction in art, Arthur Symons is a conspicuous exponent. His latest volume, "The Fool of the World and Other Poems" (John Lane Co.), presents some curious contrasts to Mr. Yeats's lovely and melodious pages. Oddly enough for a disciple of Pater, Mr. Symons in his poetry so far from "constantly aspiring to the condition of music," seems to renounce melody and to seek rather to do the painter's work, to build an expressive picture from a group of sharp details all but regardless of beauty. He is quite content with such a line as

Farmyards a-fluster with pigs,

provided it can be made to compose in his picture; and it must be said for him that, startling as some of his images are, they seldom "thump." His most characteristic work is the climax of the expressive. Take, for example, his unpleasant "Andante of Snakes," how serpentine the coiling movement, how venomous the phrase:

They weave a slow andante as in sleep,
Scaled yellow, swampy black, plague-spotted white;
With blue and lidless eyes at watch they keep
A treachery of silence; infinite

Ancestral angers brood in these dull eyes
Where the long-lineaged venom of the snake
Meditates evil; woven intricacies
Of Oriental arabesque awake,

Unfold, expand, contract, and raise and sway
Swoln heart-shaped heads, flattened as by a heel,
Erect to suck the sunlight from the day,
And stealthily and gradually reveal

Dim cabalistic signs of spots and rings
Among their folds of faded tapestry;
Then these fat, foul, unbreathing, moving things
Droop back to stagnant immobility.

Such a selection as this, however, illustrative as it is of his "characteristic excess," gives but an imperfect idea of Mr. Symons's range. He has an admirable poetic scholarship and an equally admirable intellectual integrity; his cup may be small, but he drinks from his cup. The quality of thought that underlies his verse will perhaps be better seen in this conclusion of a trilogy of short pieces entitled "The Sick Man to Health":

The will, that ruled a city all its own,
And now, without sedition, like a king
Thrust quietly aside, is overthrown;
The memory, that of any former thing
Could character the poise, the form, the size,
The impress of its shape upon the air,
And now, forgetting its blithe energies,
Lies drowsing in the sun, or, as it lies,
Repeats a fond arithmetic of sighs;
Identity, that wanders like the smoke,
Following a wind that stays not anywhere;
Conscience, that would not waken though God spoke;
Cry to thee with an unavailing cry.

Yet Mr. Symons's pride in his intellectual integrity is sometimes his undoing. His uneasy hatred of the commonplace and his constant endeavor to give it as wide a berth as possible involve such an expenditure of energy that in the long run he falls a prey to the very thing he would escape—as a man specially fearful of some disease is pretty sure to catch it in the end.

That a good way to master the commonplace is boldly to embrace it is strikingly shown in the late Prof. N. S. Shaler's posthumous volume of Civil War poems, "From Old Fields" (Houghton, Mifflin & Co.). The pieces are written in an unmusical blank verse, and there is scant trace of the surprising mastery of poetic diction which Mr. Shaler showed in his pentalogy of Elizabethan plays, yet, read consecutively, the volume is not only impressive, but poetically impressive. In a way, Mr. Shaler was the Crabbe of the battlefield. He saw the sordid, tragic, commonplaces of war with an undeluded eye, and portrayed them with a firm and vivid pen. The choice of the poetic form rather

than prose was justified by the repressed emotion which underruns all of the poems and finally breaks out at the end into this reverberating finale in rhyme:

Eighteen hundred and sixty-one:
There in the echo of Sumter's gun
Marches the host of the Orphan Brigade,
Lit by their banners, in hopes best arrayed.
Five thousand strong, never legion hath borne
Might as this bears it forth in that morn:
Hastings and Cressy, Naseby, Dunbar,
Cowpens and Yorktown, Thousand Years' War,
Is writ on their hearts as onward afar
They shout to the roar of their drums. . . .

Eighteen hundred and sixty-three:
Barring Sherman's march to the sea—
Shorn to a thousand; face to the foe
Back, ever back, but stubborn and slow.
Nineteen hundred wounds they take
In that service of Hell, yet the hills they shake
With the roar of their charge as they onward go
To the roll of their throbbing drums. . . .

Eighteen hundred and sixty-five:
The Devil is dead and the Lord is alive,
In the earth that springs where the heroes sleep,
And in love new-born where the stricken weep.
That legion hath marched past the setting of sun:
Beaten? nay, victors: the realms they have won
Are the hearts of men who forever shall hear
The throb of their far-off drums.

The typicalness of Mr. Yeats's wistful escape from a world of deeds to a vagrom world of dream is shown by the number of volumes of contemporary verse that show the influence of his poetry or of his impulse. Of the volumes before us, "Songs to a Singer," by Rosa Newmarch (John Lane Co.) shows it most clearly. Miss Newmarch's exhortation,

> Keep your dead, inviolate past,
> Hold your pale ideal fast,
> Well I know, who crave the whole,
> Only dreams and memories last,

carries quite the message, if it has not quite the accent of the Celtic bards. Lance Fallaw's "Silverleaf and Oak" (The Macmillan Co.) likewise shows the spell, though Mr. Fallaw has read his Shelley to advantage, and learned how the poet's prism may break the pale light of mysticism in color. We like Mr. Fallaw best, however, in a group of poems in which he turns back from "the brink of the night and the morning" to sing of the sentiments of the imperialistic voyager, as in these stanzas from "The Southern Cross":

Ye nations born of Britain,
  Behold your royal sign!
Gold on black velvet written
  In skies below the Line,
Like taper-shrine of Mary,
  Like shield of seraph-host;
    For each in turn
    Those bright points burn
  By continent and coast.
One star for snow and prairie,
  One for the island-home;
    One for the belt
    Of hush and veld,
  One for the Barrier foam.
Like head of horned eland,
  Like shape of gilded kite;
And the little star for New Zealand
  Just under the Austral Light.

But never those starry daughters
  Are seen by the Mother's eyes,
Never o'er English waters
  The faery cressets rise.
Far must the hunter follow
  Who stalks such lordly prey;
    Far thro' the dark
    Must plunge the barque
  In phosphorescent spray.
Where the wet whale-fish wallow,
  And southern icebergs swim,
    Where sunset spills
    Along the hills
  New colors deep and dim;
Where the white floe-field dwindles
  At touch of tropic seas,
There the High Angel kindles
  The lamps that flame and freeze.

So still the lesson showeth
  The worth of time and place;
Little the homester knoweth
  The majesty of race.
But where round kingly Mitre
  The mountains bare their scalps,
    And winter spreads
    The glacier-beds
  Along the Southern Alps;
Where Sydney wave beats brighter
  Than sheen of peacocks' necks;
    Where the long train
    By night doth strain
  Through the wild hills of Hex;
By isles that hide with pine and moss
  Some dead volcano's pyre,—
There will you find the Fiery Cross
  And hearts that burn like fire.

The preface to "The Coast of Bohemia," by Thomas Nelson Page (Scribners), offers a fine confession of the faith of a minor poet:

There is for the minor poet also a music that the outer world does not catch—an inner day which the outer world does not see. It is this music, this light, which, for the most part, is for the lesser poet his only reward. That he has heard, however brokenly, and at however vast a distance, snatches of those strains which thrilled the souls of Marlowe and Milton and Keats and Shelley, even though he may never reproduce one of them, is moreover a sufficiently high reward.

The poetic sensibility foreshadowed in the above is very evident in Mr. Page's verse, and he has an admirable command of traditional poetic tone, as may be seen from these stanzas taken from the titular poem of the volume:

There not alone the great and lofty sing;
But silent poets too find there the song
They only sang in dreams when wandering
Amazed and lost amid the earthly throng;
Their hearts unfettered all from worldly fears,
Attuned to meet the spacious music of the spheres;

Gray, wrinkled men, with sea-salt in their hair,
Their eyes set deep with peering through the gloom,
Their voices low with speaking ever, where
The surges break beneath the mountains' loom;
But deep within their yearning, burning eyes
The light reflected ever from those radiant skies.

There fadeless youth, unknowing of annoy,
Walks aye with changeless Love; and Sorrow there
Is but a memory to hallow Joy,
With chastened Happiness so deep and rare,
Well-nigh the Heart aches with its rich content,
And Hope with full fruition evermore is blent.

From "The Days that Pass" (John Lane Co.), a volume of slight but graceful verse by Helen Huntington, we take another view of the poet's predicament:

Distraught, half-puzzled by the doors that close
  Abruptly in his face.
Bewildered where the crowd of traffic flows,
  Like one of other race,

Unmindful of the hours or of the day,
  Or those who mock afar,
He dreams forever of the rose in May.
  He sees the evening star.

"Sicut Patribus and Other Verse," by Oscar Fay Adams (published by the author), is a collection of correct, derivative pieces in many modes. Mr. Adams is most inspiriting when he indulges in frankly bookish sentiment, as in these stanzas from "Cambridge":

Here roamed "the scholar Gypsy" long ago;
Here gently ruled our "New World Philhellene";
Here came the wanderer from the Pays de Vaud;
And here New England's Sibyl passed between

The gates of birth. Here, where the lilacs hedge
The winding road, the Gentle Singer told
The Legend Golden; and the murmuring sedge
Of his loved Charles still with his name makes bold.

Here, where the Elmwood thickets lift their pyres
Of green, a later summons came, and he,
Our best and noblest, whose each word inspires,
Slipped from life's moorings on a shoreless sea.

The characterization of Mr. Adams's volume will do equally well for "Whisperings of the Sphinx" and "A Scrap Book of Pictures and Fancies," two books of verse by William Leighton (Chicago: Donnelly), though Mr. Leighton's writing is marked by a kind of fluent transcendentalism, explained by a group of sonnets in the second of the two books implying an early residence in the town of Concord, Mass.

Of the remaining volumes of recent verse now before us none seems of quite sufficient substance and distinction to justify extended comment. "The Worker and Other Poems," by Coningsby William Dawson (The Macmillan Co.) shows something of James Thomson's poignant view of the world, something also of a pre-Raphaelite savor of phrase, but it is only intermittently visited by any real spell of verbal magic and compelling mood. Oliver Huckel's version of "Tannhäuser" (Crowell) in blank verse narrative is a rather languid performance. One wonders why the narrative form was chosen for a theme so intensely dramatic in the largest sense. Wallace Irwin's "Random Rhymes and Odd Numbers" (The Macmillan Co.) shows the range of his humor and metrical skill, and is always good reading. But it fails to show quite the poetic energy of the volume of "Chinatown Ballads," of which we lately had to speak.

STUDIES IN ITALIAN HISTORY.

Documenti per la storia dei rivolgimenti politici del Comune di Siena dal 1354 al 1369, pubblicati con introduzione ed indici da Giuliano Luchaire. Paris: Libraire A. Picard et fils.

When Professor Langton Douglas's "History of Siena" appeared in 1902, it was welcomed by one of the greatest living Italian scholars as an "opera veramente insigne . . . che viene a dare l'ultima mano alle ricerche regionali degli ultimi vent' anni"; and the praise thus generously bestowed was fully deserved, for the work referred to is unquestionably one of the best books ever written by an Englishman about Italy. Yet, none the less for that, even the most whole-hearted of Professor Douglas's admirers can hardly fail to admit a singular inequality in his treatment of various periods. After guiding us with nimble and sure feet among the obscure by-ways of the thirteenth century, he seems, as he approaches the far less complicated history of the fourteenth century, to grow less certain of the path he ought to follow. The landmarks, though never lost, become blurred and doubtful. Nor is the reason for this apparent anomaly far to seek. "The researches of the last twenty years" had been almost entirely dedicated to the earlier history of the Commune; and, while all the Imperial or Ghibelline period is brightly illuminated by the investigations of Italian *eruditi*, summed up and epitomized in Professor

Zdekauer's magnificent edition of the *Constitutum Comunis Senarum* of 1262, when Professor Douglas wrote, very little had been done to dispel the darkness which still brooded over the next 150 years. For the history of the magistracies of the *Nove*, the *Dodici* and the *Riformatori*, practically the only available authorities (if we except Paoli's "Monti o fazioni della Repubblica di Siena") were the "Cronaca Sanese" in Muratori and the "Historia" of Orlando Malavolti. In fact, Professor Douglas's shortcomings were not due to lack of ability or of industry, but simply to lack of available material.

Meanwhile, however, the *terra incognita* of the Trecento had begun to be explored, and, while "The History of Siena" was passing through the press, Julien Luchaire, professor of literature at the University of Grenoble, who had been working among the Sienese archives, published an interesting monograph, "Le Statut des Neuf Gouverneurs et Défenseurs de la Commune de Sienne." Of the additional material thus afforded immediate use was made by the author of the historical introduction to Miss Lucy Olcott's "Guide to Siena," which appeared in the spring of 1903 and was favorably noticed in these columns.

A few months later a key to the history of the whole of the first half of the fourteenth century was provided by the publication, in two large volumes, under the auspices of the Minister of the Interior, of the "Costituto del Comune di Siena volgarizzato nel MCCCIX-MCCCX," with an invaluable preface from the pen of Cav. Alessandro Lisini. It seems that Professor Luchaire had himself contemplated the publication of this statute; and, finding himself forestalled, he forthwith turned his attention to the succeeding epoch. The result of his researches is to be found in the work before us, which at last makes it possible to write a definite and final history of Siena up to the year 1370; while the "Provvedimenti economici della Repubblica di Siena nel 1382," which were published as long ago as 1895 by Alessandro Lisini, carry us very nearly to the end of the century. From the opening years of the Quattrocento, the difficulty is mainly one of selection, as the renewed excellence of Professor Douglas's subsequent chapters clearly demonstrates.

For M. Luchaire's book we have nothing but praise. The documents, which occupy more than three-quarters of the entire volume, are admirably selected from the "Statutes of the Commune" (Nos. 31-34), from the "Libro della Corona," and from the records of the *Concistorio* and of the *Consiglio Generale*. The index is copious and accurate and the introduction is a model of what such an introduction ought to be, not only forming a most useful commentary to the documents, but presenting us also with a masterly sketch of the earlier political history of the republic.

Nor is it the least of M. Luchaire's merits that he helps us to an entirely new point of view. In his "Songs Before Sunrise" Mr. Swinburne long ago hymned Siena as the "lady loveliest of my loves"; and, with the exception of Edmund G. Gardner, whose "Story of Siena and S. Gimignano," though pleasantly written, is far too superficial to have much permanent value, nearly all modern English writers who have treated of Siena have been Siena's lovers. They have hated where she hated and loved where she loved. As far as in them lies, they have looked upon the world through her eyes, and, in direct proportion to the devoutness of their worship, they have succeeded in interpreting her spirit to the public. In this respect no mediæval city has been better served; but such an attitude has its drawbacks, and it is well that even her lovers should learn whether the Sienese view of Siena is the true one. It is here that M. Luchaire has served us well, since, in dealing with his subject, he is as impersonal as an early chronicle, as impartial as a Supreme Court judge. Siena has won his affection, but her glamour has not blinded him, and in the present volume he regards the Sienese through their institutions. It is the democratic evolution which interests him, and he studies it, as it were, in a vacuum.

M. Luchaire informs us in his preface that he is preparing a larger and more ambitious work dealing with the whole history of the Commune of Siena in the Trecento. We can only say that, if he succeeds in living up to the high standard which he has set himself in the present volume, his name can hardly fail to find an honored place among the splendid list of learned men to whose labors Siena and those who love her owe so deep a debt of gratitude.

L'Opera Politica del Senatore I. Artom nel Risorgimento Italiano. Parte Iª. Collaborazione col Conte Camillo di Cavour. Per Ernesto Artom. Bologna; Zanichelli.

This is the most important contribution to our knowledge of the last years of Cavour's career that has appeared since Chiala completed his monumental collection of letters. Ernesto Artom has edited his uncle's papers with such scrupulous discretion that nobody now living can be injured by their publication. He has erred, if at all, on the side of reticence. We wish that he had furnished more notes and had been more careful to give dates and names, and that he had submitted his proofs to a competent reader. But when these deductions have been made, his book remains of permanent value as a historic source.

Isaac Artom, then in his thirtieth year, became Cavour's private secretary early in 1859, and served him to the end. Like Dinà, the ablest newspaper editor of modern Italy, whose talents Cavour discovered, Artom was a Jew. Between him and his chief perfect confidence prevailed. Artom was no mere stenographer, who writes out the letters that have been dictated. He had a remarkable gift for political analysis and diplomatic procedure, and he expressed himself forcibly but urbanely. So Cavour relied upon him to draft the most important dispatches, after discussing what their purport should be, and he often made no verbal change in them. Artom also sent budgets of inspired news to various correspondents in Paris and elsewhere, to be worked over into articles for the French, English, and German press, in order to create a European public opinion favorable to Piedmont. His post was no sinecure; for Cavour began his day at half-past four or five in the morning, and visitors in those early hours could hear Artom, writing behind a screen, in a corner of the statesman's bedroom.

The material in this volume which bears on specific historical events, begins with the outbreak of the war with Austria, in April, 1859. Here we find the original version of the reply to Austria's ultimatum; we find also that the address of the Venetian patriots, as well as the instructions to the Piedmontese plenipotentiary at the Zurich Conference, was really drawn up by Artom. Then follow over thirty pages of private telegrams, mostly inedited, which reveal the state of the peace negotiations from day to day. On Cavour's return to office we have several weighty papers touching the cession of Nice and Savoy—a sacrifice which Cavour wisely accepted as inevitable. But he was not to be bullied by Napoleon III. "If France employs force," he telegraphed on February 19, 1860, to his secret agent, Count Arese, "we shall protest energetically against the violation of the principle of non-intervention already admitted by her." And at the same time he bade Nigra, the Piedmontese minister at Paris, "declare to M. de Thouvenel that France may cause Nice and Savoy to be occupied and annexed by force, but that neither the King nor his Government will ever consent to sign a public treaty without stipulating the mode of voting, or will permit the votes to be taken under the menace of bayonets."

An important batch of documents refers to Garibaldi's Sicilian expedition, including the disingenuous dealings with the King of Naples, and the effort to secure the good will or at least the consent of Europe to the annexation of the Southern provinces. In general, this section contains much corroborative material, but none that calls for a revision of accepted views. Having made France his "accomplice," through ceding to her Nice and Savoy, Cavour turned to England for moral support in this most ticklish affair; and Palmerston and Lord John Russell met him half way and prevented Napoleon's disapproval from passing beyond verbal remonstrance. Gladstone, too, was a hearty supporter. In a letter of September 16, 1860, he expresses the hope that "Garibaldi, with or without the Sardinians, will become master of the Pope's territories outside of Rome." When serious British statesmen could write thus, no wonder that Continental diplomats took seriously Garibaldi's proposal to oust the Pope, and from the Campidoglio proclaim Victor Emmanuel King of Italy.

By far the most significant contribution in the volume is that of the letters which passed to and from Cavour and his agents in regard to a settlement with the Pope. The revelations of Dr. Pantaleoni and of Passaglia, who conducted his secret negotiations at Rome, are here amply confirmed by testimony from other persons whom Cavour employed on that most delicate mission. There seems to be little doubt but that at the moment of Cavour's death an agreement might soon have been reached. Cardinal Antonelli had, indeed, broken out in one of his periodic excesses of rage, but the desirability of a settlement was acknowledged by most of the Pope's supporters in Rome, and, what was of more immediate significance, the French Emperor was ready to withdraw his garrison, if

he could do so without loss of prestige. The remarkable secret letter from Prince Jerome Napoleon to Cavour, of April 13, 1861, proves this; and the dispatch from Vimercati, received by Cavour only three days before he was stricken by his fatal illness, gave him good reason to hope for a speedy solution. Cavour's death did much more than interrupt the negotiations, for it removed not only the master mind, but the tradition of success. The diplomats at the Vatican and the Tuileries had reason to know him as a man who never gave up, and who in the long run conquered; his successors might inherit his policy, but they could not inherit his personality or his habit of winning, and they made but a sorry bungle of the Roman question when they tried to solve it.

Signor Ernesto Artom adds several pieces of biographical interest, including the elder Artom's admirable introduction to Cavour's "Discorsi Parlamentari," and an important article on the relations between Victor Emanuel and Cavour. There are also letters in which he describes Cavour's last illness and gives some touching personal details. A copy of the minutes of all the cabinet meetings held between January 6, 1859, and June 6, 1861, is an historical source of primary value. Two letters to the somewhat supercilious Professor Treitschke, in reply to his criticism of Cavour's achievement and of the Law of Papal Guarantees, may be commended as models of dignified rebuttal.

We cannot conclude without quoting these lines from a letter from honest Artom to Daniel Stern, dated June 9, 1861:

When he summoned me to his office, I had just lost my father; without wishing it, or being aware of it, I came to love him as another father. Whilst he lived I never dared to express my affection to him, but from the kindness he showed me I understood that he knew the whole extent of my devotion. . . . His heart was as great as his intelligence. In spite of moments of quickness and irritation, in spite of the passion with which he carried on political discussions, he hated nobody. In his confidential talks with me, he defended his enemies, saying good-naturedly that they were playing their proper rôle. His vast tolerance included all opinions: he made me, an Israelite, his private secretary, which did not hinder him from protecting the poor monks and from having friendly relations with Fra Giacomo. In a word, he was what all the world pretends to be, but is so little, a Liberal spirit and a generous heart.

NEWS FOR BIBLIOPHILES.

A Bibliography of the Writings of Henry James. By Le Roy Phillips. Boston: Houghton, Mifflin & Co. $3 net.

This is a notable piece of bibliographical work, for more reasons than one. It is unusual to catalogue all the writings in books or periodicals of any author until his death. Mr. James is still alive, not yet seventy, and hale and sound. Thomas J. Wise's elaborate bibliography of Ruskin, 1893 (Ruskin died in 1900), is the most important instance we now recall. A few years ago, when Kipling was the favorite of collectors (alas, that day is past!), various essays towards a bibliography of his writings were put forth, but no one of them was so elaborate, accurate, or complete as this of Henry James. Mr. Phillips's work has been a labor of love, and his publishers can expect but scant returns for their expenditure on this well-made volume of almost two hundred pages. Collectors of Henry James are few; at the auction room there is almost no competition for first editions of his books. We recommend the gathering of a set of Henry James to the collector who wishes the joy of the chase, but whose purse does not permit the hunting of the costlier first editions of Hawthorne or Longfellow. With such a good bibliography, the interest in his books among collectors ought to increase, and prices should accordingly rise.

So far as we have been able to test it, Mr. Phillips's work is admirably done, and the amount of research must have been very considerable. The text is in three parts. Part I., "Original Works," is a chronological bibliography of books, giving the first edition, with lined-off title, collation, note as to binding, and full list of contents where made up of detached essays or stories, with the periodical and its date where each of the pieces first appeared. Following this account of the first edition is a record of later editions and of translations. As many of James's books were issued simultaneously in America and England, full transcripts and collations are given of the first English as well as the first American edition. In Part II. are described books by other authors to which James contributed. The titles are lined off and collations are given. Part III. is a very extended list of contributions of periodicals. His first appearance in print seems to have been an unsigned book review in the *North American Review* for October, 1864, when he was twenty-one. Upwards of two hundred contributions to the *Nation*, articles, reviews, and notes, are recorded from 1865 to 1879. The year 1875 was the most prolific, no less than fifty-five pieces being recorded as appearing in this weekly during that year. Most of these were unsigned, and the majority have never been collected or reprinted. This is true also to a considerable extent of contributions to other periodicals, the *North American Review*, *Atlantic Monthly*, *Galaxy*, New York *Tribune*, etc.

An appendix contains an account of two plays by James which have been staged in London, but which have never been published, "The American," October, 1891, and "Guy Domville," January, 1895. At the end, in small type, is an exhaustive alphabetical list of titles, with references to the periodicals and books in which they are found.

The twelfth volume of "American Book Prices Current," compiled by Luther S. Livingston, has just been issued by Dodd, Mead & Co. This annual is so well known and has become so indispensable to dealers in rare books and to collectors that it demands no detailed notice. The 774 pages contain a record of prices of the books, manuscripts, and autographs sold at auction in New York, Boston, and Philadelphia, from September 1, 1905, to September 1, 1906. The season covered in this twelfth volume surpassed every previous season in the number of lots sold and probably in the total sum obtained for them. The number of lots was 139,383, of which 14,600 are reported in this book. The highest price paid for a single volume was $1,500, at C. F. Libbie & Co.'s, Boston, for Poe's second book, "Al Aaraaf, Tamerlane and Minor Poems," Baltimore, 1829. A presentation copy of this book with autograph corrections by Poe brought $1,825 in 1903, and uncut copies went for $1,100 in 1900 and $1,300 in 1901. The next highest price for a single volume was for a third quarto of "The Merchant of Venice," 1637, $1,300, at the Anderson Auction Company in this city. A set of the four Shakespeare folios sold for $8,950 at Libbie's, but the first and the third folio were defective. Mr. Livingston observes that the increase in the price of early editions of Shakespeare and of books that refer to him is one of the striking features of recent auctions. A set of Audubon's Birds and Quadrupeds, the original folios with the accompanying text, went for $4,350 at Henkels's in Philadelphia. Comparatively few items of rare Americana were offered, but several items in this class ranged in price from $300 to $1,000. Some good collections of autographs were dispersed. There is no doubt, says Mr. Livingston, that the interest in autographs is increasing. More lots are being offered at auction and prices of specimens of the better class are rising.

The interest among collectors in the limited books issued by private or semi-private presses has fallen away greatly within the last two or three years. At the time when every book of the sort was eagerly snapped up, sometimes even commanding a premium before publication, a number of "presses" sprang into existence, some of them genuine printing establishments, others merely names. Many of these have closed down. For sane bookmaking, the Doves Press, formed by the binder, T. J. Cobden-Sanderson, and Emery Walker, was one of the best. The press has just issued Part I. of Goethe's "Faust," in German, from the 1887 Weimar edition. While the types are the same and the size of the book practically the same as in the Doves "Paradise Lost" and "Paradise Regained," the page is less attractive. The names of the speakers are in large capitals and red ink; the stage directions, though in lower case, are all in red, as is the marginal heading of each page. Where the speeches are short, as is often the case, the page is unpleasantly red. With this book, is sent gratis to subscribers an address on London by Mr. Cobden-Sanderson, delivered before the Art-Workers Guild, March 6, 1891, and now printed by Richard Cobden-Sanderson. Both books are in limp vellum from the Doves Bindery.

The Essex House Press announces two new publications. "On the Need for the Establishment of Country Schools of Arts and Crafts" is a twenty-four-page pamphlet, in white buckram. "Dr. Johnson, an Essay," by Archibald Ramage, one of the compositors of the Press, contains thirty-two pages, and a portrait by Alec. Miller. Each appears in an edition limited to 200 copies, at five shillings each. The announcement of these two new books is accompanied by a list of the previous publications of the Press, fifty-nine in number. Most of the earlier issues are out of print.

On Monday afternoon and evening the Anderson Auction Company of this city sells a collection of Americana from a Southern

library, including some autographs and book-plates. Among the books are Williamson's "North Carolina," 1812, 2 vols.; three copies (one slightly imperfect) of Haywood's "Civil and Political History of Tennessee," 1823; Williams's "History of Vermont," 1809; Belknap's "History of New Hampshire," 1791-1792, 3 vols.; the first edition of the "Book of Mormon," Palmyra, 1830; and numerous books on New York, Texas, Pennsylvania, Maryland, and the Western Reserve. The autographs include letter books, account books, etc., of Robert C. Livingston, and a nearly complete series of autographs of the Presidents. On January 15 and 16 Anderson sells a private library and print collection. It contains a complete set of the historical monographs published by Goupil & Co., all on Japan paper.

On January 14 the Merwin-Clayton Sales Company of this city offers at auction a collection of autograph letters, among them specimens of Hawthorne, Cooper, Longfellow, Irving, Whittier, Holmes, Dickens, Bulwer, Thackeray, and many of the Presidents; and documents signed by Catherine the Great, Charles I. of England, Pope Clement VIII., Frederick the Great, George II., George III., George IV., Louis XIII., Louis XIV., Louis XV., Louis XVIII., and William IV. On January 15 the same company sells a bibliographical library including Harrisse's "Bibliotheca Americana Vetustissima," with the Additions; Collier's "Rarest Books"; Hawkins's "Books from the Earliest Presses," Martin's "Privately Printed Books," Smith's "Catalogue of Friends' Books," Asher's "Dutch books on New Netherlands," Field's "Essay Towards an Indian Bibliography," and others, many being presentation copies.

On January 21 and 22, Sotheby, Wilkinson & Hodge, London, will sell a collection of autographs, letters, and manuscripts. The most interesting documents in the sale are twenty-five autograph letters of Dr. Samuel Johnson, chiefly written to Mrs. Piozzi, then Mrs. Thrale. These are to be offered first as one lot, but if the reserve price is not realized, they will be sold separately. The reserve price is not named in the catalogue. From the same source, probably, is a collection of poems, anecdotes, etc., upwards of five hundred and sixty pages bound in five volumes, all in the autograph of Mrs. Piozzi. Among the other more important letters are those of Sir John Burgoyne, John Wesley, Lord Nelson, Samuel Richardson (an interesting specimen, regretting that he had lost his former ease of writing), Edmund Kean, Benjamin Disraeli (eleven early letters), David Livingston (five long letters sold as a lot), Marie Antoinette, and Sir John Franklin. On January 24 the same firm will sell the library of Archibald Ballantine of Edinburgh. There are first editions of Dickens, Thackeray, and Ainsworth, and books from the Doves and Vale presses.

Stan. V. Henkels announces that he will sell at auction in Philadelphia in the course of the next few months part four of the library of Gov. Samuel W. Pennypacker, including items relating to State, town, and county history, the Stamp Act troubles, the War of the Revolution, War of 1812, Civil War, colonial history, and genealogy; part four of the collection of engraved portraits belonging to James T. Mitchell, chief justice of Pennsylvania, including portraits of Presidents and of American statesmen from the Colonial period to the present time; the autographs gathered by the late Joshua I. Cohen of Baltimore, including a fine set of the signers of the Declaration of Independence, letters of George Washington, his mother, wife, father, and other relatives; autographs of members of the Constitutional Convention, and Stamp Act Congress, of Presidents and Cabinet members, generals in the Revolutionary and other wars, officers in the navy, statesmen, and authors; the library of the Rev. Horace E. Hayden, librarian of the Wilkes-Barre Historical Society, including works, letters, and manuscripts relating to the history of Pennsylvania, Virginia, and the Southern Confederacy; autographs of William H. Fry of Pittsburgh, including specimens of the signers of the Declaration of Independence, members of the Continental Congress, generals in the Revolutionary and other wars, Presidents and cabinet officers, statesmen, authors, actors, musical composers, and crowned heads; and the autographs of the late Joseph Hedges of Philadelphia, including letters and documents of George Washington, Revolutionary officers and statesmen, Presidents and cabinet officers; also ivory miniatures and relics of Washington. In this collection are two autograph diaries of Washington.

The Personal and Literary Letters of Robert, First Earl of Lytton. Edited by Lady Betty Balfour. 2 vols. New York: Longmans, Green & Co. $6 net.

Lady Betty Balfour, who edits these two volumes of her father's unofficial letters, grew up to be his most intimate and sympathetic friend in the latter part of his life. None saw more clearly into his real mind than his "dear alter ego," as he called her. She disclaims having written his biography, but her quotations are so well chosen, and the connective tissue, though slight, is woven of such tell-tale threads, that perhaps no further life will be required—by the general public at least. Considering her object—a picture of the man rather than of his times—Lady Betty Balfour must be congratulated on a model achievement.

She has inserted nothing that does not throw light on the central figure. Yet even those incurious about the author of "Lucile"—to give him his safest passport to popular recognition—may find the book brilliant and engaging. His style as a letter-writer would of itself make him worth reading. He never lacks the clearness and elegance of studied composition, and yet is always unmistakably and charmingly spontaneous. More than that, he lived in constant intimacy with celebrated people, and his sympathies were elastic. He gives vivid glimpses of scores of notabilities, from Lamartine and Daniel Webster to Sardou and Sarah Bernhardt; and on all the many subjects he discusses—from fashion to metaphysics, from politics to art—his utterances are those of a thinker who was also a poet, and who had gone through a rare training in "the world's debate."

Throughout his life Lord Lytton was an active diplomatist. With little outside help, he rose to one of the pinnacles of service under the British Crown, as Viceroy of India; while at Paris he was described by the late Lord Salisbury, who was not fertile in compliments, as "one of the best ambassadors of his time." Such feats are not easily achieved. Yet "Owen Meredith" merely "pursued his profession"—so his daughter says, and so all his friends knew—"from a sense of duty and as a means of livelihood. The work which called forth his best energies, his deepest enthusiasm, and his finest intellectual capacities, was from boyhood upwards that of poetical composition."

Here, indeed, lay the tragedy of his life; for, considering all the facts, it deserves no other name. He was throughout divided against himself, industriously pursuing one object, but passionately desirous of another. As a boy, on the threshold of the diplomatic career, he wrote about it:

> I feel that all these great prizes which allure others would, even were I to obtain them, greatly diminish rather than increase my happiness. Each step forward would be a step away from my own ideal, and would have to be trodden over some relinquished dream or strangled instinct.

It is not uncommon for a youth of artistic taste to speak thus at the dividing of the ways; but it is rare for such a youth to obtain the difficult prizes, which he does not desire, and when the race has been victoriously run to confirm the detached prophecy of his boyhood. Forty years after Robert Lytton had thus forecast his mental boroscope, the first Earl of Lytton, then Her Britannic Majesty's Ambassador in Paris, wrote as follows:

> All the known and successful side of my life is a suppression, a sacrifice which has not even the grace of spontaneity, of the natural self. If now and then the cramped wings flutter under the coop, they are subdued at once by a perception of the unseemliness in such flutterings of a diseased personality. On this side of my life, whether I look forward or backward, an immense despair always comes over me. If I were younger—but it is all too late now; I know that as a poet I shall never do what I feel that I might have done and been.

And this was no accidentally morbid retrospect. A like regret dogged him throughout his career.

Now, if that "what I might have done and been" were merely an illusion of vanity, the melancholy of Her Britannic Majesty's Ambassador to the French Republic would be, after all, a theme of farce rather than of tragedy. But if, on the other hand, here was one who might in truth have been among the first English poets of his age—perhaps the first—ending, after all, as a mere ambassador, known finally in literature, if at all, as the author of "Lucile," was there no cause for tears? Before dismissing these dying regrets, let us go back for a moment to his youth.

Never have more hopeful judgments been passed on any aspirant to the bays than on the young Robert Lytton; and that by those who were best qualified to speak. Robert Browning and his wife, who had no motive to praise him beyond their native sincerity, were insistent on the prerogatives of his genius. They reproached him sharply for not giving himself completely to art, and had no shadow of doubt about

the reward of devotion. "I want you to be really great," writes Browning, "because it is *in* you—clearly enough. By success, speaking of you, I want and expect the highest of its kind. If you don't make a poet, you will have murdered a real specimen of that same." This, in a regretful letter after the publication of "Lucile." John Forster was of a like opinion, and so was Landor. After the youth's first venture—"Clytemnestra and Other Pieces"—Leigh Hunt wrote:

> He is a truly musical, reflecting, impassioned, and imaginative poet, with a tendency to but one of the faults of his contemporaries, and that chiefly in his minor pieces.

The opinion may be added of his harshest judge, his father, the famous novelist, jealous, alas! of the boy's gifts and a profound disbeliever in his poetical theories. "I must own," says Bulwer Lytton, "I have read your 'Clytemnestra' with surprise. There is no mistake that you have the *vivida vis* and are a real poet." About "Lucile" the same critic remarked: "I cannot recall any work of greater *promise* since 'Werther.' "

Is it too much to say that these anticipations were confirmed, so far as that could be the case, by the hurried productions of Lord Lytton's maturity? At all events we must concede that, when he abandoned a full devotion to art for a material career, he had some ground for supposing that he was making no ordinary sacrifice. Said that believer in his possibilities, Robert Browning:

> Let each man strive to the uttermost
> For his life's set prize, be it what it will.

Lytton, however, made "the great refusal," in full consciousness of what he was doing. And why? Mrs. Browning, writing to him soon after the renunciation, tells him that he has too much "sympathy":

> You sympathize too much . . . from some cause or other—too much love, perhaps, or unconscious indolence. Dear Mr. Lytton, let us remember that Art requires the whole man, austerely and unreservedly given.

How far he was from indolence! But "too much love"—Mrs. Browning hit the mark there! This exile from poetry was one of the most affectionate souls that ever breathed. He idolized his father, as he afterwards idolized his children. He loved unreservedly, and, so far as art was concerned, love was his bane. Some have thought that he failed to carry out his poetical mission through lack of self-confidence; but he wrote and published with a freedom which hardly confirms that idea. What he certainly did lack was the emotional self-centredness of a Goethe, a Hugo, a Shelley, a Tennyson. His affections continually "gave him away." To his artistic conscience his father could be little more than a literary cheap-jack, who "understood his poetical opinions no better than Col. Newcomb did those of Clive and his friends"; who urged on the young poet, with all his aspirations, to aim first of all at "wide popularity"; to avoid being misled by "Keats and Shelley, who, though praised by the critics, are very little read"; and who could add such an ingenuous impertinence as this: "Now, take Charles Mackay's poems! They are no idols of the refining few, *but they sell immensely.*" Yet the son's heart so clung to the man, that in spite of his innermost convictions, he could hardly quarrel with the critic. "My father's theory of poetry," he writes, "differs widely from my own, but it would be presumptuous in me to say that his is not the better of the two." And when his father bluntly advised him to "stick to his profession," and not to "saunter into a relaxed, effeminate air of pleasure and egotism"—such was his name for the austerity of a poet—the son, strong-willed man as he afterwards proved himself, submitted without one answering reproach. And what was his consolation for the sacrifice forty years after? Affection is still the note. "Besides," he writes, near his death, "there is still this paramount consolation. I feel no doubt whatever that my official and public life has been in all ways more beneficial than the other, or any other, could have been for those I love, and to the welfare of whose lives my own can be conducive." Frustrated, as he was, in the written word, this poetry must be inscribed across his life—that he "loved greatly."

But the irony of his being best known by "Lucile"! Of his being identified with the trivial hero of that novel in verse! "I have written some weaker poems," he said at the time, "but none that I dislike more." The plot was borrowed from George Sand's "Lavinia." There was not a shred of autobiography in it. Yet in popular esteem he passes for a Lord Alfred, and so must continue.

The Far Horizon. By Lucas Malet. New York: Dodd, Mead & Co.

"Sir Richard Calmady" was, we recall, a "book of the year," much read and perhaps more talked about. It was recognized as a "strong" story, with some startling situations and much frank speech. For the taste of certain readers the physical limitations of the hero may have been too insistently dwelt upon, and the indecencies of the adventuress displayed under too strong a light. Reader, be assured; nothing of the kind is to be found in "The Far Horizon." The leading lady, no doubt, is a social outcast, but she is in no sense indecent. The hero's abnormality (*quâ* hero) lies only in his fifty-five years, and his avowed status, at the outset, of superannuated bank clerk. He does not marry the lady, or desire to marry her, but he restores her to herself, and finds his own spiritual self by the way.

The style of Lucas Malet (Mary St. Leger Harrison) does not improve. It is diffuse, artificial, often pretentious: a style which would be considered distinctively literary by unliterary persons. It borders, at its worst, upon that of Miss Corelli. Nor can Lucas Malet's style in the larger sense be commended; her novels are flimsy of structure, and cumbered with superfluities. There are only two human beings in "The Far Horizon"; the rest are mere supernumeraries and property figures. With their omission, the novel, which is essentially a study of the relations of two persons, might be gainfully reduced to, say, one-fourth its present bulk. English precedent, we know, makes it difficult for the English novelist to be compact; but if some arrangement might be possible for the boiling down of fatty manuscript on its way across the Atlantic! The supposedly humorous middle-class group, introduced by way of relief to the sober, even sombre, figure of Dominic Iglesias, are merely facetious and dull. The villain of the piece is an unsuccessful author, too gross a caricature to be anything but an impertinence. Even in the delineation of the two principal persons there is a suggestion of strain. The dignity of the man is constantly imperilled by his habit of prosing; as the credibility of the woman is often in the way of succumbing to her fatal gift of sprightliness. Nevertheless, the story of the friendship of this odd pair is a really moving one. "The Far Horizon" is not that "book of the year" toward which, it is understood, the whole creation moves. It does not strike one as a book which had to be written, or will have to be read. But it possesses the treasure of a really original and affecting central motive.

Granada. Memories, Adventures, Studies, and Impressions. By Leonard Williams. With 24 illustrations; frontispiece in color by A. M. Foweraker. Philadelphia: J. B. Lippincott Co. $2.50 net.

Saunterings in Spain. By Frederick H. A. Seymour. With 24 illustrations. New York: E. P. Dutton & Co. $3.00 net.

Mr. Williams is no stranger to lovers of Spain. His "Toledo and Madrid," "The Land of the Dons," "Ballads and Songs of Spain," and "A Child's History of Spain" are proof that he did not lose his interest in the Peninsula when he ceased to represent "The Thunderer" at Madrid. In the present volume he deals with the South, that strip of Africa sewn on to the skirt of the continent, as Gautier calls the southern province, strolling through Andalusia as the Parisian saunters down the boulevard, alive to everything about him because going nowhere in particular; observant, superior, critical, philosophical, sometimes flippant, a true *flaneur*, with all the charm of one who knows his Spain and all the egoism of one who knows he knows it. "Granada" is the record of personal experience and observation, but deals almost exclusively with what the ordinary visitor never sees, 55 pages being devoted to the Sacro-Monte, 60 to excursions in the Sierra Nevada, and 35 to jaunts to Guadix and the Albaycin, out of a total of 212.

Mr. Seymour, on the other hand, whose title-page reads "Saunterings in Spain," is not a saunterer at all, but the cicerone, with much of the dryness and ponderosity of the guild, but informing, and if not so suggestive as Mr. Williams, far more valuable as a guide. His itinerary includes the most visited of the Spanish cities—Barcelona, Madrid, Toledo, Cordova, Seville, Granada, Ronda and the Rock—the Spanish Highway, but omits almost as much as it includes—Burgos, Segovia, Saragossa, Salamanca, and all the byways where the truest impressions of Spain are formed. The book is essentially for the journey, and not the fireside. The chapter on the Muséo del Prado, for example, is almost a catalogue, besides being full of information, description, and generally interesting comment—although one hardly shares the author's regret that the genius of Velasquez was "so often exercised in delineating the ugly or unsympathetic features of

dwarfs, beggars, and fools," or agrees with his designation of the gravecloths of Charles, the Empress, and Philip in Titian's "Gloria" as "nightgowns"! The author's contempt for the Puerta del Sol is refreshing. Guidebooks and writers generally overrate this famous square, whose buildings have scant claim to beauty or interest, and whose throngs of idlers, peddlers, and beggars are destitute of the redeeming local color which they present elsewhere in Spain. It is at best but a vulgar spot.

The space allotted to Toledo is disappointingly brief, and the reader's confidence in the author's Spanish is rudely shaken by the translation of the inscription on the pedestal of the statue of Charles in the quadrangle of the Alcazar: "Si en la pelea veis caer mi caballo y mi estandarte, levantad primero este que a mi," which, he says, may be rendered: "If in the shock of battle thou shouldst behold my horse go down, and then my standard, be the first to fly aloft, so may I be the first to leap to my feet." How so ambiguous and inflated a rendition can be tortured out of the simple "If in the battle you see my horse and standard fall, raise the latter before [raising] me," is difficult to imagine.

The volume opens with an historical sketch in which the author sounds the customary note of praise of the Moor:

> In architecture, religious and domestic, they originated another style which, in fascination at least, excels all other orders. No building in Europe surpasses the Cordova Mosque. The Alhambra—of which the name alone conjures up a vision of gorgeous yet harmonious ornamentation, combined with a mathematical precision of construction—has had no rival in the world.

Aside from the misuse of the word *order*, to say that the Mosque of Cordova is unsurpassed by any building in Europe and that the Alhambra has no rival in the world, is going far, indeed. As a matter of fact, the Saracen contributed little to architecture from a constructive point of view. Wherever he went, he adopted the organic forms he found, but added nothing to them. Saracenic architecture contains no new principle such as the Roman arch placed on the pier, the Byzantine dome on the square, the concentration of strains on single points of support as developed in Gothic practice, or the restoration of the column and entablature to their original Greek functions as constructive and supporting members by the Romanesque builders. With all these elements the fancy of the Arab played, depressing or elevating the dome into bulbous or tapering forms, prolonging the curve of the arch, and above all introducing an elaborate system of surface decoration peculiarly his own. But constructively he was destitute of originality in architecture, as in all else. "Upon what Department of Science and Art," says Mr. Seymour, "did that strange people not shed light?" Well, in mathematics they advanced hardly a step beyond their predecessors in India and the Alexandrian school of Diophantus; in astronomy they surpassed the Greek only in refinement of calculation; as they were averse to dissection, their surgery was at a standstill; in medicine they made little progress beyond Hippocrates; and Arabian philosophy has been somewhere wittily described as "the flight into Egypt." From the fact that science contains many Arabic words (as algebra), it must not be inferred that the Arab was a great contributor to scientific knowledge. His chief distinction is that in that dark period when the West slumbered he preserved the lamp of knowledge from extinction.

We are left in no doubt of the author's nationality by his concluding meditation on the Rock of Gibraltar, resembling "a lion couchant, regarding from his great sea-lair all that pass below him in the ocean beneath, and disregarding with majestic unconcern the jealous navies that seem to gnash their iron teeth with envy, as they glance, with impotent rage, upon the Rock whence Britannia rules the waves." O, le beau langage!

India and Her People. By Swami Abhedananda. Published by the Vedanta Society, New York.

One can but sympathize with the purpose actuating the author of this little volume. "To give an impartial account of the facts from the standpoint of an unbiassed historian, and to remove all misunderstandings which prevail among the Americans concerning India and her people" was, we learn from the preface, Mr. Abhedananda's main object in becoming a missionary and delivering before the Brooklyn Institute of Arts and Sciences the course of lectures which constitute this book. The director of the Institute prefaces the author's preface with an Introduction, in which he assures us that these lectures "contain precisely what the American wants to know about India."

"Not what we want, but what we need" should, however, be the motto of those who really wish to know, and a careful perusal of Swami Abhedananda's book leaves us doubtful whether the reader who has reached the end of the volume will have absorbed more historical truth or fiction. This applies not so much to the first two chapters, on the philosophy and religion of to-day, as to those following, on the social and political institutions, education, and the reciprocal influence of Hindu and Western civilizations, together with a final chapter (not included in the lecture-course) on Woman's Place in Hindu Religion.

From the historical point of view, which is assumed by the Swami, it is to be regretted that the author has not made himself better acquainted with chronology. His vague assumption of priority for all Hindu ideas shows that he has the native inability to distinguish between ascertained fact and poetic fancy. Even in the opening chapter we are confronted with the astounding statement that the Aryan philosophers of India had discovered the evolution of man from the lower animals at a time when the Semites were still trying to explain the origin of the human race through mythology. The casual remark in the next chapter that "Krishna, the Hindu Christ, lived about 1400 B. C.," is in itself a revelation of the unhistorical method of the writer, since even the fact that this Krishna lived at all is doubtful, and no reference to him is older than the sixth century B. C.

More important are the errors in the succeeding chapters. Thus we are told with scorn that we in the West have orphanages, poorhouses, and charitable institutions, which "were not necessary" in ancient India, because the community was "like one family" and "took care of its own poor and its own orphans." In fact, Hindu literature is full of passages showing that the Hindu community never was able to take care of its poor and rarely did so. After this we find a very instructive chapter on political institutions in India. It develops into a tirade against England on the score of taxes and famines, and contains a large number of half-truths. This sort of thing has been done in this sort of way for many decades. The best example of it is Dadabhai's "Poverty of India." Taxes are hard, famines are frequent. If only the English defender would not deny everything and the native (or his English sympathizer, who is generally still more virulent against his kin) would not charge everything to England's account, the truth might at last be known. But little is gained when we come across, at the very outset of the discussion, such a statement as that on page 141 of Mr. Abhedananda's book: "Terrible famines began for the first time with the British rule in India." Terrible famines have been known in India since the Vedic age, which, according to our author, antedates the time of Moses.

On the subject of woman's place in Hindu religion, the author should read both ancient and modern books before lecturing or writing. Women, to Brahmin and Buddhist alike, were the "torches that light the way to hell"; and though this is a sacerdotal view, the contempt for women in India is more marked than anything else even in profane literature. They had no property (our author says erroneously that women "had the same right to possess property as men") till a late era; they were excluded from religious functions, except certain rites; they were regarded merely as a "source of sorrow." The Saramâ, whom the author cities as an historical character, an Amazon, was a mythological goddess! Women have been poetically idealized in India as elsewhere, but their place in religion and the state was next to that of the slave, and at this day no creature more pitiable than many a Hindu woman, disposed of according to native rule and precedent, can be found on earth.

We have given more space to this book than, to tell the truth, it deserves. But its faults are characteristic of so many of the self-satisfied utterances of the bland Hindus who come hither to tell us how much better they would be without Western ideas, that it seems worth while to point out how misleading are the half-truths presented. When a Hindu philosopher tells us about Vedanta religion and philosophy he usually tells us something worth bearing, because it is the only thing he knows well. When he talks about history, civilization, dates, and the status of women he usually makes himself ridiculous.

A Hundred Years Hence. By T. Baron Russell. Chicago: A. C. McClurg & Co.

Science has its prophets as well as its wonders. Mr. Russell's predictions are not baseless visions, nor is his picture of the future, though occasionally extravagant,

so utopian as that of Bellamy. He interprets what is about to be from what is. With a great deal of rather superficial information scientific, artistic, educational, journalistic, social, and religious, he attempts to say what the world will be like one hundred years hence. Not much can be said in praise of his literary style. It is without distinction, monotonous, and garrulous. Mr. Russell calls himself "an optimist," but should his expectations ever be realized the world will, we fear, be in many respects a cheerless place.

Improvement of the telephone and of the phonograph, of course, have a prominent place. The recording telephone will lessen the amount of speaking, and sights as well as sounds will be conveyed over long distances, without wires. The house of the future will be one hundred stories high. Streets will be laid, and houses built upon the surface of the sea; and vehicles will skim the waves without being even partly submerged. Flying machines will be as common as bicycles, and with them travellers will visit the Arctic regions or the tropics with as little concern as they would go for a drive in the park. Domestic servants will be generally replaced by mechanical arrangements. Instead of living actors on the stage, there will be phonographic and panoramic representations of plays which will be performed but once and then reported and photographed for further mechanical repetition.

In a book like this, which is little more than a *jeu d'esprit*, the author should be allowed license for his imagination; and the probability of what he predicts need not be questioned. It is less with his forecast of the future than with his estimate of the present that the critical reader may find fault. His objections to revealed religion, trial by jury, and prevailing methods of education have been made before; and the substitutes which he offers are not enticing. His conceptions of abnormal psychology are rather crude, and his faith in reports of "thought transference" is naïve. Occasionally when he gets below the surface of things he loses his footing, as when he observes that modern atomism does not "tend to materialism" because "with atoms resolved by the latest science into electrons . . . the objectivity of matter has assuredly not received any support."

Taken in small quantities, Mr. Russell's prophecy is diverting, but those who read it continuously may wish that parts of it had been written in the age predicted by the author, when "boredom" shall have been abolished.

Drama.

TWO PLAYS BY CLYDE FITCH.

In "The Straight Road," one of the two new plays which Clyde Fitch has produced this week, he has chosen what is for him a comparatively new subject. Unfortunately, he has not treated it with much orlginality or power, or with manifest sincerity of purpose, although he reveals once more his sense of theatrical situation and his dexterity and unscrupulousness in creating it. His primary object being to construct a character suitable to the positive but restricted abilities of Miss Blanche Walsh, he conceived a scheme in which a woman of the slums, brutalized by hardship, ignorance, and drink, but not unchaste, is redeemed by the kindness of a philanthropic heiress, and the influence of a crippled child working on her undeveloped instincts of motherhood. In course of time this reformed creature, who is beautiful, attracts the attention of a vicious young profligate, who is soon to marry her benefactress, and by him is placed in a cruelly false position. Finding herself utterly discredited in the eyes of her guardian angel, she resolves to expose her persecutor's character, even at the risk of her own, and so contrives that while visiting her, he shall be surprised by his betrothed. Her plan succeeds partly, for the heiress is effectually disenchanted; but unluckily her own lover is unexpectedly present at the exposure, and remorselessly casts her off. In her furious rebellion against the injustice which has made her best impulses the agents of her ruin, she relapses temporarily into her old savagery, but soon her better instincts reassert themselves. Presently, her innocence is established, and all ends well, even for the heiress, whose loss of her chosen husband is certainly no calamity. This is a good theme, of much dramatic potentiality, but Mr. Fitch has handled it, for the most part, in conventional fashion. There is vigor and truth, together with much that is merely commonplace, in his sketch of his heroine, Molly O'Hara, but the device which he employs to secure her disgrace is quite unworthy of his experience or invention. The female philanthropist and her profligate suitor are both purely theatrical figures, but the tenement house folk, if they betray little originality in drawing, or novelty in humorous fancy, do possess vitality. It is only in the third act, where the girl's plot works out to her own undoing, that the playwright shows much of his habitual skill in the composition of an effective theatrical scene, or a striking emotional climax. The conception of the girl, in her blank despair, wrecking the home she had made, is bold and true. It was a pity to spoil it by such a transparent trick as the tearing down of a window blind to let a ray of light fall on a picture of the Virgin. Such theatrical miracles generally fail of their intended effect. Miss Walsh gives a good straightforward performance of the heroine, showing earnestness and fair intelligence, but nothing like inspiration.

Mr. Fitch's second play, "The Truth," presented in the Criterion Theatre, wavers on the border between farce and eccentric comedy, and may be dismissed with brief notice. The central idea of it has been used frequently upon the stage, since the days of Foote's old comedy, "The Liar," and doubtless is still capable of good theatrical service, but Mr. Fitch spoils the effect by whimsical extravagance, constantly outstepping the modesty of nature, which is one of his besetting sins as a dramatist. His heroine is a young married woman, with a constitutional incapacity for speaking the truth. Theoretically, her misrepresentations are not malicious, but their cumulative effect alienates her friends, jeopardizes her good name, and causes her separation from a devoted husband, who refuses to believe her, when she protests, very truly, that she is entirely innocent in deed, although appearances are against her. With his usual ingenuity, Mr. Fitch has devised two or three effective domestic crises, but they fail to impress the spectator deeply, because of the unsympathetic nature of the personages concerned, and the extreme improbability of the preliminary conditions. The woman lies so persistently, so unnecessarily, and so foolishly that she excites impaticnce and contempt rather than amusement. Moreover, it is only too plain that her falsehoods are invented with a view to the desired complications. The subordinate characters are overdrawn, and the piece throughout is lacking in proportion, restraint, and sincerity. The moral that honesty is the best policy is, of course, unexceptionable. Mrs. Bloodgood, for whom the part of the heroine was written, is only moderately successful in it. She is better in the emotional, than in the humorous passages, in which her self-consciousness is destructive of illusion. William B. Mack, as a broken-down gambler and blackmailer, Mrs. Sam Sothern as a jealous woman, and Zelda Sears, as an elderly widow in search of a husband, are all entitled to a word of praise.

The first volume of "Shakespeare's Pronunciation," by Professor W. Viëtor of Marburg, contains a phonology, with "a rime-index to the poems as a pronouncing vocabulary." In the earlier part of the book, the author, after having explained the phonetic system to be employed, discusses the Shakespearian pronunciation of the vowel and consonant sounds in order, basing his conclusions on the rhymes of Shakespeare's poems interpreted in the light of the early dictionaries and treatises on pronunciation. Since the book is professedly aimed at a wider than the purely specialist audience, it is fair to remark that Professor Viëtor is by no means always careful to make his discussions self-explanatory, or to avoid terms and allusions which imply a considerable technical knowledge, not only of phonetics, but even of the special works bearing on the Elizabethan period. Moreover, at times he uses phonetic symbols, like [y:] in chapter v., which are not included in his key. Even his list of approximate equations with modern English sounds is not as free from ambiguity as might be desired. Thus the Shakespearian vowel-sound in *by* is equated with "exaggerated London English (and usual Cockney) *e* in *be*," and the Shakespearian *aw* in *saw* with "Northern English and Cockney *a* in *father*." Some method of indicating sounds which does not demand so minute a knowledge of English local usage might surely have been found. The second part of the volume is entitled to more hearty commendation. The exhaustive rhyme-index is so arranged as to be available whether one accepts Viëtor's own conclusions or no, and it affords an excellent starting point as well as much evidence for the study of Shakespeare's personal usage in pronunciation. The book as a whole is simpler and easier to use than Ellis's great work, being much less comprehensive in scope; and it is the most convenient work on the subject

in English. It is to be completed by a "Shakespeare Reader in the Old Spelling and with a Phonetic Transcription." (Marburg: Elwert; London: D. Nutt.)

The London *Spectator* of July 2, 1898, printed a letter from Rudyard Kipling on the sources of Shakespeare's "Tempest." Mr. Kipling advanced the theory that Shakespeare might have received the suggestion for the play from the "chatter of a half-tipsy sailor" who had visited "the still-vext Bermoothes." This view Mr. Kipling fortified by the statement that "those who go to-day to a certain beach some two miles from Hamilton will find the stage set for Act II., Scene 2 of 'The Tempest' ":

A bare hearth, with the wind singing through the scrub at the land's edge, a gap in the reefs wide enough for the passage of Stephano's butt of sack, and (these eyes have seen it) a cave in the coral within easy reach of the tide, whereto such a butt might be conveniently rolled ("my cellar is in a rock by the seaside, where my wine is hid"). . . . It was so well done that, after three hundred years, a stray tripper, and no Shakespeare scholar, recognized in a flash that old first set of all.

This letter has been privately reprinted in an edition of fifty-two copies by Edwin Collins Frost and George Parker Winship of Providence. Mr. Frost, librarian of Marsden J. Perry's collection of Shakespeariana, contributes to the little book a preface which displays both learning and vivacity. He points out, among other things, that Mr. Kipling's suggestion has peculiar interest as coming from "one who has himself had wide experience in gathering and using material for literary purposes."

It is a comprehensive programme that Julia Marlowe and E. H. Sothern will offer at the Lyric Theatre, when they begin their engagement there week after next. Among the plays in which they are to be seen are: "John the Baptist," by Hermann Suderman; "Jeanne d'Arc," by Percy Mackaye; "The Daughter of Jorio," by Gabriel d'Annunzio; "Guenever," by H. W. Boynton; "The Sunken Bell," by Gerhardt Hauptmann; "Francesca da Rimini," by Gabriel d'Annunzio, and "When Knighthood Was in Flower," by Charles Major. The Shakespearean plays will be "Hamlet," "Romeo and Juliet," "The Merchant of Venice," "Twelfth Night," and "As You Like It." If there were many more companies engaged in diversified work of this sort, it would be a good thing for the stage.

Music.

Symphony Writers Since Beethoven. By Felix Weingartner. New York: Charles Scribner's Sons. $1.75 net.

Felix Weingartner is one of the most interesting and commanding figures in the contemporary musical world. As a composer—of operas, symphonies, and songs—he has not yet won the recognition he is doubtless convinced posterity will accord him; but as an orchestral conductor he is hailed as one of the chiefs in every capital of either continent that he deigns to visit. But just as Liszt, thirty-nine years before his end, gave up playing the piano, though all the world was devoured with eagerness to hear him, so Weingartner, who is still a young man, has disappointed his many admirers by a stubborn determination to lay down the bâton. Several years ago he gave up operatic conducting, and his concert work is now limited to Berlin. Even there he does it sulkily, and only under compulsion, because he is not allowed to cancel his contract.

The truth of the observation that brains are needed for success in modern music is well attested in the case of Weingartner. Without being one of those so-called prima-donna conductors whose main desire is to call attention to their new readings, he is nevertheless far removed from those old-fashioned time-beaters whom Wagner denounced with such withering scorn. To him a symphony is a subject for thought as well as a means of entertaining an audience; and his thoughts on the post-Beethoven symphonists, as embodied in the volume before us, are quite as interesting as his interpretations of these works with the bâton. The English translation by Arthur Bles (which is serviceable, without being a model) is based on the revised second German edition. Now, there is a still later German edition, in which Weingartner has considerably modified some of his opinions, especially in the pages devoted to Schumann and Brahms. These changes should have been noted, if only in an appendix. In truth, however, just as Schopenhauer hotly repudiated the second, revised edition of the "Critique of Pure Reason," as being less Kantian and consistent than the first version, so it is likely that readers of the future will prefer the first and second Weingartner editions to the third, as far the more valuable. In the third he goes so far as to attempt to prove that he was mistaken in attributing to Schumann and Brahms a lack of skill in orchestration; but he fails here with his pen just as he has failed to prove this point with his bâton.

Although he seems inclined to think that an attempt to write a symphony after Beethoven is "almost as absurd as the wish to climb higher than the summit of a mountain," Weingartner does not endorse Wagner's view that Beethoven's Ninth was the last possible word in this form. Wagner himself, in one of his later essays, admitted, under certain conditions, the possibility of saying something new in the symphonic form, and the present volume shows how far the successors of Beethoven succeeded. Schubert was a contemporary rather than a successor; of him our author speaks with eloquent admiration, though he fails to note that in melodic spontaneity as well as in novelty of modulation and an instinct for rich orchestral coloring he far surpasses Beethoven. He notes the evil influence of Mendelssohn on Schumann, whose symphonic works "produce more effect when well played as a piano duet than in the concert room." He descants (pp. 51-55) on the mannerisms of Brahms, shows how they result in ennui, and almost endorses the opinion of a French critic who wrote: "Il travaille extrêmement bien, avec des idées qu'il n'a pas." He shows how, unlike the really great men, Brahms is easy to parody. In Bruckner (not Brückner, as the text persists in making it) he admires "the wonderful abundance of new ideas, the individuality of his themes, and the astonishing long-windedness of his melodies." Dvorák and Saint-Saëns are dismissed all too briefly with a few lines of praise. But a long section is devoted to Berlioz and Liszt, and this is by far the most valuable part of this volume. Without being blind to the faults and failures of those two men, Weingartner points out with admirable clearness the importance of their contributions to the storehouse of orchestral music.

Nine years ago, when Bernard Shaw was still a musical critic, he perpetrated a *jeu d'esprit* entitled "The Perfect Wagnerite," in which he tried to prove in a semi-serious spirit of sarcasm that Wagner's "Ring of the Nibelung" is not merely an opera libretto, but a strong socialistic document, which could not have been written before the middle of the last century, because it deals with "shareholders, tall hats, white-lead factories, and industrial and political questions looked at from the socialistic and humanitarian point of view." It must be confessed that Wagner himself was wont to descant on the philosophic import of his dramas; why should not others follow his example, seriously or otherwise? Thoroughly serious is Mary E. Lewis in "The Ethics of Wagner's Ring of the Nibelung" (G. P. Putnam's Sons). Since Wagner himself, when writing this drama, exclaimed in a letter that it would be "the greatest poem ever written," it seems worth while to examine it from all points of view. Yet one is startled to read in the preface that "this volume contains the history of the evolution, or advancement, of the thought of the world, as it is set forth" in that poem. It cannot be conceded that this ambitious programme has been carried out by the author; but she has written a 178-page prose version of the poem which will doubtless help some to disentangle its threads.

Faust has fascinated more composers than any other poetic subject. Riemann devotes four columns of his "Opern-Handbuch" to an enumeration of the operas based on it, and the concert list would take up almost as much space. At our opera houses opportunity has lately been given to hear Gounod's "Faust" and Berlioz's "La Damnation de Faust," in both of which Miss Geraldine Farrar gave further evidence of her excellent vocal art and rare originality as an actress. At the fourth Philharmonic concert Mr. Safonoff conducted Wagner's "Faust Overture" and Liszt's "Two Episodes from Lenau's 'Faust,' " the second being the familiar "Mephisto Waltz," in which the fiery Russian conductor was at his best; he is an ideal Liszt conductor, as might have been expected. He is a great Liszt enthusiast, and rather oddly he also believes in Brahms, whose third symphony he has chosen for the next Philharmonic programme, January 25 and 26, with the firm conviction that he can convert the unbelievers. We shall see. The soloist of the fourth Philharmonic was Ossip Gabrilowitch, who has, since his last appearance in America, undergone a sea change from a mere virtuoso into something rich and strange—a genuine musician.

Mme. Nordica is to sing at forty-five operatic performances in New Orleans this winter. That is a very pleasant thing for the denizens of that town to look forward to, but it means that New Yorkers

will not hear her at all this season in opera. By way of partial compensation there was a Nordica concert at Carnegie Hall on Tuesday evening, which was one of the events of the year, both as regards musical value and the enthusiasm it aroused. Mr. Safonoff, as a matter of course, conducted, giving superb readings of Weber's "Oberon" overture and Tchaikovsky's "Romeo," and playing the orchestral parts to Mme. Nordica's principal numbers—Beethoven's "Ah, Perfido," and the "Götterdämmerung" finale—with unerring instinct for artistic and emotional results. Of the prima donna's singing it is enough to say that hers is the most beautiful voice now on the stage, but, it is not a "doll-face" voice; everything she sings, be it a tragic episode by Wagner, a difficult concert aria by Beethoven, a song by Brahms or Grieg, or a wild Hungarian air, is surcharged with feeling. Her art is as near perfection as anything human can be.

A memorial to the late Prof. John Knowles Paine of Harvard is proposed by his pupils and admirers. The plan is to raise $150,000 for a building which shall be the centre of the musical interests of the university. An appeal for the money has been issued by Arthur Foote, Walter Spalding, and Frederick S. Converse.

Art.

The Secret of the Old Masters. By Albert Abendschein. New York: D. Appleton & Co. $1 net.

Albert Abendschein is one of the latest of the long list of painters who have been fascinated by the "Venetian secret" and have spent years in experimenting with varnishes and media in the effort to master it. It is almost a pity to tell what Mr. Abendschein conceives the secret to be: it is like giving the reader, in advance, the solution of a detective story. There is something of the fascination of such a story in the author's method of recounting the order and the incidents of his search, the outcome of which is the almost disappointing but eminently sane conclusion that there never was any secret at all except care, leisureliness, and—sunshine! In other words, the author has proved, to his own and, we may say, to our satisfaction, that the great Venetians and Flemings used no mysterious varnishes whatever, their vehicle being plain linseed oil, and their reliance for permanence and brilliancy being upon plenty of time for drying between successive paintings and upon prolonged exposure to direct sunlight to burn out the excess of oil.

As a side issue there is some discussion of the already pretty well understood method of representing flesh by a cold underpainting, or dead coloring, and subsequent glazing. It is undoubtedly the only method by which the Venetian glow is attainable, and Mr. Abendschein is right in recommending it to those who would attain that quality, as we believe he is in his interpretation of Boschini's confusing account of Titian's manner of work. In the case of Veronese, however, we think that Mr. Abendschein is guilty of something like a wresting from its plain meaning of the same Boschini's statement. Veronese *may* have painted flesh according to Titian's method, though we think it improbable that he did so. Boschini's account is more likely to refer to his method with draperies and other objects, and means what it says:

> He painted everything first in middle tint, and on this he touched both lights and darks, leaving the middle tint visible everywhere between them, as it was first prepared. The middle tint was laid in opaque color.

We submit that "middle tint" does not mean dead color, that "touching *lights* and darks" does not mean glazing, and that "visible *between* them" does not mean through them. Veronese's manner was that of a decorator who worked habitually on vast surfaces, to whom expedition was of first importance, to whom a general clarity and breadth of light was more important than richness of individual tint or the glow of flesh painting. In spite of this blemish, Mr. Abendschein's little book will be read with interest by all painters, and they are too few, who care for beautiful craftsmanship.

He expresses a half regret that his researches have come to a close. Why should he not give us as careful an investigation of the wholly different and equally beautiful methods of the Dutch and Flemish artists and of Holbein? Rubens and Van Dyck, of course, painted in a modification of the Venetian method, and so, we believe, did Vermeer, at least at times. But the bulk of Northern painting seems to be based on the radically different principle of a warm *frottis* or transparent scrubbing with subsequent opaque painting, and much of this work is magnificent and thoroughly preserved. Rubens himself tended more and more to this method in later life and influenced all the eighteenth century to adopt it. A beautiful instance of it, quite surprising in its successful slightness, is the Goya portrait of a man, recently acquired by the Metropolitan Museum. Mr. Abendschein has done well, but the investigation of the technical methods of the old masters is not so nearly completed as he imagines.

The Frederick A. Stokes Company has issued a small volume (290 pages besides the Index), "Decorative Styles and Periods in the Home," by Helen Churchill Candee. The 177 illustrations are half-tones, and good ones on the whole. The frontispiece is a stately Venetian bedstead. Chests and cabinets of the sixteenth, chairs and armchairs of the seventeenth, cabinets and panellings of the eighteenth century, follow each other in historical order; and Figures 60 and 61 show two of those legendary Napoleonic pieces of furniture, which used to be kept in the Garde-Meuble, and are now presumably in the greatly enlarged collection of the Louvre. Among so many pictures there are, of course, many styles displayed, and one likes especially the simpler bits, the gate-legged Jacobean table in Figure 73, and the broad arm-chairs of Chippendale design in Figure 93. The text is oddly composed, with unusual turns of language, but it is intelligible, and the distinction between styles has evidently been clear to the writer. There is a little too free a treatment of the periods—thus, pages 75-6, the French Renaissance is all lumped together as if Francis I. and Louis XIII. were nearly contemporaneous, and as if a château built under Henri II. and the Luxembourg palace were to be considered in the same connection. It is difficult, however, to maintain chronological distinctions in a book that is meant to be readable, with dates not thickly interspersed. The book might have been more instructive if written in severer style, but in that case fewer persons would read it.

The seventh volume of "The Royal Academy of Arts: a Complete Dictionary of Contributors and Their Work from Its Foundation in 1769 to 1904," by Algernon Graves, has just been issued. This brings the alphabetical sequence from Sacco to Tofano. The eighth and last volume of this important work is already in type.

Pictures by J. Alden Weir, including twenty-three landscapes and portraits in oil, and about fifty etchings, are on exhibition at Montross's gallery in this city until January 15. Four of the paintings, a figure piece, "Memories," and three landscapes have just been completed. The others cover the artist's career from the very beginning up to the present time, and the whole collection, with the few water colors shown in this gallery recently, gives a fair idea of the range of Mr. Weir's achievement. Mr. Weir has certainly made an advance in his three recent landscapes. They are the loveliest paintings of green grass and green leaves that one is likely to see in a very great while. He combines here as perhaps no one before him has done the actual quiver of sunlight with a singularly fresh and quiet atmospheric effect. One may note throughout the collection how constant an experimenter in methods Mr. Weir has been. "The Gray Gown" is the best portrait in the exhibition. It is intensely alive, and straightforwardly painted, with that simplicity of eye and hand that deals only with the essential. The etchings show considerable technical sureness and delicacy, but even within their own field they cannot have the interest that the oils have in theirs. The treatment seems too often either heavy, or, if an attempt has been made for delicacy, weak. "Coon Alley" and "Bas Meudon" may be taken as fair examples of his most successful treatment.

An exhibition of paintings by the late John H. Twachtman is now being held at the Lotos Club, No. 556 Fifth Avenue. Comprising forty-five oils and pastels, lent by various owners, it offers an unusual opportunity to see a comprehensive collection of the work of the most sensitive artistic spirit among American followers of the French impressionist school. Twachtman, in common with his school, sought to reproduce on his canvases the actual pitch and vibration of light in the open air. But more than either Childe Hassam or J. Alden Weir, who make with him the three greatest exponents of the school in America, he was interested in the vague and evanescent colors in a scene. At his best he conveys this delicacy of color with the impression of perfect truth. But his work is uneven in quality, as in the Melting Snow, which shows some crudity of color. It would be hard, however, to find any painting more shimmeringly soft than the

Misty May Morning, The End of Winter, and the River in Winter.

The exhibition of Italian art at Ehrich's gallery in this city includes a few masterpieces, and nearly every piece illustrates some interesting phase of Italian art. The St. John the Evangelist, by Liberale da Verona, for instance, is one of the finest that Liberale ever painted. The influence of Mantegna is apparent in the bold foreshortening of the face and the hand, in the type of the face, and in the sculptural dignity of the drawing. Another picture of importance is the Madonna and Child by Francia, in the artist's maturer manner. Lorenzo Lotto is well represented by the Lady with a Book. The collection contains a group of portraits of men, among which the most striking is the Portrait of an Old Man, by Bassano, rich and dark in tone, and powerful in characterization. An excellent example by Pordenone is the Portrait of a Young Scholar. The dignified Astronomer, by Pontormo, shows the German influence under which this artist fell in his later years. Of the Venetian scenes by Bellotto, Marieschi, and Guardi, the most important is the large Marriage of the Adriatic, by Guardi. Salvatore Rosa is represented by a large Italian Landscape, which shows more of the classic treatment of landscape than most of his work.

The Theobald collection of etchings by Whistler, comprising 241 numbers, is on view at Knoedler's gallery in this city. Numerous examples in excellent impressions are shown of Whistler's work from his earliest to his latest period.

An exhibition of recent paintings by William Sartain will be held at Macbeth's gallery in this city from January 11 to 25. The exhibition will include work by Mr. Sartain during his visit to Spain last summer.

Among the recent acquisitions at the Metropolitan Museum, which were put on exhibition Saturday, is a group of a hundred objects belonging to various classes of the smaller Greek and Roman antiquities. They include fifteen vases, seventeen bronzes, twenty miscellaneous objects, mostly of gold and silver, and seventy-two terra-cottas. Most of the terra-cottas are statuettes from Tanagra, and are of great beauty. Among the recently acquired paintings, the most important is the portrait of the Rev. W. Pennicott, by Sir Thomas Lawrence. This work is a striking example of the artist's early and best style. The other pictures include three paintings of the Dutch school: Calm Sea, by S. de Vlieger; a large landscape by S. Van Ruysdael, and a portrait of Nell Gwyn by Sir Peter Lely.

The valuable collection of Japanese prints at the Library of Congress has recently been increased by the purchase of several hundred examples selected in Japan by Miss Helen Hyde.

In a room of the palace at Avignon, once the bedchamber of the Popes, an interesting series of frescoes has been discovered, admirably preserved, and apparently dating from the fourteenth century.

An unsigned family tree of Rubens has been discovered at Antwerp, which proves that the painter was born at Cologne, and lived there until his eleventh year.

Gustav Kruell, the wood-engraver, died at San Luis Obispo, Cal., January 2, in his sixty-fourth year. He was born at Düsseldorf. After serving an apprenticeship in Germany and establishing some reputation as an engraver, Kruell, in 1873, came to America, where his skill at once found employment with some of the leading illustrated periodicals. At that time cheap reproductive processes were but little used; and Kruell and his friend Frederick Juengling impressed their methods upon the art of the period. In 1881 they together organized the Society of American Wood-Engravers, of which Kruell became president in 1895. With the development of the half-tone process, Kruell's field in the magazines was limited, and he devoted himself more completely to independent efforts. In 1890, he exhibited the first of that remarkable series of historic portraits which is undoubtedly the most enduring expression of his art. This exhibition included two portraits of Darwin, a portrait of William Lloyd Garrison, and one of Wendell Phillips. In 1891 appeared the portrait of Lincoln, which is thought by many to be the finest of all the likenesses of the great Emancipator. The Lincoln portrait was followed by successful presentations of Lowell, Francis James Child, Hawthorne, Holmes, Whitman, Godkin, Franklin, Webster, Grant, Sherman, and other prominent men of this country and England. Some of the American heads were published not long ago under the title, "A Portfolio of National Portraits." Kruell always avoided so-called new methods and novel effects in technique for the sake of temporary and eccentric notoriety. Feeling his subject with a rare power of concentration, he believed a sympathetic rendering of his original to be the result to strive for; and his hand, thoroughly trained, responded instinctively to the governing ideas behind it. The *Nation* has more than once called attention to the sincerity and breadth of his art. The pathetic side of Kruell's work is that it was undertaken to make head against the undermining of the art of wood engraving by the rise of "process" relief engraving to which reference has already been made. Gold-medallist though he was at Chicago, Berlin, and St. Louis, Kruell experienced some difficulty in his later years in maintaining the independent livelihood which was his due.

Prof. Otto Benndorf, the archæologist, died, January 2, at Vienna, in his sixty-ninth year. He was best known for his investigations at Ephesus and Samothrace. He successively occupied the chairs of archæology at Göttingen, Zurich, Munich, Prague, and Vienna. Since 1898 he had been director of the Austrian Archæological Institute.

Science.

RECENT ADVANCES IN ZOÖLOGICAL SCIENCE.

The significance and value of the recent meeting in this city of the American Association for the Advancement of Science may be summed up in one sentence, from the address of the vice-president of the zoölogical section, Prof. Henry B. Ward of the University of Nebraska: "The highest and best work in science is due to co-operation." When one takes a mental review of the various sessions of section F, that devoted to zoölogy, one is instantly impressed with the similarity in trend of the research work of scientists from all parts of the country. In a word, this all-pervading spirit of modern scientific work is to take plants or animals into the laboratory, and by hybridizing or breeding, to discover how they conform to Mendel's laws of heredity, or to tabulate their reactions to stimuli of every conceivable description, rays of white or colored light, heat, moisture, and chemicals. This method of working upon living plants and animals is in sharp contrast with the favorite mode of research of a few years ago—which was that of dissection and anatomical investigation. This work is yielding hundreds of facts, which, little by little, are being marshalled into orderly array, for some future master mind to mould into a perfect conception of evolution and life—the basic truth of the history of the earth.

Among the more interesting matters brought forward for discussion is the recent discovery that we owe pearls to the irritation in the mantle of the pearl oyster, not, as was formerly supposed, of a grain of sand, but of the inorganic remains or cyst of a cestode larva, a form of parasitic worm. Dr. A. G. Mayer of the Tortugas Carnegie Laboratory in Florida considered the cause of the rhythmical pulsations in such unrelated marine animals as jelly-fish (*medusæ*), barnacles (*lepas*), and the heart of sea-turtles. He asserts that the movement is due to the chemical action of certain elements in the sea-water. Sodium, potassium, and calcium chlorides are stimulators of nerve tissue, and, acting on the ring of the jelly-fish or the appendages of a barnacle, these three elements cause contraction. Almost instantly, however, their effect ceases and a reaction occurs, by means of the magnesium which is present and which functions as an inhibitor of the action. Hence the contraction, or throb, ceases for a moment, when the sodium and other elements again become effective and another throb ensues. Thus a condition of unstable equilibrium is constant, resulting in the successive throbs of jelly ring or barnacle legs or turtle heart.

In a symposium upon heredity and experimental evolution, a significant instance of constant reversion was presented by Prof. C. B. Davenport. Red and black are the two principal colors of the wild jungle fowl, from which all our domestic breeds of poultry are descended. If we closely examine a black cochin-china cock, we shall see that the areas which are red in the jungle fowl, are glossy black in the domestic breed. If this cock is mated with a pure white hen, the chicks will show the ancient jungle fowl coloration, red and black; the lack of pigment in the hen compensating for or using up the excess of black in the cock and revealing the latent red color hidden in the glossy areas.

Fighting the Polar Ice. By Anthony Fiala. New York: Doubleday, Page & Co. $3.80 net.

At a time when Peary has made "farthest

north" as the record of one of the most brilliant pieces of exploration ever accomplished, the narrative of a dreary failure in Arctic waters comes with little favor; and not even the embellishments of art can secure for it a place in the bright page of discovery. Three expeditions, all practically without result in advancing scientific or geographic knowledge, mark the effort of money to buy the Pole, or, to use the words of the preface, to satisfy "the crowning desire" of a merchant "to link his name with some scientific achievement which would be considered great when compared with others of the twentieth century." It was perhaps no fault of the late William Ziegler that the expeditions which he supported were not more successful, for we are informed in the same preface that probably "no explorer had ever sailed under more favorable or promising conditions" than the commander of the first of the three expeditions. Many of the readers of Fiala's pages will probably still have fresh in memory the words attributed to his sailing and ice-master when leaving these shores: that the grit of the party, backed by an all-American crew, could not fail to win the prize; and these readers will perhaps hardly be prepared for that type of Arctic valor which abandoned the "first attempt north" (p. 80) after a march of less than two days. The second retreat (p. 88) was accomplished still more expeditiously.

The third and final effort to capture the Pole was barely more successful. The record of the commander's log-book, under date of March 5, 1905, affirms that there was little hope left of reaching the Pole, but the expedition still looked "forward as an achievement to breaking the noble Captain Cagni's record" (p. 162). Toward the consummation of this project the expedition put in seven days of laborious effort, abandoning the final search on the 82d parallel of latitude, under conditions which the leader thus describes (p. 173):

> We felt ourselves equal in strength, purpose, and endurance to any that had ever been in the field; our equipment was better and our dogs better trained.

The effort to break Cagni's record (86° 14′) thus fell short by 290 statute miles. The narrative should furnish a lesson to those asnirants for Arctic fame who are still searching for automobile routes to the Pole, or who believe no special study or form of training necessary to cope successfully with conditions in the far North. The story also sets out in extraordinary relief the accomplishments of men of the type of Peary, Nansen, and the Duke of the Abruzzi.

Those familiar with the intricacies and dangers of navigation in Arctic ice can hardly fail to be surprised that, in direct opposition to the counsel of his ice-master, who declined to assume responsibility for the safety of the vessel "if she was allowed to remain in Teplitz Bay," the civilian commander gave orders "to winter the ship in that neighborhood" (p. 43). As a result, the vessel was crushed in an early nip. Additional light is thrown on the outcome of this expedition by the statement (p. 49) that the America, the vessel that was shortly afterwards crushed in the ice, "had broken loose during the first night of the storm and had been drifting and steaming ever since without any one on board having any knowledge of her whereabouts."

Mr. Fiala's book, while not contributing materially to the fund of Arctic knowledge, and while not supplying much in the way of adventure, may yet be found enjoyable by those who find in Arctic literature perennial charm. It has the advantage of high embellishment by means of the brush and camera, and it presents some types of Northern color in a way that has perhaps not before been attempted. The proof revision is not perfect, for we find a frequent repetition of the erroneous spelling of Tromso (Tromsö), the occurrence of Weiner (Wiener) Neustadt on pp. 144 and 145, the citation of the Polaris as the vessel of the Duke of the Abruzzi expedition instead of the Stella Polare (p. 33), etc. The single comprehensive map that accompanies the volume, that of the Franz-Josef Archipelago, curiously enough omits to give the route of the expedition.

A striking development, which was discussed at the recent meeting, in this city, of the American Association for the Advancement of Science, is photo-microscopy by means of ultra-violet rays. With the aid of these rays, double the magnification of even the highest powers of the microscope can be obtained; but, as glass is opaque to these rays, the lenses must be made of rock crystal, and the quicksilver placed on the upper side of the mirror. These rays affect the nuclei of cells and other objects in the same way as a stain, and thus the minutest structure of *living* organisms can be studied—an achievement never before possible. This work in photo-microscopy by ultra-violet light has been carried to a high state of perfection in this country by Prof. E. G. Conklin and H. G. Kribs of the University of Pennsylvania. The inventor of the apparatus was Dr. Köhler, a physicist in the employ of Carl Zeiss.

A new collection of Liebig letters is promised for the near future, according to the announcement of the *Mitteilungen zur Geschichte der Medizin und Naturwissenschaften* (vi., 1), to be edited by Dr. Walther N. Clemm of Darmstadt. These letters were written between the years 1843 and 1845, and addressed to a favorite pupil and collaborateur, Dr. Karl Clemm, who had charge of the chemical factory in Mannheim and had worked in Liebig's laboratory in Giessen. These letters deal with chemical experiments, principally in the manufacture of fertilizers and of silver mirrors.

The New York Botanical Garden has acquired the remarkable collection of mosses made by William Mitten, who died in England last July. The collection contains specimens from all over the world, but the rarest and most valuable are from the Andes, where they were secured by Richard Spruce, the English botanist, during a residence of ten years in South America. In all, the specimens number at least 50,000. The Botanical Garden now has one of the three or four largest collections of mosses in the world.

The death of Augustin Normand deprives French naval architecture of one of its most eminent leaders. He came of a shipbuilding stock long settled at Le Havre; and he united high scientific attainment with great mechanical skill, as he proved in various publications relating to the theory of shipbuilding. His name in recent years had been much before the public in connection with the design and construction of vessels of the torpedo flotilla.

Finance.

PROBING INTO UNION PACIFIC.

In the spring of 1901, when the Stock Exchange became a focus of excitement, people seemed to lose their heads. The common view was that our wealthiest capitalists had concluded that prices, on their merits, were destined to go indefinitely higher, and that these capitalists were making haste to invest on the rise. The public followed what appeared to be the example of the great financiers; and it was not until the bubble had been pricked, with heavy losses to all outside participants, that the facts were understood. Those facts, as every intelligent man is now aware, were, first, that stock of one or more companies was bought up by "syndicates" with access to trust company funds and life insurance surpluses, solely with the idea of reselling to another company; second, that these other companies used credit and issued bonds to raise the purchase-money; third, that they calculated on indefinite willingness of the public to buy the new securities. The "Wall Street boom" of that day, which was to establish new precedents in every direction, is now seen to have been based on the old and familiar process of incurring debt by wholesale, and dipping recklessly into trust funds.

Discovery of these homely and somewhat sordid facts, supplemented as it was by the disclosures of the insurance investigation, for a long time put a quietus on this sort of performance. During the past eighteen months, however, Wall Street has been favored with exhibitions similar to those of 1901. The saying has been that certain stocks were "cornered," and, in fact, shares of companies with capital ranging from $70,000,000 to $150,000,000 actually seemed to be so held that the price could be arbitrarily fixed without forcing actual sales. Still other stocks would be advanced, by leaps and bounds, in the face of acute money stringency, deficits in bank reserves, or actual bad news. The general public, however, kept its head and refused to be swept into the game on the scale of April, 1901. Nevertheless, people were puzzled as to what it all meant. Since the new insurance law of last April, access of wealthy speculators and manipulators to the funds of life companies was no longer possible. Where did the money come from, then, for these extravagant feats in the financial market?

Well, the answer is not difficult, since last week's investigation by the Interstate Commerce Commission. The Union Pacific Railway, as a company, has bought since the close of last June no less than $103,000,000 worth of stock of other companies. Part of the purchase money was derived from the proceeds of a profitable operation in Northern Pacific stock; part, and appar-

ently the larger part, from money borrowed by the company on its notes. Last July the company reported a surplus unparalleled in railway history: actual cash on hand, $21,258,000, in addition to $34,710,000 loaned out in Wall Street. One might imagine that the directors would carefully limit the use of this surplus—a formidable trust to commit to any man. But they were troubled by no petty scruples. A few days after this remarkable showing, they adopted the following resolution:

That E. H. Harriman, chairman of the executive committee, be, and is hereby, authorized to borrow such sums of money as may be needed for the uses of this company, to execute in the name and on behalf of this company a note or notes for the amount so borrowed, and to pledge the securities of this company as collateral to such notes.

That is to say, with $55,000,000 ready cash in the treasury, the board of directors authorized one man not only, by inference, to use it up, but to throw the company into debt for as much more as he pleased, without the formality of consulting the directors. In the light of these disclosures, no intelligent and right-minded business man can deny that the Union Pacific Railway board, not long ago pointed out as an example of conservatism, has set a pattern of recklessness.

With such a fountain of credit constantly at the disposal of one man and his Wall Street associates, manipulation of the stock market, on a daring and extravagant scale, has been the almost inevitable sequel. We do not assert that Mr. Harriman, or any one else on the Union Pacific board, has utilized its funds for anything but the company's own purposes; indeed, the testimony showed Mr. Harriman, two years ago, as a free-handed lender to the company. But what is now clear is that the same dual relations out of which grew the life insurance troubles—the seller of property deciding that the company shall purchase from him; the speculator, in stocks or in a "syndicate underwriting," backing his personal venture with a similar operation based on his company's trust funds—become in this case the easiest of possibilities. It is not, in fact, too much to say that points of resemblance to the insurance scandal come to light with every fresh turn of the investigation. The trick in the finances of the New York Life for which George W. Perkins and C. S. Fairchild are under indictment, is almost exactly duplicated in the transaction of 1903 between Harriman and his fellow-director, William Rockefeller. Fearing success of the "Keene suit," to enjoin Union Pacific's agents from voting the half interest held by the company in Southern Pacific stock, William Rockefeller was induced, in consideration of 6 per cent. interest and $187,000 cash, to buy from the company 300,000 Southern Pacific shares and sell them back again five months later—the purpose obviously being to deceive the public and the courts.

BOOKS OF THE WEEK.

A. L. A. Portrait Index. Washington.
American Book-Prices Current, 1906. Compiled by Luther S. Livingston. Dodd, Mead & Co.
Aria, Mrs. Costume: Fanciful, Historical, and Theatrical. Macmillan Co. $2.50 net.
Arnold-Forster, H. O. The Army in 1906. Dutton. $4 net.
Ballard, Addison. Through the Sieve. Robert Grier Cooke.
Barrington, Mrs. Russell. The Life, Letters, and Work of Frederic Leighton. 2 vols. Macmillan Co.
Bennett, Arnold. Hugo. F. M. Buckels & Co. $1.50.

THREE NEW BOOKS ON ENGINEERING

Hoskins's Hydraulics

With an outline of the Theory of Turbines

By L. M. HOSKINS, Professor in Leland Stanford University. 271 pp. 8vo. $2.50 net.

S. E. BARNEY, Sheffield Scientific School:—I am very much pleased with the general arrangement of the book, especially with its conciseness of statement without omitting any part essential for instruction.

Benjamin's Machine Design

By CHARLES H. BENJAMIN, Professor in the Case School of Science. 202 pp. 12mo. $2.00 net.

I. I. FLATHER, University of Minnesota:—Will appeal to teachers of Machine Design as it must necessarily carry out the high ideals of the author. I shall have pleasure in recommending it to my students.

Leffler's The Elastic Arch

By BURTON R. LEFFLER, Engineer of Bridges of the Lake Shore and Michigan Southern Railway. 57 pp. 12mo. $1.00 net.

Engineering Record:—From the point of view of an engineer who has had to direct draftsmen in designing re-enforced concrete girders and arches and, as a result, the information he furnishes is admirably concise and to the point . . . There is no theory in the first part as the purpose is to present the actual drafting-room methods, which is done in a small manner.

HENRY HOLT AND COMPANY 29 W. 23d St. NEW YORK

The Political History of England

VOL. V. From the Accession of Henry VII. to the Death of Henry VIII. (1485-1547)

By H. A. L. FISHER, M.A., Fellow and Tutor of New College, Oxford. 8vo. With two Maps. $2.60, *net.*

LONGMANS, GREEN, & CO., New York

JOHN LANE CO., The Bodley Head, N.Y.

The Nation.

NEW YORK, THURSDAY, JANUARY 17, 1907.

The Week.

That Secretary Root is anxious to remove every outstanding difference with Canada has long been known. He himself made public declaration of that hope a year ago. Consequently, his visit to the Governor-General at Ottawa, arranged for the end of this week, arouses great expectations. It would be comparatively easy to negotiate a treaty covering all the points at issue, but the pinch would come in securing its ratification by the Senate. But Mr. Root is so excellent a man of business, with so unusual a talent for dealing practically with Congress, that his trip to Canada may signify that he has made his plans with the Senate. That body has earned the name of the graveyard of treaties. Possibly, Mr. Root may enter it in the guise of a resurrectionist.

It is a somewhat misleading use of the term "contract," to apply it to the system of building the Panama Canal, for which bids were opened on Saturday. The "contractors," under the method adopted, are nothing but agents of the Government. They do not undertake to complete the work in a given time or at a given price. All that they bind themselves to do is to put the actual work through with a profit to themselves of a fixed per cent.—6.75 was the rate of the lowest bidder—of the actual cost. The only spur to the contractor's speed and economy is a share of the amount saved under the estimates of the engineers. Manifestly, this is something very different from the original idea of the Government turning over the whole affair to private contractors. The ultimate responsibility and financial liability remain wholly with the Government. So long as the engineering features continue uncertain, it is, of course, doubtful if any other form of bid could have been had at all.

If there is such a thing as Roosevelt hysteria, the possibility of an anti-Roosevelt hysteria must also be recognized. Certain Congressmen appear to be falling into it. They are reported to be preparing a joint resolution requiring the President to file with Congress a copy of every Executive order, with a citation of the law warranting it. They also would "create a commission of distinguished lawyers to report on the President's acts and orders." If this is not merely a joke, or political malice, it must be set down as sheer panic and folly. If Executive usurpation is bad, Senatorial usurpation is worse. Not by any such niggling interference of one branch of government with another can the free play of each, within its sphere, be maintained. The President is responsible—first to his own conscience, then to his oath of office, afterwards to the Congress that may impeach him, and always to the people. But the idea that he can be made to act as if under a watchman's detector, or compelled to send in word of his movements hourly like a patrolman, is too absurd for discussion. Let the opponents of the President beware lest, in revolt against Roosevelt idolatry, they fall into anti-Roosevelt idiocy.

President Roosevelt has receded from his illegal ruling that the discharged soldiers of the Twenty-fifth Infantry should be forever ineligible to civil employment by the Government. His mistake he admits frankly, in his message of Monday; but he insists that the men shall be barred from the army unless they can prove to his satisfaction that they are guilty neither of committing the crime nor of shielding the criminals. The President transmits with his message additional evidence in support of the contention that some of the soldiers took part in the riot. As evidence collected by the Constitutional League points to a different conclusion, the court-martial of the two officers of the Twenty-fifth now under charges, and the proposed investigation by the Senate Committee on Military Affairs, are plainly more than ever needed, in order to establish the facts so clearly that nobody can hereafter question them. The Assistant Attorney-General, who collected the new evidence at Brownsville, held his hearings in secret. What is now needed is a public investigation, with opportunities for cross-examining the witnesses.

The choice of William Alden Smith as Senator from Michigan, adds another to the group of vigorous and able men who are gradually dividing attention with the old ruling coterie in the Senate. Mr. Smith's promotion is of peculiar interest, because he has been a typical member of the House. For all his disposition to insurgency, he has had the faculty of voicing the sentiment of the mass of his colleagues at critical moments more effectively than almost any other member. His speech at the time of the postal scandals, maintaining the honor of the House and incidentally nominating Speaker Cannon for the Presidency, is still remembered, and ranked with Cannon's own defiance of the Senate in the closing hours of the session before his Speakership. It might be said by the uncharitable that Michigan could not very well avoid strengthening her representation in filling the present vacancy. In this case, however, she has chosen a man of real strength and ability as well as more than the average measure of independence. Of course, he is a stiff protectionist and a valiant champion of the Michigan beet, but if we must have that kind, Smith in the seat of Alger means at least a marked personal gain.

Passage by the Senate last Friday, practically without debate and with no opposition, of a service-pension bill, does not mean that the measure will be accepted by the House. Probably there is no intention that the bill be made law at present. The Senate's action is partly for buncombe, partly to give a certain prestige to the bill in preparation for passing it in the next Congress. That this sort of legislative game is unhappy, can hardly be denied; but what we would particularly point out is the way in which this ominous reappearance of the service-pension bill gives the lie to the advocates of the half-way measures that were designed as a permanent settlement. In fact, the chief argument used in behalf of the dependent-pension and the disability-pension, as also in defence of President Roosevelt's famous executive order, was that only by such concessions could you stave off the service-pension. That would be a terribly vicious law, it was admitted, and in order to avoid it we were justified in accepting measures only trivially vicious. Well, we got those, and now we are in a fair way to get the other. It is a fine illustration of the real working of the political doctrine, now so much in vogue, that to give the tiger a taste of blood is the sure way to make him a vegetarian.

By passing the Crumpacker "fraud-order bill," the House has put itself on record in favor of giving legal redress to any person or corporation unjustly deprived of the right to use the United States mails. That bill provides that mail addressed to the person or firm against which the fraud order is issued, instead of being stamped "fraudulent" and returned at once to the senders, shall be held in the post office for fifteen days before being sent back. In that period the person concerned may begin proceedings in the Circuit Court, furnishing a bond to pay the entire costs of the action in case the fraud order is finally held to be valid. While there is little probability of new postal legisla-

tion by the present Congress, this action by the House is likely to be only the first step in a campaign for the abrogation of the arbitrary power which changed conditions without changed laws have lodged in the Post Office Department. Under the existing law and practice, the use of the mails, like the enjoyment of second-class rates by a periodical, is not a right, but a privilege, and it is a privilege revocable practically at the will of certain administrative officials. There are "hearings" of a sort, to be sure. But the Assistant Attorney-General, who listens to the arguments, is the same official who has previously examined the evidence collected by the post office inspectors and pronounced it sufficient to warrant the fraud order. No appeal is allowed; for the courts lack jurisdiction. We are far from sharing the views of those extremists who see in every ruling against a "mail-order journal" a perilous infringement of the freedom of the press, or in every fraud order against some grandiloquent promoter an interference with legitimate business. For all his inconsistent and capricious rulings, the execrated Mr. Madden has done good work in purging the second-class lists of a large number of publications which never had a shadow of right to be there, and which all the court reviews in the world would not have helped. The fraud order meets exactly the need for a method of dealing with the almost innumerable concerns, large and small, which are just on the verge of criminality. But it ought not to be said with even the semblance of truth that this Government maintains methods for destroying any citizen's business without due process of law.

Gov. Hughes's first appointments are further evidence that his policy is to be bold and independent. For the old machine and its place-hunters he cares nothing. In his most important choice, that of Frederick C. Stevens, former Senator from Wyoming County, for Superintendent of Public Works, he takes a man whom Gov. Higgins and the Wadsworths—Congressman and Speaker—had made extraordinary efforts to eliminate from politics. Charles Hallam Keep of Buffalo, the new Superintendent of Banks, is recommended by his competency, not by his activity as a politician. Benjamin E. Hall, who is to be a State Tax Commissioner in place of that machine hack, William Halpin, has the endorsement of such men as Seth Low. Of William Leary, State Superintendent of Elections for the Metropolitan District, we know less that is favorable; but, at any rate, he is not the man, Louis M. Swasey, whom Woodruff picked out and whom Gov. Higgins appointed in the latter part of December. The significance of the appointments is not wholly in the character of the men, nor in the fact that Mr. Stevens, for example, has made an enviable record for intelligence and courage. The main point is that Mr. Hughes has served notice that he is a Governor acting in the interests of the people. His purpose is to strengthen his party, not by feeding "the boys" at the public trough, but by administering his office so as to command popular confidence.

Col. H. O. S. Heistand, who lectured in this city last week on the Chinese as he saw them during the Peking troubles, punctured an old fallacy when he said that cheap Chinese labor would not remain cheap very long after entering this country. Cheap Irish labor was a political bugbear during the days of the great exodus from Ireland. During the Civil War there was great fear, even among Abolitionists, lest the newly freed slaves move North in a body and ruin the laboring man by accepting low wages. In both cases these sinister expectations were found to be groundless. The hordes of Italians and Slavic immigrants that pour through our gates today live on a few cents a day at home, but have no difficulty in adjusting themselves to our higher wage-scale. Take Westchester County. It is full of Italian laborers, who have crowded out the Irishmen that used to do the unskilled work of the county. There is considerable feeling against them in the community because they are foreigners, but no charges that they lower wages. And from people who employ Japanese and Chinese servants in this city we hear frequently that they are admirable servitors, but "far too expensive" for the ordinary family. To the $60-a-month Chinese butler, the $20-a-month Irish servant girl is a cheap laborer of an obnoxious kind.

Certain statements in the latest Papal encyclical are puzzling, in that they call into question what seems to be recognized as established fact. The document says:

> To obviate worse evils the Church might have tolerated making declarations, but laying down that the clergy shall be only occupants without any legal status, . . . placed them in such a vague and humiliating position that the making of declarations could not be accepted.

Yet Article 2 of the supplementary Briand law gives this legal status by declaring:

> The free use [of public religious edifices] may be granted either to associations formed under the law of July 1, 1901, or to ministers of religion named in the declarations prescribed by Article 25 of the law of September 9, 1905. The grant of such free use shall be by administrative act.

Again the encyclical goes on to say:

> There is uncertainty whether the churches, which are always liable to disaffection, shall or shall not in the *meanwhile* be at the disposal of the clergy and the faithful.

But the same Article 2 of the Briand law stipulates:

> The edifices and their furniture shall continue to be left, until their regular disaffection, at the disposition of the faithful and of the ministers of religion for the practice of their faith.

We recognize, of course, that every law has its spirit as well as its form, and that in its interpretation of the spirit of the present legislation the Vatican may be justified in assuming a certain measure of hostility on the part of the Government. But the question is not one of reciprocal feeling or *amour propre*, but of policy. The Government has made certain offers; can Rome accept them? We believe that in the Papal wording, "The Church might have tolerated making declarations," there is indication of a possible yielding and *rapprochement*.

In its contest with the Papacy, the French Government profits to some extent by the anti-clerical agitation in other countries, notably in Italy and Spain. It is not only that each country is prevented by cares of its own from taking sides in the French quarrel, but that the prevalence of a general anti-Church movement, in which even Germany and Great Britain may be included, tends to free the French Government from the odium of being the unique persecutor of religion in Europe. Nevertheless, it is well to differentiate between anti-clericalism in France and the other Latin countries. In France the movement is carried on by a Government which represents undoubtedly a majority of the nation, and which views the question as one of fundamental state policy. In Spain and Italy anti-clericalism is as yet in the minority, and is largely a form of political tactics. In both countries it tends to go hand in hand with anti-monarchist views. Bilbao, the latest scene of anti-clerical riots, has long been a hotbed of Spanish republicanism. In the same way, it appears that the recent great demonstration in Rome in favor of the French Government was signalized by as many cries of "Down with Giolitti!" as of "Long live anti-clerical France!" It has been pointed out how dangerous it would be for the French Government to express formal sympathy with the Italian anti-Church parties, who at the same time are working against the dynasty which, to many, stands as the guarantee of Italian unity.

The assassination of "Hangman" Pavloff at St. Petersburg affords new evidence of the fact that absolutism in Russia is now confronted with terrorism systematized. This was not the case till recently. The vengeance of the rev-

olutionaries might be frequently visited on high officials throughout the empire, but such attacks were, on the whole, sporadic, unconnected, and the outcome of personal initiative. There were not the precision, the rapidity, the dread effectiveness that mark the new terrorist campaign. The object aimed at, and certainly attained in part, would seem to be not so much the removal of this or that enemy of progress as the creation of a state of nervous debility throughout the ranks of reaction. Ignatieff, Von Launitz, Pavloff—the three blows have fallen almost in rhythmic succession, like the measured drops of water on Poe's prisoner of the Inquisition, and have undoubtedly served to arouse that horror by anticipation which is so much worse than reality. Who next? is the question in the nation's mind; for anybody and everybody is seen now to be defenceless against terrorist resourcefulness and devotion. What ultimate aim inspires this campaign? It appears to be not mere vengefulness, or the purpose of driving the Government to abandon its repressive course in the present electoral campaign, or even the hope of gaining greater liberties for the Duma to come. The great object is to create a state of panic that will drive the Government to measures of—suicide. Probably the revolutionaries would regard the election of a conservative Duma with more satisfaction than a radical Duma. It would make the issues clear by demonstrating the absolute incompatibility of monarchy, at least a Romanoff monarchy, and the real wants and needs of the people. And in the same way, the revolutionaries might welcome the abrogation of such liberties as have been conceded, and the establishment of a dictatorship. It would draw the line sharply between the autocracy and its opponents; parties would merge into one great revolutionary party. To such an end the terrorists seem to be working. They would destroy the autocracy by making it mad.

In Persia a new reign and a new régime have begun almost simultaneously. Mohammed Ali Mirza succeeds his father as Shah and King of Kings, under extremely favorable auspices. Persia is the second nation within a few years to shatter rudely our established notions regarding the Orient and Oriental capacity for political progress. The constitutional machinery that has been put in motion seems to be working well. The very fact that the first step taken by the new Legislative Assembly was to quarrel with the Crown over the establishment of an upper house with revisionary powers, is a good sign. That is the way young parliaments always begin In the new monarch's reported conservative tendencies we believe there is little cause for alarm. Indeed, it is a testimonial to his straightforward character that he should have entered during his father's lifetime into a contest with the Assembly, for the purpose of permanently defining the character of the new Parliament, when by waiting a few weeks he was sure to occupy a stronger vantage point as occupant of the throne. The reported agreement of some weeks ago between Great Britain and Russia over their relations in Persia should greatly facilitate the development of the country under its liberalized government. Japan and Persia modernized in government, China preparing to follow their examples—will it be Turkey soon?

Perhaps no better testimony could be given to the sincerity of the Chinese Government in its anti-opium crusade than the reported action of British merchants, who are planning to exact from the Government compensation for the losses they are bound to suffer under the new opium regulations. Were the opium reform, like so many other reports that come up "like thunder outer China," destined to turn out a mere passing cloud, the opium-importing interests would not thus bestir themselves. Positive evidence to the same effect is supplied by telegrams from Peking that in the province of Chi-li, and especially in the city of Tien-tsin, the opium dens are being closed "ruthlessly." The complete suppression of the traffic, which it is planned to bring about in ten years, will mean a yearly revenue loss of $3,-000,000 to the central Government and twice that amount to the provinces. The annual duties on Indian opium amount to over $4,000,000. Importation is also to disappear in ten years, and proposals looking towards that end have been laid by the Chinese Government before the British Foreign Secretary. The two leading demands are for the doubling of the present import duty on Indian opium, as determined by an agreement between the Governments concluded in 1885, and the dispatch of a Chinese official to Calcutta to investigate and supervise the traffic. British opinion regards the first proposal, which would make the tax about 35 per cent., as very reasonable. The other point, it thinks, cannot be conceded.

"His literary output was very small for a man of his mental calibre." This sentence occurs in an obituary notice of the late Principal Robert Rainy of Edinburgh. It is a delicious because unconscious testimony to the prevalence of the idea in the world to-day that the chief end of man is to write books. Great mental powers, but only a few volumes left behind! An absolute contradiction in terms! Man is a writing animal. That is the really up-to-date definition. Not to live up to it is the great reproach. You have passed your days in working and thinking and strengthening your character and doing good, but not one book to your credit with the recording angel! The harvest is past, the summer is ended, and you have not a single historical novel, not even a short story, to show for it all! Sinful readers should meditate on these things.

No nation, we suppose, is so solicitous for art and letters as France; so that every experiment she makes in their cherishing and cultivation deserves respectful attention. The latest is the proposal of a "Maison des Artistes et des Littérateurs." Some of the best names of France are furthering the plan —Rodin and Bonnat, Coppée and Rostand, to cite only specimens. They apparently got their idea from a sort of phalanstery of art established at Créteil, near Paris. There a former abbey has been taken over by a group of young men, who have set up a printing press as their means of support. Six hours a day is work enough to make sure of bread and butter; and the rest of the time these modern successors to the old monks give each to his painting, his statue, his book, his sonnet. A more ambitious affair is now projected. If the institution comes up to expectations, it will be a combined asylum, hospital, art gallery, library, and forcing-house of genius—all for the greater glory of French art and literature. One is loath to question so engaging a proposal made by men so eminent, but haggard doubts will thrust themselves in. There is, for example, the old difficulty of knowing your genius when you see him. The dæmonic youth you have especially selected as a candidate for the phalanstery, may prove to be possessed only by the devil of vanity. Furthermore, leaving the *jeunes* out of it, what are we to think of the theory that active and successful workers, in art and literature, would be happy in constant association with each other? We cannot, at the moment, recall any book on "The Loves of Authors." Artists have the reputation of being an *irritabile genus.* Instead, therefore, of the French phalanstery being a scene of harmony and deep peace, conducive to the free play of the creative faculties, might it not easily become a place of endless and acrimonious dispute, emulating that "gnashing of teeth" which was said to characterize Rogers's literary breakfasts? It is to be feared that many a French Scott would be glad to slip away from the society of his Wordsworth in the phalanstery, to take his ease in his inn. Brook Farm was not unalloyed bliss. There was backbiting at Mrs. Botta's suppers. Irving repelled the bore by falling asleep. For the rest, *vide* the "Fable for Critics."

LEADERSHIP IN A DEMOCRACY.

Representative Charles E. Littlefield of Maine has a born faculty of stirring things up, and he is again the object of much muttered and some outspoken wrath on the part of colleagues in Washington. His latest offence is that, in a recent speech before the American Founders' Association, he uncovered the attitude of these Representatives towards pending labor legislation. The Gilbert anti-injunction bill is before the Judiciary Committee. Nearly all of its members are, Mr. Littlefield asserted, strongly against the measure, which they believe to be both unconstitutional and pernicious. Speaker Cannon is stoutly opposed to the bill, holding vigorous language about it which "would require asbestos for its proper preservation." He asked Mr. Littlefield to see if an adverse report could not be had from the committee, so that the bill might be debated and the people be made to "understand what this legislation is that Gompers and his friends demand." Thereupon, the Maine Congressman made a canvass of the committee, but found only one man, R. W. Parker of New Jersey, willing to stand up openly and state his convictions. In private, a clear majority of the House is against this vicious class legislation, but Mr. Littlefield believes that if the bill were pressed to passage, it would go through by an overwhelming vote, simply because there is not courage enough to antagonize the Federation of Labor, even in a matter of vital principle.

For the precise accuracy of all this, we cannot vouch. That the situation is, however, substantially as stated, we have no doubt. The bill will probably be smothered in committee; or, if passed by the House for political effect, will perish in the Senate. A full public debate on its merits, we are not likely to see. There is the same sort of implied terrorism and coercion in the case of this anti-injunction bill as we have just seen in England in the instance of the Trades Disputes Bill. That law was disliked or dreaded by some of the clearest heads in the Commons; it was absolutely loathed by the House of Lords; yet it was enacted practically without opposition. It is again not the particular measure which we are concerned with, so much as the abdication of leadership by the representatives of the people. For that is what it comes to. A led democracy is the ideal and the hope of our government; but if the leaders will not lead, what protection have we against the passions of the hour and mob rule? If those who are in their hearts persuaded that a proposed law is full of injustice and peril, cringe and hide when they should boldly expose and denounce, we might as well send phonographs to Congress as such men.

The obligation of a man chosen as a political leader consists, first, in a fitting sense of duty to himself. He has his own intellect to satisfy, his own conscience to obey. No theory of the "mandate," or of making one's self merely an echo of the wishes of constituents, can excuse a representative from following his own inner light. He is not in Congress as the slavish mouthpiece of his district, or of any set of men in it; he is there as an umpire of right and wrong as affecting the whole country; he is delegated to exercise his best judgment and cling to his deepest moral convictions, in every new question that comes up. In a word, if he is a true leader, he is not forever waiting to get instructions, but he is anxious to give instruction. This was the spirit in which Burke resented the attempt of his Bristol electors to tell him how he should vote in Parliament. The same note of proud responsibility was in Webster's voice when he declined to take orders from the Massachusetts Legislature. And Garfield, when he was elected Senator, rose to the full stature of a democratic leader in saying to the Legislature that he should hope to serve and please the people of Ohio, but that they must understand that his first and most imperious duty would be to make his public acts square with the private convictions of one James A. Garfield.

Furthermore, how can the people be expected to think clearly if those who do think clearly run away from their own opinions, and will do nothing to shape public opinion? How can voters be made discerning and courageous, if representatives show themselves cowardly? This duty of a leader to show a good example and sound ideas to those who put him forward, is of the essence of representative government. We put in office a man who has exhibited notable qualities—powers of debate, of analysis, a gift for enlightenment of the public—and then the growing fashion is to suppose that he will thereafter have no more mind of his own than a manikin. And this is said to magnify the sovereignty of the people! It is really to degrade it. A people that cannot bear to have the truth told to it, that prefers dummies to men, will not long have a sovereignty worth anything. Representatives who fail to fling themselves against popular delusion and prejudice are doing what they can to cheapen the verdicts of the people. They give fresh point to Canning's old gibe: "You talk about depending upon the sense of the nation; give me the *nonsense* of the nation, and I will beat you hollow."

But how about winning a reëlection? Well, man shall not live by office alone. It is not absolutely necessary that a Representative, or even a Cabinet officer, put up with affronts and sacrifice his personal dignity, in order to keep on being *called* Honorable. We believe that, as a matter of fact, the people still like a man who is not "afeared," and that they will not punish him for telling them unpleasant truths; yet if they do, the leader's duty is no less clear. He must speak his own mind, he must utter the word which he feels to be necessary; and whether reward comes or penalty befalls, he will at least have been true to his obligations as a leader.

HARRIMAN AND LAISSEZ-FAIRE.

The revelation that Edward H. Harriman has used the Union Pacific as a huge engine for speculating in Wall Street has provoked the advocates of government ownership of railways into fresh outcries: "We told you so. There's nothing for it but our plan. All other ways madness lies." This kind of agitation, based on undisputed facts as to gross mismanagement of railways, is beginning to get on the nerves of our soberest and most conservative men. They sigh wearily, and admit that from Harriman and the Rockefellers and the rebates the radicals have drawn politically effective arguments against private ownership. Ergo, we are on the verge of large extension of government power over corporations; we have abandoned the doctrine of *laissez-faire*. At the recent meeting of the American Association for the Advancement of Science no less an authority than Prof. Irving Fisher of Yale seemed to assume that the doctrine was dead and ready for burial; all he wanted to know was who killed it, and why.

In the face of this general agreement among friends and enemies of *laissez-faire* that this former darling of orthodox economists has come to a timely end, we are doubtless rash in suggesting that life is not yet extinct, and that the funeral may as well be postponed for a few days. We hasten to grant that in recent years in America functions of government have been much developed, notably in the line of control over corporations. Laws still more drastic and far-reaching are likely in the not distant future. This movement seems at first glance to be away from the doctrine of *laissez-faire*; but the superficial appearance may deceive us.

More than fifteen years ago, in "The American Commonwealth," James Bryce noted the tendency which is now so apparent to all of us. "The doctrine of *laissez-faire*, or non-interference by government with the citizen," said he, "has two foundations, which may be called the sentimental and the rational." The sentimental ground, as he explained, is the desire of men to be let alone, to do as they please; the rational, the principle that interference more often does harm than good—that is, men left to themselves, to their natural collision and cooperation, are likely to work out a happier result than would be attained by the "conscious endeavor of the state."

In fine, both the sentimental and the rational ground set up the ideal of free play for the individual. Whatever interferes with this runs counter to the theory of *laissez-faire*.

When the term was first used in France the individual was—broadly speaking—hampered by three things: the privileges of the aristocracy, monopolies authorized by government, and the meddling of government itself. Under this system the abuses and oppressions had become so frightful that *laissez-faire* became the watchword of champions of liberty, both in Europe and America. The phrase became almost sacred; and any law which seemed in the remotest degree to restrict the individual was a target for the fiercest attacks from men whose experience had inspired them with a wholesome dread of arbitrary authority.

That there has been a swing away from this passionate adherence to the dogma, no one can deny. So long ago as 1884 Herbert Spencer, in "The Man versus the State," observed: "Nowadays, however, the worst punishment to be looked for by one who questions its [government's] omnipotence, is that he will be reviled as a reactionary who talks *laissez-faire*." Yet this ebbing faith in *laissez-faire* should not be confused with sincere attempts to apply the theory to modern conditions. We have abolished the privileges of aristocracy and royal monopoly; but we have developed a new *imperium in imperio* against which the individual must still contend—the corporation. For example, the railway has in its territory a practical monopoly, and thus an enormous power over the fortunes, the happiness, and even the lives of individuals. The railway manager of the old school thought of the line as his private property—"the public be damned." But it is a strict application of the doctrine of *laissez-faire*, not a destruction of it, to check this railway magnate with his discriminations and his petty extortions, so that the individuals whom he serves as common carrier may have a free competition in which the best may win. It is no more legitimate for a railway than for an aristocracy to lay intolerable burdens on the individual. So with other corporations. There must be some limit to their powers of action, or the individual would be helpless. Harriman in Wall Street, with his fifty-odd millions from the Union Pacific treasury, and the unlimited credit of the Union Pacific at his back, is the feudal lord of our *ancien régime*, crushing the individual by an irresistible weight. And the régime which thus tramples on our doctrine of *laissez-faire* must go.

If in saying this we are classed by Professor Fisher among those who have abandoned the old faith, we shall not quarrel about definitions. All we want is to have every man, white, yellow, and black, get his chance. The attempt to clip the wings of corporations, to limit their activities by strict law, will almost inevitably be carried to excess; and against such haste and zeal we must constantly guard. Even corporations have their rights. Our preference is for testing present statutes to the utmost, and then advancing slowly and cautiously where the need for amendment is plain. We hold—and the whole history of legislation supports the view—that between careful regulation and actual government ownership, there is a wide gulf which we are yet a long way from crossing. We have still many other experiments to try; many resources not yet drawn upon.

But that, through a mistaken devotion to the word rather than the spirit of *laissez-faire*, we should let Mr. Harriman or any of his kind run amuck through this community, is unthinkable. Discussion and debate will clarify our minds. Many plain people, instructed by our various investigations, already understand that railways, telephone and telegraph lines, banks and insurance companies are not, like ordinary shops, private affairs; but that they must in many ways be treated as public institutions. Their books and accounts are properly open to the scrutiny of public officials; their business must keep within set channels; their funds must be employed for specified purposes; their officers must move in a circumscribed sphere. To the full realization of these facts some of our unscrupulous captains of industry, in Wall Street and out, have not yet arrived. They plead the protection of *laissez-faire*. So did the buccaneers.

THE REPORT ON CITIZENSHIP.

In dealing with naturalization and citizenship, the well-defined and intelligent policy of the State Department, initiated by Secretary Hay, has been pursued by Secretary Root. Early in 1905, Mr. Hay's report on naturalization was sent to Congress. It set forth the deplorable conditions which had arisen from our loosely constructed naturalization laws, and the careless and corrupt manner in which they had been administered. In the recess of Congress, the naturalization commission was created, and it prepared an exhaustive report. A new and comprehensive bill, earnestly advocated by Secretary Root, was passed at the last session of Congress, and the question of naturalization may therefore be said to be settled for the present; but the questions of citizenship by birth, descent, or marriage, of expatriation or the protection of Americans who live abroad, were not touched.

Congress was asked to provide for a commission to report on them. It was Mr. Hay's design to call into consultation jurists and publicists outside of the government service. The measure hung fire in Congress for a year, but at the last session was passed by the Senate. The House Committee on Foreign Affairs, however, reported it adversely, offering in its place a suggestion that the desired report be made by the State Department itself. Secretary Root promptly created a citizenship board of his own, composed of James B. Scott, the solicitor for the State Department; David Jayne Hill, formerly Assistant Secretary of State and now Minister at The Hague, and Gaillard Hunt, chief of the Passport Bureau. All had actual experience of the subject. If they did not constitute so august a body as the British Commission of 1868, including Lord Clarendon, Vernon Harcourt, and Robert Phillimore, which fathered the present English naturalization and citizenship law, their report is, at any rate, as comprehensive as the British, and has the advantage of being unanimous, which the other was not.

Some of the recommendations can hardly arouse opposition from any source. No one will dispute that Congress should pass a law to define how one may lose American citizenship. In 1868, Congress proclaimed to the world that expatriation was a natural right of man, and that no foreign country could contest our right to admit foreigners to citizenship; but it failed to say how Americans could become foreigners. The board recommends that an American may be assumed to have expatriated himself when he becomes naturalized in a foreign country, or when he lives permanently outside of the United States without intent to return. The justice of the first proposition is palpable, but how to determine a man's intentions is obviously a difficult task. Even if the recommendation were adopted, the State Department would probably be imposed upon in the future, as in the past, by so-called Americans who have entirely severed their connection with this country, and nevertheless continue to claim our protection.

On the subject of married women, the board makes a recommendation that appears to be logical, in view of the existing statute which provides that a foreign woman marrying an American thereby becomes an American. Congress is asked to declare that an American woman marrying a foreigner shall thereby become a foreigner. Some of the State statutes might not be in agreement with such a law; but State citizenship and Federal citizenship are not always the same thing, and the rule proposed is, we believe, the same as that which now obtains in international practice. The recommendation looks to the woman's status only during marriage. Upon its termination, by death or absolute divorce, she may elect to revert to her original citizenship, or to re-

tain that which her marriage conferred upon her.

So far as children are concerned, the report proposes adherence to the existing law. Those born here, except in foreign legations, are our citizens, under the terms of the Constitution. So the Supreme Court said in the famous Chinese case of Wong Kim Ark, and we must rest content with that; but a sensible recommendation is made that the naturalization of the father shall confer citizenship upon his minor children only if they come to the United States actually to reside. The present law has been construed to confer citizenship upon minor children the instant they come to the United States, and they may go abroad immediately as American citizens. This is too manifestly improper to require comment.

An interesting phase of the protection of Americans abroad is presented in the case of those unfortunates who have made the declaration of intention to become American citizens, but have not yet been admitted into the fold. The law requires all aliens to make this declaration at least two years before they can be naturalized; yet it is forbidden to issue to them passports, and they receive no protection from this government if they go abroad on a visit. They are, as it were, prisoners at large in the United States, and they leave our borders on even the briefest and most necessary errand at their peril. The parent country feels no inclination to protect them, since they have formally declared they intend to forswear their allegiance to it; and the United States will not protect them because they are not yet citizens. Practically, they are in the distressing situation of being citizens of nowhere. The citizenship board recommends that, since our laws compel them to put their citizenship in this inchoate state, we should accept the responsibility and accord them protection if they go abroad for a stay so brief that it will not interrupt the real continuity of their residence in the United States.

Mr. Root has thus laid before Congress an important report dealing with a subject of profound interest. It ought to receive the most careful consideration. The same Congress which passed the naturalization bill should naturally pass a citizenship bill; but the shortness of the session makes it probable that the subject will have to wait to be dealt with by the next Congress.

SELF-GOVERNMENT FOR INDIA.

"In the main, we believe that British government in India is 'good government.' But it is none the less imperfect government. . . ." Thus writes the London *Tribune* in commenting on the Indian National Congress which has just ended. And it quotes with approval the restatement of a familiar Lincoln doctrine: "Good government can never be a substitute for government by the people themselves." We wish we could say that this enlightened sentiment had come from the lips of an American statesman, a Roosevelt, a Taft, or a Root: but it is to the English Prime Minister that the credit for it is due. Its application to India and the friendly expressions in the more liberal English press in regard to the Indian Congress are quite as noteworthy as that gathering itself. Even the *Spectator* speaks of England's duty "*while* we remain the overlords of India," and insists that if self-government comes, it must be a *de facto* self-government and wholly independent of Great Britain.

For this change in public feeling the Liberal Ministry deserves great credit, in particular John Morley, for whose sympathetic attitude the Indian Congress was especially grateful. Even if he has been unable as yet to bring about startling reforms, the mere fact that he is a well-wisher of the Indian nation, that he desires to see it progress, has had a quickening effect. To express confidence in a people is one of the best ways of strengthening them. Mr. Taft was able to do this for the Filipinos to only a limited extent, but Mr. Morley is in no doubt as to his course towards the Hindus. His mere presence as Secretary for India is a guarantee that the reactionary policy of the Balfour Government is at an end. What harm can come to Great Britain if the natives of India develop the power to care for themselves? Even the most sordid trader in England knows that a progressive state is a far better customer than one whose people are but half-civilized. But aside from the financial consideration, the highest renown that England could possibly win would come from building up a great self-governing nation in India.

With Persia, Russia, and China awakening, Turkey stirring, and Japan already achieving, it is no wonder that in India there should be dawning a national self-consciousness. The people have not been blind to changes abroad. Dadabhai Naoroji cited them in his opening address as president of the Congress, with its full thousand attendants, as one of the reasons why India should begin an active propaganda for the same privileges for which the Boers battled and the Irish have so long contended. He urged a petition to King Edward; and asked for a large fund to carry on the campaign, and to send speakers to England and throughout India itself. His speech was "the most resonant and the most determined demand for self-government which an Indian occupying a responsible position has ever uttered." To some crusted Tories it may, indeed, seem like sedition and rebellion. But the sober common sense of the bulk of the press, we believe, will recognize in this demand for self-government the highest compliment yet paid to the English guardianship of India. He is a poor tutor whose pupil is ever in leading-strings and never learns to walk by himself. What would be said of the United States, if, after our staying forty or fifty years in the Philippines, travellers were to find its people but little advanced towards self-government? Much of the blame would undoubtedly be placed upon the Malay character, but some would certainly attach to the teacher.

In one way, it is worth while to note, the recent reactionary policy in India has stimulated this sudden revival of nationalism. The liberal movement was not one of opposition when Lord Ripon was Viceroy; but it soon became one of protest, and, in places, of agitation. Indeed, in Bengal, after the partition, there was organized resistance, which manifested itself in a peaceful boycott of Englisn goods. The restriction of municipal government and the hostility towards certain universities were, as the London *Tribune* points out, signs that the Indian civil service had begun to regard the best sections of the Indian people with the "same aggressive hostility which the Russian bureaucracy feels for the 'intellectuals' of Russia." Yet, far from checking any pro-Indian movements, these reactionary measures strengthened them, injecting however, a spirit of bitterness and race hostility which should not be permitted to spread or intensify, if India's progress is to be along the lines of peaceful agitation.

The good temper with which the English press and public have received the reports of the Indian Congress, the keen interest in its conclusions, and the space given to discussing them, are all in striking contrast to our own apathy in regard to our oversea ventures. We cannot get the simple and just tariff legislation for the Philippines demanded by both President Roosevelt and Secretary Taft. The President's appeal for citizenship for the Porto Ricans evokes only the most languid interest. Hawaii's concerns are practically ignored outside of San Francisco. Guam and Tutuila? Americans have forgotten that they exist. The newspaper that prints a leader on the Philippines is the exception. Not one has its special correspondent there. Far from reforming our own institutions by way of the colonies, as President McKinley and the other optimistic statesmen of 1898 predicted, we have been wholly absorbed in our own debates about railroads and Trusts and insurance companies. Must we hold our colonies as long as England has India before our interests and consciences are sufficiently aroused to accord them fair treatment?

A COLLEGE FETICH IN FRANCE.

The French Minister of Education has proposed a far-reaching reform—nothing less than the abolition of the *baccalauréat*, or bachelor's degree. His argument is that the degree sets a premium on parrot-learning, while discouraging reflection and real cultivation of habits of thought. If the charge be well grounded, the change, we must all agree, can come none too soon.

The *baccalauréat*, as most of our readers are aware, does not correspond exactly to our own bachelor's degree; it is bestowed upon the French boy who has finished his studies at the *lycée* and is ready for the university. In the Paris *Temps* of December 26, Hippolyte Parigot has a long article in which he traces the origin of the degree and discusses its effect upon education and its value as a social passport. The degree was established in 1808 by a decree that had behind it the Napoleonic ideal of centralization. If the *baccalauréat* did not make every French boy study the multiplication table at the same hour, it at least provided a uniform test which every boy who had higher intellectual ambitions must pass. We may compare it to the Regents' certificates granted in this State to those who pass examinations in elementary as well as high-school subjects. These examinations are given simultaneously in public and private schools from Montauk to Buffalo. They show roughly the work which each school is doing; and they set a goal for which teachers and pupils strive. Twenty or thirty years ago, in the rural districts, the boy or girl who had won a Regents' certificate was pointed out as a pattern of intelligence and industry. The honor was and is decidedly worth having.

But the administration of a huge system of uniform examinations almost inevitably falls into routine. In this State the Regents' examinations have done incalculable service in improving the instruction, especially in the weaker schools; they have helped to develop sound methods of organization and discipline; for institution and individual they have held up definite standards of achievement. But they have not escaped the inherent defects of a vast and elaborate machine. Of this danger the officials have been well aware, and they have striven to avoid it; but in spite of their best efforts the examinations have tended to a routine. They have from time to time run into a stereotyped form; and, of course, to meet its requirements, at whatever sacrifice of worthy methods, has been the one thing for which the less intelligent teachers and students have struggled.

In France, too, from all accounts, events have followed a similar course. With this difference: in New York State we feel that our Regents' examinations, despite their drawbacks, have not become so rigidly mechanical that they have lost their usefulness; whereas in France the complaint is that the system is the nearest approach known in Europe to the mandarin methods of China. From this opinion many would dissent; but there must be some basis for the charge that the main result achieved is the mere drilling of memory, and "the absorption of interminable lists of ready-made facts, formulas, verdicts, and points of view regarded as scientifically essential and civically useful to a future French citizen." The deadening effect of it all is described by M. Parigot, who asserts that a father who has caught the spirit of the times does not say to his son, "Go to the *lycée*, and there cultivate your mind, your heart, and your will power." On the contrary, his advice is: "My son, you are going to the *lycée*. Conduct yourself as you please, so long as you aim at the *baccalauréat*. You'll never get anywhere without that." M. Parigot notes that people are inquiring the reasons for the decadence of the classes which are called cultivated. To his mind, the causes are most evident. The "feverish preparations" for the examinations are nothing more or less than a "useless assault upon the reasoning faculty."

It is hardly to be expected that M. Briand's proposed reform will be accepted—if, indeed, it is ever accepted—without determined resistance. Educators are, next to ecclesiastics, the most stubborn class in opposing innovation. Every university is, as Matthew Arnold described Oxford, a home of lost causes, forsaken beliefs, and impossible loyalties. We would not have it otherwise. In a world whose great foible is visible progress it is well that some one should still conserve ancient traditions and listen to the last enchantments of the Middle Ages. The conservatives who advocate the present system in France and the radicals who are for uprooting it can certainly unite in urging that a new type of examination is a mere temporary makeshift. For any type of examination imposed on a large number of candidates, year after year, cannot but degenerate into a routine. The only alternative that will afford a chance for freedom and flexibility is to let each school bestow its own diploma, the value of which will depend upon the reputation which the graduates of the institution are able to maintain for it.

The agitation in France carries, we may note, a warning to our own educators. In order to escape from the confusion and waste incident upon each college setting up independent requirements for admission and holding separate examinations, we are organizing one board which is gradually extending its activities and its uniform examinations throughout the country. The drift of such a body is obviously away from that very essence of a sound system of education—variety and flexibility.

GEORGE GISSING.

When Gissing died at St. Jean de Luz, in 1903, broken down at the age of forty-six by years of toil and privation, he had begun to acquire in the world at large something of the reputation he had long possessed among a select circle. But it is to be feared that the irony of his later works, such as the posthumous volume of tales recently published,* may create a wrong impression of his genius among these newly-won friends. For Gissing, more than most writers, underwent a change with the progress of time. His work, in fact, may be divided into three fairly distinct periods. Passing over the immature "Workers in the Dawn" (1880), we may mark off the first group of novels as beginning with "The Unclassed" (1884) and ending with "Born in Exile" (1892); between these two are "Isabel Clarendon," "Demos," "Thyrza," "A Life's Morning," "The Nether World," "The Emancipated," and "New Grub Street." The second group, starting with "Denzil Quarrier" (1892), may be limited by "The Crown of Life" (1899), although the transition here to his final manner is more gradual than the earlier change. This second division embraces what are perhaps the best known of Gissing's novels—the "Year of Jubilee" and "The Whirlpool"—and here again there is danger of misunderstanding. These are books of undeniable power, comparable in some ways to Hardy's "Jude, the Obscure," but pointed in the wrong direction, and not truly characteristic. One feels a troubling and uncertain note in all this intermediate work, done while the author, having passed beyond his first intense preoccupation with the savage warfare for existence, was still far from the fair serenity of his close. The greater Gissing is not to be found here, but in those tales which embody his own experiences in the cruel and primeval nether world of London—tales which together make what might be called the Epic of Poverty.

I.

Poverty, the gaunt greedy struggle for bread, the naked keen reality of hunger that goads the world onward—how this grim power reigns in all Gissing's early novels, crushing the uninured dreamers and soiling the strong. It is the guiding power of "The Unclassed." It casts its spume of misery and filth on the path of "Thyrza," that fragile Madonna of the slums, yet finds even here its pathetic voice of song:

> A street organ began to play in front of a public house close by. Grail drew near; there were children forming a dance, and he stood to watch them.
>
> Do you know that music of the obscure ways, to which children dance? Not if you have only heard it ground to your ears' affliction beneath your windows in the square. To hear it aright, you must stand

*"The House of Cobwebs and Other Stories." By George Gissing. To which is prefixed "The Work of George Gissing," an introductory study, by Thomas Seccombe. New York: E. P. Dutton & Co., 1906. Several of the most important of Gissing's earlier novels are not to be found in New York either in bookshop or library; and, indeed, he cannot be said ever to have been properly published at all. By getting together a complete and decently printed edition of his works some enterprising publisher might benefit himself and the community.

in the darkness of such a by-street as this, and for the moment he at one with those who dwell around, in the blear-eyed houses, in the dim burrows of poverty, in the unmapped haunts of the semi-human. Then you will know the significance of that vulgar clanging of melody; a pathos of which you did not dream will touch you, and therein the secret of hidden London will be half revealed. The life of men who toil without hope, yet with the hunger of an unshaped desire; of women in whom the sweetness of their sex is perishing under labor and misery; the laugh, the song of the girl who strives to enjoy her year or two of youthful vigor, knowing the darkness of the years to come; the careless defiance of the youth who feels his blood and revolts against the plot which would tame it; all that is purely human in these darkened multitudes speaks to you as you listen.

A superb piece of imaginative prose, indeed, as Mr. Secombe calls it, and significant of the music which Gissing himself wrested from the misery of the London streets. The note rises in "Life's Morning" to tragic shrillness, making of it one of the most passionate stories in English of love striving against the degradation of destiny. Again, in "New Grub Street," it sinks to the forlorn plea of genius baffled by unremunerative toil, and starved into despair. Those who care to know the full measure of agony through which the writer himself struggled, may find it portrayed here in the lives of the two unrecognized novelists. Only Gissing could tell how much of his own experience is portrayed in those "dwellers in the valley of the shadow of books"; how much of his fierce aspiration to paint the world as it really exists was expressed by the garret-haunting, hunger-driven Biffen; how often his breast, like Reardon's, swelled with envy of the prosperous commercialized man of letters. "He knew what poverty means. The chilling of brain and heart, the unnerving of the hands, the slow gathering about one of fear and shame and impotent wrath; the dread feeling of helplessness, of the world's base indifference. Poverty! Poverty!" I am not sure that it is good to know these things even by hearsay, but for those who are strong in pity and fortified by resolve they have been written out once for all, ruthlessly, without mitigation.

More general, gathering up all the suffering and foulness and crime of want, embracing too the clear-eyed, uncompromising charity of strength that asks for no reward, is that terrible story of "The Nether World." Here, most of all, Gissing is conscious of his grave theme; and as a chorus through all the sounds of defeat and consternation he raises the clamorous cry of his "Mad Jack," like the prophesying of some Jeremiah of the slums:

"Don't laugh! Don't any of you laugh; for as sure as I live it was an angel stood in the room and spoke to me. There was a light such as none of you ever saw, and the angel stood in the midst of it. And he said to me: 'Listen, while I reveal to you the truth, that you may know where you are and what you are; and this is done for a great purpose.' And I fell down on my knees, but never a word could I have spoken. Then the angel said: 'You are passing through a state of punishment. You, and all the poor among whom you live; all those who are in suffering of body and darkness of mind were once rich people, with every blessing the world can bestow, with every opportunity of happiness in yourselves and of making others happy. Because you made an ill use of your wealth, because you were selfish and hard-hearted and oppressive, and sinful in every kind of indulgence, therefore after death you received the reward of wickedness. This life you are now leading is that of the damned; this place to which you are confined is hell! There is no escape for you. From poor you shall become poorer; the older you grow the lower shall you sink in want and misery; at the end there is waiting for you, one and all, a death in abandonment and despair. This is hell—hell—hell!' " . . .

Above the noise of the crowd rose a shrill, wild voice, chanting:

"All ye works of the Lord, bless ye the Lord; praise Him and magnify Him forever!"

It has seemed worth while to quote thus at length, because Gissing is one of the few English novelists whose trained and supple language makes itself felt in such extracts, and because they lead at once to the theory on which he worked. "Art, nowadays," Gissing declares boldly, "must be the mouthpiece of misery, for misery is the keynote of modern life." It is not entirely easy to reconcile such a theory with the judgment of Gissing's own riper years; for art, he came in the end to think, is "an expression, satisfying and abiding, of the zest of life." Certainly, it is this contrast between the misery and the zest of life, derived from the same materials, that makes a comparison between Dickens and Gissing so inevitable. Gissing felt it, and his "Critical Study" of Dickens is one of the most ambiguous pieces of writing in the language. His intention is manifestly to praise, but he can never quite overcome his surprise and annoyance at the radical difference of Dickens's attitude toward poverty. And the same feeling crops out again and again in the earlier novels. Inextinguishable laughter were fittest, he says, musing on his own terrible nether world and thinking of the elder writer's gayety, but the heart grows heavy. In an essay last month, I tried to show how Dickens tended to portray his characters from the outside, without identifying himself with their real emotions. Here, on the contrary, we have a man whose ambition it was to strip off to the last rag those veils of melodrama and humor which prevented Dickens from becoming a realist, and which, it may be added, he himself by native right possessed in large measure. He would not be waylaid and turned from his purpose by the picturesque grimaces of poverty, but would lay bare the sullen ugliness at its core; he would, in a word, write from the inside. Only by taking account of the sordid realities of Gissing's life can we understand the mingled attraction and repulsion exercised on him by the large joyousness and exulting pathos of Dickens in dealing with the nether world. "The man who laughs," he said, reproachfully, "takes the side of a cruel omnipotence." The words are suggestive. Not "cruel," but *unimplicated*, let us say, and accept the phrase as a mark of the greater art. It is because Dickens stands with the powers above and is not finally implicated in his theme, that he could turn it into an expression, satisfying and abiding, of the zest of life. And it is, on the other hand, just because Gissing cannot entirely rise above the "misery" he describes, that all his marvellous understanding of the human heart and his chastened style do not save his art in the end.

And yet, if his theory and practice must from the highest standard be condemned, it would be unfair to overlook the reservations that should go with even so strict a judgment. For though the zest of life be lacking in these novels, there is something in them that strangely resembles it. "How," he exclaims in one of his latest works—"how, in the name of sense and mercy, is mankind content to live on in such a world as this?" The question obtrudes itself upon the reader again and again, and slowly he becomes aware of the vast, dumb, tumultuous *will to live* that is struggling into consciousness through all these horrors and madnesses. The very magnitude of the obstacles, the unreason of endurance, is witness to the unconquerable energy of this blind will. What, after all, has been the substance of great literature, from the days when Sarpedon heartened Glaucus on the plains of Troy to the most modern singer of some soul divided against itself, but warfare, and again renewed war? And as one reads on in these novels of Gissing's, their plot begins to unfold itself as another and darker picture of the same battle. It is almost as if we were listening to the confused lamentation of a city besieged and captured by night, wherein the enemy is no invading army of Greece, but the more treacherous powers of hunger, and vice, and poverty:

Diverso interea miscentur mœnia luctu.

And there is another element which helps to relieve the depressing nature of Gissing's theme. Literature of the slums is not lacking in these latter days. In each of our large cities you will find a college settlement where a band of prurient souls sit at type-writing machines glutting a morbid ambition on the sorrows of the poor. Now, Gissing did not learn the meaning of poverty in any such fashion; there is, at all events, nothing of the dilettante in his work. He wrote, not from callow sympathy or patronizing observation, but from his own deep experience; and, writing thus, he put into his account of the nether world the one thing commonly wanting to these pictures—the profound sense of morality. Through all these graphic, sometimes appalling, scenes one knows that the writer is still concerned primarily with the inner effects of poverty, and his problem is the ancient, insoluble antinomy of the one and the many, the individual and the mass. Taken as a whole, the society he describes is the victim of circumstances. His philosophy is summed up in a gloomy determinism: "indigence is the death of the soul," and "misery is vice." Yet even here, as in that chorus of "Mad Jack" already quoted, the contradictory and less comprehensible law of morality makes itself heard at times; and when he touches the individual, the sure insight of the artist asserts itself and he orders his people not as automatons, but as characters moved by their own volition, and, though it may be in unaccountable ways, reaping as they have sown. The knot of fate and free-will is not always disentangled, there is no conventional apportioning of rewards and penalties such as Dickens indulged in at the end of his novels; but always, through all the workings of heredity and environment, he leaves the reader conscious of that last inviolable mystery of man's nature, the sense of personal responsibility. Had not he,

George Gissing, been caught in the cruel network of circumstances, and had he not yet preserved intact the feeling that he was personally accountable? It is thus he attains by another road to something of the liberal enlargement of Dickens; the greatest art, it need scarcely be said, would combine both the free outlook of the older writer and the moral insight of the younger.

II.

Those are the principles—the instinctive will to live and the law of moral responsibility—that saved the writer's tragic stage from insupportable dreariness; they furnished, also, the clue that in the end led the writer himself out of the labyrinth of doubtful questionings. But for a while it seemed as if they were to be lost, for it is not so much any lowering of literary skill as a change in these essential points that marks the transition from his first to his second period. The new spirit may be defined by a comparison of such novels as "The Nether World" from his first period and "The Whirlpool" from his second (the very names are significant), or as "Life's Morning" and "The Crown of Life." In place of human nature battling with grim necessity, we now have a society of people contending against endless insinuations of tedium and vanity; in place of the will to live we meet a sex-consciousness, always strong in Gissing, but now grown to morbid intensity. And with this change comes a certain relaxing of moral fibre. The theme is no longer self-responsibility, or character in the strict meaning of the term, but a thousand vexatious questions of the day—anti-vivisection, anti-racing, anti-gambling, anti-hunting, anti-war, imperialism, the education of children, the emancipation of women, and, above all and more persistent than all, the thrice-dreary theories of marriage. It would be wrong to infer that the moral of his books is ever at bottom any other than sound. In the full swing of his middle period he could close a novel with the ejaculation of his hero: "Now I understand the necessity for social law!" But one is aware, nevertheless, that conventions have grown irksome to him, and that for a while his real interest is in the thronging, ambiguous problems of emancipation.

III.

If the influence of modern Continental literature, especially of French and Russian, may be suspected of unsettling his inherited canons, his home-coming in the end was surely due in large measure to his devoted study of the classics. Strange as it may seem when one considers the topics he treated, there is scarcely a writer of the last century more thoroughly versed in Greek and Latin than Gissing, and throughout his struggle with poverty he commonly kept free of the pawnshop a few chosen books, Homer, Tibullus, Horace, Gibbon, Shakespeare. Writing the memoirs of his life, at ease, and with a library at his command, he recalls his difficulties:

I see that alley hidden on the west side of Tottenham Court Road, where, after living in a back bedroom on the top floor, I had to exchange for the front cellar; there was a difference, if I remember rightly, of sixpence a week, and sixpence, in those days, was a very great consideration—why, it meant a couple of meals. (I once *found* sixpence in the street, and had an exultation which is vivid in me at this moment.) The front cellar was stone-floored; its furniture was a table, a chair, a washstand, and a bed; the window, which, of course, had never been cleaned since it was put in, received light through a flat grating in the alley above. Here I lived; here I *wrote*. Yes, "literary work" was done at that filthy deal table, on which, by the bye, lay my Homer, my Shakespeare, and the few other books I then possessed.

What a picture of the new Grub Street. One thinks of the deal table in Thoreau's hut at Walden on which a Homer lay, and one thinks, too, of Dickens in his comfortable study with his shelves of sham books. For most of his reading Gissing had to depend on public convenience:

How many days have I spent at the British Museum, reading as disinterestedly as if I had been without a care! It astounds me to remember that, having breakfasted on dry bread, and carrying in my pocket another piece of bread to serve for dinner, I settled myself at a desk in the great Reading Room with books before me which by no possibility could be a source of immediate profit. At such a time I worked through German tomes on Ancient Philosophy. At such a time, I read Appuleius and Lucian, Petronius and the Greek Anthology, Diogenes Laertius and—Heaven knows what! My hunger was forgotten; the garret to which I must return to pass the night never perturbed my thoughts.

And Homer and Ancient Philosophy won the day. There was little occasion in the earlier novels to display this learning, yet here and there the author's longing for Rome and Italy breaks through, as in the passion of the apothecary's apprentice in "The Unclassed." Then came the intellectual whirlpool. The release from that dizziness of brain shows itself first in a growing lightness of touch and aloofness from passion of all sorts. The novels and tales of the third period are chiefly distinguished by a tone of gentle and amused irony, in place of the satire of the middle group, and it is significant that the theme of "Will Warburton," his last novel, is the same as that chosen by Biffen in the "New Grub Street" for his pronunciamento of rebellious realism—the life of a retail grocer. Only, in the actual novel there is no realism at all as Biffen would have understood it, but the witty and mock heroic story of a man of good birth who begins by selling groceries over the counter under an assumed name and ends by accepting his lot in all *gaieté de cœur*—so far had Gissing travelled from being at loggerheads with destiny. "Warburton" was written in Southern France when a moderate success had freed him from the hardest slavery of the pen, and when ill health had driven him from England. Here, too, he absolved himself from an ancient vow by composing with all the artistry he possessed, a story of classical life—his "Veranilda"—and here he wrote that restrained and every way beautiful piece of self-revelation, "The Private Papers of Henry Ryecroft."

There is nothing in the language quite like this volume of half-veiled autobiography. In the imagined quiet of a home in Devon, the part of England Gissing so passionately loved, he writes out his memories of toil and the reflections that come to him as the sum of his experiences. Here is no bitterness, no complaining; all the lesser problems that harassed him have solved themselves by simply vanishing; he returns to his early convictions, with the added ripeness of long meditation. He had used the life of the poor for his greatest creative work, and the question of the growing democracy is the only one that still abides with him in his repose. Everywhere he sees the decay of that natural instinct on which the morality of the world at large must always depend, and in its place an ever-widening spirit of interrogation which only unsettles and sets adrift. "I am no friend of the people," he exclaims, and the words come with strange insistence from such a man. "As a force, by which the tenor of the time is conditioned, they inspire me with distrust, with fear. . . . Every instinct of my being is anti-democratic, and I dread to think of what our England may become when Demos rules irresistibly. . . . Nothing is more rooted in my mind than the vast distinction between the individual and the class." This doubt alone remained to annoy him, but with it he connected the other great movement of the day: "I hate and fear 'science' because of my conviction that, for long to come, if not for ever, it will be the remorseless enemy of mankind." To science he attributed the spread of that half-education which increases the powers of action while lessening the inhibitions of self-knowledge. It was from his close reading of the classics, I think, though he himself does not say so, came his notion of some salvation through the aristocratic idea—the essential idea of Greek literature:

The task before us is no light one. Can we, whilst losing the class, retain the idea it embodied? Can we English, ever so subject to the material, liberate ourselves from that old association, yet guard its meaning in the sphere of spiritual life? Can we, with eyes which have ceased to look reverently on worn-out symbols, learn to select from among the gray-coated multitude, and place in reverence even higher him who "holds his patent of nobility straight from Almighty God"? Upon that depends the future of England.

The business of the novelist is with the realities of life, and not with hypotheses; yet one cannot leave Gissing without wishing that he had found strength and occasion to express these fundamental ideas of his maturity in fiction. P. E. M.

Correspondence.

THE ANTICS OF THE PRESS.

To the Editor of The Nation:

Sir: At the recent graduating exercises of the Junior College in the University of Chicago I was giving an address in which the members of this body, both men and women, were urged to seek a sense of form—in dress, manners, speech, and intellectual habits. In antithesis, it was pointed out that we had too long lived in a kingdom of slouch—in dress, manners, speech, and intellectual habits. In a humbler way, but extending the application, the effort was made to emphasize what Mr. Henry James and Mr. Howells had said in regard to American speech. Further, after putting the emphasis upon the desirability of intellectual good form, the lesson was enforced by Lowell's poem of "Hebe," quoted by Tom Hughes on his visit to Harvard. The occasion was supposedly formal and dignified; and only in the two words above was dress even mentioned.

Perhaps to illustrate the truth of my indictment by showing the lack of good form of some American journals, the Chicago penny-a-liner attached to my name and sold it as desirable copy in New York papers such vulgar stuff as the following:

The wiggling, swaying movements of American women on the streets and the stage have made them the ridicule of Europe. They have a glide and a wiggle that make them both undignified and ungraceful.

American women live too much in a state of slouchiness in dress, manner, intellect, and language. What we need is a sense of form. It is something that is very scarce among American women. It is, indeed, the rarest sense there is in the country.

Of course, I never said any such thing, but papers in all parts of the country could not know that the report was stupid fiction, and that the quotation marks were absolutely false. Yet in this form the above vulgar paragraphs have gone the length and breadth of the country as my utterances.

May I ask the friends of decency and truth not to believe any of the similarly disgusting writing about our university, which is first suggested in Chicago papers and then sent abroad? Without any sense of honor—to say nothing of a sense of form—some Chicago newspapers, hitherto respectable, have no hesitation in defaming, without any justification whatever, an institution in their own city which is working for good—providing a story, no matter how false, can be twisted into sensational copy. J. Laurence Laughlin.

University of Chicago, January 10.

SECRETARY TAFT AND THE PRESIDENCY.

To the Editor of The Nation:

Sir: Wherever Secretary Taft is personally known your remarks concerning him as a Presidential possibility will meet with general approval. In this State he became known through the performance of his duties as a Federal judge; and among all who thus came to know him it would be hard to find any who would not enthusiastically support him for the Presidency. They found in him the rare combination which you mention of great ability and great geniality. Since he left the bench, they have learned that to these qualities he adds also constructive statesmanship of a high order, coupled with courageous and uncompromising patriotism. These qualities render him an almost ideal candidate for the Presidency, especially under existing conditions. At the present time the one thing which the people most demand in their chief executive is the ability and the willingness to protect them against the aggressions of predatory wealth and corporate monopoly. So strong and widespread is this sentiment as to leave little doubt that in the next Presidential campaign the candidate who best represents it will be almost certain of election regardless of party affiliations in respect to other issues. Indeed, this sentiment may yet force the renomination of President Roosevelt, notwithstanding the third term objection and despite his own protests and wishes, because the people feel assured that in him they have a safe champion of their interests.

That this subject is to be for a time the dominant issue in politics seems inevitable. The people are coming to realize that under commercial and industrial conditions recently developed, the institution of private property which has done so much for the advancement of mankind, may in the hands of crafty, greedy, and unscrupulous men become subversive of the very ends which it is intended to subserve and a menace to the government itself, and that it must be shorn of its evil possibilities in order to save it from destruction at the hands of the socialist.

The problem which confronts us to-day is to find a safe middle course between the Scylla of commercial and industrial slavery resulting from the almost irresistible power of aggregated capital on the one hand, and the Charybdis of socialism as the natural alternative on the other. With the exception of President Roosevelt, is there any other man now in public life who is apparently so well qualified as Secretary Taft to represent the whole people in dealing with this and the many other difficult problems that will confront our chief executive in the next few years?

Herbert L. Baker.

Detroit, January 8.

SINCERE PRAISE FOR MR. ALDRICH.

To the Editor of The Nation:

Sir: Mr. E. V. Lucas, in his new anthology, "The Friendly Town," prints under the title, "Another Invitation," Mr Aldrich's lines beginning:

> I beg you come to-night and dine.
> A welcome waits you, and sound wine—
> The Roederer chilly to a charm,
> As Juno's breath the claret warm,
> The sherry of an ancient brand.

But they are credited to "Anon."

The poet's own title is "The Menu," and the poem is in the volume called "The Sisters' Tragedy," under the general division, "Bagatelle." C. T. Copeland.

Cambridge, Mass., January 4.

Notes.

G. P. Putnam's Sons announce the following books as now ready or soon to be ready for publication: "On the Great American Plateau," by T. M. Prudden; "The Censorship of the Church and Its Influence upon the Production and the Distribution of Literature," by G. H. Putnam; "Hunting Big Game with Gun and with Kodak," by W. S. Thomas; "The Development of Religion in Japan," by G. W. Knox; "A Journey in the Back Country," by F. L. Olmsted; "Writings of James Madison," vol. vi.; "The Life of Walter Pater," by Thomas Wright; "The Life of Goethe," vol. ii., by Albert Bielschowsky; "Studies of a Biographer," 4 vols., by Leslie Stephen; "Our Struggle for the Fourteenth Colony: Canada and the American Revolution," by J. H. Smith; Mrs. Gaskell's Works, Knutsford edition, vols. iv. to viii.; "The History of Painting," by Richard Muther; "Old English Clocks," by F. J. Britten, and "A History of Tapestry," by W. G. Thomson.

Lucy Forney Bittinger's "German Religious Life in Colonial Times" is announced for early publication by the J. B. Lippincott Co. In February the firm will issue "François Rabelais," by Arthur Tilley, the third volume of the French Men of Letters Series, of which Brunetière's "Balzac" was the second.

"The Standard Bible Dictionary" will be brought out by the Funk & Wagnalls Co. early in the spring.

Henry Holt & Co. have ready for publication two new volumes in J. A. Doyle's "English Colonies in America," dealing respectively with the Middle Colonies and the Colonies under the House of Hanover. The same firm announces L. T. Hobhouse's "Morals in Evolution," in two volumes.

Doubleday, Page & Co are printing a fifteenth edition of "Bob, Son of Battle." They give some interesting details of the history of the book: "Although published nearly ten years ago, it has enjoyed a steady sale. Yet when it first appeared it was almost regarded as a failure. It took nearly a year for American readers to discover the real quality of the book."

It appears that the so-called Catechism of Sir Oliver Lodge, about which there has been so much talk, got into the press without his authority, from a privately printed copy. He will soon publish it, with considerable expansions and explanations.

The English *Independent Review*, beginning with the January issue, will be published by John Lane instead of Fisher Unwin. It will maintain its old policy of "cultured Liberalism."

The *Pennsylvania-German*, a monthly magazine, established in 1900, and published at East Greenville, contains in its January issue four articles on German migrations in the United States and Canada.

With the second ten volumes Houghton, Mifflin & Co. complete their really superb Walden edition of Thoreau. On the appearance of the first ten we took occasion to say how admirably these books were made. In format, type, and paper, they seem to us about the ideal of such a publication, presenting a thoroughly comfortable book to hold in the hand and a delightful page to read, without any of the cumbrous appurtenances of the ordinary *édition de luxe*. Thoreau stands before us complete, and conscientiously edited. A word of commendation should be added for the photogravure illustrations from photographs taken by Herbert W. Gleason, who has gone over the Thoreau country with loving care, and caught many of the fleeting phenomena of the seasons in the very spots where Thoreau observed them. The last ten volumes continue and conclude the "Journal," which had already taken four of the earlier instalment, an extraordinary record of daily life with nature, which Bradford Torrey has edited with meticulous care. If we should quarrel with it for anything it would be for its too great abundance. Much is trivial, yet much also is of extraordinary interest, as readers of the books made out of it by Ellery Channing already know.

The promise held out in the earlier volumes of "Nelson's Encyclopædia" that the completed work would be one of the most useful brief reference encyclopædias in the English language appears to be fulfilled in Volumes V. to X., which we have received.

Vol. X. carries us through Sax, and there are two more volumes to come. The blurred and badly printed illustrations, the poor maps, and the comparatively large proportion of space given up to subjects of "current interest" are still the points that most seriously detract from the permanent value of the books. But as the last-named characteristic is one on which the editors particularly pride themselves, it may be taken as fulfilling what they conceive to be the mission of the work. In this connection, however, some glaring omissions may be noted, such as the exclusion of biographies of Roland Molineux and Nan Patterson, while that of Albert T. Patrick is included. As far as accuracy is concerned, the later volumes show considerable improvement, and the "Americanization" has been more thoroughly and successfully carried out. The longer biographical, historical, and descriptive articles continue to be among the most valuable portions. Considering their limited space, the English literary biographies are, many of them, unusually fine characterizations of the subject's life and work. Some, however, strike one as peculiarly inadequate, as those, for instance, of Cardinal Manning and Walter Pater. The lack of proportion in some American subjects may be noted in the relative space allotted to Edwin Markham and Lafcadio Hearn. The long American articles are valuable in showing the results of the most recent historical research. The scientific, economic, and industrial articles as a rule are of high quality, the recent discoveries and investigations being treated with particular fulness. Of special interest and value is the article on "Irrigation" and the detailed discussion of rate regulation under "Railroads." All in all, the treatment of the subject matter in the work is an admirable example of compression, and fulfils to an unusual degree the purpose of the editors to furnish an encyclopædia for busy people.

An "historically illustrated" edition of George Eliot's "Romola," with an introduction and notes by Dr. Guido Biagi, has been issued in two volumes by A. C. McClurg & Co. Dr. Biagi, who is librarian of the Laurentian Library, Florence, is one of the small vanguard of Italian critics who find in English literature something they cannot find in French. He is, however, not merely an appreciative essayist; for a long experience in palæography inclines him toward scientific research. A few years ago he published some fresh documents bearing on the last days of Shelley; now he makes known the main written sources of "Romola." In telling about his discovery, Dr. Biagi not only reveals a method worth knowing, but gives a vivid and accurate description of a great Florentine library as it was about the year 1861, when George Eliot and Lewes were in Florence. In those days, writes the Commendatore, "an ancient priest, in greasy skull-cap and snuffy cassock, . . . presided over the books, keeping beside him as a guide the 'Index Librorum Prohibitorum.'" The receipts for books given out are still preserved. "From George Eliot herself," says Dr. Biagi, "I found not a single receipt, but there were a number signed by G. H. Lewes, to whom she left all the trouble and care of those learned investigations to which she was not accustomed." Of these receipts twelve are reproduced in facsimile, and Dr. Biagi states what books they designate, indicating briefly what each yielded to George Eliot's swift but skilful search. Furthermore, in his comments on the historical novel, our editor says something worth reading. The illustrations, 160 in all, are well reproduced. Furthermore, they are for the most part adequately described, and in every case are, for their own sakes, worth possessing; but many of them are wholly irrelevant, or are made so by being recklessly misplaced. What, for instance, can be the relevancy of a picture of the pouches for the *squittini* (Vol. I., p. 46)? or of an "Enamelled Cup and Plate" (I., p. 56)? or of the "Bussolotti and Mazze" (I., p. 60)? Others still are quite to the point, but strewn at random through both volumes. Thus—to take but one example—facing p. 42, Vol. I., we come upon a cut showing a *lucco*, though the author describes this garment forty pages earlier.

Few subjects have been more assiduously written up than the literary associations of London, and as no volume so far can be called exhaustive and as the associations accumulate daily, the supply of books will no doubt be maintained. The latest addition is "Literary London," by Elsie M. Lang, with an Introduction by Gilbert K. Chesterton (Charles Scribner's Sons). This work is arranged like a dictionary, with the famous localities and streets in alphabetical order, so that one jumps from Downing Street to Drury Lane; and unless one is very familiar with the topography, one groans at the absence of a map. As a book of reference, it has merits, though they do not include completeness. The author has secured only the more obvious of the memories that cling to nearly every old London street, and does not betray a wide acquaintance with memoirs from which she might have added to her collection. Even without such aids, she might have treated Downing Street more handsomely. This resort of so many literary statesmen appears here only as connected with the lives of Smollett and Horace Walpole. From Suffolk Street, where he lived at Garland's Hotel, is omitted the name of Whistler; and Paradise Row, Chelsea, to which Mr. Blunt lately devoted a whole volume, is not mentioned. Yet it is haunted by memories of many interesting and pathetic personages, and by the humorous figure of Pepys, who used to go to the house of Mistress Becke to eat her "admirable cakes." On Lothbury, Miss Lang has no quotation from Wordsworth; on Holland House, no mention of Lady Holland, the queen of that famous salon. Grub Street does not appear in the index, and must be looked for under its new name, Milton Street. The numerous illustrations from photographs are rather commonplace. In fact, the chief attractions of the volume are its light weight and excellent get-up. Mr. Chesterton's Introduction is in his favorite style, a mere series of flat contradictions of popular convictions and points of view about cities, thrown into the form of paradoxes, and not to be mistaken for epigrams.

"The Book of Elizabethan Verse," chosen and edited with notes by William Stanley Braithwaite, with an Introduction by Thomas Wentworth Higginson (Boston, Herbert B. Turner & Co.), is, in externals, a close reproduction of the excellent "Oxford Book of English Verse," even to the very book mark, and the tooling on the cover. As to the ethics of such book making, it can at least be said that it is quite typical of the publishing methods in vogue during the reign of Elizabeth. We find included among the poets of this volume such writers as Wyatt and Surrey, Carew, Herbert, and Herrick, to say nothing of Cartwright, Crashaw, Davenant, Habington, Lovelace, Montrose, Randolph, Suckling, and Waller, who were not born until after the death of Elizabeth. Apparently any Jacobean or Caroline poet who hits Mr. Braithwaite's fancy may be considered an Elizabethan writer, with the exception of Milton, because *his* "muse is not Elizabethan." Apart from this inconsistent method of selection, the poems are on the whole well chosen, for Mr. Braithwaite adds nothing that is new, and, following the work of other editors and anthologists, could hardly go wrong. We miss some old favorites. Though there are forty selections from Herrick, his exquisite "You are a tulip seen to-day" is not among them. Shakespeare, Jonson, Fletcher, and Herrick furnish one-quarter of the poems. One-third of Mr. Braithwaite's selections are also found in the "Oxford Book of English Verse," and where Mr. Quiller-Couch prints an excerpt from Spenser's "Shepherd's Calendar," or but part of a poem of Crashaw or Waller, the "Book of Elizabethan Verse" follows him line for line. Again and again Mr. Braithwaite fails to give us correct names and text. To cite a few typical examples, on page 772, we find Richard Greene for Robert Greene; on page 692, Dumain of "Love's Labour's Lost," appears as Dumare; on page 720, Clément Marot is called Clément Mark. The Latin quotations on pages 689, 699, and 750 are badly mangled. Typical among the misprints is the following:

> Till that ripe birth
> Of studied Fate *step forth*,
> And teach her fair steps to our earth.
> —(Page 110.)

Crashaw wrote "stand forth." Mr. Braithwaite professes the liveliest admiration for Carew's "Elegy upon the Death of Doctor Donne," yet in its opening lines he prints "crust" for "trust," the accepted reading. The editor shows no intimate knowledge of Elizabethan verse. The eighty-two pages of notes are valuable only for their very liberal citations from Grosart, Saintsbury, Bullen, Schelling, Erskine, and other editors and critics, and we have not discovered that Mr. Braithwaite has made the smallest contribution to our knowledge of the period.

In "Ronsard and La Pléiade" (Macmillans) the Rt. Hon. George Wyndham offers another example of the versatility of English statesmen who combine political with literary distinction. Beginning with an essay of sixty pages on the literary aspirations and achievements of the famous group, the volume adds a judicious anthology and several translations, in the original metres. From the point of view of scholarship, the most interesting feature in the discussion is Mr. Wyndham's contention that the much-talked-of "Italian influence" on English Renaissance came, in this instance, through the filtration of French literature. Not only Spenser and Sidney, but "the majority of Elizabethan sonneteers concentrated their attention on contemporary France, and de-

rived their knowledge of Italian work from adaptations by Ronsard and Desportes" (p. 49). As this dissertation concludes with an eloquent paragraph urging a similar *entente cordiale* to-day, we can but congratulate the author on the consistency and continuity of his plan. His translations are faithful, and not without the attractiveness of hybrids and exotics in general; still, one may doubt the quality of an English sonnet in Alexandrines, though

Quand vous serez bien vieille, le soir, à la chandelle

is indisputably genuine French. In the rendering of "Mignonne, allons voir si la rose," the ear is jarred by such rhymes as "lament," "raiment"; "mother," "by her." A graceful dedication, in verse, after the fashion of Swinburne, completes this study.

Several large collections of coins in Great Britain, the most famous of which is in the British Museum, afford English scholars a unique opportunity for the study of numismatics. That they have taken full advantage of their favored position is proved by such works as B. V. Head's "Historia Numorum," now entering on a new edition, Percy Gardner's "Types of Greek Coins," George Macdonald's "Coin Types," G. F. Hill's "Handbook of Greek and Roman Coins," as well as the last-named author's more recent volume, "Historical Greek Coins" (The Macmillan Co.). The plan of this new book is to present as nearly as possible in chronological order a series of coins interpreted with less regard to economics and art than to the light they directly throw upon history. In his preface the author explains that he has chosen for discussion pieces which, "by the mere fact that they were issued, or else by information conveyed through their fabric, types, inscriptions, or standard, actually add their quantum to our knowledge of the period to which they belong. Sometimes, as in the case of the coins struck after the battle of Cnidus, the amount added is considerable. Sometimes, however, as with the early didrachm of the Achæan League, the coins cannot be said to do more than throw a pleasantly illustrative light on the period." They are especially valuable for illustrating the foreign connections of a state, the extent and direction of its commerce, and the growth and decline of its economic and even of its political importance. The work begins with the invention of coins, probably by the Lydians, and traces the expansion and development of Greek coinage to near the opening of the Christian era. As an elementary treatise it presents the subject in a clear, straightforward style, unhampered by details, yet with some attention to the historical problems involved. The glossary of technical terms will be found useful to the reader. Abundant illustrations are provided in the thirteen plates in addition to several cuts in the text. In some cases the reader may be unwilling to accept the author's view. The treatment of Solon's coinage (p. 12 ff.) is not altogether convincing, and some may feel that the author is unjust toward Themistocles (p. 48); but these are subjects on which opinions may differ. The high reputation of the author is a sufficient guarantee for the scholarship of the work. If it meets with the encouragement which it deserves, "it may be followed by a companion dealing with Historical Roman Coins."

Few events of the French Revolution have aroused more rancorous passions in the breasts of writers, both royalist and republican, than the episode which forms the chief part of G. Lenôtre's vivid and captivating narrative, "The Flight of Marie Antoinette" (Translated by Mrs. Rudolf Stawell; J. B. Lippincott Co.). M. Lenôtre confines himself largely to the relation of the drama itself, leaving aside its causes and consequences. Indeed, the author creates in the reader's mind the illusion of his personal presence at every scene. Although the work is fully documented, the author can scarcely be said to add much to our knowledge of the subject. This is not surprising, the hunters have been so many and so keen. It is by the precision and arrangement of details and by their picturesque setting that he has succeeded in creating a fresh interest. To achieve this result he has had recourse to all sources of information: national archives, private archives, and memoirs past counting. The skilful use he makes of this material, balancing probabilities against probabilities, checking one document by another, and always picking out with unerring finger the convincing, essential fact, is as striking as the intensity of life which he manages to give to his revival of the past. No historian of the period has shown so forcibly by what a fatal chain of secondary causes —trivial causes, too, that could all have been easily counteracted—the well-arranged plans of Fersen were rendered unavailing. M. Lenôtre writes sympathetically of Louis XVI.; but his picture of the loutish sovereign, always doggedly obstinate at the wrong time, is calculated to excite more irritation than pity. M. Lenôtre is by no means a thoroughgoing partisan of Marie Antoinette, and therefore the light he sheds on the innocence of her relations with Fersen is the more convincing. Fersen was her lover, but in the high and noble sense of the term. Subtle as is M. Lenôtre in rendering individual impressions, he is still more successful in analyzing great popular emotions. The chapter which describes the agitation of the peasants of Champagne, the mustering of the civic guards, and their mad rush to Varennes, is extremely interesting. The book has been exceptionally illustrated. Most of the portraits have never been published before, and are reproduced directly from miniatures. Then there is a large number of little pictures, drawn from photographs or from nature, which enable us to trace the lumbering berline and its occupants through all the scenes, and to all the halting places on the route: the streets, roads, hotels, post-houses, yards, are all vividly represented.

A "History of the Town of Middleboro, Massachusetts," by Thomas Weston of the Suffolk Bar, has been issued by Houghton, Mifflin & Co. It is the opinion of the author of this valuable addition to New England local history that it should have been written fifty years ago, when there were yet living men by whom the earlier traditions were still well remembered. In this statement some allowance must be made for Mr. Weston's modesty, for, appointed by a responsible committee as town historiographer, he has made no mention of himself in the text or index. He might advisedly have said that there were some compensations in delay, for the present work has profited by some excellent recent models. The early annals of the older New England towns have necessarily a measure of similarity. If, therefore, Mr. Weston's story is in part familiar, it is because Middleboro has as good a claim to such phases and incidents as many another town. But it had also a distinct character and history of its own. The event of greatest immediate significance in Middleboro's long career was King Philip's War, when all the dwelling houses and out-buildings, as well as the town records and documents, were burned, though there were happily wanting those scenes of carnage so terribly visited on other settlements. Since no one has ever been willing to take New England's mineral history seriously, it is difficult to present to believing ears the claims of Middleboro as a mining and early manufacturing centre; yet here was dredged, for many years, from the bottom of Assawampsett and its little family of ponds, a quality of iron ore more satisfactory than hog iron; and here were developed thriving industries, employing many men in the forges, slitting mills, nail, ordnance, and other factories. Chief among the owners of these enterprises was Peter Oliver, the most prominent person who ever lived in Middleboro, who, after he rose to be chief justice, used to ride to Boston in full state, with scarlet-clad outriders. No trace is left of stately Oliver Hall, and it would have been well if Mr. Weston had defined more sharply the present condition of the site of this memorable abode of colonial magnificence and hospitality. Racy of a soil rich with tradition is the chapter on early purchases from the Indians, and the necessary map which goes with it. The 26 Men's Purchase, the 5 Men's Purchase, the Little Men's Purchase, the Sixteen Shilling Purchase—these, with their expressive titles, speak visibly of shrewd, but not dishonorable bargainings.

"The Dog Book," by James Watson (Doubleday, Page & Co.), is from the pen of a man eminently fitted for his task. He has been owner, breeder, and judge of the animal for many years; and while he is something of a specialist in certain breeds, he is thoroughly familiar with all, and his statements will generally pass unquestioned. Regarding the genesis and early history of the dog, Mr. Watson has written entertainingly, and, while some of the matter is old, much will be new to his readers. Doubtless his positive statement that while the dog and the fox and the dog and the wolf will mate, the interbreeding of their progeny is impossible, will be disputed—and, for that matter, it has been—but Mr. Watson seems to have the better of the argument. Valuable information is offered in the chapter on the dog in the house, and the arguments in favor of the short-haired breeds are sound; but his statement that "for a city dog give preference to something of moderate size, even the smaller toy dogs, although setters and pointers do very well," is open to debate. Mr. Watson might have gone further and declared that the city is no place for a dog, and his dictum would have been sup-

ported by hundreds of thousands of dog lovers. Though he is not a veterinarian, his judgment on the ills of the dog and their treatment is worth regarding. Feeding in particular is discussed in great detail, but the many indulgent women who own dogs and constantly overfeed them are not likely to see the book. Managers of kennels would have a more profitable business were they to study carefully the chapter on proper handling of the animal in large numbers. Mr. Watson also tells how to turn a dog into a prize winner. Time and time again has a pet dog been sent to a bench show, and has come away without even a H. C., while its owner has seen its brother carry off the blue ribbon. The reasons for this are many and are fully described. Mr. Watson explains how the experienced fancier takes up his dogs at least two months before showing, and works over them every day until they are in the best condition. The author considers each breed, gives its life history, the points necessary in a perfect specimen, and illustrates each chapter with well-printed photographs. Unfortunately there is no index.

Motorists and other superficial travellers may find stimulation in "Winged Wheels in France," by M. M. Shoemaker (Putnams). The book records a rapid rush through France with inevitably hasty observation and numerous omissions of not unimportant objects of interest. Aigues-Mortes and the Pont-du-Gard find no mention in the southern part of the tour; "Toulouse . . . is not a place of interest for the tourist" (p. 39); the French are a queer people; and so on. Guide-books and manuals of history supply the information, original comment dwelling often on hotel accommodations, and the chances of motor-travel. The illustrative photographs, which are well-selected, might, of course, be procured independently of the volume.

The German author Dr. Ludwig Fulda has just published, under the title "Amerikanische Eindrücke (Cotta: Stuttgart), the impressions made by a recent visit to the United States. Although not entirely free from the tendency to bold generalizations, in which Europeans are likely to indulge when recording their views concerning the institutions and people of America, Fulda aims to be just, and shows, on the whole, discernment in the formation of his judgments. Yet our author, notwithstanding his caution, does not always distinguish the essential and permanent from the casual and transient. He thinks the great historical process which once transferred the seat of intellectual culture and the centre of world-sovereignty from Asia to Europe, will be repeated by a similar transfer from Europe to this side of the Atlantic. The only means of preventing or delaying this impending movement, is, in Dr. Fulda's opinion, the formation of "The United States of Europe," a union of all the nations of the Old World, not under one government, but in one great confederation of political communities, so constituted as to work together as a single body for the promotion of material prosperity, political power, and intellectual productivity. Such a coalition would lead first of all to the abolition of standing armies, which are a fatal source of weakness in the competitive struggle of continents. However ardently our author desires to see such a union called into existence, and however strongly convinced of its efficacy, he is forced to deem it Utopian, under the present conditions of international jealousy and hostility.

In a pamphlet entitled "Der alte Orient und die Bibel," Prof. Hugo Winckler, the Assyriologist of Berlin, strikes out in a new direction in the interpretation particularly of the genesis and development, not only of the Old Testament religion, but of religion in general. While making no attempt to undermine the literary analysis of the sources as currently accepted, he declares that the facts of Babylonian culture and civilization that have come to light show that the Old Testament religion cannot be explained as a mere development from an elementary faith of Arabian nomads. His argument is an attack upon the natural development hypothesis so fundamental in the Wellhausen school.

Whatever one may think of the methods of rescue missions there can be no question of the genuineness of such a man as "S. H. Hadley of Water Street," whose story is told by the Rev. J. Wilbur Chapman (Fleming H. Revell Co.). Hadley came of best New England stock, was a rather wild youth in a primitive section of Ohio in the years succeeding the Civil War, became a common drunkard, thief, and gambler, but was thoroughly transformed and lived a life of devoted usefulness for over twenty years. His religious experience was of the usual evangelical type, but was notable for its positiveness and thoroughness. Dr. Chapman has yielded somewhat disproportionate space to the eulogies pronounced over Mr. Hadley at the time of his death.

A handy pocket edition of Nietzsche's "Werke," with an explanatory preface and biographical introduction by his sister, Elizabeth Förster-Nietzsche, has just been published by Naumann in Leipzig. The arrangement of the condensed contents is strictly chronological, and gives a clear and concise survey of the intellectual development of the author.

Francis Charmes, who has been chosen editor of the *Revue des Deux Mondes* in succession to Ferdinand Brunetière, has been long connected with that periodical as writer of its political *chroniques*. Born in 1848, he began his career as a political journalist in 1872, when he went on the staff of the *Journal des Débats*, which had just gone over to the cause of republicanism. He enjoyed the protection of Thiers, rose to an important position in the ministry of foreign affairs, entered the Chamber of Deputies, and is at present Senator from the Department of Cantal. Concerning his election to be head of the great French review it is stated that he was the unanimous choice of the Supervisory Council of Five, in whom the naming of the chief editor is vested, subject to ratification by the general meeting of stockholders. The Council, consisting of Paul Leroy-Beaulieu, Gaston Boissier of the French Academy, the Vicomte d'Avenel, Charles Richet, and Mme. Edouard Pailleron, had to consider the names of several eminent candidates, including the Vicomte Melchior de Vogüé, René Bazin, and René Doumic. The Council decided in favor of M. Charmes because of his freedom from narrow party and literary affiliation.

The new Royal Library at Copenhagen, recently opened, is a model of the complete and modern library building. The architect was Prof. Hans Holms. The book rooms have floors of iron grating; an extensive system of telephones connects all parts of the building; the cleaning is done by the vacuum process; special rooms have been arranged for photographing manuscripts. The magazine department offers access to more than five hundred periodicals. The Royal Library contains more than six hundred and fifty thousand volumes. It owns the manuscript of the Eddas, as also the famous Icelandic manuscript known as the "Flatoe book," with its account of the discovery of "Vinland."

STUDIES IN HISTORY.

The Life of Sir Henry Vane the Younger, with a History of the Events of his Time. By William W. Ireland. New York: E. P. Dutton & Co. $3.50 net.

"Vane, young in years, but in sage counsel old," is best known to the world as the subject of the sonnet of Milton—a great title to distinction if there were nothing else. Readers of history know him as the man who perhaps, next to Cromwell, was the most important figure of the English Commonwealth; the man who, as Baxter said, was that within Parliament which Cromwell was without, and who at the coming back of the Stuarts underwent for his service a noble martyrdom. In America a still higher significance has been recognized in Vane. His first American biographer, C. W. Upham, asserts that his name is the most appropriate link to bind together England and America—a claim not without basis when it is remembered that he has the almost unique distinction of an eminent political career in America and also in England; that largely owing to him the methods of the Independents in erecting the English Commonwealth were called the "New England way"; and that his best years were spent in an effort, premature but most able and energetic, to set up in England, in place of a monarchy, government of, by, and for the people. The effort for popular government appeared to fail, but as John Richard Green has remarked, during the centuries since that time England has done little else than adopt, slowly and tentatively, but surely, the programme laid down by the party of which Vane was the chief.

A statesman of this sort ought not to be forgotten by republicans, nor is he likely to be. Vane has been, up to the present, the subject of four biographies—the earliest by George Sikes, his contemporary and disciple; a later one by the well-known John Forster; and two lives by Americans, C. W. Upham, and after an interval of nearly fifty years, J. K. Hosmer. To the four Mr. Ireland now adds a fifth, a thing not superfluous if his predecessors have failed in judgment or research, or if new sources of information have been opened. Mr. Ireland is an Englishman of mature years and wide experience, practised in writing books, and so far conversant with matters both civil and military as to be able to take up

intelligently the history of a disturbed period. His sympathy with Vane and with the ideas of the English Commonwealth is strong, his industry marked. The outcome of his labors is a well-studied and interesting book.

In his narrative of Vane's American years Mr. Ireland falls into some errors. The hunting-grounds of the Pequots certainly did not lie "between Plymouth and Massachusetts" (page 75). Since the careful essay of George Sheldon, the Connecticut valley antiquary, no writer ought to give as sober fact the story of the regicide Goffe, "The Grey Champion," in the Indian attack on Hadley (page 432). A tradition ardently cherished by Harvard men is that Vane presided at the council at which the college was founded, an honor which we understand Mr. Ireland to assign to Winthrop (page 96). Mr. Ireland professes to base his account of Vane's English career and the politics of the Commonwealth period on the sources, and he has used diligently both printed documents and manuscripts of the seventeenth century. But there are important authorities which he seems not to have read, or read without being impressed. We do not, for example, notice any reference to the labors of Charles Harding Firth, author of "Cromwell's Army," and other works upon the Ironsides, and editor of the Clarke Papers, the records of an official with the army abounding in the most instructive details. If Mr. Ireland has studied these authorities, his portrayal of the work of the army, the rank and file of the Ironsides, is strangely inadequate. While Cromwell, Vane, and even Ireton, still clung to the old order, trying to treat with Charles Stuart, who forever paltered with them in a double sense, the humble soldiers, under their steel caps, were measuring the King more accurately and devising plans for the betterment of their country on which republicans should ponder with admiration. The "agitators" were at work, and the "Agreement of the People," almost as American in its ideas as a document of Abraham Lincoln, was taking shape and receiving signatures. Mr. Ireland does not pass over quite unnoticed these lowly and sturdy heroes of Anglo-Saxon freedom, but we think they have much less prominence than they deserve in a report of that time of manly striving.

Of the higher and nobler significance of Vane, spoken of at the outset, as a link between the severed branches of the English-speaking race, and as the prophet and forerunner of a fraternal coming together of kindred peoples long separated, Mr. Ireland has nothing to say. Perhaps he is not aware that such a conception of his hero has obtained in America or elsewhere. He professes to deal only with sources. "Later histories I have not read, or only looked at after my pages were composed" (page vii). The book, we grant, is a scholarly and interesting presentment of a noted man and a glorious period. We believe it would have been better had the author considered, if only to confute them as unsound and extravagant, the conclusions of his colaborers.

The Ohio River, a Course of Empire. By Archer Butler Hulbert. With Maps and Illustrations. New York: G. P. Putnam's Sons. $3.50 net.

Throughout history river valleys have been an important factor in human development, and not even the age of the railroad has destroyed that importance. There was a real place, therefore, for the "Historic River" series, and in that series the Ohio has a valid claim to a prominent place. Down its waters have passed hundreds of families of pioneers to southwestern Virginia and Kentucky, even before the way was open to legal settlement on the opposite side; and numerous rude flatboats dotted its forest-hemmed surface as soon as the rich lands of the Northwest Territory were available. The romance of this earlier history the author has portrayed very well, on the whole, though he has possibly gone a little beyond the mark in minimizing the actual danger to early settlers from wild animals, and in exaggerating the effect of snags, drift-piles, and swampy bottoms, upon the assumed beauty of the valley.

The succession of various kinds of craft which have dominated the navigation of the river makes an interesting story. Some features of it, however, have escaped the author's notice; for instance, the enormous lumber-rafts which, until the Allegheny pine forests were exhausted, were so common in spring freshets. As late as 1875, one could stand on some hill by "Long Reach" (the longest straight place in the whole river) and count nearly a score of these rafts on the fifteen miles of water within view. We miss, too, any account of the floating coal traffic which attained large proportions previous to the era of the steam "tow-boat"; and the date set for the practical close of the brilliant period of the Ohio River passenger steamer is too early. Such steamers as the St. Charles, the Arlington, and the Major Anderson, which were competitors in speed, interior decorations, and dining tables some years after the close of the Civil War, would have stood well among the best of twenty years earlier. The local traffic over the hundred miles between Parkersburg and Wheeling was large and comfortably cared for even much later; for it is only within less than twenty-five years that this portion of the valley has been traversed by a railroad.

The author is an ardent advocate of the present movement to secure slack-water navigation throughout the whole course of the river, and, with the completion of the nine-foot channel which is now the standard demanded by the promoters of the plan, he foresees an era of manufacturing activity all along the valley which will make it "the workshop of the world." It is, of course, true that the maintenance of water freight lines throughout the year would immensely facilitate the distribution of fuel, raw materials, and manufactured products; but, without the free competition which the perverted business ingenuity of dominant and not wholly philanthropic interests has found so many means of stifling, it is not so sure that the results would be as beneficial to all concerned as Professor Hulbert seems to imagine.

The author takes a lively interest in some of the sociological features of his subject, such as the meeting and intermarrying of Yankee and Virginian, with other minor race elements, and the "Reign of the Outlaw and Rowdy" which characterized the days before law and order had overtaken the swifter march of the restless adventurer and the whiskey barrel. As to the race mingling, it may well be questioned whether that or anything else has given to the population of Ohio as a whole quite such a lead over all competitors in energy and ability as is assumed. The appeal to the group of Ohio men in high position, at Washington, on the occasion of Garfield's inauguration is not convincing. Neither Hayes nor Garfield would have had any chance of nomination except for peculiar conditions developed in the Republican conventions of 1876 and 1880, in the process of repeated balloting; and while all the men named were above the average in their respective lines of effort, not one of them can hope for a permanent place in history as a really great constructive statesmen.

There is no chapter in this book which is not of historical interest and value. But without depreciating its genuine worth, it must be said that the treatment should have been more systematic and complete. We have already indicated some deficiencies. A careful outline of geological and geographical conditions, in relation to the material resources of the valley, is another desideratum. Considering the number and importance of these lacunæ, one must begrudge the ample space devoted to the romance of Blennerhasset, which is interesting enough in itself, but of no fundamental importance in the social, political, or material development of the region. The photographic illustrations are individually good, but here too the opportunity for a systematic and thorough representation of the valley has not been adequately used.

CURRENT FICTION.

The Patriot (Piccolo Mondo Antico). By Antonio Fogazzaro. Translated from the Italian by M. Prichard-Agnetti. New York: G. P. Putnam's Sons.

"Piccolo Mondo Antico" was published ten years ago, the first member of a trilogy. The third member, "Il Santo," has already been rendered in English, and the second, "Piccolo Mondo Moderno" (to be called "The Sinner"), is in press. These books have been popular in Italy, and should find many readers in America. They present an Italy remote from that of D'Annunzio and distinct from that of Mr. Crawford, an Italy less foreign to the western sense, a land in which people appear to love and laugh and suffer in much our own way. The laughter is especially a relief, or perhaps one should say the quiet humor with which the novelist invests his narrative. The humor of the Latins is for the most part a crackling of thorns in the ear of the Shakesperean legatee, who is slow to realize that Rabelais and Cervantes and Boccaccio did not precisely die intestate. We are not suggesting that Signor Fogazzaro is to be compared to any of the masters, but only that his humor suggests that smiling catholicity of vision which makes the whole world kin.

The title of the present English version,

with its suggestion of the political-historical, is a little misleading. The action takes place, to be sure, at that tense moment which preceded the downfall of the Austrian power in Italy. But the hero, though his sympathies are with the national movement, and his steps are turned toward Piedmont, is more Romanist than patriot; and the momentous struggle takes place between his religious nature and the rationalistic nature of his wife. Yet the book is not a tract, or even a "Robert Elsmere." Fogazzaro has, the translator rightly says, "spared us the long and tedious tirades of personages who are, after all, simply mouthpieces, and has given us instead two warm and palpitating human beings, who live and act in accordance with their opinions, and whose innermost souls are laid bare to us by their own deeds, their own actions." The translation is admirably vigorous and idiomatic, a true conveyance, one surmises, of a forthright and undecorated original.

The Mystery. By Stewart Edward White and Samuel Hopkins Adams. New York: McClure, Phillips & Co.

As a deliberate feat in the pirate-and-treasure line, this is not bad. All the familiar elements are here—the mysterious voyage, the desert island, the fabulous prize, even the pirate with the hook instead of a hand. The only novelty lies in the nature of the sought-for and fought-for treasure. It is to be doubted whether novelty in this particular can give any permanent advantage to a story of the sort. Nothing can be really better than the old bags of gold, unless it were the old chests of jewels. Give us something that chinks, something heavy to the back and easily negotiable along the water-front, and we are content. A chemical formula is, on the whole, a dismal thing to bring away from a lonely island in tropic seas. However, we are not bothered with chemical detail, a fact to be grateful for in this age of scientific journalism; and we are able to behold the effect at least of the product of our formula. The narrative sags badly amidships, but the faith of the romancer serves to keep us afloat till we reach port.

The Malefactor. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

An amusing yarn, and not without a moral. The title is a studied misnomer, since the supposed malefactor is really a most well-disposed and well-doing person. This fact the reader should be good-natured enough not to discover till the author is ready for him; for by means of this concession, which nobody with the soul of a novel-reader can grudge, he will put himself in accord with an ingenious and well-told bit of fiction. If the malefactor is a sham, the lady of his choice is not; and there are other credible and engaging persons and circumstances involved in the story.

Hugo: A Fatasia on Modern Themes. By Arnold Bennett. New York: F. M. Buckles & Co.

This fantasia, as the author rightly names it, might almost deserve a place among the "New Arabian Nights"; it is as fantastic, as adventurous, as disconcerting as any of Stevenson's inventions. It might be as effective if it were less casual and less diffuse. The author evidently wrote it offhand and let it go as an improvisation. The result shows an ingenious but not sure fancy. Hugo is proprietor of an immense shop in London. He falls in love with a milliner in one of his innumerable "departments." She weds another, is pursued by a third, officially dies, is bereft timely of her spouse, and returns in due season to life and Hugo. It is all very absurd and pleasant; all the more so that the writer appears to be regarding his own fable with merely good-humored toleration. What most warms us to him is the occasional apparition of demurely droll passages, which would make us forgive much in the way of prolixity and of commonplace.

NEWS FOR BIBLIOPHILES.

Perhaps no single work by Robert Browning contains so many poems that are still high favorites as the two volumes issued in 1855 under the title of "Men and Women." A proof copy of the work which we have recently examined shows a number of interesting variations from the first published edition. This copy is very different in appearance from ordinary proof. It is printed on both sides of the sheet on good paper. The first two sheets are marked in pencil "Only proof," and on two or three pages are printers' queries in ink, but otherwise, except for a few corrections in Browning's own autograph, to be described later, the pages are clean as in a finished book. The two volumes are bound in one, in "binder's cloth," the edges trimmed. Before the issue of the first edition about six hundred words were altered, and in about eleven hundred cases the punctuation was changed. Many equally important passages might be selected, but the following will suffice to show Browning's method:

Vol. I., p. 77, stanza 42 of "By the Fireside," in the proof reads:

> For a chance to make your little much,
> To gain a lover and lose a friend
> Tug though you venture a myriad such;
> Nothing you mar but the year can mend:
> But a last leaf—fear to touch!

In the first published edition this stanza is printed:

> For a chance to make your little much,
> To gain a lover and lose a friend,
> Venture the tree and a myriad such,
> When nothing you mar but the year can mend!
> But a last leaf—fear to touch.

The colon after "mend," and the exclamation after "touch" are restored in the final revision of 1888, and perhaps earlier.

Volume I., page 85, stanza 10, of "Any Wife to Any Husband," in proof, is:

> So, what if in the dusk of life that's left,
> A foot-sore traveller of his sun bereft
> Look from his path when, mimicking the same,
> The fire-fly glimpses past me, come and gone?
> Where was it till the sunset? Where anon
> It will be at the sunrise: what's to blame?

In the first edition:

> So, what if in the dusk of life that's left,
> I, a tired traveller, of my sun bereft,
> Look from my path when, mimicking the same,
> The fire-fly glimpses past me, come and gone.
> Where was it till the sunset? where anon
> It will be at the sunrise! what's to blame?

One of the most important changes is in "Andrea del Sarto" (Vol. II., p. 9). The familiar lines in which the painter describes the way he worked while at the court of Francis I. originally read:

> One arm about your shoulder, round your neck,
> The jingle of his gold chain in your ear,
> You painting proudly with his breath on you.

In revising these lines Browning changed this to the first person, but the first word of the third line be overlooked. In the first edition these three lines read:

> One arm about my shoulder, round my neck,
> The jingle of his gold chain in my ear,
> You painting proudly with his breath on me.

In later editions this last line is corrected to read:

> I painting proudly with his breath on me.

Many variations occur in "Old Pictures in Florence," which, has, in the proof, the title "Opus Magistri Jocti." But this poem, even in the worked over and revised text of the first edition was not satisfactory to its author. Shortly after the publication of "Men and Women," Browning sent a copy of the book to Dante Gabriel Rossetti with a letter in part as follows:

I perceive some blunders in my poems, which I shall not, I think, draw attention to, but quietly correct hereafter. But it happens unluckily that the worst of them occur just in a thing I would have you like if it might be—so please alter the following in your copy, before you begin it, won't you?

The "thing" which he hoped would please Rossetti was "Old Pictures in Florence," and the list of errata, sixteen in number, are, with two exceptions, corrected by Browning in his autograph in the proof. Although these fourteen alterations are made in manuscript, in nearly ninety other cases the first edition differs from the proof either in words or punctuation.

The "Bibliography of Thomas Wentworth Higginson," issued by the Cambridge Public Library, has the advantage of being based on a note-book of Col. Higginson's. It has been elaborated by Mrs. Winifred Mather and Miss Eva G. Moore. The little pamphlet shows a long life of literary activity, beginning with a poem in the *Christian Examiner*, in 1843, when the author was nineteen, and including contributions to the magazines of the year just past. We may note that from 1877 to 1904 Col. Higginson regularly wrote the criticism of verse for the *Nation*.

On Monday and Tuesday, January 21 and 22, the Merwin-Clayton Sales Company of this city offers at auction a collection of Americana and a collection of Lincolniana, including some rare memoirs and eulogies. Some of the items are Mercy Warren's "History of the American Revolution," 1805, 3 vols.; the first edition of Jeremy Belknap's "The Foresters," 1792; first edition of Timothy Dwight's "Conquest of Canaan," 1785, and "Greenfield Hill," 1794; Harmon's "Voyages and Travels in the Interior of North America," 1820, and Flint's "Recollections of the Last Ten Years in the Valley of the Mississippi," 1826.

On the same days the Anderson Auction Company of this city sells a selection of books from the libraries of Gen. Francis Fessenden and William Pitt Fessenden. Isaiah Thomas's folio Bible of 1791, the first folio edition printed in America; the first edition of Dryden's "Cleomenes," 1692; Lamb's "Elia," with the "Essays, Second

Series," Philadelphia, 1828, both uncut, are among the books offered.

On Tuesday and Wednesday, C. F. Libbie & Co. of Boston sell the library of William J. Mackay of Springfield, Mass., with some books from other sources. A number of Massachusetts and Connecticut town histories and local books, and a number of books on Indians, and the languages of several Indian tribes are included. Some letters and manuscripts from the papers of Samuel Williams, historian of Vermont, are also of considerable interest. Among these is a portion, 228 pages quarto, of his own manuscript of the history, accompanied by several letters relating to the publication of the second edition. There are also letters to Williams from Ira Allen, Isaiah Thomas, and the Rev. John Sergeant.

The Makers of English Poetry.—The Makers of English Prose. By W. J. Dawson. New York: Fleming H. Revell Co. $1.50 net each.

The reissue of these two volumes in a revised edition, together with the publication, a few months ago, of "Makers of English Fiction," by the same author, completes definitively a body of criticism at which Dr. Dawson, as he tells us, has been working for fifteen years, and which he entitles collectively "The Makers of Modern English." Here, then, is at last something rare in the language—a comprehensive survey of English literature with an eye to the development of its several *genres*, comparable for scope and general design with Brandes's "Main Currents," say, or any other of the more consecutive efforts of European criticism. It will not be amiss, therefore, to draw the comparison which Dr. Dawson seems himself to invite. What strikes the reader most forcibly, perhaps, in Émile Faguet's "Siècles"—which are probably the nearest thing in French to Dr. Dawson's "Makers of Modern English"—is the fact that the writer's criticism is controlled by a perfectly clear and consistent idea of the nature of literature and the function of criticism. And what is true of M. Faguet, is true of the French critic in general. His ideas may be right or wrong; but at all events his criticism is the expression of them, and upon them his rank as a critic largely depends. To review Dr. Dawson's judgments in detail would be impossible; but for the application of such a test as this, he has afforded every facility in the general confession with which he opens the first volume of his series.

At the outset he formulates the one principle capable of presiding satisfactorily over such a work as he is undertaking—the essential unity of literature, a principle but dimly perceived as yet in English criticism. English literature, he says, "may be compared with a tree which has passed through various stages of growth," or better, perhaps, "with a river which has broadened and deepened in its course." In short, literature is, to use Brunetière's favorite term, an evolution. The critic who attempts to follow it ought to account for its development and gradual accretion; he ought also to be prepared, if necessary, to recognize its degeneration and decline. In particular, he should trace its chief branches and the various tributaries which have from time to time augmented the main waters and confirmed and modified their general course. What we require is to know each poet's contribution to the conception of English poetry. But this is just what Dr. Dawson does not tell us. Had he done so, he would not have dismissed Byron in ten pages, as against Tennyson's ninety-seven and Browning's forty-four.

In spite of his initial declaration, Dr. Dawson has no pretension or desire to write a history of ideas; indeed, he hardly sees literature as a matter of ideas at all. His conception is strictly industrial and in thorough harmony with the spirit of modern institutions. He looks upon the "critic" as a kind of "middleman" or peddler of literary notions to "the vast mass of readers who have no time to devote to intricate literary problems and the ever multiplying details of literary history"—the new generation of readers who have no time for reading. In other words, he is a mere popularizer of received opinion, with occasional discretionary powers in the case of vexed or unsettled questions, though where that opinion which should form his stock in trade is to come from, when criticism itself is finally contained within such narrow limits, we are not informed.

With this view of his function it is not astonishing that Dr. Dawson's performance should be rather tame and insignificant—a register, for the most part, of critical commonplace, chequered to some extent with the colors of the medium through which it has passed. To be sure, such personal coloring, due to the critic's temperament, is common to all criticism. But in Dr. Dawson's case this special tinge is not so much a temperamental infusion as the result of an arbitrary and inconsistent refraction. Occasionally he writes as though literature were quite independent of morality, and yet at the same time he seems to hold the poet responsible for life and culpable for its evil as far as he has consented to recognize it. So in one place he appears to condemn Byron and all his works irrevocably: "They leave an evil taste upon the palate. The taint of morbid despair is on all he has written, and on much that he has written there is the worse taint of moral depravity." To the ordinary mind that would seem to settle Byron's pretensions to greatness. But a page or two later he declares, "To say that Byron is a great poet is not enough: he is among the greatest." Such unprincipled criticism cannot but be vicious. It tends to separate things that belong together. It would set life upon the one side and poetry upon the other, making the former to consist solely in conduct and the latter solely in versification. And this curious dualism pervades all Dr. Dawson's criticism. He is bound to approve of Browning for the excellence of his teaching—at least the greater part of the criticism is devoted to that purpose; though in Byron's case influence would seem to have nothing to do with poetic greatness.

In prose, however, Dr. Dawson gets along rather better, if anything; for in prose there is less temptation to confound the vehicle with the cargo. Prose is instinctively recognized as the instrument of ideas; and it is seldom that a mere command of the prose machine is supposed to confer literary greatness. And yet even here he does not altogether avoid confusion. In accounting for his particular selection of prose writers, he asserts that "it is the form that is the chief thing to be considered, and the degree of fresh and original force which creates a new form"; subsequently he modifies the statement so as to take account of "the scope and weight" of a writer's "contribution." Yet he excludes Mill from his "Makers of English Prose" with the apology that his "value" consists in his "contribution to thought" rather than in "anything which constitutes great literary excellence." This is evidently Dr. Dawson's dilemma: as often as he puts thought out at the door, it insists upon coming in through the window. For it is obvious enough, when he comes to estimate his individual authors, that thought does count with him in some manner. May it not be that the kind of thought makes a difference? But at all events, it would seem as though a critic, before undertaking to pass in review the main body of English prose and poetry, should have formed some fairly consistent idea of what constitutes literature and literary greatness.

Memoirs of My Dead Life. By George Moore. New York: D. Appleton & Co. $1.50 net.

This book is chiefly of interest as the confession of faith of a writer who has attained a not altogether bad eminence as an English novelist—or novelist in English: Mr. Moore is far less "Anglo-Saxon" than most of the Murphys and Hennessys to whom Mr. Dooley points with pardonable pride as solid pillars of our Anglo-Saxon supremacy. Though Mr. Moore is of Irish birth, it is his vaunt that "Paris has made him what he is." He has a low opinion of religion and the Bible. Gautier is his prophet, and "Mademoiselle de Maupin" his "sacred book, . . . a great purifying influence, a lustral water dashed by a sacred hand." It follows that he has also a low opinion of marriage and of any pretence at an ordered relation between the sexes. Like Gautier, he is at pains to announce himself a pagan, by which is apparently meant an anti-Puritan. It has never, we suppose, occurred to a true pagan to boast of not being a Christian, or of not being bound by a moral code. Yet the affirmation which solidly underlies these negations, the affirmation responsible for whatever is good in Gautier, or Mr. Moore, or Arthur Symons, or D'Annunzio—that life is an art, and that the purifying influence (the Aristotelian κάθαρσις) of art is æsthetic rather than moral—is essentially pagan.

Of Mr. Moore, as of D'Annunzio, art and sex are the only preoccupations, or perhaps one may say, the single preoccupation, since they are plainly inseparable. The doubtful and ever-recurring question is whether this modern sex-art, with its extreme self-consciousness and its polite realism, actually effects any sort of κάθαρσις upon healthy natures. Few normal readers born west of Calais (the fact may be absurd) are capable of perceiving the lustral office of "Mademoiselle de Maupin," or of "Il Trionfo del Morte," or of these "Memoirs." In "Esther Waters" love did,

though painfully, exist. In the "Memoirs" one finds merely the word. "It is only with scent and silk and artifices that we raise love from an instinct into a passion"; *i. e.*, that we raise lust from a banality to an elegant accomplishment, to *l'amour*, in short. Mr. Moore has wished to record the achievemeuts of a master of the craft of love, one who with subtle and fastidious art has drawn from life its purest essence and swectest music—the essence and music, that is, of the sexual experience. Arthur Symons has done this; Mr. Moore does not do it. Pan singing of his loves is a world away from the boulevardier recounting past triumphs. We wish much that the present memorialist had been able to tell his tales without the damning wink and leer: "I was what you, with your absurd prejudices, would doubtless call a sad dog; listen, and you shall hear all about it." Something like this, unfortunately, is the effect, though not the sound, of his summons to the reader.

Tbis effect is not diminished by the character of the "Apologia pro Scriptis Meis," with which the book is prefaced. It seems that the American publishers found some of the accepted material unprintable, and Bowdlerized the text. Mr. Moore was properly indignant that this should have been done; but it is a pity that the incident should have called forth such a defence. The "Apologia" is not an impressive utterance. Man must, it says, "seek in vain for a moral standard, whether he seeks it in the book of Nature, or the book of God. . . . With the degradation of the courtesan the moral standard has fallen, for as we degrade her we disgrace the act of love." "*Moi, je trouve la terre aussi belle que le ciel, et je pense que la correction de la forme est la vertu* has become the heresy more intolerable than any other to the modern cleric, and to me and to all the ardent and intellectual spirits of my generation a complete and perfect expression of doctrine." And so on.

In regard to the charges that his book has an immoral tendency, Mr. Moore finds two convincing grounds of defence: First, that the newspapers are really much more immoral; and, second, that so is the spring. In other words, "I sell no worse poison than the newspaper saloon on the opposite corner, and as for Nature, if my work is dirty, it is not half so dirty as a mud-puddle, that generally accepted work of Nature." The book itself might more naturally have been written by a Frenchman than an Irishman; but the "Apologia," with its poses, its paradoxes, its supreme complacency, could hardly hail from any other clime than that which produced Mr. Moore's great compatriot and fellow-prophet, Bernard Shaw.

Harvard Studies in Classical Philology. Edited by a Committee of the Instructors in Classics. Vol. XVII. Cambridge, Mass.

The Harvard Studies in Classical Philology for 1906 offer an especially interesting series of papers in literature as well as in technical scholarship. Prof. W. W. Goodwin's study of the Battle of Salamis, which appeared in 1875, has already received the approval of scholars like A. Milchöfer, Percy Gardiner, Evelyn Abbott, and others. He reviscs the essay, and in tbe light of a recent treatise by Lieut. Rhediades of the Royal Greek navy, modifies some details. He also answers convincingly, to our mind, certain objections of President B. I. Wheeler of the University of California, including his peculiar rendering of the "Persae," 382-385. The result is a satisfactory scheme, consistent with all the chief ancient authorities and with the strategic probabilities, the main feature of which is that the Persians blockaded both outlets of the bay of Salamis, but did not enter tLe straits till just before the battle began. Incidentally Professor Goodwin accepts, in opposition to Busolt, the tradition of "the divine full-moon" on the previous night.

Prof. J. H. Wright, in his paper on the origin of Plato's Cave, offers a genuine discovery which must add a footnote to future editions of "The Republic." He shows that this remarkable piece of presumably imaginative construction is not altogether drawn from the imagination. Its curious details were almost certainly a reminiscence of a cult of Pan and the Nymphs and Apollo, maintained in a cave on Mt. Hymettus, near tLe village of Vari, recently explored and described by Weller. The plan of the grotto coincides surprisingly with that of Plato's imaginary cave, and elucidates most happily its peculiar imagery.

Prof. J. W. White's illuminating paper, "An Unrecognized Actor in Greek Comedy," makes clear in detail the brisk and important rôle which Aristophanes often assigned to the second leader of a semichorus. This paper, together with the recent masterly discussion of the manuscripts of Aristophanes, reminds us that it is Ligh time for an edition of Aristophanes to which these are prolegomena. An editor so ripe owes a duty to his public.

Prof. E. K. Rand successfully dispels a will-o'-the-wisp raised by Lucian Müller—the fancy that the Augustan poets entertained a coldness towards Catullus as a Roman representative of the Alexandrian school. He shows in detail, with much charm of style, that Virgil pays Catullus the compliment of frequent reminiscence, and of borrowing, generally with interest repaid. The silence of Horace he regards as no disparagement. As to the episode of Dido, hc makes no allusion to the influence of Apollonius Rhodius. With regard to certain other parallels, we commend to Professor Rand what Tennyson says of his own supposed imitations. The range of ideas and of diction, in any given subject, has its own natural limitations.

Prof. C. P. Parker, in a refined and subtle piece of rescarch, discusses the manifold shades of meaning of *spiritus* as used by Seneca, and of πνεῦμα by St. Paul and Marcus Aurelius. Prof. A. A. Howard seems to show conclusively, by a thorough analysis of the extant fragments, that Livy did not draw from Valerius Antias, but on the contrary, in the main, criticised and rejected his authority. We can only allude to tbe fresh and informing "Notes on Vitruvius" by Prof. M. H. Morgan, to the report of Prof. Minton Warren on five new manuscripts of Donatus on Terence, to the discussion of origin of the Tauroboliuu by Prof. C. H. Moore, and to the descriptions of an Amphora with a new καλός-name by Dr. J. H. Chase, regretting tbat their contents do not admit of convenient summary.

Dr. Herbert Weir Smythe's address, "Aspects of Greek Conservatism," contains so much thought, sustained and buttressed by so much learning, expressed in a manner so finished and effective, that it is a shame to mew it up in the pasteboard covers of the "Classical Studies," or to risk its loss among the chips of a technical workshop. Would it be bad form if the Classical Department more frequently condescended to mere literature, and once in three or five years printed a volume of such essays? It would not be among the "best sellers," like "Ben Hur" and "David Harum," but it would be read and pondered with delight by a judicious remnant, such as sat through the rain last June to watch the beautiful and humanizing vision of "The Agamemnon." The prowess of our American scholars in philology and research is now recognized the world over. Their reputation being made and settled in pure science, let the Harvard classicists now descend to popularizing after the manner of Jebb and Butcher and Sellars and the Croiscts. The germs of such literature may be discerned in the essays of Professors Parker and Rand. Meantime, the hungry sheep look up and are not fed.

Through Five Republics (of South America). A critical description of Argentina, Brazil, Chili, Uruguay, and Venezuela, in 1905. By Percy F. Martin, F.R.G.S. With 128 illustrations and 3 maps. New York: Dodd, Mead & Co. $5 net.

Mr. Martin deprecates the tendency of Britishers resident in Argentina to be supercilious and unsympathetic in their attitude towards the natives. But he is himself guilty of what he condemns in another. Almost all the time, on his journey through the five republics, he gives the impression of holding his nose, while freely damning other people's eyes. It would, indeed, be hard to name a book of South American travels in which the author's suspicion, dislike, and contempt are so openly and continuously bestowed upon the luckless inhabitants. Mr. Martin, having taken small pains to *comprendre*, is at no pains at all to *pardonner*.

It should be added that this Fellow of the Royal Geograpbical Society has very little to say about nature in South America. He has no discoveries to report, no exploration to detail. He was, in fact, scarce off the beaten track. His great preoccupations were financial and industrial. Distinctly the most valuable parts of bis book are the heaps of statistical iuformation which he gives respecting the agriculture and commerce and banking and public works, above all, the railways, of the countries which he visited. All this is imparted with a minuteness better fitting a consular report, or a technical paper submitted to the Council of Foreign Bondholders, than a book for general reading. But the industry with which Mr. Martin has collected his figures and endless minutiæ is commendable in spite of the rather deadening effect when they are all massed and offered you in lieu of entertainment.

All in all, the volume is heavy and dull. The persistent searcher after amusement, even in unlikely places, might find a certain joy in the consistently petulant and superior air with which Mr. Martin lec-

tures his republics and sets all the world right. This last he does with most gravity when most wrong himself—as when he makes Jean Jaurès President of the French Chamber (p. 58). On the Monroe Doctrine Mr. Martin comes out strong. He speaks of it as "dug up from an honorable retirement and flaunted in the face of the whole world, supported by the cheap hombast of President Roosevelt." "It has always," observes Mr. Martin, "been a matter of surprise to me that the European Powers . . . should have bowed the knee with so much humility to the preposterous Monroe Doctrine." But, then, he is in a state of perpetual surprise and irritation at all sorts of things. The illustrations in the book he lets tell their own tale; which is the reason they are its best feature.

Andreas and the Fates of the Apostles: Two Anglo-Saxon Narrative Poems, edited, with introduction, notes, and glossary, by George Philip Krapp. Boston: Ginn & Co.

As is stated by Dr. Krapp in his preface, there has been no attempt at a comprehensive edition of the "Andreas" since Jacob Grimm published his "Andreas und Elene" in 1840; and "The Fates of the Apostles," which stands in such a singular relation to it, has never before been edited with explanatory comment, or, indeed, in its entirety—that is, so as to include the runic passage discovered by Professor Napier in 1888. A good edition of these poems, therefore—and we know of no better edition of any Anglo-Saxon poem than the present—fills a long recognized want. Every part of the work gives evidence of the editor's characteristic qualities, thoroughness and sound judgment. The glossary is practically exhaustive of the forms of the text, and the introduction and notes, though detailed, are executed in a workmanlike manner, and are free from the pedantry with which some recent editions of Anglo-Saxon poems have been charged. There was, of course, little to improve in the readings of a text which has been so often edited as the "Andreas," but Dr. Krapp had already given proof of the care which he has bestowed on this part of his task in his "Notes on the Andreas" in "Modern Philology" (1905). With respect to the source of the poem, he adopts the commonly accepted and obviously correct view, viz., that this was a lost Latin version of the "Acts of St. Andrew." The whole evidence bearing on the question is set forth in the Introduction.

As regards the two great questions of controversy (in part identical), which relate to the "Andreas," namely, its Cynewulfian authorship, and its connection with "The Fates of the Apostles," Dr. Krapp's conclusions will commend themselves to the majority of Anglo-Saxon scholars. The first place should, of course, be given to the objective tests of language and metre, and it is on these grounds that Dr. Krapp justly, as we believe, denies the "Andreas" to Cynewulf. It may be remarked in addition, that the superiority of the "Andreas" in a literary sense to the poems which bear Cynewulf's signature, points in the same direction. This superiority is doubtless due in part to the greater interest of the original legend, but there is certainly nothing in the Saints' Lives treated by Cynewulf to equal in execution the voyage in the "Andreas." On the other hand, notwithstanding the puzzling double ending to "The Fates of the Apostles," we agree with Dr. Krapp that this poem is a genuine production of Cynewulf's, and is not to be connected with the "Andreas."

As a matter of detail, it seems to us a mistake to speak of the occasional parallels to the "Beowulf" in the "Andreas" as imitations of the older poem. This Dr. Krapp, following the usual custom, does in several places. The parallels in question, however, are practically all formulas such as in all probability must have occurred in almost any Anglo-Saxon epical poem. It is merely the accident that the "Beowulf" alone of the Anglo-Saxon sagas in verse has been preserved in a single manuscript that creates the illusion. The point is one of some importance, inasmuch as such citations tend to put the "Beowulf" in the wrong perspective. As a matter of fact, all the evidence of the names of places and persons goes to prove that the Beowulf-saga was of inferior importance among the Anglo-Saxon tribes to those of Finn, Wade. and others.

Primitive Christian Education. By Geraldine Hodgson. Imported by Charles Scribner's Sons. $1.50.

The author of "Primitive Christian Education" was moved to make the book by the unfavorable—and, as she believes, unjust—judgments pronounced by many historians upon the influence of Christianity on education in the ancient world. To refute these adverse criticisms she went through the principal writings of the Greek and Latin fathers down to the fifth century, and collected what evidence she found of a more intelligent and sympathetic attitude toward classic literature and philosophy, together with considerable information about Christian schools and teaching.

The spread of Christianity was not the sole—nor even the chief—cause of the decay of the ancient culture; but it is hardly a convincing reply to the strictures of Compayré or Symonds to show that not all Christians were obscurantists, that some of the fathers were even proud of their profane accomplishments, or that the Church developed methods of religious education, which the author, who is "Mistress of Method" as well as "Lecturer on the History of Education," deems pedagogically admirable. The materials which the author's diligence has accumulated are, in themselves, interesting, but scrappy and ill-digested. Everywhere the absence of the large furniture of knowledge, which an investigation of such a subject demands, makes itself felt. Even matters on which correct information might have been got from the handiest encyclopædia are often wofully muddled. For example, take this about the Alexandrian Library (p. 51): "Demetrius of Phaleron, who acted as adviser to both father and son [Ptolemy Soter and Ptolemy Philadelphus], stated, about 385 B. C., that the two libraries together contained not less than 200,000 MSS." Charity would regard the 385 as a misprint for 285 were it not that two pages farther on we read that Pergamon was "founded (!) about 383 B. C. by Philetaerus, an absconding treasurer of the King of Thrace," where, beside the errors of fact, the date is a mistake for 283. The rest of the story rests on no better authority than the Epistle of Aristeas, a Jewish fabrication, whose fraudulent character was first demonstrated by evidence that Demetrius of Phaleron was banished from Alexandria by Philadelphus immediately upon his accession, and shortly after died in arrest. But it is not the Alexandrian history alone that shows such slips. Mistakes in proper names and in details of more familiar epochs also occur quite too commonly.

Early Chinese Writing. By Frank H. Chalfant. Reprinted from the Memoirs of the Carnegie Museum, Vol. IV., No. 1.

This is a highly useful publication inasmuch as it acquaints scholars not familiar with Chinese literature with the early development of Chinese hieroglyphic art, the beginnings of which take us back well into the second millennium B. C. There is no lack of authorities on Egyptian and Western Asiatic hieroglyphics who have not even seen specimens of the corresponding script in China, because the literature on the subject has hitherto been buried in Chinese books known merely to sinologues.

That very important problem, whether the Chinese, in the dawn of their history, had any cultural connection with the Assyrians, Babylonians, or Egyptians, as might be shown in the construction of their hieroglyphics, has thus had but little chance for thorough discussion. The present publication will afford the best possible material for comparison and speculation. Some readers may feel tempted to compare Chinese hieroglyphics with the several pre-Columbian scripts of America; but the result, we venture to prophesy, will be negative. The most ancient Chinese have, like other makers of word symbols, tried to draw the pictures of natural objects, such as sun, moon, house, gate, man; and when comparing notes we need not be astonished to find similarities. The system of developing from these crude pictures further meanings by combination and the formation of synonyms may be common to the most distant nations, and can be explained by the uniform organization of the human brain. But the more we go into the detail of hieroglyphic art the more we shall be convinced that no connection between the culture of ancient China and the nations of Western Asia or Egypt can be assumed on the ground of similarities in their hieroglyphics. In comparing ideograms on both sides we may imagine that we detect similarities in shape, but on close examination we shall find that, with the exception of such easy pictures as those of sun, moon, etc., the meanings are widely different; and if we compare the meanings, we shall find that corresponding ideograms show no traces of affinity. This view is, of course, based on the little we know about non-Chinese hieroglyphics, and we must admit the possibility of fresh discoveries somewhere in the world, if not in Western Asia, causing us to change it.

The Rev. Frank H. Chalfant, during his missionary career extending over nineteen years in the province of Shan-tung, gave much time to the study of Chinese litera-

ture on hieroglyphic art. His material has been to a certain extent prepared by the Chinese themselves, who are excellent philologists, and in their criticisms generally exhibit common sense and caution. The Chinese cannot, unfortunately, boast of any such monuments as the royal tombs and the pyramids of the ancient Egyptians; but they have sacrificial urns, bells, and other objects, some of which probably date as far back as the fifteenth or sixteenth century B. C. The inscriptions found on these objects have received careful treatment at the hands of native scholars, who have recorded the ancient hieroglyphics in the shape of rubbings and facsimile prints. One of the most recent, and probably the most comprehensive, native work on the subject is the "Corpus Inscriptionum," published in 1803, by Yüan Yüan of Yang-chóu-fu. Mr. Chalfant was also able to study a large number of hieroglyphics on a collection of tortoise shells and bones, used in ancient China for the purposes of divination, discovered near the present city of Wei-hui-fu in Ho-nan; also the legends of ancient coins, bronze and stone seals, and the trade-marks on old pottery. The Dictionary of the Han dynasty, known as "Shuowön," and published in A. D. 100 (not 120, as Mr. Chalfant says), represents a refined, conventionalized shape of the more ancient hieroglyphics. These and a few other Chinese works have furnished the stock of ideograms from which Mr. Chalfant has made a selection of some four hundred characters. He arranges them in a table under the following heads: (1) Meaning and Sound; (2) Modern Form; (3) Radical; (4) Seal Form, A. D. 100; (5) Older Forms (by far the most interesting portion, since they represent ideograms actually found in old inscriptions); (6) Probable Original (this latter shape being, of course, based on conjecture).

We may find fault with the author in a few matters of detail, as in his definition of that frequent and characteristic ideogram for *ting* (No. 364), which he describes as an "incense-tripod." This involves two slight errors; the most ancient sacrificial vessels were not used for burning incense—a misuse of later centuries—but to hold viands offered as sacrifice; and, further, the vessel called *ting* was not necessarily a tripod, since some *ting* had four feet, like the celebrated urn ascribed to Wön-wang of the twelfth century B. C. But all this does not diminish our gratitude for his having brought this interesting subject before the general public in such an intelligent manner. No public library should be without this book.

Mes Origines: Mémoires et Récits de Frédéric Mistral. Paris: Plon-Nourrit et Cie.

There is little or nothing really new in this volume of memories—except the arrangement of its contents. Mistral's disciples and admirers have long been familiar with his "origins," as he calls the circumstances which have combined to make him a poet and the restorer of a language. The character of his ancestors; the habits and dispositions of his parents and relatives; the scenery, the local fêtes, the patriarchal usages, the folklore, and the chansons of his native village and district; the amusing adventures of his childhood; the merits and demerits of his different boarding-schools and of their masters; his truancies and other school-boy escapades; his school intimacies; his youthful affairs of the heart; the manner in which he took his bachelor's degree at Nimes and pursued his law studies at Aix; his roistering larks with Alphonse Daudet; his friendship with Roumanille, Aubanel, Mathieu, Brunet, Giéra, Tavan, and the founding by them of the Society of the Félibrige; the motives which led him to devote seven years to writing "Mireille" and twenty years to compiling a dictionary of the *langue d'Oc;* and his conquest of Sainte-Beuve and Lamartine—these are all known to the well-read inhabitants of Provence and to the foreign students of the Provençal language and literature.

For over half a century Mistral has been printing his memoirs. He contributed entertaining reminiscences nearly every year from 1855 to 1895, to the popular Provençal annual, *Armana Prouvençau*, published at Avignon; and, since 1885, he has made similar contributions to *La Revue Félibrienne*, the organ of the Félibrige. But these productions (barring a few which have been translated) have been so secure under the locks and bolts of the Provençal tongue as to be practically inaccessible to the great majority of the reading public—even in France. For deigning to translate them into French, citizens of the reading world at large owe Mistral a triple debt of gratitude. First, because they are thereby privileged to view one of the most faithful and beautiful pictures of the sun-bathed land of the cigale and the olive that has ever been painted; second, because they are thereby enabled to associate (through some 350 pages) on terms of close and delightful intimacy with a most refreshing and magnetic personality; and, finally, because they may thereby make the acquaintance of a new master of French prose.

The Swedish Academy, in the letter announcing to Mistral its award to him of a Nobel prize, called special attention to the "fresh and artistic originality" of his poetry. M. Mistral's prose also is characterized by "fresh and artistic originality." It is absolutely free from the taint of the boulevard, and is not marred by preciosity. Never affected or overstrained, it is yet highly colored, replete with imagery, musical, and at times impassioned. But its crowning glory is verve—a quality sadly lacking in even the best of modern work, which is likely to be anæmic or cynical if highly finished, and morose or brutal if rough-hewn. M. Mistral's splendid vitality informs every page of this book. He writes, as the typical Provençal talks, vividly, picturesquely, and lyrically, without the slightest effort—because the red blood of the troubadours runs riot in his veins.

"Mistral's life," says Professor Downer in the concluding paragraph of his biography of Mistral, "is a successful life. He has revived a language, created a literature, inspired a people." Granted. He has done the work he set out as a youth to do, and he has done it well. And yet the qualities of Mistral's prose, as revealed by this book, are so surpassingly fine that it is impossible not to feel a half-regret that he did not devote his life to French prose instead of to Provençal poetry. Had he done so, he would not have achieved more, perhaps—"Mireille" by itself is an achievement of which any writer might be proud—but he would have given exquisite pleasure to a much larger number of people.

Drama.

MADAME NAZIMOVA IN "A DOLL'S HOUSE."

By her performance of Nora in Ibsen's "A Doll's House" in the Princess Theatre on Monday afternoon, Madame Alla Nazimova has clearly established her right to be placed in the first class of living actresses, if not in the highest division of it. She exhibited remarkable versatility—one of the rarest gifts in these later days—a notable capacity of sustained impersonation, control of both humor and pathos, much emotional eloquence and boldness and delicacy in technical execution. Her Hedda Gabler was a woman of distinctly Oriental type—haughty, indolent, serpentine, and voluptuous—with the smouldering fires of passion glowing darkly beneath a veil of languorous cynicism; her Nora, in the earlier scenes, is a veritable child-wife, recalling the Dora of Dickens—a fragile, laughing, kittenish, irresponsible little thing, with the vaguest notion of right and wrong, ignorant as a baby and as heedless. She has become wife and mother without outgrowing the tricks and guile of the nursery. The one serious element in her character is her adoration of her husband, and that, too, has its origin in ignorance. In the graver scenes, when fear of exposure and punishment has gripped her, the effervescence of youthful spirits gradually vanishes, but the essential childishness of the mind remains; and the fine instinct, or intelligence, of the actress is never more apparent than in the distinction which she marks between the distressful perplexity caused by unforeseen consequences and the apprehensions of conscious guilt. She actually succeeds, and in this respect excels all predecessors in the part, in making the innocent intent of Nora in her forgery, fairly plausible. Her treatment of the final scene with Helmer is admirable in its utter simplicity and its quiet misery of heart-breaking disillusion. There is one noble emotional outbreak in it, charged with true pathos, where she cries out that she feels as if she had been living with a strange man.

But neither she, nor any one else, can make the character consistent as a whole. It is impossible to reconcile the Nora of the first two acts—the frivolous, impulsive, empty-headed doll—and the strong, resolute, clear-headed creature of the last. And, after all, her conduct is as irrational as her metamorphosis is incredible. She abandons her children because she is not fit to take charge of them, yet surrenders them to the care of a man whom she has divorced because he is incapable of loving anybody but himself. But the subject of discussion now is not "A Doll's House," but the acting of Madame Nazimova, which, without reference to its correctness as a bit of interpretation—as a matter of fact

her Hedda is French, Viennese, or Italian, rather than Norwegian—is an achievement of high artistic merit. If she can only master the English language she will be one of the brightest ornaments of the American stage.

A collection of Ibsen's posthumous papers has just been published by S. Fischer in Berlin. Although the contents of this "Nachlass" are somewhat fragmentary, they give the reader an accurate conception of the literary methods of Ibsen, showing how thoroughly he studied the characters of his plays. This creative process, or inner evolution, went on generally for about two years, and after its completion the drama was written in a very short time. Especially idiosyncratic are the psychological reflections of the author during the mental elaboration of the character of Nora in "A Doll's House," and his suggestive remarks concerning the intellectual and emotional dissimilarity between men and women, and consequently their different points of view in regard to their mutual relations and social obligations. A comparison of the first draft of this piece with the finished work reveals the fact that the action is more tragical and has a more fatal issue in the former than in the latter. The same is true of "The Lady of the Sea." The same publisher has recently issued also a small volume by the Norwegian, John Paulsen, entitled "Im Verkehr mit Ibsen," which contains many anecdotes and utterances of the dramatist as well as intimate observations of his daily life.

Miss Ellen Terry and her English company of thirty-five persons left England last Saturday for this country. She will make her first appearance in Bernard Shaw's "Captain Brassbound's Conversion" on January 28, in the Empire Theatre in this city. This piece will be followed by "The Good Hope" and "Nance Oldfield."

Madame Réjane has opened her new theatre in Paris with "La Savelli," taken from the romance of that name by Gilbert Augustin-Thierry, son and nephew of the famous historians. The plot concerns a conspiracy of Italian carbonari towards the end of 1858, evidently with Orsini as a model. The historical part is well done, as in all the author's romances; it is a pity these "serious" and powerfully written works have never made their way into English, if only for the benefit of historical knowledge.

A new piece at the Comédie Française, "Poliche," is not likely to be represented in countries not yet obsessed by sexuality. The author, Henry Bataille, is a guarantee of writing of the very highest literary quality, but this does not authorize us in wasting tragic pity on the sentimental amours of the half-world, there still being enough love of ordinary decent mortals left unwept.

Music.

PROGRESS IN MUSICAL EDUCATION.

Haydn brushed the clothes and blacked the boots of Porpora. Schubert, when teaching music at Zelesz, took his meals with the servants of his employer. In Weber's day musicians in a London drawing-room were separated from the guests by a cord. Thanks to the strong personalities of Liszt and Wagner, and the improvement in the general culture of musicians, prominent composers or performers are now welcomed and honored in the salons of royalty, aristocracy, and plutocracy. Not all, however, is as yet smooth sailing. Ralph L. Baldwin, supervisor of the public schools at Hartford, Conn., asserts that the large majority of our educational authorities still "have to be convinced of the educational value of music study, for many consider it as a mere accomplishment, to be reckoned with dancing." Thomas Whitney Surette declares that there are still those who look on music indiscriminately as mere folderol, and who class all musicians with organ-grinders. He tells of a little girl who, after he had played a piece of Schumann's at her home, turned to her mother, and whispered: "Mamma, give the man a penny."

Mr. Baldwin and Mr. Surette are contributors to the papers and proceedings of the Music Teachers' National Association at its twenty-eighth annual meeting, published by the Association as "Studies in Musical Education, History, and Æsthetics" (Ralph L. Baldwin, Hartford; $1.60). The object of this Association is to do for music what the various annual congresses do for medicine, geography, natural history, and other branches of knowledge. The last convention was devoted primarily to the discussion of musical education in American conservatories, colleges, and universities; and the dozen lectures by well-known experts thus brought between two covers, make this the most valuable known storehouse of information on this important subject.

That it is important is being increasingly acknowledged from year to year. Some of our States have school laws making music compulsory, while others have special laws favoring it. How general is the demand for a musical education is evident from the fact that in the High School at Hartford it was found last year that 700 pupils out of an enrolment of 1,100 had taken lessons in vocal or instrumental music, under outside private teachers. "Why," asks Mr. Baldwin, "should the State compel the parent to educate a talented child in music at his own expense, when there is offered a business education,, training in manual arts, cooking, sewing, languages, science, painting, etc.?" Considering the omnipresence of music, in church, at weddings, at funerals, at all social occasions, not to speak of refreshing entertainments, is not the knowledge and appreciation of this art at least as important as learning how to run the lathe, dissect a frog, or solve a problem in algebra? Prof. A. A. Stanley of the University of Michigan has solid ground for his sarcasm when he wonders whether the creator of a new symphony which contributes to the happiness of the race is not quite as worthy of the highest academic degree as the student who brings to light some novel use of *ab* in Latin or adds a new prong to a Greek root.

Prof. W. R. Spalding of Harvard believes the day is not distant when a knowledge of musical history and of the works of the great composers will be considered as important an element in a man's culture as a knowledge of the history and literature of any nation. "Are not the names of Bach, Beethoven, Mozart, Schubert, Schumann, Verdi, Brahms, and Wagner quite comparable with Milton, Wordsworth, Keats, Shelley, Tennyson, and Browning?" As a means of training the senses, the mind, the muscles, music is preëminent:

> Any one studying music in a serious, methodical way is training his ear in keen and accurate hearing, his eye in quick, comprehensive seeing, his brain in clear thinking, his imagination in constructive design, his hands and (in organ-playing) his feet in physical dexterity of a high order.

A quarter of a century ago there were few American universities whose curriculum included French and German; today the leading universities require both these languages for admission. Music has apparently started on a similar course. Harvard now counts harmony and counterpoint on equal terms with the other subjects for admission, and other institutions are following its example. The experts are not agreed as to all details, but the opinion prevails that colleges should teach music theoretically only, but universities also practically, as they do law, medicine, dentistry, etc. Prof. H. C. MacDougall of Wellesley voices the opinion that when once the higher schools of learning do their full duty toward this art, music study will probably pass from irresponsible individual teachers to the responsible, authoritative university. This would certainly go far toward solving the problem of charlatanry in music-teaching, which does such incalculable harm to ambitious students.

One of the most noteworthy aspects of this collection of papers by eminent educators is their liberal attitude toward the semi-automatic instruments which are being made and sold at present in such enormous numbers. Far from denouncing them as a damage to musical art, they hail them as a blessing. Edward Dickinson, professor of musical history at Oberlin College, declares that the "piano player" is so useful that one might almost imagine that it was "invented for the sake of teachers of music history. It is to the music student what photographs are to the student of art. In my own work, I am sure, I should be seriously crippled if I were forced to do without it."

The third symphony concert for young people will be given in Carnegie Hall next Saturday afternoon, under the direction of Frank Damrosch. Old English and French dances of the sixteenth, seventeenth, and eighteenth centuries will be played. The programme shows clearly how often and with what countless variations the dance form is used by the old masters. Bach, Haydn, Beethoven, Wagner, and many others have woven their fancies about these old measures.

The Mozart No. 2, in G minor, is the symphony chosen by Walter Damrosch for performance at the sixth concert of the New York Symphony Orchestra, at Carnegie Hall, next Saturday evening and Sunday afternoon. The soloist will be Leo Schultz, violoncello, who will play Lindner's concerto. César Thomson, the Belgian violinist, who was to have been sololst at these concerts, is prevented by illness from coming to America. Other numbers on the programme are Debussy's pretty prelude,

"L'Après-midi d'un Faun"; his nocturne, "Fêtes," and the overture "Benvenuto Cellini" of Berlioz.

The Bruckner movement is growing apace in Germany. One can hardly take up a newspaper without seeing accounts of the performance of the symphonies of this unfortunate master, who was so long suppressed by the powerful Brahms faction.

Art.

Leonardo da Vinci's Note Books. Translated by Edward McCurdy. Imported by Charles Scribner's Sons, New York. $3.50 net.

It was distinctly worth while to publish, as Edward McCurdy has done, a selection, done into English and purchasable at a moderate price, from Leonardo da Vinci's Note Books. The more one studies these notes the more one is astonished at Leonardo's range of study and accuracy of observation. Of course, his method of accounting for things often seems, from our modern point of view, naïve and even ludicrous, and one needs to reflect on the state of science in his day to realize how far he was in advance of it. In observation he is scarcely ever wrong, and he saw and noted many things that we are accustomed to consider the discoveries of yesterday. In spite of his scientific turn of mind he evidently did not choose to paint all he saw, as is shown in the passage where, after describing with great minuteness the effect of transmitted light through leaves, he goes on: "Never represent leaves as though transparent in the sun, because they are always indistinct . . . and the imitation of it is to be avoided." Here his training in a kind of art dependent on clearness and beautiful precision comes into conflict with his observation of the confusion and mystery of nature, and we find him as resolutely sacrificing his knowledge of nature to his conception of art as might a decorator of to-day, who refrains from many things in his mural paintings which he perfectly knows to exist and which he would freely represent in a portrait or a *genre* picture. Bearing this in mind, we shall be the less surprised to find that the blue shadow, which was the great discovery of Impressionism, was known and thoroughly understood by Leonardo, though it had to wait four hundred years to find itself adopted by painting.

We have observed only two errors in Mr. McCurdy's contributions to the volume. In his description of Plate 4 he says:

> The lines on the drawing are to show, *inter alia*, that the point about which the skull rotates is one-third the vertical distance from the level of the chin to the level of the crown of the head.

The drawing really shows the distance, as it is in nature, about one-fourth of the total height of the skull. On p. 28, after giving the statement of Antonio de Beatis, who saw Leonardo at Amboise in 1517, that "paralysis had attacked his right hand, and that, therefore, he could no longer paint with such sweetness as formerly, but still occupied himself in making drawings and giving instruction to others," Mr. McCurdy parenthetically inquires: "May the inference be that he then drew with the left hand? If so, he presumably used it in the manuscripts, which are written backwards." Surely Mr. McCurdy should know that the internal evidence of the drawings themselves, as well as that of the manuscripts, has conclusively proved that Leonardo always worked with the left hand at every epoch of his life. This is so certain that the mere fact that a Leonardesque drawing is made in the ordinary way, with the right hand, is sufficient to exclude it from the catalogue of the authentic works of Leonardo; just as, conversely, the fact that they are drawn with a left-handed stroke (*i. e.*, from left to right) has enabled Mr. Berenson to separate the drawings of Raffaelle da Montelupo from those of Michelangelo and of Michelangelo's other imitators. The story of Leonardo's paralysis is, of course, possibly true, but it is most likely a mistaken inference from the left-handedness of the aged artist.

The first volume of the Humanists' Library, edited by Lewis Einstein and printed by D. B. Updike at the Merrymount Press, is so beautiful a piece of bookmaking that we may be pardoned for speaking of the form before the substance. Mr. Updike is using for this series a new font of "Montallegro" type, which was specially designed for him by Herbert P. Horne of London, and which the *Burlington Magazine* has praised as "perhaps the most perfect now in existence." There is, we may add, nothing fanciful in the shape of the letters, nothing to distract the mind from the sense of the words; the face is rather more open than the usual so-called artistic fonts. Mr. Horne also furnishes the title page and a series of initials. The paper and manufacture of the book are worthy of the letterpress. As the opening volume of a library for humanists the choice fell happily on "Leonardo da Vinci's Thoughts on Art and Life," which Maurice Baring has translated, and rearranged, from the selections edited by Dr. Edmondo Solmi (Leonardo da Vinci: "Frammenti Letterari e Filosofici," Florence, 1900). To these Mr. Einstein, the general editor, has prefixed an introductory essay, dwelling particularly on the union of the rational and the mystical, which, running through all the Italian Renaissance, finds its most perfect expression in the art of Leonardo. We shall follow the future volumes of this series with particular interest.

It is well that the author of a monograph on a painter should be a hearty admirer of that painter's work, but there is such a thing as admiring too heartily and too indiscriminately to be effective; and this is the case with the author of the latest issue of the Walter Scott-Scribner series of The Makers of British Art—Edgcumbe Staley's "Lord Leighton." Leighton was a unique figure in England and a notable figure in the art of the nineteenth century, the only Englishman who ever had a complete academic education and one of the best of the academic painters anywhere in his time. He could draw superbly, and some of his works are rarely beautiful; but he was not without his faults. His color was lacking in fulness and resonance, and his composition in amplitude and spaciousness, while he was deeply bitten with the English rage for prettiness and sentiment; and he disfigured some of the grandest of his Greek figures with doll-like English heads. Therefore, to have him held up constantly as the greatest of modern artists, the equal of Titian, while any derogatory criticism of him is treated as the result of spite and envy, is something monotonous. One must have enough clearness of perception to recognize an artist's shortcomings, if one is to have enough judgment to praise him intelligently. Thus it happens that Mr. Staley's praise is not only tiresome, but generally meaningless, and without any clear perception of the real quality of the work praised.

The Knackfuss monographs are valuable, even to those who do not care for or cannot read the text, as giving in convenient form a large number of illustrations of the works of a given artist. It is therefore a good thing that they may be had, in this city, of Lemcke & Buechner, though it would be a better if they were more frequently to be had in translation. The wide inclusiveness of the series is shown in the diverse subjects of two of the latest issues, the most attractive of primitives, Fra Angelico, and the most pompous and intolerable of German classicists, Kaulbach.

The publication of the first part of Prince d'Essling's work, "Les Livres à Figures Vénitiens de la Fin du XVe Siècle au Commencement du XVIe," is announced for March next. The work will be completed in four volumes folio, with numerous illustrations, including many in colors. The edition is limited to 300 copies at 500 francs the set.

While the spade of the archæologist in Egypt has for decades been devoted to the discovery of pre-Christian remains, in recent months a successful investigation of Christian antiquities has been begun by Karl Maria Kaufmann, a merchant and savant of Frankfort-on-the-Main. He has found in the so-called Mareotis desert, south of Alexandria, an extensive field of Christian ruins, including the remnants of the memorial church of the Alexandrian martyr Menas, two other Basilicas, and the site of a great Egyptian clay and pottery industry. A preliminary report has been published in a good-sized pamphlet, embellished with some fifty illustrations and sketches; and this is to be followed by a more exhaustive publication. A second archæological expedition is to be sent out soon to this new field, the money being furnished by the city authorities of Frankfort. The modern name of these ruins is Boumna Karm Abu'm; and the flourishing city that once occupied this place was still seen and described by an Arabian geographer of the tenth century. The excavations all took place during the year just closed. The Munich *Allgemeine Zeitung*, which reports fully on this new field of archæological treasures (Supplement No. 255), declares that doubtless richer finds will yet be made, and that what has been unearthed is of special importance as showing the close connection between the ecclesiastical architecture of the Western Roman Empire and that of the Oriental peoples.

There is an Institut de Carthage, which is doing its best to safeguard what remains of the famous city. We should say cities, since the Romans utterly ruined the town

of Dido and Hannibal before building up their own. This was second only to Rome in the empire. Then came Vandals and Byzantines, Moors and Moslems. In spite of all, an Arab historian of the twelfth century says the ruins were still a marble quarry for the whole world. By the seventeenth century nothing was left above ground but three cisterns, a broken aqueduct, a few fragments of walls, and scattered stones. Since 1837 various societies and individuals have carted away cases of columns, mosaics, statues by the dozen; and one man loaded a ship with 2,500 stelæ and such like—the ship sank under the weight. All this profited not even museums. More recent collections have gone to England and France; and since the French protectorate in Tunis, two local museums receive the finds of Père Delattre. Meanwhile, Tunis of nowadays is growing, and houses are covering the most promising fields of research. A systematic effort is to be made to bring to light and rescue what still remains in so interesting a site. A law of Parliament is asked in the interests of history and archæology. The old Roman amphitheatre has already been dug out and used for an open-air classical play—Corneille's "Polyeucte."

A new Velasquez, thought to be the portrait of Calabacas, has recently been discovered in France by Sir George Donaldson. The portrait, which has been lost sight of for nearly half a century, represents a youth about eighteen years of age standing erect with a miniature in the right hand. It is considered a fine example of the early middle period of the master.

F. Hopkinson Smith is holding an exhibition of his recent water-colors at Noé's gallery in this city, till January 26. The artist is a traveller, and his pictures are the records of days in Venice, England, Normandy, and Sweden. The good commonplace quality of most of this work is much the same as the artist has made familiar in previous exhibitions. A few of the pictures, such as Santa Barnabas and A Summer Morning, are, however, within the limits imposed by the manner of dealing with the medium, exceptionally good. A Summer Morning is charming in its blue and gray tone, the values of the distant Venice across the water are sure, and the handling throughout has considerable distinction. Santa Barnabas is also much better in tone than most of the work. There is a bold touch that makes the artist's impression emerge with admirable distinctness. The wonder remains that the artist does not bring more of his work up to the quality of his best.

An exhibition of etchings and dry-points by Whistler is open at Keppel's gallery in this city till February 6. Joseph Pennell has written an interesting introduction to the catalogue.

The Art Institute of Chicago has opened a new gallery, which is to be devoted solely to etchings and engravings. The nucleus of a permanent collection has been formed by the Nickerson collection, which was presented some time ago to the institute.

The seventy-fifth exhibition of the Boston Art Club is now in progress. There are 206 paintings and fourteen sculptures.

A retrospective exhibition of English water-colors of the eighteenth and nineteenth centuries is now open in Paris, at the Shirley galleries. The collection contains nearly one hundred works. There are five examples of Turner, ten or more of Rowlandson, several of De Wint, ten of John Crome, and specimens of such painters as Bonington, Constable, Cotman, Cox, the two Cozenses, Gainsborough, Girtin, Morland, Muller, Prout, Romney, Varley, Wright, and others. The catalogue contains an admirable historical survey of British water-color work by Percy Moore Turner.

Hubert von Herkomer has been appointed professor of painting at the Royal Academy as successor to George Clausen. The vacant professorship of sculpture has been filled by the election of R. Colton, A.R.A.

Science.

Radioactive Transformations. By E. Rutherford. New York: Charles Scribner's Sons. $3.50 net.

Had electricity been originally a scientific discovery, instead of our acquaintance with it growing up, as it did, out of matters of common knowledge—such as the attraction of rubbed amber for bits of straw—it would have ranked, in every way, as the very greatest of the gifts of science to man. But electricity being so ruled out, the most important and astounding of all strictly scientific discoveries, thus far, has been that made in 1898, by Madame Curie, of the metal radium, notwithstanding the trifling radioactivity of some uranium compounds having been detected by Henri Becquerel two years earlier. For what would any physicist or chemist have said, on the previous Christmas Day, to a suggestion that perhaps the most tremendous force active in nature all about us might have escaped our notice? At the time, of course, no action was known to liberate more energy, weight for weight, than the combination of hydrogen and oxygen. Had his interlocutor then informed him that there was a spontaneous decomposition (meaning that of the actinium atom, for example) that gives out more heat per pound of the substance than any combustion, he might dubiously have inquired, "How much more?" to which the true answer would have been, "Millions of times more." For a single pound of radium emanation would liberate in all sixty thousand times the energy of a horsepower working for twenty-four hours, and half of this would be given off in the first four days after its preparation. Something like this, and tenfold more, has been told of the radioactive bodies a thousand times and one; and the theme is not yet worn out. Indeed, the facts are so exorbitant that some reiteration is needed before any ordinary mind can fully realize that they are no more than simple truth.

The exquisite experimental researches which have brought the known facts to light are agreeably and most lucidly described by Prof. E. Rutherford of Montreal, the author of most of them, in his latest volume, "Radioactive Transformations," being the third of the series of "Mrs. Hepsa Ely Silliman Memorial Lectures." His conclusions are in brief that radium is a metal, closely similar to barium, except that it is still heavier and is continually shooting forth certain invisible rays, called alpha-rays, which seem to consist of atoms of the new gas, helium. The residue of the radium, after the emission of these atoms of helium, is a heavy gas, called the "radium emanation," which is apparently another chemical element. The transmutation takes place at such a rate that it is an even chance whether any one atom of radium, no matter how long it has existed, will or will not still exist as radium at the end of thirteen centuries; and this rate is maintained whether the radium be in a hot oven or be plunged into liquid air, or be in chemical combination. About a dozen elements are known to give off alpha-rays, and to be transmuted in consequence, but each at its own characteristic rate.

The immediate result of the transmutation, or, as we had better phrase it, the immediate residue after the first shooting forth of helium-atoms, from a substance, like radium, that emits nothing else, may itself emit helium and nothing else. In fact, this happens more often than not; and when this does happen, the new helium-emitting substance is transformed more rapidly than was the substance from whose disintegration it resulted. If, however, the residuum no longer emits rays, its further disintegration takes place a little slower. But it still takes place, and results in a new element, and not in an allotropic form of the same element; whence one infers that it did emit helium, though only helium of too low velocity to be electrically detected. For the rays are best detected by their rendering the air a conductor of electricity. The residue after the disintegration of such apparently rayless atoms is, in four out of five cases, an element that emits, whether along with alpha-rays (as it does in the exceptional case and three others) or without these, a kind of rays called beta-rays, composed of separate corpuscles, such as are contained by the thousand in every hydrogen atom. They are no doubt electrons. Elements emitting beta-rays quickly disintegrate, especially if they also give off alpha-rays. These facts are shown by a diagram on page 169 of this volume. The beta-rays once given off, freeing the substance from loose corpuscles that are necessarily a factor of disturbance to the system of the atom, we always find the residue to have gained greatly in stability and endurance.

Since radium is half destroyed in thirteen centuries, it would have been long ago completely used up were it not produced anew. It very likely comes from uranium, or perhaps from thorium. But still the same difficulty recurs. It would seem that whatever radioactive element was first formed must by this time have disappeared. Atoms may have been at first as large as cannon-balls or as planets, but have become reduced by the same process that is to-day destroying the individual radium atoms. Dr. Boltwood thinks that all these metals finally become lead; and it is possible that even that is radioactive, though we cannot observe it.

The tenth volume of "Œuvres de Christiaan Huygens," published by the Holland

Scientific Society, has recently been delivered to subscribers in this country. It is the final volume of the correspondence, giving the letters to and from Huygens and his friends from 1691 to the time of his death in 1695. His most important correspondent during that time is undoubtedly Leibniz, whose last letter, written a few days before the death of Huygens, the latter probably never saw. Like the preceding volumes, this concluding one is a stately quarto (816 pages), beautifully printed, and copiously annotated. The indexes deserve especial mention. They extend over sixty-seven pages and contain: (1) A chronological list of letters; (2) an alphabetical list of correspondents; (3) a list of persons mentioned in the correspondence (Newton 123 times, Leibniz 233 times); (4) a list of works cited or mentioned; (5) an admirably complete analytical table of contents. While the correspondence is mainly on mathematical and scientific themes, there is hardly an interest of the times that is not reflected in the letters.

In his recent volume, "Documents Scientifiques de la Mission Saharienne," M. F. Focreau, describes his desert explorations, the land of the Tuaregs, the circuit around Lake Chad, and a descent of the Sbria and Ubangi Rivers. He also gives valuable details of astronomical and meteorological observations made during the trip. Indeed, the fascicules now published (parts i., ii., and iii.) relate to the scientific results of the expedition, a popular account of which was published soon after his return. He gives an excellent description of the water systems, the topography of the district, and the geological action of local winds. For thirty years M. Foureau has traversed the Sahara in all directions, but his ambition to penetrate to the Sudan had always been foiled by the Tuaregs, fierce and fanatical towards all foreigners, especially Europeans. A larger fund than ordinary becoming available a few years since, he was enabled to gather a small army, of about 300, with 1,000 camels. Thus equipped, he could be independent of warlike tribes. His astronomical observations are perhaps more nearly geodetic in character, and naturally limited to the determination of station positions. For longitudes, reliance was mainly placed upon methods used at sea, supplemented by a few occultations and phenomena of Jupiter's satellites. Of greater general interest are the meteorological and climatic observations, spread as they were over a large area. Many important points relating to Lake Chad are noted, and this "lake of mystery" is studied as to its currents, and the saline quality of its many lagoons.

Gaston Bonnier has submitted to the Académie des Sciences the results of his experiments in the distribution of labor among bees. He marked the bees with different colored talc powders on back, head, and abdomen, sufficiently to identify them. One bee starts out prospecting and finds a new patch of honey-bearing flowers. It goes back to the hive and returns with a certain number of honey-gatherers, organizing a regular service back and forth. The number of gatherers is proportioned to that of the flowers; that is, while the bees may not be able to count, they certainly can estimate the amount of work before them. When the flowers are far from the hive each bee carries a correspondingly smaller load. On mountain heights bees flying at a higher altitude are more heavily laden than those at a lower. Bees applied to one definite branch of work never turn aside to another; the water-providers never stop to gather at a sugar syrup. On the other hand, those gathering honey from flowers will not touch water offered them, even when it is needed in the hive for the rearing of the larvæ. M. Bonnier argues from all this that there must be some general understanding among the bees for seeking and transporting provisions so as to realize the best distribution of labor on the flowers in the minimum of time.

A synopsis of the Report of the Naval Observatory superintendent has been sent out, containing an account of achievement up to July 1, 1906. Until his retirement on February 28 last, Rear Admiral Colby M. Chester, U. S. Navy, was superintendent, when the duties were assumed by Rear-Admiral Asa Walker, U. S. Navy. The work of the Department of Chronometers and Time Service, and the Compass Office, are reported; and in the Nautical Almanac Office, the work is said to be well up to date. The ephemeris of Phœbe, the ninth satellite of Saturn, is now given for the first time in the American Ephemeris.

"The Importance of the Early Discovery and Treatment of Defectives in Special Public School Classes," an address delivered last November before the Public Education Association of Philadelphia, by Dr. Walter E. Fernald, superintendent of the Massachusetts School for the Feeble-Minded, has been issued as a pamphlet by the association.

Cambridge (England) needs a new museum of anthropology and is preparing to erect a building at a cost of £25,000, apart from maintenance and the purchase of hooks and specimens. The university, unable to bear the whole expense of the undertaking, has made an appeal for subscriptions.

Prof. H. C. Parker of Columbia University, working with W. G. Clark, has invented an incandescent lamp which he hopes will revolutionize electric lighting. He says that it has forty-five times the efficiency of the ordinary lamp with a carbon filament. The new filament which Professor Parker calls hellon, because its spectrum is similar to that of helium, is composed largely of silicon. The other ingredients are not divulged. A current that will give only a dull red color to the carbon filament makes the new lamp burn with a bright white light.

Finance.

THE RAILROADS AND THE MONEY MARKET.

Nothing is more characteristic of Wall Street than the contrast between its state of mind now and a little more than a month ago. At that time, financial circles knew perfectly well that certain large railways must soon borrow money on an enormous scale. Any doubt on this point would have been dispelled by the events of November, when news from the West made it plain that the transportation lines were not able to do the business that crowded on them. One day the country would hear the complaint of wheat growers, whose grain was rotting on the ground because there were not storehouses enough and because the railways would not provide cars. The next day one heard of towns in the Dakotas shutting down schools and churches because the railways would not or could not bring coal. Another day, the cotton merchants would be accusing the railways of holding back the crop from the Eastern markets. All this time huge freight trains clogged every siding of the railways, and at intervals sent forward on the main track without due precautions collided with fast passenger trains and brought the succession of disasters which culminated on the Southern Railway, in the tragic death of President Spencer himself.

The truth was, that the railways were doing the best they could; but that with all their enlarged facilities, they could not keep pace with the amazing expansion of internal trade. Some experts laid the blame on inadequate car equipment or motive power; some, like President A. B. Stickney of the Chicago Great Western, on the unreasonable demand of shippers to have their goods all transported at once; others, like President James J. Hill of the Great Northern, on the failure of the railways to provide track enough for a "boom time." Mr. Hill's idea became generally accepted; yet even here, opinion differed radically as to cause. Mr. Hill himself complains to the governor of Minnesota that legislative hostility to railways has scared away capitalists and prevented the companies from raising the necessary funds. Others have flatly challenged this theory, and asserted that the recent slowness of railway-building compared with twenty years ago—a fact which even Mr. Hill admits—is the inevitable consequence of the policy of railway financiers in discouraging the building of competitive lines and in devoting available resources to buying up rival lines and strengthening existing tracks. By no means all of the railway experts concurred with Mr. Hill's declaration of November that "115,000 to 120,000 miles of track must be built at once"—three times as much as was laid down in all of the ten years prior to 1906—or, as he added, that "1,000,000,000 a year for five years will scarcely suffice"—which is twice as large an outlay per annum as has been made since 1900. But all have agreed that the railways must apply themselves at once to providing these absolutely necessary facilities.

Consequently, no one had reason to be surprised at the successive announcements of a $65,000,000 stock issue by the Great Northern, $95,000,0000 by the Northern Pacific, $100,000,000 by the Chicago, Milwaukee and St. Paul, and finally, within a few days, $200,000,000—of which, however, one-half may be stock reserved to take up the other half, originally issued in the form of bonds—by the Pennsylvania.

When these stock issues were first rumored, Wall Street was in a fever of speculative excitement. It declared that, since the new stock was to be sold to shareholders at par, when the existing stock was quoted on the market between 150 and 300, the offer of such profitable

"rights" or "subscription privileges" would make the old stock still more valuable, and therefore push Stock Exchange prices higher still. And in anticipation of this output of three or four hundred-million dollars in the new securities prices actually were advanced. Before long, however, the other side of the question presented itself, and the market began to ask: If the supply of stocks is to be so enormously increased, and demand does not increase proportionately, how can prices hold up? Every one knows what happens when an extensive new supply of wheat or cotton or iron comes suddenly on a market which has pretty much provided for its needs already. The result of this altered point of view was the rapid fall in Stock Exchange prices in December, and the total absence, thus far this month, of the traditional "January boom."

The Pennsylvania Railroad's $200,000,000 announcement, a week ago, seemed for a time to be the *coup-de-grâce*. People remembered how, at exactly this time in 1903, that company announced that it would issue $150,000,000 new securities; how it offered half of this to its shareholders at 120, when the old stock had just sold above 150; how the market price fell below 120 before the subscription day; how the operation narrowly escaped failure, and how the whole market straightway fell into the "rich men's panic" of 1903. There are many reasons why the precedent of that period cannot be accepted offhand; the situation in general is in many ways different and in many ways stronger. The point of analogy which undoubtedly holds, however, is that demand for new capital has plainly outrun supply; and that while requirements of active industry and speculative inflation on the Stock Exchange had been absorbing like a sponge the decreasing stock of capital, railways had been making expensive contracts for new construction which they could no longer postpone, and for which they soon had to file their applications in the money market.

This has been as true of the present season as of four years ago. The result, in 1903, was that the railways had to borrow on their notes, at exorbitant interest, until the liquidation on Wall Street, and in general trade, had released enough capital to make their problem easy again. We have already begun to hear of borrowing on notes this year; probably we shall hear more of it. The larger question is, what will be the limit of the railway borrowings which have started out so formidably? To this question no one has yet been able to give a confident answer.

JUST PUBLISHED

Doyle's English Colonies in America

III. The Middle Colonies IV. The Colonies Under the House of Hanover

By J. A. DOYLE. 8vo. $3.50 per volume.

Of the author's earlier volumes, Virginia, Maryland, and the Carolinas; and the Puritan Colonies (2 vols.), The Nation says: "For their size, the best of which we have any knowledge to place in the hands of any young person desirous of really knowing the subject. They are attractive in style, full of careful research, impartial in judgment."

Hobhouse's Morals in Evolution

By L. T. HOBHOUSE, author of The Labor Movement; The Theory of Knowledge; Mind in Evolution, and Democracy and Reaction.

There are few if any equally interesting compendiums of the revolutionary thought of the last half of the last century. 375 + 294 pp. 2 vols., 8vo, $5 net; by mail $5.30.

Victor S. Clark's Labour Movement in Australasia

A book written in a simple, untechnical, and very impartial fashion, and one that is full of very valuable suggestions affecting our own labor troubles. 327 pp., $1.50 net; by mail $1.63.

Logan G. McPherson's Working of the Railroads

273 pp., $1.50 net; by mail $1.65.

Wall Street Journal: "Written from the point of view of one who has seen transportation from the focal viewpoint of central management. His connection with practical service in the various departments of administration gives this convenient volume a value which no other book quite equals. . . . Up to date . . . informing . . . An excellent piece of work."

Zartmann's Investments of Life Insurance Companies

A valuable book for all who are interested in the rate of return upon loanable capital. It analyzes investments and the earning power of the various assets of life insurance companies. The interest rate is calculated by a new and exact method. The author also discusses the relations of the investments to social welfare, and the proper control of the immense assets of the companies. 259 pp., $1.25 net; by mail $1.37.

HENRY HOLT AND COMPANY 29 W. 23d St. NEW YORK

THE HEART OF HAMLET'S MYSTERY

By KARL WERDER

Translated by ELIZABETH WILDER

With an Introduction by W. J. ROLFE

Crown 8vo, net $1.50

This extraordinary piece of German criticism must now be regarded as one of the landmarks of the literature that is devoted to a study of the Prince of Denmark. It has won over to its point of view Shakesperean critics of the first rank, among them Furness, Corson, and Hudson. Werder advances, and it would seem triumphantly champions, the theory that Hamlet's inaction and procrastination were forced upon him by circumstances which were beyond his control.

The Nation.

NEW YORK, THURSDAY, JANUARY 24, 1907.

The Week.

That the Governor of Jamaica has, in a great crisis, acted like a glorified beadle, seems to be the almost unanimous opinion in England as well as in this country. The letter which he wrote to Admiral Davis should alone be enough to terminate his career. Such a mixture of clumsy insult and vulgar smartness would have been out of place at any time, but to be addressed by the Governor of a smitten Colony to those who came as friends and rescuers, was simply amazing folly. Even if the Americans there were ignoring the nice technicalities, they were kind-hearted and were doing useful work, and ought not to have been kicked off the premises as trespassers. The most charitable supposition is that Gov. Swettenham had simply lost his head through anxiety or overwork. England need not be troubled about good relations with this country being disturbed by the incident.

Clown. I have an answer will serve all men.

Countess. Marry, that's a bountiful answer that fits all questions.

—[All's Well that Ends Well.

The bountiful answer of President Roosevelt, to every objector to any policy of his, seems rapidly getting to be that all opposition to him is inspired by the Trusts. All the Washington dispatches agree that this is now the White House attitude towards the critics of the President's action in discharging the colored troops. It is merely resentment at his successful attacks upon "corporate interests." Senator Foraker is the protagonist in the debate on the Brownsville affair; he was also the chief opponent of Mr. Roosevelt's railway-rate law; so what could be plainer? The infuriated corporations are using Foraker and Knox and Aldrich to strike back at the President who has drawn their fangs. Mr. Roosevelt has descried this hidden and wicked motive many times before. Any challenge of his Panama plans, for example, could have sprung, we were given to understand, only from enmity prompted by the smarting railroads. The long refusal of the Senate to approve his policy in Santo Domingo had a similar abhorrent origin. On the public side, the effect of the attitude of the President is very unhappy. Here is a large question, about which opinion is much divided, and about the legal and Constitutional aspects of which able and honest men seriously differ; but Mr. Roosevelt would have it settled purely on the basis of personal loyalty to him. Now, there is no doubt that President Roosevelt has evoked a marked personal devotion; but for him to throw that into the scale when there is pending a great question of right or wrong under the law, of justice or injustice, is to confuse the issue and to obstruct the working of our machinery of government. To keep each question clear and distinct, and to settle each on its merits, is the great desideratum of public discussion. Mixing up disparate subjects and dragging in personal motives can but muddle debate, cloud the popular mind, and lead to lame conclusions. If the corporations do hate the President and would embarrass and mortify him in every way possible, that is a question by itself, to be dealt with on fit occasion. But just at present we have other work in hand.

Senator Spooner's speech last week on the President's discharge of the colored troops was largely a lawyer's abstract discussion. One of the Wisconsin Senator's general principles was:

> Even if a President abuses the power which he possesses, or exercises it with bad motive, I should greatly deplore an attempt by the Senate to investigate it or pass judgment upon it.

Mr. Spooner's reason is that the Senate is the body which has the sole right, under the Constitution, to try impeachments; and "it would be a horrid thing if, when articles of impeachment reach this chamber, they should be laid before a court which in another capacity, having investigated and considered the same matter, had prejudged it." This being so, we might imagine that Senator Spooner must have "greatly deplored" the attempt of the Senate in 1886 to "investigate and pass judgment upon" an alleged violation of the law by President Cleveland. There was at that time a determined attack for weeks upon that Executive, led by Senator Edmunds, on account of his refusal to send to the Senate certain papers bearing upon removals from office. The act was declared to be lawless and in defiance of the Constitution. But turn to the *Congressional Record* of March 18 and 19, 1886, and you will find a two days' speech by Senator Spooner, arraigning the President in the strongest way for having failed to comply with the law, and set at nought a provision of the Constitution. He asked if Mr. Cleveland was "too great to be subject to the law." What he now deplores, he then did with the utmost gusto. And as if with prophetic joy at the thought of eviscerating his own argument of twenty years later, he exclaimed, when told that he ought to leave impeachable offences to the House:

> Exercise the power of impeachment and give the President the power at his will to destroy all evidence upon which alone that power could be exercised! It is idle; it cannot be maintained for a moment!

The fact is, of course, that the Senate has always felt free to debate the legality of the acts of the President, and we hope it always will. Webster and Clay had it solemnly entered upon the journal of the Senate that Andrew Jackson had exceeded his lawful powers. In 1894 a committee of Republican Senators brought in a report formally reciting that President Cleveland had been guilty of "an unconstitutional act" in appointing Mr. Blount commissioner to Hawaii. We cannot reduce the Senate to the vacant-mindedness of a jury which has neither read, formed, nor expressed an opinion. Senators who may hold, and may have uttered, strong convictions, may yet be judicial, and decide the case according to law and evidence, when the time comes.

The passage by the Senate of the bill increasing the artillery by over 6,000 officers and men, and its favorable report in the House, is another example of the way our military forces are gradually being increased. Prior to the war with Spain, our artillery consisted of five regiments, comprising about 3,500 men; now we have 663 officers and 18,166 soldiers. With the additional strength about to be authorized, the artillery alone will be as large as our entire army on January 1, 1898. The War Department has found that any large increase would not be voted; it has therefore hit upon this way, as Congressman Theodore E. Burton of Ohio has pointed out, of getting its whole loaf by slices. Last year it was the Ordnance Corps that was increased; this year it is the Artillery, and next year it will be the Medical Corps or some other branch of the service. So far as the artillery is concerned, we are told we need it because we have so many coast defences; a few years ago Congress was asked for guns because we had none for our artillery, and so the game goes on. The public has quite forgotten that when the Endicott Board's vast system of coast defence was created it was with the assurance that with these forts we should never need a large navy. Now we squander millions upon battleships and land defences alike.

The House of Representatives has made a new record by passing 628 private pension bills in one hour and thir-

BURLINGAME PUBLIC LIB.

ty-five minutes. Three or four thousand similar bills become law every year, and no President since Cleveland has been willing to take the trouble of looking into their merits one by one. But the service-pension advocates, having put Senator McCumber's bill through the Senate, are making much of an argument derived from this special legislation. Most of the beneficiaries of the private bills would receive pensions under the general act, as the proposed change would make it. Instead of the $24 or $30 a month which the average private bill now carries, they would get $12 to $20. "Probably," said the father of the bill, "if these men who are seventy-five years of age should receive $20, they would not apply for the other $10 per month by special bill." Trust in pensionable human nature still persists in cynical Washington. Mr. McCumber is sure that veterans who might have had $30 a month, will be perfectly satisfied with $20. Yet out of the first 100 bills passed on this record day to which we refer, no less than ninety-two increased pensions already granted, while only eight authorized new pensions. What earthly warrant is there for the supposition that there will be any fewer applications for "increases" under the new law than under the old? Special pension legislation is excused on the ground that it tempers the omissions and inequalities of the rigid general law. That Congress can satisfy everybody merely by granting a pensionable status to new classes of applicants is as beautiful a dream as that it can satisfy all the shipping interests with one modest little subsidy bill.

The choice of two United States Senators Tuesday in Oregon was the result of the nearest approximation to popular election that ingenuity has been able to devise without amending the Constitution. In fact, the process by which they were selected was considerably more democratic than what was usually meant by popular election a few years ago. E. J. Burkett of Nebraska was elected by popular vote in that sense. He was nominated for Senator by the same convention which named another Republican for Governor, and his name was placed on the official ballot on election day, the Legislature merely confirming the choice so made. A. J. Hopkins of Illinois was nominated in State convention, but not voted upon by the people. A dozen or more of Southern Senators were chosen as the candidates of an invincible party in popular primaries. But these Oregonians, F. W. Mulkey and Jonathan Bourne, were put through a double process. They were chosen as the Republican Senatorial candidates in a direct primary, and then voted upon like other party candidates in the regular election. They had, first, to commend themselves to a plurality of the members of their own party, and then to a plurality of the voters of the State. They will have a serious responsibility at Washington as the first products of a system which the Western States are hurrying to copy.

South Carolina having shown the way in which a State may legally bring immigrants from abroad to settle within its borders, Virginia has promptly profited by the example. The Commissioner of Immigration and Agriculture from that State, G. W. Koiner, expects a party of domestic and farm workers from Europe to arrive at Baltimore before the end of the present month. By the United States Immigration Commissioner at Baltimore he has been informed that "they will, in all probability, if not physically disqualified, be permitted to land, but . . . until the foreigners arrive at the port and apply for admission it will be impossible for this office to decide upon their eligibility to land." Commissioner Koiner says he can find work in Virginia for not less than 50,000 white farm-hands and domestic servants. In other Southern States the newspapers have spoken of Secretary Straus's recent ruling in the South Carolina case as if it solved the problem of diverting a proportional part of the stream of immigration to the South. The problem, however, is different in several respects from that of the States of the Northwest when they first sought European settlers. Apart from the negro question, the fact that these States have no public lands to offer "homesteaders" brings the South's appeal, from the immigrant's point of view, down to a simple question of wages. How far the organized efforts of the Southern States may be able to offset higher bids elsewhere is still an open question.

In Indiana on Sunday a passenger train was blown to pieces by the explosion of a car of powder which was part of a freight train going in the opposite direction; eighteen passengers were killed. In New Jersey a locomotive exploded; three enginemen were killed. In Ohio a passenger train ran into a telegraph pole which had been blown across the track; twenty persons were injured. Just over the line from West Virginia one of the two engines pulling a passenger train jumped the track; one passenger and one trainman were injured. In New York a locomotive ran off the track, in the Grand Central yards, tipped over on its side, and blocked traffic for several hours. In Minnesota ten express cars, running off the track, were smashed to kindling. On Saturday, besides two other wrecks in Indiana and one in Minnesota, there were accidents of a serious nature in Massachusetts, Kansas, Illinois, Mississippi, and South Carolina. Eleven States thus contributed to two days' news of railroad accidents. As made up from the dispatches, there was a death-roll for these two days of twenty-seven and an injured list of fifty-eight. Exceptional conditions of various kinds must have taxed the resources of operating officials. There were two wrecks in the list caused by obstructions which had blown or fallen on the tracks since the previous trains had passed safely. The explosion at Terre Haute of a car of powder which, for anything that appears to the contrary, was being transported in the customary way might be set down in the category of unavoidable accidents. But what of the two locomotives that exploded? What of the three head-on collisions, one rear-end collision, one collision of character not stated, and two unclassified "wrecks"? What of the four derailments and the "narrow" escape of a fast train in New Jersey which passed over a broken rail? Protests against the kind of management and equipment under which such catastrophes are possible have been raised so often that they are almost in danger of losing their force. Yet the accidents go on, not on one road, nor in one section, nor under one set of difficult conditions, but on all roads, in all parts of the country, and under all sorts of conditions. If legislative bodies are turning to remedies which railroad men say are wrong and ineffectual, the reason is not far to seek.

The mass meeting held at Carnegie Lyceum Monday night to demand a Congressional investigation of the status of women workers; Saturday's appeal of two associations for equal pay for women and men teachers, in this city; the formation of women's trade unions, and the growing demand for the ballot among working women, both here and abroad, are indications of widespread unrest among the rapidly increasing number of women who are bread-winners. Yet it is easy to understand how the discrimination in women's wages has arisen. The first women who became industrial producers lived and worked at home; so do many to-day. Moreover, the average man-worker must generally earn enough to support not only himself, but a wife and family as well. These are the historic arguments with which economists have explained and still explain the disparity in wages. In Germany this problem of the pay of the woman worker is recognized by careful students as one of the most serious of our modern industrial conditions, with most direct bearing upon race deterioration and prostitution. Hence an elaborate study of the inequality of wages between the sexes by Dr.

Alice Salomon has been warmly welcomed. To the classic explanations of the discrimination against women which we have cited, she adds that they are physically unfit for certain occupations, such as the making of iron and steel, which fact tends to confine them to the poorer paid because more crowded industries. She also lays stress upon the absence of a keen desire to rise to the more highly paid grades of labor, and the fact that young girls are loath to enter skilled occupations requiring a long apprenticeship; hence they are restricted to employments easy to learn and readily recruited afresh whenever there is a strike. In order to lessen differences in wages, Dr. Salomon relies more upon the proper training of women workers than upon unions. She cites, of course, the case of the Lancashire weavers as proof that unions accomplish something. But the success of these women in raising wages to the same level as those of the men is also due to the fact that they have been over a century in this employment, with much resulting solidarity and pride in their work. They are serious in it, expect to give their lives to it, and after generations of experience—and this is most important of all—have learned to insist upon a most rigid training of the young girls who enter the trade.

The death on Thursday of the Rev. James Woodrow reminds us how far the hand has moved across the dial in two decades. He was a teacher in both the University of South Carolina and the Columbia Theological Seminary, a Presbyterian institution. In 1884 he ventured to declare his belief in evolution; he thought it "probably true" that the body of man descended from some animal, and that "at a certain point his Maker met it and breathed into it spirit." In 1886 he was tried for heresy by the Augusta (Ga.) Presbytery, and acquitted; then the Synod of Georgia reversed the action of the Presbytery. Finally, in 1888, the General Assembly of the Southern Presbyterian Church sustained the Synod by an overwhelming vote, and forced Dr. Woodrow from his position in the Theological Seminary. His opponents denounced the doctrine of evolution, even in the mild form in which he held it, as contrary to Scripture and subversive of the interests of Christianity and of the Church. Where to-day is the ecclesiastical organization that would stand on that platform? The incident has its lesson for heresy-hunters, though as a class they are our Bourbons, who learn nothing and forget nothing. It is useless to remind them of Gamaliel's advice as to dealing with heretics—advice which is confirmed by all ecclesiastical history:

> Refrain from these men and let them alone. For if this counsel or this work be of men, it will come to naught; but if it be of God, ye cannot overthrow it, lest haply ye be found even to fight against God.

The unhappy state of Macedonia forms the subject of a powerful letter addressed to the London *Times* by Arthur John Evans, an eminent authority on the archæology and history of the Nearer East. His acquaintance with Turkey and the Balkans goes back for more than thirty years. The occasion for his appeal is the rumored intention of Russia and Austria, the two Powers charged with the execution of reforms in Macedonia, to follow up their scheme of financial renovation, according to the Mürzsteg programme of 1903, with a series of judicial reforms. The burden of the letter is the absolute vanity of expecting any real reform under their auspices. What is the present condition of Macedonia, after more than three years of the Mürzsteg régime? The inspector-general in charge of the reform programme is Hilmi Pasha, "the Sultan's *âme damnée* and nominee." The Austrian and Russian assessors have merely advisory powers without any real control. The international gendarmerie has shown little efficiency, because the European officers have been provided with an inadequate staff, and must take their orders from "Abdul Hamid's agent." The Turkish Government is acting in concert with the Greek bands against their common enemies, the Bulgars of Macedonia. Incendiarism and massacre run riot, and the traditional futility of the European Concert receives one more demonstration. Great Britain alone, concludes Mr. Evans, could force a termination of the régime of terror. But can England enter upon such a course? At this moment in India, Great Britain is trying to rally Mohammedan opinion to its support against the Hindu national movement, and must naturally be anxious to avoid all conflict with a Mussulman Power.

Georges Clemenceau is not popular at this moment in labor-union circles in France. For the second time since his accession to power, about nine months ago, he has made use of the military and the police to maintain order against the adherents of organized labor. Yet its representatives in Parliament stand in more or less intimate relations with the Cabinet, especially on the religious question. From one point of view, of course, the Premier's action in suppressing the projected labor demonstration in Paris Sunday required less courage than was called for by the situation in the northern departments last May. Then it was a case of checking the strikers driven into violence by the horrors of the Courrières mine explosion. Sunday no such danger from aroused public opinion threatened the Ministry. But, on the other hand, it was a bold step for M. Clemenceau to risk antagonizing a large faction in the Chamber whose support he can scarcely dispense with in his present contest with the Papacy. At the same time, the events of Sunday may possibly move the Catholic opposition to a more conciliatory policy. We read that "one pro-Church paper said that these Socialists who wanted to take possession of the streets are the very people who wished the Government to stop Catholic processions." To which M. Clemenceau might reply: "True; and it is between my policy and the policy that threatens you from these Socialists, that you must choose."

Premature advertising of medical theories which have not gone beyond the stage of experiment has many dangers. The X-ray was hailed on all sides as the long-sought panacea. Within a year after its discovery it had been tried on all sorts of maladies, and the papers were reporting results nothing short of miracles. Conservative medical men asked in vain for time to observe results. But what now is the attitude of the profession toward X-ray therapeutics? It has replaced none of the older methods, certainly no surgical operations, and with cancer it is used only when every surgical measure has failed, and then only to decrease the rapidity of the tumor's growth. The alleged trypsin cure for cancer has been similarly trumpeted more loudly than the scientific tests yet warrant. The results of the experiments on mice by Dr. John Beard of Edinburgh he regards as very encouraging, but in cases of human cancer it is yet years too soon to make any positive claim whatsoever. Of cancer there are many types: some grow quickly and without removal are rapidly fatal; some, again, are so slow in their growth that years may pass before their presence is even recognized. It is not easy to decide, even when the result appears most conclusive, whether a cure of cancer has been effected. Formerly, surgeons believed that if a cancer did not recur in its first site within one year, the patient was free of danger. That time ("observation time," as surgeons call it) has been increased first to three, then to five years, and at present one of the most experienced surgeons in this country believes that cancer may recur even after ten years. Thus it is evident that the factors which enter into any adequate determination of the value of trypsin as a remedy for cancer are not simple, nor do they quickly become manifest even to the conscientious and scientific physician.

PREPARING SUBSIDY SCANDALS.

The subsidy hunters have apparently captured President Roosevelt. They attacked him on his weak side—his love of national grandeur. In his speech last Wednesday at the dinner of the Foreign Commerce Convention, he said that he had never given any particular attention to the question of steamship communication, but that he had been startled when told by Secretary Root that our flag is seldom seen in South American waters except upon a warship. This sudden discovery filled him with patriotic mortification and a desire to do something immediately. He wants to "see the flag fly," just as Thiers wanted to "see the tall chimneys smoke"; and is seemingly as ready to resort to bad legislative and economic means to bring about the good result.

Mr. Roosevelt probably does not remember the Pacific Mail scandals of the early 70s. It might do him good to read the exposure of the corruption, in connection with that subsidizing legislation, which so badly smirched the Republican party of that day. And, next, it would be well for this enemy of corruptionists to take a sharp look at the suspicious men and suspicious methods made use of to engineer this latest raid on the Treasury for a grant of $3,750,000 a year. Congressman Grosvenor is at their head, and what sort of reputation does he bring to the task? He is serving his last term. To such a depth of discredit had he sunk even in his own district that he was denied renomination, and one of the chief arguments used against him in Ohio was his dubious financial relations with the interests that have been clamoring for subsidy. The New York *Evening Post* published several years ago a facsimile of J. Pierpont Morgan's check for $1,000 payable to Grosvenor, nominally for a copy of Grosvenor's "Book of the Presidents." The fact was used against him among his constituents with deadly effect. Grosvenor's right-hand man in this subsidy business is Littauer—a Representative also in the last weeks of his public service, also under a cloud. Secretary Root's report, which the President can scarcely have forgotten, intimated that the statute of limitations alone saved Littauer from prosecution for dabbling in Goverument contracts. With this precious pair is employed Alexander R. Smith, whose business it is to "work up public sentiment" for the subsidy bill. He was openly charged by Samuel Gompers with having tried to bribe labor leaders into withdrawing their opposition to subsidies, and the matter has been under investigation by District Attorney Jerome. Smith himself admits that he was in a position to "secure funds" for the subsidy propaganda.

Indeed, the evidence is strong that what we have in the subsidy bill is, not a measure which any large number of people are asking for, but a scheme got up in the interest of a few ship-builders and ship-owners, who are not too scrupulous in the instruments and methods they employ. The legislation now sought they regard as something which they have bought and paid for by means of contributions to the Republican campaign funds, and to secure which finally they are ready to put up more money. There is no real and general demand for ship subsidies. Even under great pressure, three Republican members of the Committee on Merchant Marine voted against reporting the bill. That was one-third of the Republican membership; and probably represents about the proportion of Republicans in the House who are against the subsidy raid. But the President is counted upon to persuade them. Theodore Roosevelt, the clean, the hater of corruption, is to be used to overcome the objections of honest Republicans to a scheme which they believe to be both bad in itself and pushed by corrupt methods!

Special legislation of this sort has always been the besetting sin of the Republican party. No sooner does it get firmly in power than it begins to dole out favors to particular classes. Put in office in 1896 to establish the gold standard, it moved most reluctantly in that direction, but ran in eagerness to allow manufacturers to write their own duties in the tariff. If now it rounds off its record by voting public money into private pockets by means of ship subsidies, it will go far to confirm the charge that it is hopelessly joined to its idols of class legislation. In the proposed bill there is an amusing attempt to disguise the gift of money to J. J. Hill and E. H. Harriman. The bill gravely says:

> From a port on the Pacific Coast north of Cape Mendocino to Japan, China, and the Philippines, $350,000 for a monthly service, $700,000 for a fortnightly.
>
> From a port on the Pacific Coast south of Cape Mendocino to Hawaii, Japan, China, and the Philippines, $350,000 for a monthly service, $700,000 for a fortnightly.

But what has Cape Mendocino to do with it all? Nothing, except that the existing Hill line of steamships from Seattle is north of it, and the existing Harriman line from San Francisco (the Pacific Mail) to the south. The committee simply did not like to say outright that it was intended to hand a present of $700,000 to Hill, and the same amount to Harriman.

We hope to see the bill fought and defeated. Subsidy is a hateful word, and it ought to be erased from our legislative dictionary. It has reeked with scandal in the past. So it infallibly will again, if allowed to creep into our laws. There are ways of restoring our merchant marine, as every American hopes it will be restored, without the touch of corruption upon them; but they consist in abolishing old bounties and statutes for a favored few, not in enacting new ones, with their endless possibilities of favoritism, fraud, and political demoralization.

THE HISTORIC SENSE.

Readers of the English reviews may have seen very favorable notices of a book, "The Great Days of Versailles," by G. F. Bradby. It is, indeed, an entertaining work. Here you may follow the daily life of Louis XIV. and his court to the minutest details—what they ate and wore, how they talked and quarrelled and loved—a strangely vivid picture. Only one aspect of that existence is omitted: there is scarcely a word to indicate why those days should be called "great." The monotony of court life is set forth in full, but nothing is added to explain how this monotony was only the last rigid stage of the ideal of uniformity, or rather conformity, which had produced the literature of the *grand siècle*. Something is said about the production of Racine's "Esther" at Saint-Cyr, but chiefly to show the vexations the play brought upon Madame de Maintenon. Nor does religion fare better. Here you shall read of the trick by which the sham devotion of the great ladies was exposed to Louis; Madame Guyon also is mentioned, and Fénelon's connection with the Quietists, but for petty reasons only. Louis's own submission to the Church is related, but there is nothing to indicate the deep religious current that ran through the age side by side with its worldliness, sparing in its course not even Versailles.

However, we have no quarrel with Mr. Bradby's book, which is excellent in its kind. It concerns us here only as rather an extreme example of what is growing more and more evident in recent literature—the absence of the historic sense. It used to be the boast of the nineteenth century that it was the creator of science and of the historic sense; and in a way the boast was justified. Certainly, no previous century had undertaken to worm itself into the secrets of the past as did the century of Renan and Taine and Sainte-Beuve. From the great doctrine of relativity and of development inculcated by Germany from Kant to Hegel, came the notion that an era of the past is something distinct in spirit, something to be comprehended by getting outside of present associations. To this end the study of details was to be carried to indefinite lengths, for gradually, through the accumulation of minute point after point, the picture of a past environment was to be produced, and from this knowledge of surroundings we were to infer the nature of the soul of the period. The historic sense, as then understood, was

thus an offshoot of skepticism and science, of *skepsis* in the double meaning of that ancient word. As scholars lost faith in the immutable and universal principles of human nature, they became more interested in tracing the path of what is changeable and locally determined. As the past lost in authority it seemed to grow more valuable to us as a field upon which we could exercise our unconcerned love of abstract truth. Those who have read Buckle will remember how the methods of science were adapted to this pursuit. Or, better yet, there is Taine's attempt to analyze the products of English literature as if they were so many chemical compounds.

It is a question whether there was not a certain admixture of self-deception in all this brilliant resuscitation of the past, whether the historic spirit of the nineteenth century ever escaped quite so entirely from the clinging fallacy of the present as it supposed. It is at least significant that those who were loudest in proclaiming the new scientific and skeptical method are just those who are most rapidly losing credit to-day. Buckle, despite his erudition and eloquence, is no longer taken quite seriously; Taine is notoriously an unsure guide, and the "History of English Literature," written confessedly as an exemplification of his theory, is a continued distortion of the reality. One may doubt whether their vividness in reconstructing what they called the past was not really due to the completeness of their implication in the spirit of the present: the picture at least was intensely alive. It would be odd if in the long run the earlier writers who were concerned with what they regarded as the unchanging elements of human nature should prove to have been truer in their grasp of the past than these disciples of scientific relativity.

On the whole, it is safer to admit a moment in the nineteenth century, when the older notion of continuity and authority combined with the newer theory of development and relativity to create a genuine historic sense. A perfect example of this may be seen in the "Port-Royal" of Sainte-Beuve, where a writer essentially skeptical reproduces a society dominated by religion; in English we have the greater historical novels culminating in "Henry Esmond." What cannot be ignored is the fact that for many years the historic sense, that is, the power of calling forth any true illusion of the past, has been surely waning. The abuse of the documentary method of study may have something to do with this, by habituating the mind to dulness, but the real cause lies deeper. The means has destroyed the end, and those who try to be most entertaining are likely to be least historical. The effort to accumulate picturesque details has blinded us to the purpose for which these details were first desired. Of this Mr. Bradby's book affords a striking example. At first the attention of the reader is deeply engaged; he expects to be led into the very spirit of the age. Presently he is chagrined to discover that the picturesque anecdotes and descriptions lead nowhere. Because the inspiration of that age was different from ours, it is simply non-existent to the author; he has no standard by which to measure the relation between the uniformity and restraint of manners on the one hand, and on the other the discipline of mind that showed itself in so many works of genius. And missing this interest in the higher things of humanity which make of that age a lesson and authority, he falls into the most vicious fallacy of the present. Because we with our habits and conveniences should be bored and shocked by the physical conditions of that life, he represents the great days of Versailles as a time of almost unmitigated boredom.

THE WORSHIP OF LOCAL COLOR.

Mrs. Gertrude Atherton has fluttered London journalists by a letter to the *Times* in which, in her "second-best Californiaese," she bade the august editor "go to the devil." Far more significant, however, is an earlier letter to the same newspaper, setting forth her theory of "local color," for here she is spokesman of a whole school of modern novelists. She would have a writer accept nothing at second-hand. For the sake of a single chapter in her last novel, "Rezanóv," she spent thirteen days on a trip from San Francisco to Sitka. She found the effort "quite worth while," for her mental picture of the place was very different from the reality. She adds:

> It may be argued that a few paragraphs of description do not matter one way or another, and that the average reader will never know the difference—likely as not will skip them; but it matters to the author, who is not worth his salt unless he writes first of all to please himself; and places his work before every other consideration. Moreover, there are subtle suggestions in a new atmosphere related to his work, that he would never get otherwise.

This, we submit, is to follow the spirit of the age to the bitter end, by subjecting works of creative imagination to the limitations of the exact sciences. The inference from Mrs. Atherton's statement is that the novel must, like a modern doctoral thesis in history or biology, be thoroughly documented and fortified by abundant experiment. This, indeed, is the contention of Zola and his disciples among the uncompromising realists.

We all know to our sorrow what local color is. The novel of to-day reeks with it—dialect so carefully spelled as to be unintelligible, passages of precise description of persons and places, meticulous attention to costumes, forms, and customs. It is realism run mad. Now, we raise no objection to sufficient local color to lend background to a story; but we wish aspiring novelists would bear in mind that the background is made for the story, not the story for the background. Such excursions as Mrs. Atherton's to Sitka are the very things that distract the novelist from his main theme of character and action. When you write of a place which you have known long and intimately, you can preserve your sense of proportion; for you are not carried away by the novelty of the view. But after you have completed a long journey expressly to see what a country is like, the temptation to overload the tale with a description of it is almost irresistible. You cannot throw away or dismiss in a word or two the precious picture which you have taken so much trouble to get.

Then, too, it is so easy to write description — now that Stevenson has shown us all the trick. We may not match him in characterization and conduct of events, but at any rate we can come out strong on description. Indeed, any fairly trained hack can offer a sketch of the Kamchatkan coast or of Popocatepetl that might easily be ascribed to the master himself. We need not turn for examples to the *dii minores*, whose faults we have always with us. So competent a novelist as Joseph Conrad has fallen a victim to his own powers as a writer of description. His "Nostromo," admirable as it is in many respects, oppresses us with too much about the mere physical aspect of Sulaco.

Obviously, a thorough familiarity with a place is for most authors the secret of success in handling the minutiæ of local color. The works of Scott, Thackeray, and Dickens all testify that you can write most vividly of the scenes in which you have lived. But where such long familiarity is impossible, we think a little—a very little—second-hand information better than a flying trip to Sitka or exhaustive study of books. We all know what happened when George Eliot went to Florence and skimmed a thousand books for the local color of "Romola." If any book is killed by local color it is "Romola"—always excepting, of course, Becker's "Gallus" and "Charicles." Shakespeare made no such painstaking study of Verona for his "Romeo and Juliet," but critics assure us that it is Verona in very truth that he draws for us. Two weeks ago we printed Kipling's striking statement that in the "Tempest" Shakespeare certainly showed us the Bermudas: "Those who go to-day to a certain beach some two miles from Hamilton will find the stage set for Act II., Scene 2." Kip-

ling's theory is that Shakespeare talked with some sailor. At any rate, we know that for "Captains Courageous" Kipling did not go to the Grand Banks with any Capt. Disko Troop, but chatted comfortably on shore with the fishermen. Defoe had never been on a desert island or through the heart of Africa, yet neither "Robinson Crusoe" nor "Captain Singleton" lacks local color so far as it is needed for a capital story.

So far as local color is needed. And the fact is, that of the kind of local color you will get during a few days in Sitka, much less is needed than is commonly supposed. The great novels, we make bold to say, contain very little in the way of dialect or description. The authors of "Tom Jones," "Pride and Prejudice," and "Vanity Fair" had more vital topics to deal with than scenery. They were busy with human character; and all else was incidental. "Henry Esmond" is often called the best historical novel ever written. It gives an incomparable picture of England in the age of Anne. Yet how little it contains that is purely pictorial! One scene, very brief, will stand out as typical in the memory of most readers—a few lines that afford a glance at Castlewood as the ill-omened Mohun took his leave:

> The sky bright overhead; the buttresses of the building and the sun-dial casting shadow over the gilt *memento mori* inscribed underneath; the two dogs, a black greyhound and a spaniel nearly white, the one with his face up to the sun, and the other snuffing amongst the grass and stones, and my lord leaning over the fountain, which was bubbling audibly.

That is all, and that is enough. The novelist of this year of grace has fallen into the same delusion as the stage-manager, that elaborate and historically accurate setting is an essential. But if the characterization be vital, and the tale compelling in its interest, the rest is leather and prunella. Shakespeare's auditors needed nothing more than a signboard to start their imaginations. In our own day, Ben Greet has cut his scenery down to scarcely more than that irreducible minimum; and yet his performances do not suffer. The play's the thing. Our novelists may, without going to extremes, take a lesson from Mr. Greet and from the older masters of the story-teller's craft, and learn to distinguish between the essence and the accidents.

THE INTERPRETER OF GRAFT.

When, six or seven years ago, a volume called "The World of Graft," describing the life of the "underworld," first attracted notice, the ordinary respectable readers had to find out what the last word of the title meant. They learned that it was a sort of thieves' Latin for the ill-gotten gains of the powers that prey. It applied to the petty thief's takings, the swindler's gains, the gambler's winnings, the corrupt policeman's hush-money. But there was some fascination about the word. It began to appear in respectable company. Gradually it lost its quotation marks. It lost its original meaning at the same time. The term "grafter" came to be reserved for the unfaithful employee or public servant, the purchasing agent who accepted secret commissions, the legislator who sold his vote, the official who held an interest in public contracts. With that meaning, the word passed the stage of slang within an almost incredibly short period, and as yet shows no signs of disappearing from our speech. That word is the real monument of Josiah Flynt Willard, "Josiah Flynt," as he signed himself, who died Monday at Chicago. The term with which he enriched the language seems destined to live much longer than the studies of criminal and semi-criminal life which first contained it.

It was no new thing for a man of good family and education to become a vagabond by choice. Not to mention Sir Richard Burton in the Orient, the gypsy studies of Borrow and Charles Godfrey Leland have a permanent place in literature. To every one who possesses either intellectual curiosity or love of adventure there is an appeal in this kind of exploration that does not record its achievement on the map—in the discovery of new worlds almost at one's doorstep. Balboa had no finer moment than Leland when he found in the tinker's jargon a language, which was unknown and yet which was spoken along the roads he had trodden all his life.

Josiah Flynt had nothing in common with the dilettante sociologists who every now and then hold their noses, plunge into the human cesspool, and, climbing out, presently spray themselves and hurry off to write their experiences. Richard Harding Davis once lived, as we know, disguised "among the thieves of Philadelphia." Certainly, he has never gone back to them from choice. Richard Whiteing and Arthur Morrison have interpreted their London of mean streets, with only such concession to the ways of the people who became their characters as Dickens and a hundred other writers have made. Flynt, however, could be called quite as truly a tramp with a gift for expression as a literary man who became an amateur tramp.

He thus belongs at the opposite pole from the sociological investigators who play the part of the honest workingman. Prof. Walter A. Wyckoff spent eighteen months doing odd jobs throughout the country. His accounts of that period were highly interesting, but they hardly pretended to interpret the workingman's psychology. The idea that his trials and privations are of his own making, and that they could be terminated in twenty minutes by a telegram, is ever with his readers. They find him in difficulties which would not be such for the ordinary "worker" he pretended to be. A man who does chores about a summer hotel and refuses to accept the tips which are a regular and expected feature of that kind of employment, an unemployed laborer who refuses the refreshment offered by the free-lunch counter, are not typical of anything or anybody. Similarly, Mrs. Van Vorst could mark an emotional crisis by putting in parallel columns the cost of the clothes she took off and of those she put on when she went to look for work in factories. It was a crisis for her, no doubt, but it would not have been to "the woman who toils" for a living or to any of Josiah Flynt's people, outcasts, criminals, and semi-criminals, abnormalities generally.

In dealing with this class he lacked the genius really to ennoble his narratives, however vivid and searching they might be. Pity and terror were not the emotions they aroused; rather, plain curiosity. Such influence as they may have had was in their disclosure of corrupt alliances between the criminal and the officers of the law. Like any ordinary "exposer," he encountered for a time the wrath of those whom he had criticised. For example, after his account of crime in New York was published, our whole police force was hunting him unsuccessfully. But even in this public service Flynt was doing only what Dr. Parkhurst did a few years previous by a brief personal investigation of the evil of the city.

Voluntary vagabondage will exist so long as "the call of the open road" is heard. There will be scholar gypsies and "wander-lovers." Flynt by nature must have belonged to the restless tribe, yet the journeys on which he took his readers were, after all, little more than protracted slumming tours.

OUR CHAMBER MUSIC.

The attention of the whole world of music has been drawn to this city because of the opening of a second grand opera house. Yet Oscar Hammerstein's venture is no better index of New York's extraordinary musical growth than is the development of our chamber music. It is fourteen years since the Kneisel Quartet gave its first series of concerts here, in an almost virgin field. True, there had been quartets before theirs, and irregular chamber music concerts for forty years. Yet the permanent development of this form of music must date from the arrival of these great artists. The generosity of Major Henry L. Higginson of Boston made possible their venture, for which musical America owes him a debt that can never be liqui-

dated. And when these performers found it desirable to sever their connection with the Boston Symphony Orchestra, Major Higginson again proved his breadth of view by freely granting their wish, even though it meant a great loss to the orchestra for which he has made such sacrifices.

Now, besides the Kneisels, we have the Olive Mead, the Dannreuther, the Kaltenborn, the Flonzaley, and the Marum quartets, all giving concerts in this and other cities, and all worthy of respect, as is the new Boston Symphony Quartet, of which Prof. Willy Hess is leader. None of them ranks, of course, with the Kneisels, and none is nearer to their standard than the Olive Mead Quartet. This is not only an organization of women, but has the distinction of being the most thoroughly American quartet of them all. Miss Mead herself never even studied abroad, but learned her art entirely from Kneisel himself. The fact may indicate that hereafter we shall not be compelled to draw upon Europe for our best chamber-music players. The concerts of this club are not only well attended here, but are in demand in many places—a result of the pioneer work of the Kneisels. They early ventured into cities where chamber music was unheard of, and the term "orchestral concerts" generally meant at its best a Sousa or a Duss. The other quartets are also popular in the good sense of the word. At schools and colleges and private entertainments their services are sought by really musical people.

If the Kneisel concerts in this city have begun to be in a sense "fashionable," they draw none the less the pick of our music lovers, and in such numbers that it even looks as if Mendelssohn Hall would soon be too small. Since chamber music does not appeal to the musical masses, this appreciation of our quartets is in itself evidence of the improvement of American taste. Great dynamic or dramatic effects are not to be obtained or desired in a small hall. It is the finish of the players, their high artistic skill, which counts. Only by endless rehearsing and constant practice can the high-water mark of ensemble-playing be reached, and then only in case the artists have especial gifts to start with. Tonal and color effects are to be obtained only by the most careful correlation of the instruments; by unceasing study of intonations. Correctness of phrasing and of notes is merely the first requisite in the successful chamber-music player.

Nor must it be thought that chamber music appeals only to those whose money has given them unusual opportunities for perfecting a taste. The Auxiliary Club of the People's Symphony Society has recognized the extent of the interest in music, and is engaged in an excellent undertaking—supplying chamber music to people of small means. These concerts, generally given in Cooper Union, may be attended by two persons for 25 cents, the club making up the deficit in the cost. It has availed itself of the existing organizations with marked success, and, like the People's Symphony Society, deserves greater support from the public than it has yet received.

While the quartets now furnish the most popular chamber concerts, the success of the Margulies and Severn Trio clubs must not be overlooked. In this field we may expect still further progress. As for other forms of chamber music—the Petchnikoff concert last week, at which husband and wife, both violinists, played, proves that there is still room for novelties. Last winter eight wood-wind players of the Boston Symphony Orchestra gave concerts in this city, with fair success; but their work showed clearly that performers of high rank in orchestral work have still much to learn when they turn to chamber music.

All in all, New Yorkers and Americans generally may be proud of the support given to chamber music. It means much to the musician, and will eventually mean much for the American composer.

CANADIAN LITERATURE IN 1906.

OTTAWA, January 15.

Surveying Canada's literary output during the year just closed, one is struck not so much with the high level reached by any one writer or any one book, as by the wide range of this young country's intellectual activities, and the average merit of the whole both in matter and manner. Despite her preoccupation with material affairs, in the development of her vast natural resources, Canada has taken a creditable place in the year's production of books. Perhaps the most striking characteristic of recent Canadian literature is that spirit of optimism which is such a marked feature of Canadian national life.

In poetry the field is confined to names that were already familiar. During the past twelvemonth books of verse have been published by William Wilfred Campbell, Bliss Carman, Duncan Campbell Scott, Isabella Valency Crawford, Vernon Nott, Elizabeth Roberts MacDonald, and Frederick George Scott. One notable omission is the name of that versatile Canadian, Charles G. D. Roberts, who has, temporarily at least, abandoned poetry for fiction. We miss, too, the genial interpreter of the French-Canadian *habitant*, Dr. William Henry Drummond. In his "Collected Poems" (Revell), Dr. Campbell has brought together all that he cares to preserve of his earlier verse, with a good deal of new matter published here for the first time. These new poems represent a mature mind, as the others were the product of youth. They reveal a broader outlook upon life, a more definite message, with perhaps less of the lyrical charm of the earlier poems. Bliss Carman has been an exile from his native land for many years, but he has never forgotten the Canadian provinces by the sea where he spent his boyhood. Through all that he has written there runs the memory of familiar scenes in that romantic country about the head of the Bay of Fundy. In his "Pipes of Pan" (L. C. Page & Co.), a reprint of several recent volumes, he expresses again and again the two articles of his faith which he has elsewhere described as the Kinship of Nature and the Poetry of Life. The swing of the sea, the indescribable charm of the northern woods, the witchery of the beautiful Acadian valleys—these and the joy of living are with him always. In his "New World Lyrics" (Morang), and in "Via Borealis" (Tyrrell), Duncan Campbell Scott has made his own a field that had never before been touched in verse, except perhaps in those inimitable folk-songs that are part of the life of French Canada. This is the virgin land of the Far North, the land where the moose and the bear roam free, where Ojibway and fur-trader meet on the banks of the Mattagami. Nearly a quarter of a century ago a little book of verse was published at Toronto, which attracted no notice at the time, and has long since been forgotten. The "Collected Poems" of Isabella Valency Crawford (Briggs) contains all that was included in the earlier book, with a number of other poems gathered from Canadian periodicals. Neither has this later volume gained attention; yet here are verses that have never been equalled by any other Canadian poet. Frederick George Scott, in his "Hymn of Empire" (Briggs), strikes effectively the chords of Canadian patriotism, but in a little lyric toward the end of his book he reaches something deeper even than patriotism, that yearning for "the touch of a vanished hand" that belongs to all races and all times. A few years ago a little book of verse appeared, of some intrinsic value, but chiefly interesting as the product of a family of poets. The verses were by William Carman Roberts, Theodore Roberts, and Elizabeth Roberts MacDonald, and they were accompanied by a prologue by Charles Roberts and an epilogue by his cousin, Bliss Carman. In "Dream Verses" (Page) Mrs. Macdonald has boldly adventured alone. While these verses do not mark any very decided advance on those credited to her in the earlier volume, they attract one by their gracious simplicity. Vernon Nott of Montreal is credited with four books of verse, the last of which, "Summer Days" (Greening) appeared a month or two ago. None of these poems rises much above mediocrity. Their value rests mainly upon their sincerity.

One of the evidences of Canada's rise toward nationhood is the increasing interest taken in the early history of the country. The romantic side of early Canadian history has appealed to more than one of her novelists. Its more serious side is taking an increasing hold upon the minds of the people. In her "Pathfinders of the West" and "Vikings of the Pacific" Miss Agnes Laut has revealed the richness of this field. Not every one possesses her picturesque touch, but, in more prosaic fashion, other Canadians are helping to dig the ore that has remained for so many years hidden and forgotten. The value of the work now

being done in the Dominion Archives has already been explained in the *Nation*. Of almost equal importance is that of the Archives of the Province of Ontario, the third report of which was published late in December. The 1906 transactions of the Royal Society of Canada, of the Ontario Historical Society, the Literary and Historical Society of Quebec, and other similar organizations, added important material to Canadian historical literature. Of peculiar interest are Benjamin Sulte's "Origin of the French-Canadians," and Dr. S. E. Dawson's "Brest on the Quebec Labrador"—read before the Royal Society. The Champlain Society is doing excellent work in the editing of historical manuscripts and the publication of annotated reprints of early Canadian books. Several valuable historical articles by Canadians have been prepared for the new edition of the "Encyclopædia Britannica," notably the general article on Canadian history, by Prof. C. W. Colby of McGill University, and Prof. G. M. Wrong of Toronto University. Dr. Arthur Doughty and L. J. Burpee have covered French- and English-Canadian literature respectively. W. L. Grant, who has done important editorial work on the new "Britannica," is also editing Champlain's Voyages for the series planned by the American Historical Association. Another book of somewhat similar character, by L. J. Burpee, is "The Search for the Western Sea," covering the exploration of Northwestern America.

In Canadian biography three important volumes appeared during the year in Morang's Makers of Canada Series: Dr. W. D. Le Sueur's "Frontenac," John Lewis's "George Brown," and Le Blond de Brumath's "Laval." Dr. Hannay's "Wilmot and Tilley" and Bradley's "Lord Dorchester" are ready for publication. The Rev. Charles W. Gordon (better known as Ralph Connor) has prepared a life of Dr. Robertson, the eminent Canadian divine; and the Hon. J. W. Longley is editing the Letters of Joseph Howe, one of the fathers of Confederation.

In fiction the Rev. C. W. Gordon has brought out a new novel, "The Doctor," already criticised in the *Nation*. Dr. Wilfred Campbell, after winning a name for himself as a poet, has now followed his fellow-Canadian, Charles Roberts, into fiction. His "Ian of the Orcades," is a romance of old Scotland, covering the same period as the "Fair Maid of Perth." Mr. Roberts himself has written two books of fiction during the year, one a very readable novel, "The Heart that Knows," the other a good boys' story, "The Cruise of the Dido." Another first-rate book for boys is Norman Duncan's "Billy Topsail." Mrs. Everard Cotes returns to the field that she has made so peculiarly her own in "Set in Authority"; Harvey J. O'Higgins in "Don-a-Dreams," Marion Keith in "The Silver Maple," R. L. Richardson in "The Camerons of Bruce," Dr. Price Brown in "In the Van," and Mr. Knowles in "St. Cuthbert's," have taken characteristic Canadian scenes as the setting for their stories. The quiet humor that is characteristic of Sydney Preston's work is a marked feature of his "On Common Ground." W. A. Fraser brings together a further collection of his very readable short stories in "Thirteen Men." A Canadian edition of Jean McIlwraith's "Roderick Campbell" has been issued. This brief survey leaves out of account a number of Canadian books of a scientific or technical character.

The most important contribution to French-Canadian literature in 1906 was l'Abbé G. Dugas's "Histoire de l'Ouest Canadien de 1822 à 1869" (Beauchemin). This is a continuation of his valuable work, published ten years ago, "L'Ouest Canadien, sa découverte par le sieur de la Vérendrye, son exploitation par les compagnies de traiteurs jusqu'à l'année 1822." The significance of La Vérendrye's Western explorations is being recognized more and more by students of Canadian history, as witness Judge Prud'homme's scholarly memoir in the Transactions of the Royal Society, "Pierre Gaultier de Varennes, Sieur de La Vérendrye, Découvreur du Nord-Ouest, 1685-1749." In the same transactions Dr. A. D. DeCelles, librarian of Parliament, pays a tribute of appreciation to the memory of that scholarly Canadian churchman, l'Abbé Bourassa; Camille Roy contributes an elaborate critical paper, "Étude sur l'histoire de la Littérature canadienne, 1800-1820," and in an appendix is found an exhaustive bibliography, covering 161 pages, compiled by Dr. N. E. Dionne, librarian of the legislative library, Quebec, "Inventaire chronologique des ouvrages publiés à l'étranger dans diverses langues sur la Nouvelle-France et sur la province de Québec, depuis la découverte du Canada jusqu'à nos jours, 1534-1906." During 1906, Pierre Georges Roy of Quebec added another to his genealogical studies of French-Canadian families, this volume being devoted to the Panet family, which has given many eminent men to Canadian public life. During the year Beauchemin of Montreal brought out a book of verse by the late Alfred Garneau. In December last the *Revue Canadienne* completed its forty-second year, a remarkable record for a colonial periodical with only a very limited field to appeal to. In the character of its historical, critical, and descriptive articles it is far ahead of any other review published at any time in Canada. L. J. B.

Correspondence.

THE VALUE OF THE DOCTOR'S DEGREE.

TO THE EDITOR OF THE NATION:

SIR: Prof. H. A. Todd of Columbia chose a timely topic for his recent address before the Modern Language Association at New Haven. In nearly all that he said on the "Function of the Doctor's Degree" he expressed what may be termed the orthodox German view. The ordinary candidate for the degree should not, according to Professor Todd, spend more than a year on the actual writing of his dissertation, and all successful dissertations should be printed. To be sure, the American thesis should aim to combine the solidity of German scholarship with the French finish of form. It is to be feared, however, that satisfactory doctors' theses are not to be compounded by any such easy recipe. Most German theses, on literary subjects at least, are as flimsy in substance as they are crude in form, and finish of form in the French thesis has value only in so far as it is the outer sign of maturity of substance. One can scarcely contemplate the German theses as they pour by hundreds into a large library without a sort of intellectual nausea. To adopt Professor Todd's suggestion as to printing would, under present conditions, simply mean adding an American tributary to the stream.

It is not so much, however, what Professor Todd actually said that is open to objection as what he took for granted. Hope for literary study in this country would seem to lie in questioning the very things that to our philologists of German training seem self-evident. Thus Professor Todd assumed not only that the chief aim of our graduate schools should be to train investigators, but that our graduate students have as a rule a preparation sufficiently broad to justify them in embarking at once on their investigations. He assumed—and this is perhaps the underlying assumption of the whole German school—that there are two kinds of scholars: the receptive scholar, who takes things on authority and is still in his intellectual nonage; and the originative scholar, who proves that he is intellectually of age by independent research. But this is to overlook the all-important, intermediary stage when the mind is neither passively receptive nor again originative, but is assimilative in the active and masculine sense. It is this oversight which leads to the exaggerated estimate of the man who brings forward new material as compared with the man who has really assimilated the old. In a recent paper on "Aspects of Greek Conservatism," Prof. H. W. Smyth of Harvard points out how perfect a balance was maintained in Greek literature between the forces of tradition and the claims of originality, so that Greek literature at its best is a kind of creative imitation. It is precisely the lack of this creative imitation that is the special weakness of our contemporary literature, just as the lack of creative assimilation is the special weakness of our contemporary scholarship. A pseudo-originality is equally the bane of both.

The trouble with most of our imitation of German scholarship is that it has not been creative, but servile. Our practice in regard to the doctor's degree might at least have been tempered by hints from England and France, both of them countries with older literary traditions than Germany. For instance, a First Class at Oxford has little in common with our undergraduate honors, but offers a training comparable in difficulty to that of the doctorate. This training, however, is of an entirely different kind; it is at once a test of humane assimilation, and a discipline in thoroughness and accuracy. The Frenchman, again, who has gained in the *lycée* the educational equivalent of the *gymnasium*, cannot, like the German, proceed at once to specialize; he must in all cases receive the *licence* and in nearly all cases actually does receive the *agrégation*—involving years of assimilative work—before he arrives at his special investigation. Even with these restrictions, Sainte-Beuve, himself one of the greatest and most accurate of investigators, complained of the harm done to humane letters in France by an undue emphasis on "originality" and research. In our own time, the same complaint has been repeated with less amenity by Brunetière. As Sainte-Beuve says, "L'ère des scholiastes

et commentateurs se rouvre et recommence." One cannot help being reminded of Sainte-Beuve's prophecies of a new Alexandrianism by the poverty of real intellectual achievement on the part of our modern language teachers, as compared with their eager interest in such subjects as the making of concordances, dialect-study, and spelling reform.

It is a pity that more time cannot be spared from these topics to consider not only the best training for the modern language student, but the field that this training should cover; above all, the question as to the relative importance of the mediæval and the classical backgrounds. In theory, several of our institutions—especially Harvard—recognize the value of the classical background. But practically when a student is once started on his bit of mediæval research, he not only has to forego his classics, but in preparing for his doctor's examination often has to cram from manuals a hasty knowledge of the very parts of the modern field that he is afterward to teach. Ordinarily, a student will be forced to make a choice between the Middle Ages and the classics; in only the rarest cases can he really master both. Now a man may be properly qualified to teach seventeenth century French though he has nothing more than a general notion of the Middle Ages; but he cannot be so qualified if he does not know at first hand his Latin classics at least. The break with the mediæval past was far less abrupt in England than in France, yet even for the student of English literature a knowledge of the Middle Ages before Chaucer is vastly less important than a thorough grounding in the classics.

This being so, one can only deplore the complacency with which modern language teachers as a body seem to regard the rapid decline of Greek studies during the past ten years, as well as the prospect of a demand in the near future for an A.B. degree without Latin. To talk in this connection, as some of them are doing, of inevitable tendencies and "manifest destiny," is simply to surrender to what is cheapest in the spirit of the present age. The current utilitarianism which appears to exalt the study of the modern at the expense of the ancient languages will, if yielded to, deprive this very study of a large part of its seriousness and dignity. President Hadley may, as he said in his New Haven address, prefer "Wilhelm Meister," to Plato; but no one, it should be remembered, would be more offended by the doctrine implied in this utterance than Goethe himself.

The modern languages, then, if they are to deserve to rank as humanities, should be taught so as to insure broad assimilative reading; and they should be taught with reference to the classical background. In a previous paper in the *Nation* (September 20, 1906) I expressed the opinion that these ends could be best attained by a comprehensive plan for graduate and undergraduate honors, undergraduate honors being so used as to give seriousness to the A.B. degree, and graduate honors to the A.M. The problem, however, is not so much to devise some new form of academic machinery as to change the spirit that is responsible for the present superstition of the doctor's degree. This will be a necessary preliminary to the liberalizing of our study of either the ancient or modern languages.

IRVING BABBITT.

Harvard University, January 14.

BACON ON SPELLING REFORM.

To the Editor of The Nation:

Sir: In Miss Grace Norton's letter in your issue of January 3 she quoted a very interesting passage from Howell's Letters in favor of reform in spelling; and I suspect that some of your readers may be interested in the opinion of another and greater seventeenth-century writer. With his unerring instinct in going to the heart of things, Francis Bacon takes a hand in this discussion himself, and in chapter i. of the sixth book of the "De Augmentis Scientiarum" he says:

> And with regard to the common orthography itself, a controversy and question has been raised among us, namely, whether words ought to be written as they are pronounced, or in the usual way. But this apparently reformed style of writing (viz., in which the spelling should agree with the pronunciation) belongs to the class of unprofitable subtleties. For the pronunciation itself is continually changing; it does not remain fixed; and the derivations of words, especially from foreign tongues, are thereby completely obscured. And as the spelling of words according to the fashion is no check at all upon the fashion of pronunciation, but leaves it free, to what purpose is this innovation?

This seems to me to be the "last word"; but if spelling can be separated from pronunciation I would suggest that if the reformers wish to persuade the public to use their list of words, they will do well to direct their attack upon the makers of dictionaries, and content themselves with obtaining the admission of their reformed spellings, each in its proper place, but subordinated to the already current form. Litigious persons referring to a dictionary will thus find that the reformed spelling is a legitimate variant. The whole question reminds me of a passage in Crabb Robinson's "Diary," in which the Rev. Dr. Rees describes his visit, in conjunction with a committee of two other Noncomformist divines, to Lord Chancellor Thurlow. Their object was to ask his lordship if they could count on his support in the event of their obtaining the introduction of a bill into Parliament for the repeal of the Corporation and Test Act. Thurlow's reply was:

> Gentlemen, I'm against you, by God. I am for the Established church, damn me! Not that I have any more regard for the Established Church than for any other church, but because *it is* Established. And if you can get your damned religion established, I'll be for that, too!

I suspect that the sanity of both Bacon and Thurlow would become apparent if we could listen to the *pronunciation* by Messrs. Murray, Skeat, Butler, Brander Matthews, Calvin Thomas, and Roosevelt of the list of words their spelling of which they wish us to adopt.

WILLIAM S. BOOTH.

Boston, January 17.

PROFESSOR WATSON'S EXPERIMENTS ON RATS DEFENDED.

To the Editor of The Nation:

Sir: The recent criticisms of the *Nation* upon the experiments by Dr. John B. Watson on rats are evidently based upon inaccurate newspaper reports.

The purpose of Dr. Watson's work has been misrepresented. The discovery of a mysterious "sixth sense" was not his aim, although in his general studies he has found that rats apparently possess a certain sensibility to the points of the compass. But this discovery has no connection whatever with his main experiments, save that it happened to be mentioned in the same report. In common with many other comparative psychologists and biologists Dr. Watson is carrying on extended observations upon that most pregnant of modern problems, the evolution of intelligence. His own special field has been that of the mammalian mind, a field which obviously lies closest to the domain of human consciousness. In this field it is not often necessary to resort to vivisection, but conclusive evidence on certain points occasionally requires it.

Mind is an endowment for steering organisms through their chance experiences, it operates by the use of sensations. To get exact evidence of the character of the sensations, and thus of the mechanism of mental control, it is sometimes necessary to make such experiments as Dr. Watson's. If one regards the experimentation as cruel (as the writer does not), its justification would be found in its contribution to the foundations of genetic psychology upon which pedagogy, hygiene, and psychiatry largely rest—especially those forms of psychiatry dealing with arrested mental development. There is already reason to congratulate the science on its practical value in these directions.

As to the experiments themselves, they were conducted with the same scrupulous care as regards anæsthesia and asepsis that characterizes the operations of a humane surgeon. I have taken special pains to inquire into this. The alleged "freezing" of the animals' feet, of which so many grewsome pictures have been drawn in the daily papers, in point of fact consisted in the slight use of an ethyl-chloride spray—a device long employed by surgeons for producing *a very transient dermal anæsthesia*, leaving no after effects of damage or pain. Other measures have been similarly misrepresented. The animals recover from the operations almost immediately, show prodigious appetites, and promptly return to play and business with their companions. Neither the editor of the *Nation* nor any one else could by their behavior distinguish the normal rats from those upon whom the operations have been made. The latter are fat, strong, and vigorous, and apparently do everything which their normal brothers do, and with equal facility.

It was because previous experimentation had seemingly showed that the so-called higher senses were of little or no consequence for these animals under conditions of captivity that the vivisection experiments were felt to be essential. Could it be that animals of so much apparent intelligence really get along almost wholly by means of their "movement" and organic sensations? If so, primitive mammalian mind is quite a different sort of thing from the common psychological conception of it, and the outcome of the experiments is apparently to show that such is the fact.

If we assume as a matter of course that we are at liberty to remove rats by linger-

ing poisons, by the slow torture of rat-traps, by drowning, or by any other means that will be effective, surely there is not the slightest ground for blame when an animal is with proper care deprived of sense processes whose absence does not noticeably alter his behavior or happiness. Nor is the attitude of the critic wholly consistent who objects to these anæsthetic experiments while accepting complacently the annual wounding by hunters of thousands of birds and animals that escape to suffer for indefinite periods.

One familiar with the rats with which Dr. Watson has experimented must regard them indeed as exceptionally favored rather than otherwise. They live in plenty, they show a tame and amiable attitude toward those who handle them; and are they not protected from the spring-trap, the rat-terrier, the slow poison of the public that is less discriminating and far more cruel than the careful scientific investigator?

J. Mark Baldwin.

Johns Hopkins University, Baltimore, January 15.

OPEN SHELVES.

To the Editor of The Nation:

Sir: The article in your issue of January 10 (p. 34), stating that "American librarians" are "compelled to confess" that "the 'open-shelf' system is proving a failure" in our libraries, seems to me somewhat pessimistic and overdrawn. We must remember that the open-shelf system is comparatively new, and has been given a fair trial in but few of the larger libraries, so that it seems a little premature to confess failure. We must also remember that the great majority of librarians and library trustees are opposed to the system, and will not give it a fair trial—indeed, many of them, owing to the construction of their buildings, where the stack-room plays so important a part, cannot give it a trial. A member of the Massachusetts State Library Commission, at a Library Club meeting, within three years, said that he thought the open-shelf system was wrong, because it tempted the young to steal. A. R. Spofford, in his work, "A Book for All Readers" (p. 221), states the case of the opposition thus: "The open-shelf system requires far more space, and is more expensive; and that, however desirable its general adoption, is utterly impracticable." My own experience has been that the keenest opponents of open shelves are those who have never given the system a trial. It is, like many other library questions, one that should not be condemned absolutely because there have been some cases of failure.

Under ideal conditions, the statement that the unscholarly reader "stands ten times the chance of making a wise selection when he is limited to a room in which there are only one-tenth as many books, and that tenth a selection of the best," may be perfectly true; but where are ideal conditions to be found? Certainly not in our libraries, as yet. We have been training people to use books during the past ten or fifteen years as never before. We open children's libraries where every book is accessible, but when these children become adults we refuse them access to the shelves, on the ground that they are not to be trusted to select their own reading. And what are we to say to that large and ever-growing class of technically and professionally educated people who are already knocking at our doors for access to the shelves? No librarian living can meet the needs of these people by a "selection of best books."

It is a very serious question, deserving careful study and experimentation on a large scale before we confess failure. At the Clark University library we have had the open-shelf system since its opening, in 1889, and it has been an unqualified success. We check up our books once a year, and our losses have not averaged $5 a year.

Louis N. Wilson.

Clark University, Worcester, Mass., January 15.

[We hardly need to point out that children's libraries are, in fact, select libraries; and that as regards open shelves the problem of the college library is not exactly that of the public library.—Ed. Nation.]

A. C. BENSON ON GISSING.

To the Editor of The Nation:

Sir: Apropos of the article on George Gissing in your issue of Jannary 17, perhaps those who have not seen Benson's paragraph upon him in "The Upton Letters" will be glad to have their attention called to it:

> Then there is another writer, lately dead, alas! whose books I used to read with absorbing interest, George Gissing. They had, when he treated of his own peculiar stratum, the same quality of hard reality which I value most of all in a work of fiction. The actors were not so much vulgar as underbred; their ambitions and tastes were often deplorable. But one felt that they were real people. The wall of the suburban villa was gently removed, and the life was before your eyes. The moment he strayed from that *milieu*, the books became fantastic and unreal. But in the last two books, "By the Ionian Sea" and the "Papers of Henry Rycroft," Gissing stepped into a new province, and produced exquisitely beautiful and poetical idealistic literature.

Albert S. Cook.

Yale University, January 19.

THE ABSURDITIES OF THE TARIFF.

To the Editor of The Nation:

Sir: The ineptitudes of our tariff are an inexhaustible source of gaiety, or affliction. I am usually patient under them. I even pay, without a murumur, duty on complimentary copies of my own books which, as New York won't look at them, I have to publish in London. But my latest experience transcends my patience, and I must air my grievance. I have just had sent me my Master's hood (old and used) of Cambridge University by post from England. I was assessed for 60 per cent. on this as an article of wearing apparel, which, rationally speaking, it is not. I protested; in vain. I then pointed out that *Hoods* figure on the tariff at 20 per cent., and that in any case that was the proper charge. But, no; evidently, in the opinion of the collector of customs, this was merely a base subterfuge and evasion on my part; my hood was not the sort of hood that has commercial currency and I must therefore be pitchforked into *Wearing Apparel*! I blush when I think of the epithets which the research student of the year 2000 will bestow on our civilization.

Cambridge, Mass., January 16.

Notes.

Macmillan's list of spring publications is long and interesting. It includes the following: "Prima Donna," by F. Marion Crawford; "Spirit Lake," by Arthur Heming; "Before Adam," and "Love of Life," by Jack London; "The Gulf," by John Luther Long; "The Kinsman," by Mrs. Alfred Sidgwick; "Family Secrets," by Marion Foster Washburne; "Poppea of the Post Office," by Mabel Osgood Wright; "Ghetto Comedies," by Israel Zangwill; "The Earth's Bounty," by Mrs. Kate Saint Maur; "The Birth of the Nation," by Mrs. Roger A. Pryor; "A Book of Vegetables," by Allen French; "Problems of the Panama Canal," by Henry L. Abbot; "Three Acres and Liberty," by Bolton Hall; "Birdcraft," by Mabel Osgood Wright; "Life and Letters of Edwin Lawrence Godkin," edited by Rollo Ogden; "Mrs. Gaskell," by Clement Shorter; "Charles Kingsley," by G. K. Chesterton; "Shakespeare," by Prof. Walter Raleigh; "Emerson," by George Edward Woodberry; "The Life and Writings of Benjamin Franklin," vol. x., edited by Albert H. Smyth; "A History of the United States," vol. ii., by Edward Channing; "A History of Rome in the Middle Ages," vol. i., by F. Marion Crawford and Prof. Giuseppe Tomasetti; "A History of the Inquisition of Spain," vol. iii., by Henry Charles Lea, LL.D.; "The Cambridge Modern History," vol. x.; "The American Colonies in the Seventeenth Century," vol. iii., by Herbert L. Osgood; "Vancouver's Discovery of Puget Sound," by Edmond S. Meany; "The Development of Shakespeare as a Dramatist," by George P. Baker; "The Modern Reader's Bible," one volume, edited by Richard G. Moulton; "A Flower of Old Japan, and Other Poems," by Alfred Noyes; "Lyrical and Dramatic Poems," vol. ii., by W. B. Yeats; "Sappho and Phaon," by Percy Mackaye; "Her Own Way," and "The Girl and the Judge," by Clyde Fitch; "The Truce in the East and the Aftermath," by L. Putnam Weale; "Essentials of Economic Theory," by John Bates Clark; "The Government of European Cities," by William Bennett Munro; "Races and Immigration in America," by John R. Commons; "Federal Power Over Carriers and Corporations," by F. Parmalee Prentice; "Practical Problems in Banking and Currency," edited by Walter Henry Hull; "The International Law and Diplomacy of the Russo-Japanese War," by A. S. Mower Martin and Wilfred Campbell; "English Costume," by Dion Clayton Calthrop; "Ireland," by Francis S. Walker, and Frank Mathew.

J. A. Farrer has written a study of "Literary Forgeries," including the "Eikon Basilike," Chatterton's poems, and the forged Letters of Byron and Shelley. Messrs. Longman have the book in press.

Two important works are soon to be published by M. Champion of Paris: "Mélanges, Linguistiques," by the late Gaston Paris, and the second volume of "Les Français Italianisants au XVIe Siècle," by Émile Picot.

The German National Free Mason Association proposes to celebrate its fiftieth anniversary in September, 1911, by the publication of a complete bibliography of Free Mason literature, and has for this purpose set aside as a preliminary the sum of 15,000 marks. Down to 1750 the work is to be an international bibliography, but from 1750 to the present it will be limited to publications in the German language.

The *Geographical Journal* for January opens with an address by Sir G. T. Goldie in Edinburgh at the award of the Livingstone medal on geographical ideals. He characterizes Livingstone as the ideal explorer, and Reclus as the ideal cartographer. Dr. Stein sends from Central Asia an account of his exploration work, the most interesting feature of which was the discovery of a large number of manuscripts on paper, in Sanskrit, Chinese, and the "unknown" language of old Khotan, besides many wooden tablets inscribed in the same language, and in Tibetan. "Some excellently preserved large rolls of a Buddhistic text in Chinese, having on the reverse what is evidently its translation into the 'unknown' language, may prove to furnish the long-desired clue for the decipherment of the latter." Among the other contents are an illustrated description by V. Cornish of progressive waves in rivers, and a paper on the study of social geography read at the meeting of the British Association by Prof. G. W. Hoke of the Ohio State Normal College.

The first volume of the Tudor and Stuart Library, published at the Clarendon Press, contains a literal reprint of "Howell's Devises" (1581), with an Introduction by Walter Raleigh. The titles of Howell's known works are: "The Arbor of Amitie, wherein is comprised pleasant Poems and pretie Poesies, set foorth by Thomas Howell Gentleman," 1568; "Newe Sonets, and pretie Pamphlets, Written by Thomas Howell, Gentelman. Newly augmented, corrected and amended," licensed 1567-8; "H. His Devises, for his owne exercise and his Friends pleasure," 1581. Of these only a single original copy of each is known to exist, although they were all reprinted by Dr. Grosart in 1879. Professor Raleigh's edition gives us the best and most characteristic volume of one of that mob of gentlemen who with rather a thin music filled the interval between Surrey and Spenser. Their works are not for the general, but every scholar and wide reader of English will welcome this help to their acquaintance. The editor calls attention to the reminiscences of Chaucer in Howell, and points out the fact that the earliest extant notice of Sir Philip Sidney's "Arcadia" occurs in the lines "Written to a most excellent Booke, full of rare invention."

"The Complete Poetical Works of Thomas Hood," edited, with notes, by Walter Jerrold, is added to the excellent Oxford edition of the poets—a volume to set beside Barham's "Ingoldsby Legends," Combe's "Dr. Syntax," and a few other prime humorists from that age. Mr. Jerrold has provided a more comprehensive edition of Hood than has hitherto been available, searching out from the magazines whatever could be certainly attributed to him, and adding half a dozen new poems from manuscript. We confess ourselves in general hostile to this mania for raking up insignificant matter and adding it to the works of writers who already suffer from the preservation of too much that is mediocre. The result of such accumulations is to lessen the number of an author's readers and bury him ever deeper in oblivion. What is needed most of all now is a series of judiciously selected (not expurgated) editions, which would lighten the labor of carrying the past with us. Such a volume, in the case of Hood, would bring into emphasis his few poems of strangely penetrating pathos and aerial fancy and would separate from the mass of stuff written for some "funny corner" the poems whose wit is perennially fresh. We should like, by the way, a study of Hood's wit and pathos which would show how they often turn on the same faculty of playing with the meaning of words. For the rest, we have nothing but praise for the present edition of Hood; the notes are capital, and the make-up of the volume attractive.

"Correspondence of Two Brothers," by Lady Guendolen Ramsden, is just issued by Longmans, Green & Co. The two brothers, whose letters make up a good deal of this portly volume, but by no means all of it, are Lady Guendolen Ramsden's grandfather, the eleventh Duke of Somerset, and her great-uncle, Lord Webb Seymour. The period covered reaches from 1775 to 1853, but at either end the matter is thin, and the years 1800 to 1819 yield the bulk of the correspondence. It is a rambling, unkempt book; but it contains some material for historical specialists; and the general reader, who is agile in skipping and has a quick eye for the picturesque and the amusing, may dip into it with no fear of going unrewarded. Both brothers were men of intellect, the Duke distinguishing himself as a mathematician, an antiquarian, and a pioneer in psychical research; while Lord Webb Seymour early gave up "all the ordinary uses of rank and fortune," and retired to the British Boston—Edinburgh, where he remained for the rest of his days, devoting himself to geology, philosophy, and the literary society of the place. On his death Hallam, the historian, wrote a memoir of him, in which he compared him to Marcus Aurelius. The book is not so grave, however, as these facts might suggest. To tell the truth, the brothers' letters are not the most attractive part of it. Lady Guendolen Ramsden has the quality of her defect as an editor. If she is not orderly, neither is she narrow, and her discursiveness is fruitful of many neat glimpses of contemporary society. The Duke and Lord Webb were in touch with not a few people of perennial interest, such as Sir Walter Scott, Madame de Staël, Metternich, and Sydney Smith.

The Burrows Brothers of Cleveland have recently brought out "The Navy of the American Revolution," a small, well-printed duodecimo, into whose narrow compass the author, Charles O. Paullin, Ph.D., has packed an astonishingly succinct and trustworthy account of the administration of the maritime forces of the revolted colonies. Dealing with the creation, organization, and control of the Continental navy and the various State navies in turn, he has emphasized this neglected page of our history rather than the well-known brilliant exploits of a few popular heroes. These, however, he does not ignore, but merely assigns to their due place. The reason why so little was accomplished by the men fighting on shipboard in public and private vessels (at least twice as numerous as those fighting on shore) was never made more clear. As they lacked proper direction and coöperation, nothing better could have been expected. Dr. Paullin's references to authorities are so frequent and scrupulous that his book becomes an indispensable guide to the student of this epoch.

The late Senator John H. Reagan's "Memoirs" (Neale Publishing Co.) are partly dull and partly interesting. Perhaps it would be more accurate to say that Mr. Reagan's recollection of the early days of Texan independence is not particularly lively. And yet these days must have been, in a certain sense, lively enough to furnish many incidents typical of a civilization now happily past. We miss the personal element where this element must have been dominant. As postmaster-general of the Confederacy, however, Mr. Reagan stands on firmer ground, and has written pages that are not without future historical value. We hear the personal note and get some insight into the workings of the Confeder-

ate Cabinet. Written in sensible, straightforward style, these "Memoirs" cover no complaint, reveal no humor; they are the serious expression of a serious man's reminiscences, with the political aspect of things always squarely to the front.

In the "Women of the Confederacy" (Neale Publishing Co.) the Rev. J. L. Underwood has brought together from various sources a number of stories, episodes, "tributes" (an odious word!), bearing on the devotion and courage of the women of the South during the war between the States. We have always believed that to women falls the hardest lot in war, and surely no other women ever had a harder lot than the women of the Confederacy; none ever bore it more uncomplainingly. Whether their cause was right or wrong, they believed in it, and gave it their all. And so they really deserve to-day a little more than Mr. Underwood's well-meant compilation, and when they get their just recognition, it will lie rather in the record itself than in mere words of praise.

From John W. Munson's "Reminiscences of a Mosby Guerrilla" (Moffat, Yard & Co.) it is clear that Mosby's partisan rangers were not soldiers. Col. Mosby himself unquestionably held a Confederate commission; but, if we may trust the account of these pages, his men were time and again more bent on booty than on service. Given a state of war, to kill one's enemy in open combat is legitimate, but to kill him and then take his watch and money, is to practise the trade of a highwayman. There was so much of this sort of thing in Mosby's command as to be undeniably a blot on the reputation of the most daring and skilful rangers that ever rode boot to boot. It is part of the record, however; and, if the author gives expression to it much as if he were describing a bear hunt, we must recollect that his purpose is purely reminiscent, and not the serious one of weighing Mosby's services as part of the sum of Confederate operations.

"Links in My Life on Land and Sea," by J. W. Gambier, Commander Royal Navy (E. P. Dutton & Co.), is a book which some people will enjoy reading. The author is a nephew of Admiral Gambier of Baltic memory. After retiring, he went to Turkey, in the Russo-Turkish war, as naval correspondent of the London *Times*. He writes in a free off-hand manner, and is frequently unrefined, even to coarseness. Knocking about the world, he appears to have visited many out-of-the-way places. His description of Norfolk Island, for instance, is interesting, since we seldom hear of it. There is a curious absence of dates. The reader has to guess in what year this rambling sailor is undergoing his remarkable experiences. If the book has literary merit, we have failed to discover it; or any mark of distinction. The author's comments are, as a rule, commonplace. Yet a kind of devil-may-care tone may render these chapters entertaining to readers who like a slashing way of talking of men and events. As indicating the merits and defects of this rather unusual piece of autobiography, we may quote a single passage, taken at random:

I rushed over to Paris to say goodbye. My American friends were in a small *pension* in the Rue du Colysée, No. 8, and were practically living on the charity of a very noble-minded American millionaire, Mr. Corcoran, who, I believe, kept half the American colony of Southerners going all through the war. I found a well-known French historian hanging about the eldest girl, and instinctively mistrusted him. He was a plausible, sneaking, conceited humbug, and brought great sorrow into that family. I also heard of an extremely wealthy German banker, of Jewish extraction, as paying great attention to the younger, my *fiancée*. But I thought nothing of it, and left again with as light a heart as the prospect of this temporary separation would permit. Could I have foreseen the future, I should have stopped in Paris, called out both men, and have tried to kill them. Page 287.

The third edition of Thomas Kirkup's "History of Socialism" (The Macmillan Co.) has been revised at a few points and enlarged by some forty pages. The first twelve chapters are substantially unchanged, but the thirteenth, treating of the growth of socialism, has been completely rewritten in order to bring it up to date. The concluding chapters deal with the alleged forces now making for the coming of socialism, and review in a dispassionate, if sympathetic, way the philosophy of the movement. Since 1887, when the author published his first work upon the subject, great changes have occurred, both in industrial conditions and in economic opinion, which seem to justify many of his forecasts; and it is not strange that he now speaks with calm assurance of the coming socialistic state. He is singularly free from the exaggerated statement and declamatory style which characterize the writing of so many socialists, and the concluding pages of the present volume show him at his best. Others have written with fuller knowledge of the literature, or from more intimate acquaintance with the practical propaganda, but none have surpassed Mr. Kirkup in philosophical grasp of the essentials of socialism, or have presented the doctrine in more intelligible form.

Francis W. Hirst's "Monopolies, Trusts, and Kartells," which was brought out by Methuen & Company in 1905, is now presented to American readers by E. P. Dutton & Co. So far as we can observe no changes are made in the plates. Persons who believe that the "trust movement" flourishes in a free-trade country like England will learn much to their advantage by perusing the volume in either its English or its American dress.

The stuff that sociology is made of is exemplified by Prof. Franklin H. Giddings's "Readings in Descriptive and Historical Sociology" (The Macmillan Co.), which is designed "to offer to the beginner in sociological studies significant examples of the great facts of social evolution and of their interpretation." The volume contains three or four hundred extracts varying in length from five lines to five pages, and classified under the headings: Society, Elements and Structure of Society, The Social Mind, Social Organization, and Social Welfare. The puzzle seems to be: Fit these extracts, if you can, into the author's general scheme of sociological classification and terminology. Turning, for instance, to page 72, under the general heading Elements and Structure of Society, and the sub-heading Aggregation, the student will find the following:

An Army of Blackbirds.—Last Wednesday army after army of blackbirds flew over Aline, headed north. The advance guard was about a half-mile long and flying in lines or files reaching from the Rock Island to the Orient track. The second flew in column formation and was fully three-quarters of a mile long. At intervals of from fifteen minutes to an hour all through the forenoon patches and squares of birds followed. A conservative estimate of the number that passed during the forenoon would be five hundred thousand. The birds flew very low, and their wings and chattering could be heard at a great distance.—Kansas City *Journal*, April, 1905.

From birds the student may, if he choose, pass to Bostonians, and wrestle with the following extract on page 76:

The Early Bostonians.—The Bostonians, almost without exception, are derived from one country and a single stock. They are all descendants of Englishmen; and of course are united by all the great bonds of society: language, religion, government, manners, and interests.—Timothy Dwight, "Travels in New England and New York," vol. i., 506.

By stages he will advance from the simpler problems of social elements to the more complicated questions of social organization and welfare, until he finishes "a fairly complete scheme of elementary readings in descriptive and historical sociology." The value of it all we shall leave to those who have the courage to try it; the belief of the editor is that such exercises keep the student's mind "alert to discover essential similarities between facts drawn from widely different sources."

Professor, now also Sir, William M. Ramsay has collected under the title "Pauline and Other Studies" (A. C. Armstrong & Son) some fifteen essays ranging from "Shall We Hear Evidence or Not?" to "Life in the Days of St. Basil the Great"—papers which, with one exception, have already seen the light in various British reviews. The title is inexact and the unity of character in the studies slight. The illustrations which accompany the text are new.

The Rev. Dr. Morgan Dix, rector of Trinity Church of this city, has earned the gratitude of all who are interested in the history of New York, as well as those who concern themselves with ecclesiastical matters, by his careful completion of his "History of the Parish of Trinity Church in the City of New York," of which volumes iii. and iv. are now published (G. P. Putnam's Sons). The period covered in these two volumes is from 1816, the year in which John Henry Hobart began his able leadership of the parish, to 1862, when the author of this history was inducted to the rectorship. The history of Trinity Parish is in large part the history of the Episcopal Church in the city and State of New York, since up to 1830 the offices of Bishop of the Diocese and Rector of Trinity Parish were filled by the same person. Moreover, Bishop Hobart was a man of national influence, whose services to the Church in general Dr. Dix has not overestimated. The extended bounty of Trinity is traditional, and the recital of applications granted and accepted has obliged the author to touch upon religious situations of great variety and extent. Dr. Dix has been thorough in his search for documents and careful in their use, and his work will be invaluable to students of the matters with which it deals. As to outward form

these volumes leave nothing to be desired, either in dignity, taste, or serviceableness.

Ten lectures on the origin, mutual relation, and historical value of the four Gospels and the history of their adoption into the canon, delivered in the spring of 1906 by F. Crawford Burkitt at the Passmore Edwards Settlement in London, and, on the author's election to the Morrisian Professorship of Divinity at Cambridge, repeated as his inaugural course, are published under the title "The Gospel History and its transmission" (Charles Scribner's Sons). The volume evinces ripe scholarship and good critical judgment. The priority of Mark is maintained and the construction of the framework of Christ's life, according to the Marcan account, is attempted, with some original and valuable suggestions. The theory that Marcion is the real source of the doctrine that Christ's death was a ransom to the devil, which was for many centuries the received teaching, is made quite plausible.

"The Psychology and Training of the Horse," by Count Eugenio Martinengo Cesaresco, has been imported by Charles Scribner's Sons. The author devotes a considerable portion of his book to a discussion of the mind of the horse, and although he uses the pretentious term "psychology," he starts with the generally accepted statement that "the horse is endowed with fair intelligence within the range of ideas allowed by his mental constitution and faculties." While describing the motives and habits of the animal the author mingles a considerable amount of instruction and advice; and after many pages comes to the wise conclusion that "every horse according to his mental nature, sensibility, intelligence, and his physical qualities, is more or less adapted to a particular use or employment." In truth, although the author has prepared a readable book, under a title indicating an entirely original treatment of the subject, he is forced back to certain facts proved by the long experience of many horsemen. The horse must be trained by teaching him the use of the various implements and aids. When he has learned that by obedience he meets with kindness and that through a failure to comply he incurs resistance or punishment, his training proceeds smoothly. To this extent he may be said to reason, but in the main the horse is absolutely a creature of habit. An entire chapter is devoted to fear, its causes and amelioration, but after all is said and done, strange sights and unaccustomed sounds arouse suspicion and fear in all animals; punishment generally fails to remove it, and, not infrequently, increases and fixes it as a habit, while patience and kindness will nearly always enable an animal of limited reasoning powers to overcome acute fear of things which do not actually injure it. The final chapter on the use of the bridle and curb bit is not up to the standard of accurate knowledge, and detailed instruction of the cavalry schools of America, France, Germany, Austria, or the very efficient establishment in the author's own country.

"Behind the Scenes With Wild Animals," by Ellen Velvin (Moffat, Yard & Co.) will appeal to the lover of the sensational, as it consists of a heterogeneous collection of anecdotes detailing hair-breadth escapes of animal trainers and sundry bitings and scratchings by captive trained animals. The author had a rare chance to obtain interesting material, an opportunity which was thrown away because of her sensational interest in the lives of the trainers themselves, and because of the anthropomorphic treatment of the animals. The disjointed way in which anecdote follows anecdote, and the lack of coherence between chapters and parts of chapters leave in the reader's mind only a blur of disconnected facts. The single thing which approaches lasting value is the list of various species of mammals which have been bred in captivity. The photographs of animals by E. R. Sanborn and others are excellent.

"Cathedrals and Cloisters of the South of France: Gascony, Provence, Languedoc," by Elise Whitlock Rose, with illustrations from original photographs by Vida Hunt Francis, is issued in two volumes by G. P. Putnam's Sons. This work aims to allure the curious traveller. It is not technical, and its historical side is not very systematic. Yet the author preserves a just sense of proportion. The churches of the ancient maritime provinces of southern France are, of course, not to be compared for size or magnificence with the cathedrals of the North. Purity of design is to be found in only a few of them, and in spite of the audacity with which some of their builders ventured to combine features of different ages and orders, the structures show comparatively little originality. Many of them, especially those among the foothills of the Pyrenees, were long ago reduced from cathedrals to parish churches. But the makers of these two beautiful volumes have discovered other merits and a manifold charm in the wilful perversions of style, and have read a moving story of ecclesiastical ambition and popular heresies, and finally national indifference, in the battered and mouldering walls. But few cathedrals of the South are of commanding size, as Bayonne, Rodez, and Auch. Perhaps not one, unless it be Bayonne, is regular in style. Many, especially if we include those which have lost their former diocesan dignity, are very small, as the forsaken relics at Digne, Senez, and Saint Papoul. Quaintness and confusion, rather than any claim to artistic excellence, characterize the edifices at Toulouse and Rieux. The interest of the cathedral at Carcassonne is almost purely romantic, depending on its picturesque elevation above that wonderful town and on its associations with the wars of religion. The building at Maguelonne was as much a seamark and watch-tower as a church, and the forbidding walls of the cathedral of Albi were intended largely for defence. The high-perched fanes of Entrevaux and Sisteron, approached over drawbridges and up precipitous streets, are remarkable chiefly for situation. Yet all these peculiarities are elements of a charm which is amply transmitted in these volumes. The author struggles rather helplessly with general historical and archæological questions in the opening pages, and is often uncertain and inexpert in the use of language, but manages nevertheless, with the help of many fine illustrations, to convey the charm. Not by the law of 1906, but by the withdrawal of faith, have these churches of the Pyrenees and the Mediterranean been left desolate.

In her "Comparative Studies in Nursery Rhymes" (Duckworth & Co.), Lina Eckenstein aspires neither to exhaustiveness of treatment nor finality of interpretation. Well satisfied if she can show nursery lore to enshrine much that is "meanlngful" and worthy the attention of the student, she discusses, in the space of some two hundred pages, nursery rhymes proper, and the popular songs handed down with them, rhymes and ballads, country dances and games, custom rhymes and riddle rhymes, cumulative pieces, chants of numbers and the creed, chants on bird sacrifice, etc., etc. Of actual comparisons she makes less use in the case of ballads and popular songs —many of these are comparatively modern —than when writing, *e. g.*, of games like Sally Waters, Drop the Handkerchief, etc., where she sees traces of a primitive marriage-rite; or cumulative pieces, *i. e.*, pieces like "The House That Jack Built," that depend for their consistency on repetition and cumulation. Of the latter, some appear to relate to the making and unmaking of spells; others, like the chants of number and of the creed, are obviously intended to convey instruction. The parallels to these from Languedoc, Spain, Canada, etc., are especially interesting. The book, as a whole, is well arranged and readable, besides showing considerable knowledge. We are grateful for the list of foreign authorities and of the collections of nursery rhymes in chronological order.

In view of the scarcity of works in the Basque language, students will rejoice at the bringing to light by Don Julio de Urquijo, in the Franciscan convent of Zarauz, of the "Obras Vascongadas" (Basque works) of Joannes D'Etcheberri. This writer, of whom but little is known, was born at Sare, in the country of the French Basques, in the latter half of the seventeenth century. His exact date is uncertain, as the registers are imperfect. He lived for a time in his native village, practising as a physician. In 1716 for some reason or other we find him leaving France and settling in Spain. He is supposed to have died there in 1749. While still at Sare he began a dictionary of four languages, Basque, Spanish, French, and Latin. This is mentioned by the scholar Larramendi, but is now lost, if indeed it ever was finished. The manuscript discovered by Don Urquijo belongs to the same period (circa 1712). It is written in the Labourdin dialect, which is admitted to be the best, and consists of two distinct parts, (a) the Rudiments of Basque, (b) the Rudiments of Latin. The second he intended as supplement to the dictionary, believing that Latin contained the roots of all the languages. These works, with Spanish notes and introduction by Don Urquijo, make up a volume of some three hundred pages quarto. The publisher is Paul Geuthner, Paris.

In our review last week of the "Harvard Studies in Classical Philology," we might have noted that the volume (No. xvii.) was intended, in the words of the preface, "as a token of affection and esteem for Clement Lawrence Smith, of the class of 1863, for thirty-four years a valued member of the department, but forced by ill health to

resign the Pope Professorship of Latin in this university in 1904."

The recently installed Mayor of Oxford (E. J. Brooks) has launched a project, sanctioned by the vice-chancellor (T. H. Warren, president of Magdalen College), for an Oxford historical pageant, to be produced for the coming commemoration of 1907, and to be repeated every day during that week, June 24 to 29. This project is exciting much interest at Oxford, in view of the successful performances at Sherborne and Warwick and of the plans already afoot for something similar at Bury St. Edmunds. The much applauded Bryn Mawr pageants and plays have doubtless familiarized the American public with the scope of such revivals as a means of quickening old-time historical associations, so that the barest outline of the Oxford plan will suffice. Scenes are to be produced reënacting many of the half-forgotten episodes in the romantic history of several of the ancient foundations of Oxford. These are to be selected by a committee consisting of experts, such as the regius and the Chichele professors of modern history, Firth and Oman, the professor of English literature, Raleigh, and others.

It may not generally be known to students of geography in this country that the Hon. James Bryce, the newly appointed British ambassador to the United States, is a specialist in their department, and has contributed to geographical literature not alone from the side of the field investigator or traveller, but from that of the collegian and teacher. His "Student's Atlas of Physical Geography," published upwards of thirty years ago, is in no sense a modern work, but yet presents the science in a way that must continue to commend itself on the score of conciseness, directness, and a clear perspective, even where the so-called "newer" geographies have entered the field. The Atlas might be said to be a minor and popularized Berghaus. Mr. Bryce is a noted Alpinist, with a record in high-mountaineering which has given to him the presidency of the British Alpine Club. At a recent meeting of the American Alpine Club he was nominated to honorary membership in that body.

Prof. William James of Harvard has announced his intention to withdraw from active teaching and devote his time to writing.

STUDIES IN AMERICAN HISTORY.

Westward Extension, 1841-1850. By George P. Garrison. [The American Nation, vol. xvii.] New York: Harper & Bros. $2 net.

Professor Garrison's readable volume is another illustration of the changing attitude of historical scholars towards the history of the United States in the period from 1815 to 1861. With few exceptions, writers on that period have tended to view nearly all the great events of the time with primary reference to their bearing on the slavery controversy. The great civil war, with its impressive achievement of both nationalism and freedom, has so far cast its shadow backward over the immediately preceding years as to make pretty much every event in regard to which the North and the South were of different minds seem but another step towards the final and inevitable struggle. Everywhere there have been pointed out the dark and subtle machinations of the slave power, and nowhere more strikingly than in the case of the annexation of Texas and the Mexican war—topics which naturally occupy a prominent place in Professor Garrison's volume. It is one of the special merits of Professor Garrison's book that, without minimizing the true importance of slavery in the period with which he deals, he has freed himself from bondage to a conventional theory which, however stimulating emotionally, is as a whole both insufficient and misleading, and has taken a position more in harmony with the facts.

In Professor Garrison's view, the underlying impulse in the United States, from 1840 to 1850, was territorial expansion; and while territorial expansion inevitably involved a settlement of the conflicting claims of slavery and freedom in the new regions of the West, Southwest, and Northwest, slavery was a secondary, and not a primary, influence in determining the new territorial policy. The working out of this thesis has resulted in a volume some parts of which are positive additions to hitherto available knowledge; while the use of manuscript material—a rare thing in this series—in the archives of Texas and Mexico as well as at Washington, gives additional weight to his conclusions. The author is at his best, we think, in exhibiting the approaches to great events rather than in describing those events themselves. Thus we have illuminating chapters on the beginnings of the Texas question, the Texas boundary controversy, and the diplomatic negotiations for annexation, as well as on annexation itself. Two later chapters tell the story of the rupture with Mexico and the Slidell mission—both of them rather neglected topics—while the military operations of the war are rather summarily disposed of. The history of the Wilmot proviso, with its divisive effect on both Democratic and Whig parties, gains significance by considering the territorial as well as the slavery aspects of it. The adjustment of the Oregon difficulty was a less complicated matter, with even more remote connection with slavery; while the Maine boundary dispute stands by itself, save as it illustrates; in its limited field, the prevailing demand for territory.

Equally suggestive, if not always at first sight equally convincing, is Professor Garrison's exposition of the party situation and the motives and conduct of party leaders. Both the character and the achievements of Tyler are exhibited in a much more favorable light than has customarily been the case. For example, instead of condemning Tyler for his breach with the Whigs, Professor Garrison credits him with honesty and courage, declines to adjudge him guilty of untruthfulness in the bank matter, and points out that his attitude was only what was to be expected from a stanch believer in State rights. For Polk, too, whose invaluable manuscript diary he has used, he has defence and judicious commendation. The exact status of the Texas boundary was difficult, if not possible, to determine, but the evidence adduced by Professor Garrison goes far to acquit Polk of the charge of deliberately instigating an invasion of Texas when he ordered Taylor to advance to the Rio Grande. On the whole, both Tyler and Polk pass this new scrutiny with enhanced credit. Clay's standing is not raised, however, nor Buchanan's, while neither Scott nor Taylor add to their military laurels. We have no space to dwell on these or other interesting points, however, and can only commend the book as a thoughtful and scholarly study of a period which has long needed impartial examination.

The Records of the Virginia Company of London. The Court Book, from the Manuscript in the Library of Congress. With an introduction and bibliography by Susan Myra Kingsbury. Vol. I. Washington. Pp. 636, facsimiles.

After the lapse of nearly two centuries, the Court Book of the Virginia Company of London, 1619-1622, is printed in full for the first time. The romantic history of the manuscript is known to scholars. Hastily prepared by some members of the company who knew that their actions as members of the company would be subject to hostile examination, it passed from England to America, and through the purchase of the library of Thomas Jefferson came into the Library of Congress. It is the transcript of a lost original, and is itself only a fragment; but as material of history its value cannot be too highly estimated. It is one of the earliest records of English colonization in America, and it is one of the earliest and fullest official records of the transactions of a trading and colonizing corporation, active at a time when such corporations were clothed with governmental functions, exercising in an imperfect manner what properly belonged to the Royal Government. Hence these experiments were doomed to failure. No monopoly could sustain them, and the very features which seemed to confer strength, the features of self-government and protected interests, proved their weakness. Whether the trade was with Muscovy, Africa, the Levant, or America, there came a time when a little competition proved the futility of granting exclusive privileges, when a diminution of profit awakened dissensions within the company, and when the King, deprived of his expected royalties, saw fit to interfere and revoke the charter.

The Virginia Company was no more successful than other like ventures; and were the Court Book for its entire existence as a company available, the peculiar as well as the general causes of its decline could be described. Fragmentary as this printed volume is, the contents are conclusive upon the crisis which led to the dissolution of the company. Any person who paid or adventured £12 10s. became a member, as did also those to whom a share had been given for services. As the membership increased, the actual management fell into the hands of a small number of the more active or influential members. Some of their acts were undoubtedly oppressive. It was difficult to control the colonists, whose lot was by no means a happy one, at so long a range, when the length and expense of a voyage prevented frequency and regularity of sailings. Differences in Virginia were carried to London, and the proper attention to settlements could not be given in a body which was too large for executive

efficiency, and was itself shifting in composition through the irregular attendance of members. Discontent was awakened, factions formed, and the ruling influence opposed on matters where its conduct of affairs was entirely proper. Wbat appears to be trivial in these records was at the time of great moment, showing the existence of tbese factions, the extent of their discontents, and the manœuvres adopted to secure a hearing and a remedy. The grievances were very real, and, cumulative in tbeir effect, they put an end to the usefulness of the company.

As the principal product of the colony was tobacco, questions of its importation and sale in England were many and difficult. It was regarded as proper to prohibit the planting of tobacco in England and Wales, but for this favor the King's exchequer required some compensation. The manner of receiving and handling the colonial weed was satisfactory neither to the company nor to the King's customs. Tbe hopes of introducing vines, or of establishing industries by inducing skilled labor to come from Continental Europe, were doomed to be disappointed. Spanish tobacco competed witb the Virginia product. Tbe proffered monopoly in tobacco could not be made good; and the sales of the company's product yielded uncertain returns.

Apart from its trading activity, the Virginia settlement must be constantly supplied with fresh blood and even food. The sending of ships cost money and lives. In one of the voyages of the Gift, there "dyed 14 Landsmen and three seamen as also tbat two children was borne at sea, & dyed, and at his there ariuall, finding the Plantaçon to be in great scarcity for want of corne, desired the company to beare wth him, if for this yeare he something neglected the planting of Tobacco, and followe the sowing of corne, wbere by the next yeare he hopes by the blessing of God to raise such a Cropp thereof, that the said Plantaçon shall have noe greate cause to complaine in hast of want." The public and the college lands, set apart for specific uses, must be cultivated at the expense of the company. Bad management, lax supervision, and even disbonesty, resulted in little returns. These various difficulties reacted upon the home company. As a picture of administrative problems this record can hardly be surpassed in interest.

It remains to say a word on the execution of this publication. The editor's introduction and bibliography have already been praised in these columns. To secure the essential accuracy of text, the original was first deciphered by Miss Kingsbury and independently by the manuscript division of the Library of Congress. The result warranted this care. Every detail of the text, even to erased words and letters, is reproduced so far as type can reproduce it; and the very errors of the copyists are noted. The labor involved is seen by glancing at the pages of the Court Record reproduced in facsimile. The large type, generous margins, and fine paper make a dignified volume; but these mechanical matters are of secondary importance. The real matter of moment is that so extensive an undertaking can be carried to so successful an issue by the Library of Congress, and printed as a Government publication. It marks once more the appearance of a spirit of scholarship in that institution, which, fostered and encouraged, will place it on the same plane as the British Museum, whose corps of scbolars has contributed so much to our knowledge.

CURRENT FICTION.

The Privateers. By H. B. Marriott-Watson. New York: Doubleday, Page & Co.

Mr. Marriott-Watson is an expert maker of fiction. We should say there are no waste products tolerated in the conduct of his manufactory. But the other day in "A Midsummer Day's Dream" he contrived a dainty spectacle out of certain volatile gases of the fancy which a less clever man might have allowed to escape. To-day he produces "The Privateers," a toy-bouse of slag, not without surface glitter and iridescence, though of no substance. The plot has novelty, but its development is half-hearted. It is notbing enough, whether bloody or romantic or farcical, but a mild blend of all three. But what is sauce for one public is not sauce for all; and we do not doubt that the present compound may satisfy a profitable number of palatcs.

We should say, however, that Mr. Marriott-Watson has imperilled his chances in America, not by introducing some half-dozen Americans who are all villains, but by trying to make them talk United States. The result is a strange lingo, a kind of "American as she is spoke" which could bave been invented only by an Englishman. The principal American and arch-villain "had been at Yale, and he knew several languages; in fine he met me [the virtuous Englishman] on my own level as a cultivated man of the world." "There's degrees of comparison, I reckon, Lieutenant, in affairs," is one remark by this cultivated person. "Fixed up" the author uses indiscriminately, whenever it seems to him that an American verb is in order. He is under the impression, further, that "top-dog" is a favorite phrase of ours, and that our present slang method of suggesting that there is an obstacle to overcome is to say: "It is up against us." The ranch, the stockyard, and the Bowery make obliging contributions to the dialect of this extraordinary speaker; nay, even the realm of cockney does not disdain to pay tribute. Here, in the tongue of Mr. Herbert Forsythe Alston, it may be suggested, is a medium of communication sufficiently versatile, eclectic, and unintelligible to deserve entry in the present admired competition of world languages.

The Second Generation. By David Graham Phillips. New York: D. Appleton & Co.

Some five years ago a book of this title, written by James Weber Linn, was published by Macmillan; a story of unusual merit, which attracted less attention than it deserved. It embodied certain facts about American life, but it did not preach about them. Mr. Pbillips's story is a tract rather than a piece of pure fiction, and the author is at small pains to conceal the machinery of his argument. He is not in the habit of expressing his opinions in measured terms. Here there is little ligbt and shade in bis sketching of persons and events, which, however, doubtless serve his purpose well enough. The present proposition is that inherited wealth is an unmitigated curse. As a corollary, persons of leisure, especially persons in "society," since they ordinarily inherit wealth, are an accursed class. To enforce tbis unhopeful contention, the demonstrator introduces us to a prosperous manufacturing city in the Middle West, wherein all who have inherited wealth have gone or are going to the dogs. All the younger persons involved in the story are directly committed to this dread alternative save two. One of these is shot by an aristocrat, who has become a drunkard becausc he has *not* inherited money (which would have been a saving fact if he had not been an aristocrat); the other marries a girl of common blood who bas grown up in the expectation of a great inheritance. This girl's nature is as pliable as that of Oliver in the forest of Arden. When she is good she is very, very good, and wben she is bad she wastes her desires upon pretty gowns and the degrading exercise of social observances. In the end, after much vibration, she becomes for good and all what her inventor desires her to be. Her brother, wbose case is rendered particularly desperate by an experience in the best set at Harvard, is similarly amenable to treatment. Harvard turns him out a fop and a cad, but Mr. Phillips, by depriving him of his looked-for inheritance, sets him to work with his hands, and succeeds in making a man of bim. He is promptly jilted by a mercenary sweetheart, and after sufficiently insulting bis father's memory, and throwing away a paltry legacy of $5,000 in a vain attempt to break the fatber's will, he falls in love with a moderately poor and immoderately honest girl, and becomes one of nature's noblemen. Therc is quite enough importance in the tendency which Mr. Phillips has in mind to make one wish that he might have painted it as tendency rather than as inevitable fact. He has written a forcible tract, however, and this is what we suppose he intended.

NEWS FOR BIBLIOPHILES.

In 1882, the Virginia Historical Society purchased a little pamphlet dated 1716, by Sir Tbomas Grantham, relating in considerable part to Bacon's Rebellion, in Virginia. It was supposed at the time to be unique; and it was of such interest and importance that a reprint, called a facsimile but evidently, owing to exigencies of type, not an accurate type reprint, was issued, by permission of the society. R. A. Brock, the secretary of the society, supplied an introduction. So far as we can trace, no other copy of the book has come upon the market until a few weeks ago a copy, with a title of quite different wording and dated 1714, turned up. The full title of this 1714 edition is as follows:

An | Historical | Account | Of Some | Memorable Actions, | Perform'd | For the Service of his Prince | and Countrey, | By Sr Thomas Grantham, Kt. | [Quotation. 3 lines]. | London: | Printed for J. Roberts, near tbe Oxford-Arms | in Warwick-Lane. 1714. |

The title of the Virginia Historical Society copy, as in the reprint and as transcribed by Sabin, is as follows:

An Historical | Account | Of Some | Memorable Actions, | Particularly in Virgin-

ia; | Also | Against the Admiral of Algier, | and in the East Indies: | Perform'd for the Service of his | Prince and Country, | By | Sr Thomas Grantham, Kt | [Quotation, 3 lines]. | London: | Printed for J. Roberts, near the Oxford-Arms | in Warwick-Lane. MDCCXVI. |

The two editions seem to be identical, except for the title-page, and it is probable that the new title was made by some enterprising printer or bookseller in order to accelerate the sale of the pamphlet. There is no doubt that the second title containing in large type the words "Particularly in Virginia," is much the more attractive. The newly discovered 1714 edition and the reprint of the 1716 edition are page for page; and the text is, with a few exceptions, line for line. The headings of various documents, printed in italics, are not line for line. The title leaf of the 1714 edition is the first leaf of the signature and the paper is continuous with its follower A4, thus showing that this is the original title. The latest date of any document printed in the book is July 10, 1711. The probability is that the book in either form had practically no sale, most of the copies being very likely disposed of as old paper.

On Monday, January 28, the Merwin-Clayton Sales Company of this city offers at auction a private library, containing some first editions of American authors, mostly in full or half binding or calf or morocco. Among the writers are Bret Harte, John Hay, Hawthorne, Longfellow, Poe, and Whittier. Among other books, Herndon's "Lincoln, the true Story of a Great Life," three volumes, the original issue which was suppressed, is perhaps the most notable.

Sotheby, Wilkinson & Hodge of London will hold in the early spring an auction of "a small but choice collection formed within recent years by a member of the New York Stock Exchange." Some of the books, notably a first folio of Shakespeare, are from the Rowfant Library. There are several early Shakespeare quartos, including "The Merchant of Venice," 1637, which brought $1,300 at Anderson's auction rooms in this city last May, and "Midsummer Night's Dream," 1600, which brought £480 at Sotheby's a year ago. There is a copy of Sidney's "Arcadia," 1590, which sold for £450 at Sotheby's in 1905. The library also contains a fine example of the first "Kilmarnock" Burns.

Opus Epistolarum Des. Erasmi Roterodami denvo recognitvm et avctvm per P. S. Allen, M. A., e Coll. Corporis Christi. Tom. I., 1484-1514. New York: Henry Frowde. $5.75.

More than two centuries have elapsed, or more than half the period following the death of Erasmus, since his correspondence was published in the completest collection then possible, as volume iii. of John Le Clerc's folio Leyden edition of the "Opera Omnia" in 1703. Many scholars in many lands have felt impelled to the task achieved by Mr. Allen, and he has greatly profited by the communication of their interrupted enterprises, as well as by the ungrudging assistance of scholars and archivists. By good fortune, a fellow-Oxonian, Francis Morgan Nichols, of Wadham College, working on parallel lines, has published two noble volumes of "The Epistles of Erasmus," selectively translated, critically set in order, and carried down to 1517, with a third volume well assured. Mr. Nichols, in his first volume, has made his acknowledgments to Percy Stafford Allen of Corpus Christi College, Oxford, and now Professor in the Government College at Lahore, and foreshadows the appearance of the present "Opus Epistolarum." Mr. Allen, on his part, tells of his enormous labor having "occupied my leisure for the last thirteen years," and been carried on "under the gloom of Indian summers and in high valleys in Kashmir." Mr. Nichols's anticipatory publication is referred to (preface, p. v.), with counter acknowledgments of his having "given me the full benefit of his ripe judgment and detailed study of the ground in which I have been allowed to glean after him."

This spectacle, of two Oxford men harmoniously working together to ends so creditable to their University, is heightened by the fact that their zeal might rather have been looked for in the sister University of Cambridge, seeing that Erasmus's stay in Oxford (at St. Mary's College, in 1499) was of the briefest. On the other hand, Mr. Allen may have found an incentive in the fact that, after the founding of Corpus Christi by Richard Foxe, one of Erasmus's correspondents, the latter manifested great interest in what was intended to be "the seat of the new learning." We must add that the amicable coöperation described above has been consistent with entire scholarly independence, as manifested by the later comer. Thus, Mr. Allen splits in two the letters numbered 119 and 128, to James Batt, though Mr. Nichols defends their conjunction; *per contra*, he replaces at the head of the letter (254) to Thomas Halsey sentences which Mr. Nichols had clapped on the end of another. Again, they differ as to the date of letter 193, to Christopher Urswick; while a corresponding disagreement in the case of letter 81, to William Herman, leads Mr. Allen to question Mr. Nichols's inferences as to persons therein alluded to. For a final example, doubts about the attribution to Erasmus determine Mr. Allen to relegate to the appendix letters admitted by Mr. Nichols to full standing in the regular series.

The amount of Erasmian correspondence available since Le Clerc's gleanings has not been so considerable as might be thought, and leaves a vista for still further discovery. In Mr. Allen's table of the letters to date of his volume i., there are but twenty-seven pieces not included in the Leyden edition; only four are here published for the first time, whereof only three proceed from Erasmus's pen. Of these last, one is a mere fragment, bearing the probable date of 1489, and written from Steyn to that indefatigable author, Cornelius Gerard of Gouda, exhorting him to perfection of style in matter worthy of posterity. Another, derived from the Gouda find of MSS., and addressed to John Colet (Oxford, 1499), supplements by three times its length that opening of the "Disputatiuncula" which Le Clerc published in 1703. It is a labored reinforcement of the argument which had failed to convince Colet in the dispute over the proper interpretation of Christ's shrinking from death, instead of seeking it with alacrity. The third letter, much the longest of the three, is in response to Colet's rejoinder, and is a capital example of Erasmus's mode of reasoning. One proposition of his, which no longer cuts a figure in the theological wrangling of the present day, is that Christ, as man, must have died some time, and not necessarily from violence. Not a few minds might now be almost as much shocked by this thought as by the theory suggested by a diplomat at The Hague in the Revolutionary epoch, viz., that, in view of the imperfections of this world, God must have died before completing his work. The interest of the debate over "Let this cup pass" is made more piquant by the fact that Colet advances the authority of Jerome, Erasmus's great teacher, and is parried by the contention that this saint's exegesis was a solitary utterance in his writings, while Augustine and other equal lights hold to the common-sense view of the meaning of Christ's simple language. Among the letters discovered and published by other scholars, notably M. de Nolhac, since Le Clerc, it will suffice to mention Erasmus's first to Aldus Manutius, the earliest known example of his handwriting, two other examples of which, by the way, are among the plates inserted in the text.

The period covered by Mr. Allen's first volume is overstepped, as in the Leyden edition, by prefixing to the correspondence Erasmus's account of his literary beginnings and self-discipline, and detailed list of his writings, addressed to John Botzheim and commonly referred to as the "Catalogue of Lucubrations," of date January 30, 1523. This invaluable list, so far as it is available for biographical purposes, the chief end of Mr. Nichols's undertaking, he chronologically introduces piecemeal in translation (*e. g.*, I., 227). Next comes the "Compendium Vitæ," which Mr. Nichols translates in full (I., 5), and which cannot antedate 1516; and, finally, the letter from Beatus Rhenanus to Charles V. of June 1, 1540. It is gratifying to find that the genuineness of the disputed "Compendium," as well as of the letter to Servatius Rogerus of July 8, 1514, is maintained by both our Oxford editors; by Mr. Allen with a shade more of positiveness. The latter's apparatus is as follows: Each letter is introduced by a more or less particular description of it as a document and with reference to its proper place in the series—in the sum affording a disconnected view of Erasmus's goings and comings and doings; and, in the case of first mention, a summary sketch of the correspondent, either writing or addressed. The pains bestowed on these elucidations, rich in bibliographical guide-posts, it would not be easy to over-praise; nor will the future biographer of Erasmus ever speak except gratefully of this blazing of his path. The footnotes exhibit the same scholarly temper and patience. They are the repository of variant readings; they identify persons imperfectly indicated in the text, and trace their biographies—the more carefully the more obscure the subject; they endeavor to fix dates and events; they track to their source classical and other allusions and quotations; they take notice of such minor matters as, in Erasmus's letters to Batt, of his frequent use of the phrase *fato tuo*, with a "lucky-dog" connotation. Together, the introductions and notes afford an agreeable browsing-

ground, not only for Erasmians, but for any one of scholarly proclivities interested in the period. Equally readable and informing are the appendices dealing with the broader topics of authenticity, with several of Erasmus's correspondents, the principal editions of the "Epistolæ," the Deventer letter-book, and the Gouda MSS.

The above apparatus speaks to the eye, and may be estimated for the editor's industry by him who runs. The labor bestowed upon the text, resulting inevitably in one just like no other, lurks out of sight and can be weighed only on reflection. For letters published in Erasmus's lifetime, the text of the London edition of 1642 after Frohen's of 1538 and 1541 has been scrupulously compared with the earliest authorized. For the orthography, Mr. Allen conforms faithfully to the earliest original source, except where depravations are manifestly to be corrected; the punctuation, on the other hand, has been freely improved. For facility of reference in footnotes and otherwise, the text is numbered for every five lines. A temporary index of correspondents and some biographical notices, supplied on a loose leaf, will be superseded by a full one in the second volume.

To expatiate further were easy, but our readers can readily dispense with it. The fortunate possessors of Mr. Nichols's two volumes will not rest content without Mr. Allen's, which enables one to test the fidelity and closeness of his coadjutor's homely idiomatic version, as well as to ascertain the *ipsissima verba* in any given instance. All libraries will require, as all experts will laud, both these monumental publications.

Historical Bases of Religion, Primitive, Babylonian, and Jewish. By H. C. Brown. Boston: Herbert B. Turner & Co. $1.50.

This book is an example of the dangers that beset the non-specialist in dealing with large questions. The author has consulted a number of excellent books, and much that he says is correct, particularly in his account of the later phases of Judaism, from the prophets onward. But throughout the volume the wrong is so mingled with the right, and there is such a distortion (doubtless unintentional) of the history, that the general reader may often get an impression not in accordance with the facts. Mr. Brown's tone is one of assurance and finality—he is certain of many things as to which the best authorities are in doubt. He knows not only that the Babylonian civilization is earlier than the Egyptian, but that its records go back about 8,500 years, and that well-developed states, enjoying a civilized life that far outranks that of many so-called civilized countries of the present day, were in existence more than ten thousand years ago (p. 50). He is able to describe the furniture of a Babylonian temple (p. 102f.) with a minuteness not found in the records, and to assert (p. 213) that Babylonia for a period of more than five thousand years existed as a homogeneous people, contented and happy under a system of government and religion practically unchanged. As to the origin of the Essenes, a question that still vexes scholars, he has no misgivings—he states as an historical fact that their practices were derived from Buddhism.

In addition to these exaggerations and discolorations the book has misstatements of important points. The language of pre-Israelite Canaan was not Babylonian (p. 79)—the contrary is shown by the Amarna letters. That the monotheistic ideas of Judaism were "derived from the religion of Zoroaster" (p. 173) is a statement that no judicious critic would now make. The idea that the Semitic divine names Bel, El, Baal, and Al are all "slight variations of the same word" (p. 166) will be a surprise to Semitic scholars. Still more remarkable is the announcement (p. 31) that the name of the deity of the Israelitish nation was lost and for it "the name Jehovah (the strong one) was substituted"; and so with the Arabian deity "to whom the name Allah (the mighty one) was given." Passing over the hitherto unheard-of explanation of the meaning of "Jehovah," it is strange that the author never heard of the name Yahweh, and that he is not aware that our word Jehovah is the ignorant miswriting of a friar of the sixteenth century of our era; as for "Allah," it was the current name for the deity in Arabia in Mohammed's time. Such slips weaken one's confidence in the author's general trustworthiness. It must be added that he is concerned to show that the old Hebrew religion was derived, on its better side, wholly from the Babylonian. It is generally agreed that the Babylonian influence on the Hebrews was great; but a proper estimate of Hebraism and Judaism calls for wider knowledge and a calmer and more judicial attitude than are to be found in this volume.

The Practice of Diplomacy. As Illustrated in the Foreign Relations of the United States. By John W. Foster. Boston; Houghton, Mifflin & Co. $3 net.

This is a pleasing, sensible, and useful book. It is not so much a formal and comprehensive treatise, as a sort of running comment on the history of American diplomacy, bringing out its guiding principles and its technique, and giving an abundance of those best of all definitions—examples. Throughout, a high note of national obligations in international relations is maintained; and while Mr. Foster is careful to give both sides of several of our famous diplomatic controversies—as in the Barrundia case, for instance, and the fur seal dispute—he makes it clear that his own leaning is to justice rather than cleverness, and to sound precedent more than novelties invented *ad hoc*. In dealing with the artificial distinctions of diplomatic rank, Mr. Foster displays great common sense, as well as an American love of equality; and we could wish that his plea for absolute impartiality in the treatment of national representatives, however designated, as of nations themselves, might prevail. In what he says of the unexpended and legitimately unexpendable balance of the indemnity extorted from China by the United States in common with other countries, he points out an imperative duty of Congress. It should vote to pay back the money, with as zealous a care for "the honor of the United States" as it showed in returning to Mexico the award fraudulently obtained under the Weil and La Abra claim.

If one were to pick flaws at all, it would be in regard to some of the references to European practice and personalities. To illustrate the point that irregular appointments often produce good diplomats, Mr. Foster speaks of three Englishmen—Lords Dufferin, Pauncefote, and Cromer—who were not "trained for the diplomatic service," yet who were "the three most prominent and efficient diplomatic representatives of the British Government during the last quarter of the nineteenth century." We think that Lord Odo Russell or Sir Robert Morier would rank above either Dufferin or Pauncefote, while Cromer's great work has been rather administrative than diplomatic. Mr. Foster alludes to Bismarck's efforts to displace French as the language of diplomacy. He boasted that he would find a way of making a German note understood in Paris. The story is told that he also thought to make it understood in St. Petershurg, but that when he got his answer in Russian, he threw up his hands and fell back upon the hated but necessary French.

Lew Wallace: An Autobiography. 2 vols. New York: Harper & Bros. $5 net.

The autobiography of Lew Wallace will not, we think, add much to its author's literary reputation; for while it is, as a whole, entertaining, there is a diffuseness, an over-elaboration of small points, and a too frequent triviality which suggest lack of proper editorial revision. The autobiography proper ends with the summer of 1864; the story from that point, largely in the form of letters, is carried on by Mrs. Wallace.

Literary merit aside, the value of these volumes as a contribution to American history is not inconsiderable. The life of Wallace was more than ordinarily full of variety, incident, and distinction. Born in Indiana in 1827, he grew to manhood in the central West at a time when the West, as a distinct factor in political and economic life, was coming to prominence by leaps and bounds; and the chapters devoted to an account of the everyday happenings of these early years throw much incidental light on a place and period of whose development we yet know little. When the Mexican war came on, Wallace enlisted as a volunteer and served under Taylor, though seeing little actual fighting. He gained, however, useful military experience. Returning from Mexico, he was admitted to the bar; cultivated a wide acquaintance, including Lincoln, of whose personal appearance and story-telling powers he gives an entertaining description; heard one of the Lincoln-Douglas debates, and worked painstakingly at his first novel, "The Fair God."

The civil war was his great opportunity. He took charge of the enlistment and organization of the Indiana volunteers, was made colonel of one of the new regiments, pushed his way to prominence as an aggressive and resourceful commander, and in due time joined Grant in the West as a brigadier-general. He took part in the capture of Fort Henry and Fort Donelson, and in the battle of Shiloh. The autobiography goes much into detail regarding these several operations, both as to the movements as a whole and as to Wallace's own share in them. We must leave to military critics the final judgment upon his course at Shiloh, merely noting that his

own side of the case is here elaborately set forth. Wallace fell out of favor, however, and was withdrawn for a time from active service. An acute controversy with Halleck, his superior officer, did not help matters; and his account of the affair shows how deep and lasting was the contempt which he felt for the man whom he believed to have wronged him. He later rendered good service in defending Cincinnati, administered sagaciously the affairs of the military district in which Baltimore was situated, and played a promiuent part in the defeat of Early's attempted raid on Washington.

Following the close of hostilities, Wallace served as a member of the commission which tried the assailants of Lincoln, and of that which convicted the notorious Wirz. Later he was governor of New Mexico, and then minister to Turkey. In the meantime, the publication of "The Fair God," whose inception in his early years is here interestingly described, had won for him a remarkable literary reputation, immensely increased by the extraordinary success of "Ben Hur."

The autobiography must be pronounced satisfactory in this, that it accounts pretty fully for Wallace's success in public life. He was beyond question a born leader of men, intrepid, dashing, resourceful. He had boundless energy and untiring industry. To these qualities he added a keen eye for the main chance, and a singular adroitness in availing himself of opportunities. The animosities of his military career, and the criticism to which as commander he was particularly subjected, appear to have been due in considerable measure to his frankness in speaking and acting, and to his confidence in his own judgment. For the remarkable popularity of his books these volumes fail to offer any adequate explanation.

Jamaica. Painted by A. S. Forrest, described by John Henderson. London: Adam & Charles Black. New York: The Macmillan Co. $2 net.

In this volume, which appears just when the Kingston earthquake has brought Jamaica to a conspicuous place in the world's news, two Englishmen have set forth, one with pen, the other with pencil, their impressions as travellers in that island. More than this the book scarcely pretends to do. It consists for the most part of lively descriptions of phases of West Indian life; "The Philosophy of a Jamaican Gamin," "A Jamaican Court House," "The Dandy and the Coquette," "Alligator Shooting in a West Indian Swamp," are typical chapter headings. Mr. Henderson emphasizes throughout the resemblance of Jamaica to America rather than to England. Of now ruined Kingston he observes:

> If the place resembles any well-known capital it must be New York; but a New York built by children in doll's-house style and painted green and white. In the manner of New York the streets stretch to the wharves and quays of the giant harbor, and electric tram-cars clang along the busy roads by day and night. Electric poles stick up along the roadway in blatant disregard of the finer feelings of romantic tourists.

The book, and especially the bright colored pictures, will satisfy the average reader's wish for a popular account of life as it was lived in the community now suffering under such a calamity. Of more permanent interest, possibly, are the chapters describing the relations between the races, and the mixed hostility and mutual understanding of the white and black regiments. In one chapter the author quotes the views of an intelligent negro on ultimate indepence for Jamaica. This man, who had travelled in England and on the Continent, being asked what would become of the half-breeds in a government controlled chiefly by the uegroes, replied ingeniously, "They would be our Irish."

Drama.

SUDERMANN'S "JOHANNES."

Biblical subjects, for obvious reasons, have always been dear to the heart of the theatre-manager, and the chance of producing a scandalous sensation under cover of a great New Testament name is too good to be lost. It is to be regretted that two performers who have done so much creditable work as Miss Julia Marlowe and Mr. E. H. Sothern should have been tempted by the notoriety of the theme to produce Mary Harned's adaptation of Sudermann's "Johannes," a piece which on the Scriptural or pseudo-historical side has very little actual artistic value, while one of its chief motives, the Salome legend, is altogether abominable. The play is called "John the Baptist," and purports to deal with all the prophet's public life; showing him in the wilderness, proclaiming the coming Messiah, in the streets of Jerusalem debating with the Pharisees, in the palace denouncing Herodias, in prison spurning the odious solicitations of Salome, and in the hands of the executioner. It is in the scenes with which Sudermann has tried to supplement the brief Biblical record that the interest of the play collapses. John is represented as being in constant doubt as to the significance of his own inspiration and as mystified by such fragments of Christ's teaching—in the Sermon on the Mount, for instance—as he can collect from the lips of stray Galilean peasants. The command to love your enemies works such an upheaval in him that, instead of throwing a stone at the guilty Herod, and thus giving the signal for a general attack, he falls at the monarch's feet. His vacillating mood drives his disciples from him, and he is practically deserted when he is thrust into prison.

Whatever plausibility there may be in these spiritual distractions of the prophet, there can be no doubt that their result is to render him a less virile and picturesque figure for theatrical purposes. At all events, Mr. Sothern failed to endow him with the fanatical fire, grandeur of spirit, or majesty of pose becoming a prophet with such a message. He had dignity and some righteous passion, but he did not glow with the heat of a divine and consuming zeal. In his scenes with Salome he bore himself rightly, at first with indifference, then with angry scorn; but no skill could interpret satisfactorily scenes in their very essence unnatural and repulsive. Wholly apart from the gross improbability of a delicate young princess, almost a child, such as Salome is represented to be, conceiving a passion for a man of so rough and wild an aspect, there is the radical absurdity of the conditions under which they meet—conditions which could never occur in the East. Similar objections would lie against the whole play, which rarely makes any concessions to Oriental customs, except in the matter of attire. Miss Marlowe, in her acting of Salome, a part for which she is not now suited, seemed to be constantly trying to mitigate the unpleasantness of it by emphasizing its juvenility. She portrayed a petulant, childish coquette. This view, of course, was utterly incompatible with an adult passion which could drive a princess to such extremes. All the details indeed of this love episode are as preposterous as the original conception is vile. But it is to be noted that the play follows the Biblical story with regard to Herodias and does not permit Salome to sport with the Baptist's head. With Salome out, the play would be but a dull affair. She is the chief excuse for the representation, and a very bad one.

The cause of the American drama is not much advanced by the composition and production of such pieces as "Salomy Jane," which was greeted with much boisterous approval in the Liberty Theatre, on Saturday evening. Paul Armstrong, the adapter, or rather joiner, has selected his rough material from "Salomy Jane's Kiss" and other tales of Bret Harte and dovetailed them, after a fashion, into a melodrama, well stuffed with sensational episodes, but rickety in structure, incoherent in substance, and no more a reflection of real life in California, or anywhere else, than are the distorted figures in a comic mirror. Bret Harte, with the genius of a true romancer, clothed many gross realities with a glamour of beauty, nobility, or pathos, diverting attention from patent anomalies by some subtle and often disingenuous appeal to that common human sentiment which is ready to applaud the attribution of the noblest virtues to the most unlikely possessor of them. The publication of Mr. Harte's earlier stories was followed by a perfect epidemic of frontier plays in which homicidal adventurers, hard and rough as the rocks amid which they labored and fought, melted suddenly with exquisite tenderness, while audacious hoydens, heedless of virtue or morals, proved themselves angels of grace and goodness. Of late the far Western play has again been coming into fashion, and doubtless there is a wide field for the dramatist in the primitive life upon the borders of civilization. But little is to be gained by working anew the exhausted vein of Mr. Harte's fancy, and reviving the personages, vital, indeed, in his pages, but on the stage stale, flat, and unprofitable. Moreover, Mr. Armstrong has furnished in his Col. Starbottle, Yuba Bill, Jack Marbury, Larrabee, Red Pete, and the rest of them, feeble copies of their prototypes. The fact is that these imaginary creatures necessarily lose their verisimilitude when stripped of their literary adornment, and exposed in their naked personality before the footlights. The success attained by the present performance will be due to the admirable acting of Reuben Fox, the capable work of H. G. Warner, Ralph Delmore, Holbrook Blinn, Stephen Wright, Ade Dwyer, and Eleanor Robson. The forest

scenery is superh. In fact, the setting is worthy of a masterpiece.

The death is announced in London of a once popular English actress, Miss Hudspeth, better known in this country as Mrs. Edmund Phelps. She will he remembered for her finished performances of old women in some of Charles Wyndham's productions. She was horn sixty-seven years ago, and first appeared in London in 1859. She supported John Drew, the elder, in "Handy Andy." Later she joined the Drury Lane Company, and for many years was one of the chief attractions of the annual pantomime, in which she was associated with the Vokes family, Kate Santley, Paul Herring, and Brittain Wright; she was also in the original cast of "Eileen Oge"—next to "The Peep o' Day" Edmund Falconer's most successful play.

Sarah Bernhardt is to play the part of Mephistopheles in a new version of "Faust," heing prepared by Henry Bataille.

Music.

RICHARD STRAUSS'S "SALOME."

The most sensational event of the musical season was the production, at the Metropolitan Opera House on Tuesday evening, of Richard Strauss's "Salome," a work which has heen more talked and written ahout than any other opera since the first production of "Parsifal" in 1882, with the exception of "Cavalleria Rusticana." And as in the case of Mascagni, so in that of Strauss, the libretto had more to do with the success of the opera than the music. It is an old story that to insure an enormous vogue for a work of art or a hook, nothing more is needed than that some responsihle censor should forhid it on moral or religious grounds. "Salome" was thus forhidden hoth in Vienna and in Berlin. Dresden, however, came to the rescue; "Salome" was produced at the Royal Opera on Decemher 8, 1905, and made a great stir. Since then, thirty other opera houses (including the Scala of Milan) have produced it, and even the Kaiser found it advisable to relent, so that Berlin, too, heard the opera on December 5, 1906, on which occasion the house could have heen sold out twenty times, and $25 was paid to speculators for single seats.

Music itself is neither moral nor immoral, though it may he so bad as to provoke murderous or suicidal reflections. There are pages in Strauss's score that come perilously near that condition, hut they were not the cause of offence in the eyes of the censors. That lay in the libretto, the notorious "Salome" of Oscar Wilde, concerning the premeditated nastiness of which there can he no two opinions. It is had enough for composers to glorify in music the adventures and feelings of such depraved creatures as Manon Lescaut, and Violetta (in "La Traviata"); but when a diseased imagination conceives a character like Salome, which can he fully comprehended only after a study of the psychopathological works of Krafft-Ehing, and a musician makes her the heroine of an opera, it is time to call a halt, and protest that the stage is not a sanitarium. Such subjects are proper for medical, not for musical, treatment. It cannot he denied that there is some genuine poetry in the libretto, and that the scene of the one-act opera, with the central cistern whence issues the voice of the captive prophet, with the picturesque Oriental surroundings, is operatically most effective; hut this merely aggravates the offence.

Perhaps it is wrong to call this performance an opera. Strauss's admirers prefer to name it "an orchestral tone-painting, accompanied hy a dramatic action on the stage." That phrase, we must grant, describes it very well. The artists on the stage are important as histrionic figures; but their contrihutions to the entertainment as singers are quite insignificant, with the exception of one or two passages by Salome and a few of the utterances of the prophet in the cistern. One could not help feeling sorry for Mr. Conried's excellent artists—Fremstad, Weed, Burrian, Dippel, Van Rooy, Reiss, Mühlmann, Dufriche, Blass—for having to grope their way through a jungle of orchestral cacophonies with hardly a strain of true melody to offer as a healing balm for the ears of the listeners.

The weakness of Strauss's melodic sense explains his method. Not having any real melodies to offer, he does all sorts of eccentric things to hide his weakness. He demands an orchestra of at least 106 players; he uses new or unusual instruments, like the heckelphone and celesta; and he goes to unprecedented extremes in subdividing the string instruments and giving each little group a part of its own to play. In the love duet of "Tristan and Isolde," Wagner divides the strings into sixteen parts; Strauss goes him four hetter, and thus makes an "advance upon Wagner"! He shows extreme subtlety and cleverness in combining the various leading motives, making them suggest and recall events and scenes, quite in the Wagnerian way. But there is an enormous difference: Wagner's leading motives are pregnant themes, easily remembered because of their striking melodies or appropriate harmonies, whereas Strauss has nothing to offer hut insignificant themes—nay, themelets—so commonplace and unindividual that it is extremely difficult to recognize them. In a word, in the orchestral as in the vocal parts, the fatal defect of Strauss's opera is a lack of melody.

Students will find much to admire in the ingenious mathematical subtleties of the printed score. Their lahors may he facilitated by a perusal of the "Guide to Salome," hy Lawrence Gilman, just issued by John Lane; a little book of eighty-five pages, thirty of which are devoted to an analysis of the music, with illustrations in musical type of the twenty leading motives the writer has found in the score.

Fate sometimes has its strokes of justice as well as its irony. In May, 1890, there hurst upon the world a one-act opera, "Cavalleria Rusticana," by Pietro Mascagni, which was hailed all over Europe and America as the beginning of a new school, and its composer in a few months was rich and famous. Six years earlier the Scala in Milan had produced an opera, "Le Villi," which strikingly anticipated the chief peculiarities of the "Mascagni school"; hut as the opera was not a success, its composer, Giacomo Puccini, remained unknown. Apparently without realizing that he had been cheated out of his birthright, he kept on writing other operas, among them "La Bohême," "Tosca," and "Madama Butterfly," and one day he awoke to find himself famous too—first in England, then in Italy, and then in America. He arrived in New York on January 18, just in time to attend the first performance ever given at the Metropolitan of his "Manon Lescaut," which is to he followed, while he is here, by the other three operas named, making a Puccini cycle. "Manon Lescaut" had heen sung once before in the metropolis (1898), but hy a strolling company, which could not do it justice. To descant on the libretto, whicb is based on the rambling story of the Abbé Prévost, or to compare the opera as a whole with Massenet's on the same subject, would be futile. With Caruso as the Chevalier des Grieux, the opera will attract crowds; without him it will be sung to empty benches so far as they are not covered hy subscription. Puccini's theatrical instinct is no douht revealed in this opera, as in its successors, hut apart from its technical cleverness, and a few numbers like the madrigal and the minuet of the second act, which are true rococo, and some admirable pages of orchestral coloring and mood painting, there is little to praise in the score. Its fatal defect is a lack of melodic individuality. Puccini knows how to write most effectively for the human voice (to that he owes most of his success); hut as a melodist he will never rank with Rossini and Verdi, or even with Donizetti and Bellini.

The Philharmonic Concerts in this city Friday afternoon and Saturday evening will exhibit Safonoff as interpreter of Brahms, Grieg, and Glinka. The third Brahms symphony has heen chosen for the opening numher, and Glinka's overture to his "Russlan and Ludmilla," one of the most popular of Russian operas. Hugo Heermann, the German violinist, will play the Beethoven concerto. There will also be an interesting novelty—the Lyric Suite of Grieg. This suite is an orchestral version of four of the six short pianoforte pieces puhlished under the opus number 54.

No pianist now hefore the puhlic has more of the much-coveted quality called temperament than Fannie Bloomfield Zeisler. She will give a recital at Carnegie Hall next Saturday afternoon, at which she will play Beethoven's sonata op. 31, No. 2, the Schuhert-Liszt "Erlking," a scherzo, an étude, a valse, and a polonaise hy Chopin, a concert étude hy Liszt, and short pieces hy Poldini, Moszkowski, Rachmaninoff, and arahesques on the "Blue Danube" waltz.

There is a growing demand in Germany for the songs and the pianoforte pieces of the American, Edward MacDowell. To meet this in part, Breitkopf & Härtel of Leipsic have just hrought out a new edition of the famous "Eight Songs," with German as well as English words.

Art.

THE PENNSYLVANIA ACADEMY.

Given nearly five hundred framed paint-

lngs of widely varying size to hang on the walls, and about one-fourth as many pieces of sculpture to place advantageously, the hanging committee for the current exhibition of the Pennsylvania Academy of the Fine Arts seems for the most part to have performed well its arduous and thankless task. Examples there are of the individual sacrificed for the good of the whole, as perforce must always be the case in the cramped quarters of this ancient and honorable institution, which this year holds its one hundred and second annual exhibition. The corridors and rotunda, for example, instead of being simple and dignified, as befits an approach, present a somewhat jumbled appearance. Here are assembled, with no great regard for relative proportions, statuettes, low reliefs, busts, full-length life-size figures of man and beast—indeed almost everything that would lend itself to the plastic art, not to mention sundry things that do not. St. Gaudens, Lopez, Tonetti, Konti, Grafly, Roth, McKenzie, McNeil, Pratt, Bitter, Hartley, Brooks, and Paul Nocquet, not to prolong the distinguished list, are represented by from one to twenty examples apiece, which for the most part would lend dignity and beauty to the art of any country. Thus emphasis is once more, and from the sculptor's point of view, given to the importance of more adequate and better lighted exhibition galleries in Philadelphia, whose needs in this respect are only less pressing than those of New York city.

Unlike the passing displays of the National Academy of Design and the past displays of the Society of American Artists in New York, the show in Philadelphia is not made up of what may be justly called the current art of the year, but, wisely or unwisely, includes much already familiar material, which makes for a higher artistic average, if less for freshness. Not that the latter quality is wanting here—on the contrary, the last word in smartness by the younger and more impetuous painters emphasizes the works of the elder workers alongside them. Among the contributors, about two hundred and fifty in all, there are many new names; and on the other hand, not a few familiar names are missing.

Passing into gallery F, the largest in the building, one is possessed by the spirit of serenity brooding over the place, to which Whistler's full-length figure of Count Robert possibly gives the keynote, if that be not too loud a term to apply to this canvas which the dead painter has invested with all his subtle charm, a charm which finds echo in three other valued smaller canvases farther along, by the same hand. At the same end of this gallery, too, one has come to look each year for something from the hand of John Sargent, who has this time a portrait of the Rev. Endicott Peabody, done, perhaps with a nice regard for the cloth, in an unusual spirit of sobriety and delicacy which Sargent's numerous followers may well take note of. Frank W. Benson with a fresh, wholesome portrait of a child, Philip L. Hale with a full-length life-size female figure in which is no trace of the sensuous, Louis Loeb with the dainty head of a beautiful young girl, two characteristic canvases by John Alexander, a brilliant Matador by Robert Henri, a clever but unpleasant characterization of Chevaller by John Lambert, two of Miss Cassatt's most able canvases, a graciously feminine portrait by William W. Churchill, a picture portrait by Sergeant Kendall, and a seated figure in blue by Cecelia Beaux, indicate, but do not exhaust, the list of worthy portraits in the room.

In the same gallery are brilliant still life, by Cadwallader Washburn and William M. Chase (who has disposed about the building several portraits of varying excellence), two graphic figure groups, instinct with life, by William J. Glackens, and a joyous Tea Party by Marion Powers. Here also is a powerful marine by Homer, one of jewel-like quality by Ryder, a choice interior by Walter Gay, and an interior with figure by Frederick Frieseke, which should not be overlooked. Of landscapes in this gallery there are few, those by W. E. Schofield, Ernest Lawson, W. Granville Smith, Edouard Steichten, Leonard Ochtman, and Charles Rosen being among the best.

An adjoining smaller gallery is largely given over to works of impressionistic tendencies, amid which the two large, vigorous, and virile canvases by Edward W. Redfield seem a trifle misplaced. Here are numerous brilliant contributions, new and old, by Childe Hassam, Willard Metcalf, Robert Reid, John H. Twachtman, J. Alden Weir, and Charles Hopkinson, who, along with a few other faithful if less well-known painters of light, uphold the traditions and advance new theories of the cult.

Gari Melchers has a gallery quite to himself, where, insulated and isolated, the various phases of his art may be studied freely. Portraits, "types," a landscape or two, and even a large Last Supper, together present a dignified appearance, and one of much harmony, albeit a trifle sombre contrasted with the brilliant work of the luminists next door.

A somewhat ineffective effort at insulation has been made, though just why, one can only half-surmise, with gallery J. Here, besides the three fine smaller Whistlers already adverted to, hang Thomas W. Dewing's delicious Lady with Lute, a vigorous young woman by Robert Henri, a portrait group by William M. Chase, two landscapes sounding a new note, by Joseph B. Davol, and a group of three splendidly impressive landscapes by Elliott Daingerfield.

Strolling through other galleries and corridors, which seem less well lighted, one is attracted by such serious and well-painted productions as H. O. Tanner's Two Disciples (one of the most thoughtful works here), John Sloan's Kent, Kenyon Cox's Portrait of Maxfield Parrish, the two little canvases by Jerome Meyers, a portrait by J. J. Shannon, a Florida scene by Joseph Woodwell, and Mr. La Farge's Visit of Nicodemus to Christ—one of that artist's most dignified productions. Nor should the excellent portraits by J. McClure Hamilton, Irving Wiles, and Thomas Anshutz be overlooked, as in the remote gallery where they are placed they are likely to be.

In conclusion it may be said that, unlike most exhibitions in America, figures and not landscapes dominate the Pennsylvania Academy's show this year. The larger part of these are portraits, more individual than usual in their tendencies, and one's first and last optical impression is of tall single figure portrait panels at frequent intervals, sometimes a seeming intrusion, and at others lending dignity to the galleries.

BEN FOSTER.

Two books of drawings are disappointing for different reasons. The "Drawings of Gainsborough," in the Newnes-Scribner Series of Drawings of the Great Masters disappoints from the slightness of the drawings themselves, few of them being more than hasty scrawls or possessing any quality sufficient to justify the praise lavished upon them by Lord Ronald Sutherland Gower in his introduction. The best of them had already been reproduced in Armstrong's great book on the artist, and two or three of these have great charm.

"The Drawings of J. F. Millet" (Lippincott) is a much more sumptuous and elaborate publication, in a limited edition. Here the disappointment is in the selection. There are some very fine drawings, as there could not well help being, among the fifty chosen; but somehow the collection fails to show the noble qualities of the artist at their highest—or so it seems to one who remembers this or that masterpiece in chalk not here included. Now and then there is an obvious blunder in the title given, as in the so-called "Sheaf-binders," who are gathering faggots, and in the "Peasant Woman Cleaning Out a Trough," who is chopping straw. It is still considered obligatory that a book should have a text, and so this one has an "Introductory Essay" by Léona Bénédite. It is well enough, but really little to the purpose. If a competent technical study of the merits of Millet's drawing, as drawing, was unattainable, why not omit the text altogether and publish a portfolio? But enough of fault-finding. Fifty drawings by Millet are fifty drawings by Millet; and to have them thoroughly well reproduced, as these are, is to have something well worth more than the price asked, if one has the money to spend.

Francesco Malguzzi Valeri's little handbook of drawings in the Brera, "I Disegni nella R. Pinacoteca di Brera" (Milano: Alfieri & Lacroix), may be cordially recommended. Ninety-four drawings are reproduced in the original colors by the half-tone process, and brief editorial notes give all necessary indications as to provenience and bibliography. Many of the sheets are from Morelli's collection, being lent to the gallery by his executor, Dr. Frizzoni. In the matter of attributions the editor takes a sensibly modest course—the mark of interrogation abounds. The brochure is of pocket size, and may be conveniently used in galleries. We know of no similar publication that so nearly meets the practical needs of the student. Similar handbooks of, say, the Louvre, the Ufizzi, and the British Museum, would be simply invaluable. We have no space to enumerate the artists represented, and must close with the hint that a drawing in the Metropolitan Museum ascribed to Raphael (temporarily withdrawn from exhibition) must stand or fall with the sheet of studies reproduced in plate 63. Morelli believed in the genuineness of the latter work, and it would be a difficult critic that would discredit its New York counterpart.

The King of Italy has given to the Brera,

Milan, several mythological frescoes by Bernardino Luini, formerly in the villa dei Pelluchi, near Monza. The decorations of this villa are widely scattered. A number were already in the Brera, including the famous St. Catherine Carried by Angels; others are at Hertford House, the Louvre, and Chantilly. Francesco Malguzzi Valeri describes the royal gift in the *Rassegna d'Arte* for December, and, noting the collaboration of Bramantino and Luini in this villa, suggests that their relation was that of master and pupil. This furnishes at least a plausible solution of the obscure matter of Luini's apprenticeship.

The contents of the Oratorio of San Ansano, Fiesole, have been taken over from the bishopric by the Italian Government, and will soon be placed in the little museum on the Piazza Mino. The sculptures include the head of a boy in unglazed terra-cotta, by Luca Della Robbia—one of his most beautiful works; a round of the Virgin in Adoration, by Andrea della Robbia, with a notable frame of flowers and fruit; besides interesting fragments of Byzantine wood carving. The pictures number some fifty of the fourteenth and fifteenth centuries—mostly of small size and importance. Four Triumphs of Petrarch by Jacopo del Sellaio, formerly attributed to Botticelli, are perhaps the most interesting items, but the late Giottesque school is well represented by minor examples. This acquisition should make the Fiesolan museum, usually overlooked by tourists, a place of resort.

During the last two years, the National Gallery at Berlin has made an unusual number of acquisitions. They number over two hundred paintings and almost half as many pieces of statuary. The gallery now presents an altogether different appearance from that of 1904, and is as fairly representative of German art of the last hundred years as can be expected of a single collection. Besides this, many modern pictures by foreign painters have been bought or received as gifts.

The authorities of the Louvre will arrange a special Rembrandt room, where the twenty-two works of Rembrandt, now scattered through the museum, will be brought together.

The Government of India has taken steps to preserve the Sinbyame Pagoda, which is the only building of its type in the Mingun province of Burma.

An interesting discovery has been made in a Belgian convent of a painting of "Christ Risen," which has been attributed to Rubens by various experts. In 1603 Rubens painted a series of Christ and the Twelve Apostles for the Duke of Lerma. The Twelve Apostles have long been in the Prado at Madrid, but the Christ has been lost sight of till this discovery in Belgium, which is now identified as the missing picture.

News has come from Geneva that in a collection of Egyptian papyri Prof. Jules Nicole has lately come across an ancient Latin guide through Rome, which he found in the midst of Greek texts. The guide contains an inventory of sculpture, enumerating the chief works to be seen in the city, and indicating exactly where they are placed; it also gives a description of each one, with the name of the artist, its provenance, and so forth. Many interesting facts concerning hitherto unknown artists are given, as well as additional information relating to already known Greek sculptors. This discovery may prove of importance in supplying us with data for the attribution of as yet nameless statues.

The Central New York Society of Artists, which was organized in 1902, will hold at the Syracuse Museum of Fine Arts in December, 1907, an exhibition of works of art produced within that part of the State of New York not immediately tributary to New York city. Communications regarding the exhibition may be addressed to the chairman of the executive committee, R. Franklin Dallas, Syracuse.

The Wadsworth Atheneum of Hartford, Conn., is to receive a gift of an art building from J. Pierpont Morgan as a memorial to his father, Junius S. Morgan.

An exhibition of paintings by William Sartain is now open at Macbeth's gallery, in this city, until January 26. The twenty-seven pictures shown, including landscapes, interiors, and figure pieces in oil, and a single water color, make an exhibition of unusual interest.

At the Anderson Auction Rooms in this city on the evening of January 16 the following prices were paid for prints: Robert Burns, bust portrait, engraved by W. Walker and S. Cousins, after the painting by Nasmith, $105; Meissonier's La Rixe, etched by Bracquemond, $350; Meissonier's Partie Perdue, etched by Bracquemond, $170; Meissonier's 1806, etched by Jules Jacquet, $100; Meissonier's 1807, etched by Jacquet, $450; Meissonier's 1814, etched by Jacquet, $210; Millet's Angelus, etched by Charles Waltner, $200; Rembrandt's Night Watch, etched by C. Waltner, $260; and Jules Breton's Evening, in a Hamlet in Finisterre, etched by W. L. Lathrop, $100.

Science.

A QUARTER-CENTURY OF CATASTROPHISM.

The student of geology, however taxed his mind may be with the consideration of the numerous unsolved problems in the physics of the earth, cannot fail to be deeply impressed by the catastrophic happenings of the last twenty-five years. The record of no other like period, so far as it is written in the book of science, carries with it so clearly the concept of the unfinished globe, or so eloquently teaches the inconsequence of man beside the titanic forces of nature. When, in August, 1883, a cataclysm rent asunder the island of Krakatoa, and caused a shock throughout almost the entire mass of the earth, we saw how the processes of adjustment which shape the interior of our globe were still tending to produce equilibrium. For two years or more we gazed upon the wondrous red and yellow afterglows which marked the distribution of the high-blown ash, and reflected the energy by which 40,000 or more persons were swept out of existence. At this same time, or close to it, Casamicciola, in the island of Ischia, fell. The ash from Krakatoa had hardly settled when we learned of the reawakening of Tarawera, in New Zealand—a battered volcano, whose activities had been assumed to be ended for a full hundred years prior to June, 1886. The tourist then beheld, seemingly for the last time, what had been designated the "eighth wonder" of the world, the famous pink and white terraces of Rotomahana. Before the great rift that had formed in this lake-basin had entirely closed, came the disaster to Charleston, S. C.

The major disturbances following the Carolina earthquake were chiefly in the field of Japan, where the number of shocks noted in the nineteen years between 1885 and 1903, as we are informed by the Japanese Earthquake Investigation Commission, was 27,485. The decapitation, in 1888, of Bandai-San, and the hurling of its vast mass over miles of inhabited lowland, was followed the next year by the great movement of Kumanoto, and two years later by perhaps the most far-reaching of all the recorded earthquakes of Japan, that known as Mino-Owari. Thousands of lives were destroyed in this shock, which the distinguished seismologist, Montessus de Ballore, characterizes as "le plus formidable tremblement de terre dont l'histoire fasse peut-être mention." Within three years came the tremendous earthquake of Tokio, 1894.

A new era of catastrophism began with evidences of unrest in Vesuvius, Etna, and Stromboli, in a number of the volcanoes of Central America and of northern South America, in Colima, Mexico, in the Hawaiian Islands, and in the mountains of Alaska (Wrangell, Sheshalden, Iliamna). There had also been widely separated earth-movements, as those of the Phocian plain of Greece, of Carinthia, and of southeastern Alaska. This last brought about the interesting displacements on the shores of Yakutat Bay and the disruption of the Muir glacier. The rapidly-succeeding events of the year 1902 are still fresh in the minds of most people: the destruction by earthquake, on January 16, and on April 18, respectively, of considerable portions of the towns of Chilpancingo, in Mexico, and Quetzaltenango, in Guatemala; the eruption on May 7, of the Soufrière, of St. Vincent; on May 8, of Pelée, with the annihilation of Saint-Pierre; on August 30, of the same volcano, with the razing of Morne-Rouge and other villages in Martinique; on October 24, of the volcano of Santa Maria, in Guatemala, with the further destruction of Quetzaltenango; the earthquakes of Shemaka and of Andijan, in farther Asia. The result of it all was the death of between fifty and sixty thousand persons. The same year saw the foundering with nearly all of its inhabitants of the island of Tori-Shima, in Japanese waters, as the result of a volcanic explosion.

This event was soon followed by the first of those vast disturbances in Formosa, which culminated in the catastrophes of March and April of 1906, when the greater part of the island was devastated and thousands of lives sacrificed. Preceding these calamities by a few months, and coincident with a paroxysmal awakening of Stromboli, was the earthquake of the Monteleone region of southern Italy. The echoes of this

had hardly died down when Vesuvius opened a new chapter in its history and closed it with the outbreak of April, 1906, which in violence and destructive effect is thought to have surpassed all other eruptions of that volcano, with the exception of those of the years 79 and 1631. Then, nearer to our own hearts and homes, the tragedy of San Francisco was enacted—followed in almost exactly four months by the still greater tragedy of Valparaiso, in Chili. Before the close of 1906—a year which had also witnessed in its early days the minor disturbances of Esmeraldas in Ecuador, of Buenaventura in Colombia, and of Castries in the island of St. Lucia—a great part of the city of Arica lay in ruins. And now, with the beginning of the year 1907, the seismo-volcanic registry records the eruptions of Mauna Loa and Etna, the continuing vast flows of lava from the Savai volcano in the Samoan Islands, and the appalling disaster which has converted the capital of the island of Jamaica into a mass of débris.

In all these events we see the earth in the making—a process now, as ever, destructive. Within this quarter-century the population of the globe has been diminished by not less than 125,000 or 150,000 as the result of terrestrial catastrophism. Possibly the figures should be even larger, for the records are incomplete.

ANGELO HEILPRIN.

Philadelphia, January 18.

The Scientific Papers of J. Willard Gibbs. 2 vols. New York: Longmans, Green & Co. $9 net.

That Josiah Willard Gibbs advanced science the world over more than it has ever been given to any other American researcher to do, can hardly be questioned. He published but one separate book, his "Elementary Principles in Statistical Mechanics" (Charles Scribner's Sons), which appeared in the Yale Bicentennial Series in 1902, the year before his death. Another volume in the same series, written by his pupil, Edwin B. Wilson, was founded on his lectures. His only other printed remains are the papers now collected, which are few but fundamental. They are substantially limited to three, not counting an unusually small number of preliminary and supplementary outputs.

Of the earliest, relating to diagrams and models representing the effects of temperature and pressure on all sorts of substances, Clerk Maxwell once spoke to the present reviewer in terms of warm laudation, before Gibbs had produced anything else, and when he was all but unknown in this country. His second work, on the equilibrium of heterogeneous substances, taught chemists how to reason about the final results of reactions (without reference to the processes by which they were reached), and it stands to-day the stone at the head of the corner of dynamical chemistry. The memoir itself (in which, by the way, was first given the now celebrated "phase rule") occupies three hundred pages of the first of these two volumes, a good many more pages being substantially parts of the same whole.

The second volume is mainly occupied with Gibbs's peculiar calculus called "vector analysis," which was designed to supersede quaternions and Grassmann's *Ausdehnungslehre*. It is now taught in sundry European universities; but its vogue was prevented or hindered by a trait of its author's character that struck everybody that ever met him, and that we know not how otherwise to designate than as diffidence. Yet this is not a fit name for it. It certainly was not that diffidence which consists in timidity; nor can we assent to his brilliant scholar Prof. Bumstead's apparent view that he was unconscious of his own superiority, which would come too near to making him a gifted idiot, rooting up his mathematical truffles like a Périgord pig, and as oblivious of being deprived of them. We should rather conceive of it as an exaggerated estimate of the possibility of any opinion of his being erroneous that might concern a difficult question not susceptible of a demonstrative solution. He thought his method ought to be left to make its own way in the world; but he overlooked the fact that he was not giving the offspring of his brain the fair start to which it was entitled. For he limited himself to printing and privately circulating a fifty-page syllabus of that method, with no illustrations of its application. The industry of a man of great parts and attainments would not more than have sufficed to construct any decided opinion upon such a question from such a basis. If Gibbs himself, after devoting his own surpassing genius for some years to the matter, was not prepared to put forth a categorical decision as to the merits of the method, pray who else could be expected to undertake the office? We can only say that the ease and mastery with which his scholars have handled some of the most thorny problems of physics, as contrasted with the infertility of the quaternionists, incline us to put our trust in "vector analysis."

The book is clothed in all dignity and beauty of paper and type, carries a noble photograph of the master, and in every way (except by an index) recommends itself to the liking of friends of American science. There is a good, but restrained, notice of this most genuine of high intelligences by a worthy interpreter, Prof. H. A. Bumstead, who has taken Dr. Ralph Gibbs Van Name as his collaborating editor.

The following scientific books are included in Macmillan's list of spring publications: "Cyclopedia of American Agriculture," vol. i., edited by Prof. L. H. Bailey; "Experimental Zoölogy," by Thomas Hunt Morgan; "Economic Geology of the United States," by Heinrich Ries; "Forage Corps," by Edward B. Voorhees; "The Storage Battery," by Augustus Treadwell; "Practical Text-Book of Plant Pathology," by D. F. MacDougal; "Introduction to Zoölogy," new edition," by Charles Benedict Davenport and Gertrude Crotty Davenport; "Elements of Electro-Chemistry," by M. Leblanc; "Types of Farming," by L. H. Bailey; "Meteorology, Weather, and Methods of Forecasting," new edition, by Thomas Russell; "Principles of Inorganic Chemistry," new edition, by H. C. Jones; "Studies in Physiology, Anatomy, and Hygiene," new edition, by J. E. Peabody; "The Common Bacterial Infections of the Digestive Tract," by C. A. Herter; "Lectures on the General Properties of Immunity," by Svante Arrhenius; "System of Medicine and Gynæcology," vol. ii., Part I., edited by Thomas Clifford Allbutt; "Clinical Psychiatry," new edition, by A. Ross Diefendorf.

The ascent of Mt. Ruwenzori, the ancient Mountains of the Moon, last summer was described in a lecture delivered at Rome on January 7 by the Duke of the Abruzzi. In a little over a month he climbed the sixteen highest peaks, made a survey of the range, determined heights, fixed the watersheds, and mapped and photographed the whole region. The principal scientific results are the fact that the range consists of six principal groups, 16,810 feet being the altitude of the highest peak. The limit of perpetual snow was about 14,600 feet, and of the lowest glacier 13,677. None of the glaciers were of the first order, and they showed signs of receding.

Finance.

THE BREAK IN THE STOCK MARKET.

About the middle of last December, after having held obstinately strong in the face of extremely tight money, repeated deficits in New York bank reserves, and prohibitory rates charged in London for "carrying" American securities, Stock Exchange prices suddenly began to give way. Since then, the decline has been almost continuous, up to the present week. During the five-week period, such striking declines in the price of important railway stocks have been scored as 20 points in Chicago, Milwaukee and St. Paul, 23 in Union Pacific, 34 in New York Central, 39 in Reading, 63 in Northern Pacific, and 80 in Great Northern. People, learning of such a fall in prices, might easily infer either that a serious disaster had befallen the world of investors, or else that the Stock Exchange movement was foreshadowing a highly unfavorable turn in our tide of prosperity.

And, in fact, the violent fall in prices last week and at the opening of this week, had so far cut the ground from under the feet of speculators—who had been holding huge lines of stocks with money borrowed on collateral of these very stocks—as to force liquidation and some signals of real distress. This, however, was pretty much restricted to that class of people known in Wall Street as "Stock Exchange professionals." No one else seems to have been badly hurt. The outside public, which lost millions in the Wall Street collapse of May, 1901, and which was probably hard hit in the two-day crash of December, 1904, has on the present occasion made little complaint. At the same time, no signs of trade reaction, or of alarm in business circles, is anywhere manifest. Instead, one hears the general comment, that legitimate industry is in a far safer position, now that Stock Exchange speculation has collapsed and Stock Exchange prices have come down.

Nevertheless, there still exists, even in Wall Street itself, a good deal of perplexity as to why the stock market should have fallen at just this time. Two months ago, every one on Wall Street had a word

to say of the "January reinvestment demand" and the manner in which it would put up stocks and lower the money rate. It was commonly alleged that, if prices could only be held up through December, the market was "safe." Since bankers and brokers are apt to buy stocks in the last days of December, in order to sell at a profit to the January investor, this support to the market is likely to be felt before the year is over. Yet it was precisely this time that witnessed the beginning of the break, and it was in the week when money was cheap, bank reserves rising, and "January reinvestment" normally in full swing, that forced liquidation on the Stock Exchange went on most rapidly. Why such a paradox—especially when the argument, that a rise in stocks would only "reflect" or "discount" increasing prosperity, still appears to hold good?

The first and most obvious answer is that the rise in stocks may have been going ahead too fast in its "discounting." The second is, that it had been using, for speculation pure and simple, capital and credit which were needed in the country's expanding trade. A third answer is, that the great rise in stocks had brought their net yield, on the basis of existing dividends and prices, to 3½ or 4 per cent.—this at a time when merchants were paying 6 per cent. for six-months' loans, and when other borrowers, with the best Stock Exchange collateral to offer, were paying even higher. Such a situation was in all respects anomalous; in the nature of things, it could not continue. The plain enough reason why the break occurred at the moment when many people were looking for a further rise, was that some of the more astute speculators, understanding how precarious their position had become, did not dare to sell out when all circumstances were against the market, but deliberately selected a time when there was reason to expect better outside buying, and when, accordingly, they could get rid of their own burden to the best advantage. Even so, the pressure of liquidation turned out to be too heavy; the collapse became more rapid with each additional lowering of prices; it culminated in the extreme unsettlement of a week ago.

There is perhaps no more delusive idea in finance than the notion that a stock market cannot decline when prosperity is increasing. So far is this from the truth, that the great financial panics have usually come close on the heels of an immensely active and apparently prosperous industrial movement. Not to mention the "little panic" of 1903, which began in the very months when bank exchanges, iron production, and railway earnings were making the high record of our history, there are the notable cases of 1890, when London's financial break-down followed a famous "boom year," and 1873, when our own overwhelming collapse came directly after a year of unparalleled trade activity, business profits, and speculative ventures. The reason was identical with the reason, already set forth, for this month's break in stocks, at the height of the country's material prosperity.

NEW BOOKS

Railway Organization and Working
Edited by ERNEST R. DEWSNUP

A score of prominent railway officials have contributed to this volume the condensed results of their experience. Eminently practical and thoroughly readable, the book will occupy a unique position as a manual of railroad business. It is equally adapted to university classes and to the needs of the professional railroader. 510 pages; small 8vo, cloth; net $2.00, postpaid $2.16.

The New Appreciation of the Bible By WILLARD C. SELLECK

This book seeks to do three things: first, to state briefly the principal conclusions of modern learning regarding the Bible; second, to show the enhanced values which it now exhibits; and third, to point out some of the ways in which it may be most helpfully used. 424 pages; 12mo, cloth; net $1.50, postpaid $1.63.

The Development of Western Civilization
By J. DORSEY FORREST

An examination of modern European society which has in view the determining of the social forces by which it has been molded to its present form. 418 pages; 8vo, cloth; net $2.00, postpaid $2.17.

A Genetic History of the New England Theology
By FRANK HUGH FOSTER

As the first genetic history of the greatest theological movement which America has yet seen, the book will command the attention of all students of our national thought. 580 pages; small 8vo, cloth; net $2.00, postpaid $2.17.

Homeric Vocabularies
By EDGAR J. GOODSPEED and WILLIAM B. OWEN

This little book is planned to aid the reader of Homer in the rapid acquiring of a vocabulary. The words are arranged in the order of their frequency, a method which has proved remarkably successful in practice. 70 pages; small 8vo, paper; net $0.50, postpaid $0.53.

Egyptian Antiquities in the Pier Collection Part I
By GARRETT PIER

Mr. Pier's collection contains a number of unique specimens and is known to experts throughout the world. The catalogue is luxuriously printed and bound, and profusely illustrated. 48 pages; quarto; net $4.00, postpaid $4.15.

Index Volume to Breasted's Ancient Records of Egypt

An elaborate index to the collection will shortly be published as a separate volume. A most important work will thus be completed. It will now be possible for any reader of English to have access to the entire body of Egyptian historical inscriptions. 200 pages; 8vo; net $2.00.

Animal Micrology: Practical Exercises in Microscopical Methods
By MICHAEL F. GUYER

An indispensable book for teacher, physician, student, or novice who wishes to learn how to prepare his own material for microscopical examination. Sufficient account of the theoretical side of microscopy is given to enable the student to get satisfactory results from his microscope. 250 pages; 8vo, cloth; net $1.75, postpaid, $1.88.

Hebrew Life and Thought By LOUISE SEYMOUR HOUGHTON

The reader of the Bible who wishes to be well informed, and who yet finds little to attract him in accounts of scientific investigations, will do well to read this book. Enriched with the fruits of a lifetime of study and versed in the intricacies of modern criticism, the author approaches her subject with a depth of feeling that reminds one of the best religious writers of the past. 396 pages; 12mo, cloth; net $1.50, postpaid $1.65.

A Short History of Christianity in the Apostolic Age
By GEORGE H. GILBERT

This new textbook belongs to the series of "Constructive Bible Studies." It is intended for pupils of sixteen or seventeen years of age. Like the other volumes of the series it aims to embody the results of modern scholarship, while remaining true to the spirit of its great theme. 246 pages; 8vo; postpaid $1.00.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps. $5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

The Nation.

NEW YORK, THURSDAY, JANUARY 31, 1907.

The Week.

If "home-keeping youth have ever homely wits," it is certain that a country which has kept its eyes fastened for a generation upon the home market, cannot be expected to show clear sight for foreign markets. When President McKinley said at Buffalo in 1901 that "if we will not buy we cannot sell," the truism was received as if it were a thunderclap. Since that time there has been much talk in Congress and in the press and party platforms about enlarging our business abroad, but the attempts at doing something have been fumbling. This "greenness" in the business is particularly betrayed in the pending bill for ship subsidies, or postal subventions for ocean steamers. The whole plan, as submitted, is uncertain. The bill leaves it doubtful whether the end desired is the mere building of ships —to throw a government sop to American shipyards which, as the annual report of the Commissioner of Navigation has just shown, are highly prosperous— or the owning and sailing of them. Nor does the bill reveal any close-knit idea of the way in which more ships to South America (if we got them by the subventions) would increase our trade with that region. As a matter of fact, we have yet to hear of an American exporter who cannot get all the goods he can sell to South America expeditiously carried thither. But the really gaping hiatus in the subsidy argument appears when we ask what cargoes the new ships (if we get any) are to bring back from South American countries. Their wool and hides we could not think of allowing to come in free to compete with our own. Yet with that national policy firmly established, we propose to vote money out of our own Treasury in order to hasten and cheapen the coming of more of the deadly wool and hides of foreigners! The example of Germany and England is appealed to. They have great fleets of merchantmen, a small part of which has government subventions. What is concealed is the fact that German and English steamship lines have been built up on an intelligent and comprehensive theory of foreign trade. The return cargo is as carefully studied as the outgoing. Germany has a protective tariff, but she is wise enough to provide for the free entry of the raw materials of her manufactures. Failing any broad revision of our tariff laws, and a large and intelligent adjustment of our whole policy to the steady development of foreign trade, ship subsidies would amount to nothing. They would promote scandal, favoritism, and further raids upon the public funds, but not commerce.

The report of the Joint Postal Commission authorized by Congress at its last session is the most important document relating to the postal service that has appeared in many years. "The object of this inquiry is not a temporary or provisional one," says the report. "It is an attempt to get that gigantic enterprise known as the postal service organized once and for all upon a sound economic and administrative basis." If the Commission's recommendation for an accurate weighing, count of pieces, and determination of the average haul of mail matter of each class, is adopted, there will be available for the first time the data for intelligent comprehension of the whole system. Yet the Commission does not wait this information before making its own recommendations. It is positive that the difference between the second and third-class rate is too great, and strongly inclined to the belief that the periodical rate is absolutely too low. The Commission does not go so far as Third Assistant Postmaster-General Madden's suggested three-rate classification: letters, printed matter, and merchandise. The Commission proposes a sliding scale for second-class publications, based upon the weight of single copies and ranging upward from the present one cent per pound. But the really radical recommendations are made with a view to purging the second-class list of undesirable publications. The Commission would take out of the second class bodily all issues of which more than one-half the "superficial area" is occupied by advertisements, and all which send sample copies in excess of 10 per cent. of their paid circulation. That this rule will catch, "put out of business" perhaps, the particular publications about which the Department is most concerned, may be conceded. That it would also be a serious blow to hundreds of magazines and newspapers which are in every sense legitimate, is, however, equally true. There are few, if any, successful publications which do not occasionally or regularly exceed the 50 per cent. limit. There are probably no newly established periodicals which do not send out more than 10 per cent. of free copies. No one denies that the second-class privilege has been abused by "mail-order" journals and "house organs." If the objectionable publications possessed some definite quality or characteristic which the worthy ones do not, all would be plain sailing. It is as if some lawgiver, noticing that a great many malefactors had large feet, ordered the imprisonment of every man wearing a shoe larger than number ten.

Congress last year passed a Public Buildings bill. This is to be the year for river and harbor appropriations. It is still political slang to say that the "pork" is thus distributed, though the scrutiny of these measures of local benefit has been so much closer of late years that the old screaming absurdities in the erection of post offices and improvement of channels hardly exist outside the comic papers. Regarding the River and Harbor bill, which the House committee has ready, two special points are to be noted. First, it is the largest ever brought before Congress, carrying $83,466,138, of which $34,631,612 is for immediate expenditure. Second, it appears likely to fail more conspicuously than its successors to satisfy the demands of the interests which are seeking favors. Already there have been reports of an organized effort to remake the bill on the floor of the House, led by a coalition of the advocates of a thirty-five-foot channel in the Delaware River and of a fourteen-foot channel from the Great Lakes to the Gulf. An Illinois Senator, A. J. Hopkins, was quoted a few days ago as threatening to talk the whole bill to death in the Senate unless his favorite project was embodied in it. A Missouri Representative, Mr. Bartholdt, has suggested a plan for satisfying everybody just now in sight, by issuing half-a-billion dollars' worth of special bonds for waterways improvement. We do not suppose that Chairman Burton, who is said never to have been overruled by the House when he opposed an amendment to the River and Harbor bill offered on the floor, is very seriously disturbed by these threats of insurrection. Be that as it may, however, this is a critical year in regard to the whole of this subject. Waterways conventions have been a feature of the past twelve months. Moribund inland steamship routes have been revived. We commented last fall on the somewhat spectacular resumption of traffic on the Missouri. Projects of a similar character have been since noted in the local press of all sections. The sudden revival of interest in water competition as an agency in keeping down railroad rates has turned attention to river work, just as it has to canal-building in this section. But the consequences of a simultaneous insistence on all the meritorious plans in sight may give pause to the most liberally disposed Congress.

A "tariff war" with Germany, the latest dispatches tell us, has been happily "averted." Looking for details, we

discover that the joint commission at Berlin has worked out a scheme for a commercial treaty which only requires the "consent of the Reichstag and the American Congress." That is, when the standpatters at Washington cease from standpatting we may hope for good trade relations with Germany. So we may with Canada. So we may with the Philippines. But what prospect is there that the tariff Old Man of the Sea will relax his grip upon Congress? The Gloucester herring and the Attleboro cheap jewelry still exercise their veto, through Senator Henry Cabot Lodge, upon reciprocity treaties. The beet is too strong for both Secretary Taft and President Roosevelt, and prevents them from obtaining elementary justice for the Filipinos. Our optimistic commissioners in Berlin will sing a different song when they get to Washington and stand in the presence of Can't Do It Cannon and a protection-ridden Senate. Who touches a schedule of yon gray tariff, dies like a dog!

The idea of reforming the meat-packing, food-manufacturing, and medicine-compounding industries by simply compelling them to tell every customer the truth about themselves, is having far-reaching effects. Good "temperance people" are giving up the nostrums which contained as much alcohol as whiskey. It is therefore a fitting time for Congressman D. A. De Armond to come forward with his proposal for applying the label principle to the tariff question. The man who buys a box of cigars, a bottle of whiskey, a pack of cards, or any other article taxed for internal revenue can tell by looking at the stamp just how much he is paying to the Government. Why should not the article taxed by means of the tariff be similarly marked? The Dingley tariff being our chief source of national pride, we do not understand how too much publicity could be given to the details of its workings. Just as the hair-tonic manufacturers assert that their decoctions "grew this hair, and we can prove it," so the protected interests should be proud to say: "The Dingley act grew these knives and knit goods and tinware, and we can prove it." Let us picture the happy state of society under the proposed De Armond law. With what satisfaction does Mr. Doe, when he buys the plate-glass windows for his new house, find "151 per cent." neatly etched on the corner of each pane! Mrs. Doe surely rejoices similarly to see a label of "165 per cent." stitched to her new dress-pattern, and "141 per cent." on every piece of plush. Miss Rosalie Doe likes her chocolate creams all the better for the stamp on the bottom of each one, "50 per cent." Little Johnny Doe is prouder than ever of the India rubber boots that are marked on the inside "30 per cent." Let us hasten to adopt this method of heightening the popularity of the Dingley tariff.

The action of the Senate has assured both Senators and Representatives that their pay will be raised from $5,000 a year to $7,500. This increase of 50 per cent. marks, we doubt not, the rough estimate of Congress as to the recent increase in the cost of living. If we are to do anything more than give our lawmakers a mere honorarium, $7,500 is not, under present circumstances, too large a salary. The English system of an unpaid Parliament does not accord with our traditions and sentiments. For one thing, we do not care to recognize officially a class of landed or wealthy gentlemen who give their services to the Government, and who thus secure for their class—almost inevitably—rather more consideration than its numbers or intelligence would warrant. In Germany the pay of members of the Reichstag is low, and as a consequence the representatives of labor, as in England too, are often supported by labor organizations. Such members can scarcely be more than mere spokesmen for the unions—just as some of our Senators, like Chauncey M. Depew, are only mouthpieces for railways or other corporations. In a crisis such retained attorneys can never exhibit independence of judgment. If, then, we are fully committed to the principle of fair pay, we see no reason why, in addition to allowances for secretaries and clerks, the Congressmen should not share the general rise of wages.

The Lodge resolution in regard to the Congo, if adopted by the Senate, may have important results. Its language is guarded, for it now merely expresses the opinion that the time is ripe for an international inquiry into the affairs of the Free State, and pledges support to the President "in any steps that he may deem it wise to take in this direction, in coöperation with or in aid of any of the Powers signatory to the Treaty of Berlin which shall seek to ameliorate conditions" in the Congo. This gives the President pretty broad powers; but if we could safely intervene between Russia and Japan and take part in the Conference of Algeciras, we might as well risk international complications along this line. There is, of course, one excellent reason why we should concern ourselves with the Congo, and that is that the United States was one of the Powers that created that government. In England conditions are ripe for action, but Sir Edward Grey has been apparently waiting for some one else to move. If the Senate expresses its opinion, that may be just the spark to set off the explosion for which humanity cries out. The amount of public interest in the Congo in this country is surprising. It is welcome as showing that our plunge into Imperialism has not wholly deprived us of the ability to feel for the oppressed abroad, just as we used to feel for the Greeks and the Italians and others who fought for liberty.

This time it is the Interstate Commerce Commission which has had its turn at the Standard Oil Company. Despite Chancellor James R. Day and the Rev. R. S. MacArthur, the Commission, instead of proving the falsity of Miss Tarbell's attacks or those of the numerous other investigators of high and low degree, who have paid their respects to the best-hated of our Trusts, has confirmed about everything heretofore alleged against it. Moreover, it has brought out one or two new points of interest. For instance, the Commission reports that the "Standard buys advertising space in many newspapers, which it fills, not with advertisements, but with reading matter prepared by agents kept for that purpose, and paid at advertising rates as ordinary news." It is a great pity that this statement was not accompanied by specifications. The public is entitled to know the names of the venal journals, secular or religious, just as it found out what newspapers, like the Boston *Herald*, took matter favorable to the insurance companies at one or two dollars a line. The allegation against the Standard Oil, if it can be sustained, only shows that corporations with bad consciences turn readily to dishonest methods, in order to fool the public.

James H. Blount, ex-Judge of the Court of First Instance in the Philippines, contributes to the *North American Review* a notable article, entitled "Philippine Independence—When?" He affirms of his own knowledge that all the Filipinos, however much they may differ among themselves in minor matters, earnestly long for independence, and that this unsatisfied longing is the cause of the prevailing unrest throughout the archipelago and of the frequent outbreaks and bloody reprisals of which we have accounts from time to time. Judge Blount's article indicates a way by which this unrest may be quieted, and all the consequences of a good understanding secured, leading to fitness for independence and to that boon itself within a decade. The price to be paid for this transformation is very slight. It is simply to promise the Filipinos their independence at the expiration of ten years. Now, what are the qualifications of the man who makes this bold prediction? Mr. Blount has served six years in the islands in official positions—two in the military and four in a judicial capacity. His time has not been spent in the city of Manila. He has

been constantly in the interior, close to the people. As a soldier he has been a witness of the bravery and self-devotion of the Filipinos. As a judge he has learned what their ideas are, and what is their capacity for acquiring knowledge and making good use of it. It is his conviction that the promise of independence will make the Filipinos contented, and that nothing else ever will. Is the objection raised that the President and Congress of to-day cannot bind their successors to a particular policy for ten years to come? There is no need to borrow trouble on that score. It is not conceivable that any Administration in the next half-century would voluntarily assume such a burden, after the experience we have had with this one. The reluctance everywhere manifested to the annexation of Cuba now is convincing evidence that the American people are sick of colonial possessions, and especially of new acquisitions from among the colored races. A declaration by the Government that the Filipinos shall have their independence at a fixed time would be the wisest step the country could take.

Gov. Hughes's earnest appeal at Monday night's banquet of the American Institute for Social Service, in behalf of the movement to introduce safety appliances for American workingmen, should do much to awaken public interest in the matter. The facts set forth by the experts as to the number of lives needlessly sacrificed are, as the Governor pointed out, not only humiliating, but shocking. If it were true that protective appliances are complicated, difficult to procure or install, or otherwise impracticable, there would be something to say in apology. But in the kinds of machinery through which annual loss of life is greatest, the mechanical safeguards already available are so simple and so complete that they ought of themselves to appeal to the practical instincts of every manufacturer. If the objection of expense is raised, it was met Monday night by Col. Carroll D. Wright's assertion that, in so far as society has to pay more for manufactured goods, to cover the manufacturer's loss in damage awards, to that extent at least it has the economic right to insist on the prevention of accidents being most thoroughly looked after. It is the purpose of the Institute, moreover, to show that even the matter of expense is exaggerated in the public mind, through ignorance. The free exhibition of such appliances, now open at the Museum of Natural History in this city, is designed to give to people at large a clear idea of what can be done.

In Spain the fall of the Vega de Armijo Cabinet, which was formed only last December, shows that personal differences among the leaders of the various Liberal factions are fully as influential in preventing the formation of a stable Ministry as diversities of opinion with regard to the exact nature of a progressive religious policy. To this in some form the Liberal party is pledged. The Marquis de Armijo consented to take office, in spite of his eighty-two years, on condition that loyal support be forthcoming from the party chiefs—Montero Rios, Moret, and Canalejas. When these failed to live up to their promises, the Premier would no longer consent to hold office as a mere stop-gap. Concerning the religious problem in itself, we are told that the object of the Liberal party is to put a check to the enormous growth of the religious congregations, native and French. A concordat between the Holy See and Spain grants authorization to only three religious orders. But under a law regulating associations, which was passed with the object of popularizing democratic institutions and the machinery of representative government, there have sprung up religious orders to the number of 100 to 150.

The visit of the Ameer of Afghanistan to India is regarded with more than satisfaction in British official circles and the press. It is no secret that the attitude of the present Ameer to the Indian Government has till recently been one of reserve. A British mission in January, 1905, was successful in bringing about a renewal of relations established with Abd-ur-Rahman, father of the present ruler, but that achievement alone was generally regarded as insufficient, in view of the active and partly successful effort of Russia to get into friendly touch with the Ameer. Hence it is gratifying to England that Habibullah Khan should exchange his policy of suspicious aloofness for one of extremely friendly intercourse. At Agra he was welcomed by the Viceroy with a splendid retinue of military officers, rajahs, maharajahs, and begums. The meeting was marked by elaborate courtesy. "The Ameer opened the conversation with the Viceroy by saying: 'I am sorry I cannot talk English. I speak a little, but not good.' Lord Minto replied: 'I think your Majesty speaks extremely well.'" Later, when tea was served, Lord Minto rose and helped the Ameer to milk. When the Viceroy sat down, the Ameer "quickly rose and poured milk into Lord Minto's cup, saying, 'I will help you.'" A great hunting party was planned, among other festivities. We are not told whether Lord Minto and the Ameer are to play tennis together.

The professors of the Museum of Natural History at Paris are collecting subscriptions for a monument to Lamarck, the "originator of the transformation theory." They think it discreditable to the French nation that, while Darwin rests in Westminster Abbey, Lamarck should still be without a statue. Darwin sought to explain the apparent discontinuity in the chain of human development; Lamarck endeavored to show by what processes organic forms were constituted and continuously transformed. The French naturalist was not appreciated during his lifetime. His treatises on "zoölogical philosophy" and on invertebrate animals excited the contempt of Cuvier, who pronounced his so-called *éloge* before the Academy. Even Geoffroy Saint-Hilaire, who was Lamarck's friend, did not appreciate the latter's theory when he delivered the oration at his tomb. It is proposed to erect the monument in the Jardin des Plantes, where Lamarck spent so much of his life in botanical research; and it is suggested that the state should be asked to coöperate in the publication of a complete edition of his works. Undoubtedly, he prepared the world for a ready acceptance of the Darwinian hypothesis. Yet he was but one among a number of writers who, during the eighteenth and the early part of the nineteenth century, set forth a speculative theory of development which, indeed, had an earlier origin in Greek philosophy.

Bournemouth rejoices in the possession of a municipal orchestra which has met with marked success since its foundation fifteen years ago. It is admittedly one of the finest in England outside of London, and has been fortunate in having as its supervisor Dan Godfrey the younger, son of the well-known bandmaster. There are forty musicians in the orchestra, which has a permanent headquarters in the Winter Gardens Pavilion, where admission may be had for the extremely reasonable price of 12 cents, a sum that brings the concerts within the means of practically everybody. Despite this low rate of admission and the heavy cost of securing first-class soloists—such as Paderewski—the orchestra has all but paid for itself. Only very small deficits have from time to time been made up by the taxpayers. Of course, Bournemouth, as both a winter and summer resort, has a great many strangers who help to pay the cost of the orchestra—about $35,000 a year—but none the less its record is a notable one, because the authorities have set themselves very high musical standards and stuck to them. Their orchestra is much more than a mere resort band. Nearly all the leading British composers have gladly conducted their own works at its concerts. The municipal orchestra is, of course, an old-established institution on the Continent, but in this country it is slow to obtain a foothold.

THE FEDERAL CHILD LABOR BILL.

Senator A. J. Beveridge's plan to limit child labor by means of Federal statute, for which he spoke in the Senate last week, has the hearty endorsement of public-spirited men and women. Felix Adler, Jane Addams, Samuel Lindsay, Homer Folks, Florence Kelley—when such as these favor a measure, the public is generally correct in assuming that it is wise. Dr. Adler, for instance, in his own words, is "one of those who by temperament, by prejudice, and by predilection cling to local self-government and dread the expansion of the Federal power." Yet, after only three years of leadership in the effort to bring individual States to a realization of the lasting evils of child labor, he and his associates turn to Washington for aid. There they see a short-cut to some of the desired reforms. Briefly, the Beveridge measure proposes to forbid any carrier of interstate commerce "to transport or accept for transportation the products of any factory or mine in which children under fourteen years of age are employed or permitted to work." Violations of the law are to be punished by fines of not more than $10,000 or less than $1,000, or by imprisonment for between one and six months, or by both.

That this latest resort to the overworked "interstate commerce clause" of the Constitution is open to objection has been apparent to the framers of the bill from the beginning. With marked skill, they have endeavored to disarm their opponents in advance. Thus Senator Beveridge remarked in his speech:

> How strange that the Constitution is always invoked to prevent every reform helpful to humanity and hurtful to the great financial interests! How strange that the Constitution is never invoked against legislation asked by railway and manufacturing interests!

Senator Beveridge also asserts that the "worst enemies of reform are apparently for it, but earnestly against any effective methods of handling it." He who would oppose the bill on conscientious or Constitutional grounds is thus forewarned that his unfavorable criticisms will be discounted in advance as due solely to malign or corrupt influences; and that he will be classed either as an enemy disguised as a friend, or as an agent of the "great financial interests."

But despite these warnings, there are those who, like ourselves, decline to decide the question on the sentimental side alone. If it were merely a question of sentiment, Senator Beveridge's plea would be conclusive:

> I am more anxious to debate an inhuman evil than a governmental theory. . . . Some say, "Let us wait until the States act." What say the American people, with countless child graves before them, child murder this moment being done, and human lives daily being wrecked—what say the American people to this counsel of death and delay?

But no step like this should be taken without careful discussion. Such as has been permitted has already laid bare differences of opinion among the child-labor opponents themselves. Thus Edgar Gardner Murphy, the ablest and hardest worker for the cause in the South, has withdrawn from the National Child Labor Association because of its endorsement of the Beveridge bill. He, surely, is neither an enemy in disguise, nor a tool of the money power. Yet he has given to the Montgomery *Advertiser* reasons for opposition, which deserve the most serious consideration.

Mr. Murphy points out that "no other public issue within the past ten years has gained such popular interest or commands to day such undivided popular support." In this cause, Mr. Murphy adds, the States have been neither indifferent nor inefficient. There have been, of course, weak spots in the laws thus far passed, but there are weak spots in the proposed Federal legislation. Most striking is Mr. Murphy"s positive assertion: "I personally know that the preparation of the Beveridge bill was directly due not to the neglect of the States, but to the fact that those who have been struggling for State action had created such popular interest in the subject that a Federal bill was regarded as a strong political move." Mr. Murphy also dwells upon a fact, which appeals strongly to us: that dividing responsibility for child-labor conditions between Federal and State authorities will shift the centre of moral obligation from the States to Washington. He maintains with much force that, without local public opinion, Federal enactments themselves are impotent, and that the proposed bill will weaken local efforts and the development of this opinion in the individual States.

The feebleness of a naked Federal statute is inherent in the nature of this particular case. An effective law against child labor must go into details with which Federal legislation cannot deal: it should regulate hours of labor and night work; it may prescribe the physical condition of factories; it must dovetail into the laws regarding school attendance. The Beveridge bill goes as far as a Federal bill can; but, as we have already noted, it offers nothing beyond a bare age limit for children under fourteen. Then, too, methods of enforcement and inspection are not yet worked out with any thoroughness. No one knows how large a staff of Federal inspectors will be required, or what burdens will be placed upon the Department of Commerce and Labor.

Furthermore, the very Constitutionality of the bill is in doubt. The Senate itself sent Mr. Beveridge's first draft to the Judiciary Committee for its opinion. A recent unfavorable court decision upon one of Senator La Follette's railroad bills pointed in the other direction from that in which Beveridge is headed. But even if his proposal is Constitutional, there are reasons enough for going slow with it. We are already relying too much on the authorities at Washington. We need, as Secretary Root has urged, to educate our State governments to a sense of their duties and responsibilities.

VON BÜLOW'S VICTORY.

The enthusiasm reported from Berlin over Von Bülow's victory at the German elections strikes the foreign observer as distinctly forced. The Chancellor has accepted the congratulations of the Kaiser and his friends without reserve, and has characterized the outcome as a triumph for the German nation. Yet when the results to date are studied, it is apparent that, so far as the Centre is concerned, Von Bülow has met with nothing less than a defeat. It was not primarily to attack the Socialists that he dissolved the Reichstag in December. True, they united with the Centre in defeating his Southwest African proposal. But he was avowedly gunning for the Clerical Centre. At that party be emptied his first barrel. Only nine days ago, in his election speech, he devoted his attention chiefly to it, saying that it could never be counted on. The Centre represented, he declared, the reactionaries, both aristocratic and democratic; and German politics must not become the shuttlecock of a faction which treated everything from a sectarian point of view. It was from them and their attempt to run the Government that he appealed to the people.

The election shows clearly that his first shot missed entirely. The Centre has lost only two seats of the total number, and has already elected one more representative than in the first day's balloting of 1903. It is announced that the Centre will reënter the Reichstag "chastened," and this may be so. In most countries, however, a return after successfully sustaining the assaults of the Government would ordinarily make a party more aggressive and exacting than before. The Catholics have certainly fully maintained their position; and if the rest of the election had been marked by as little change from existing conditions, Von Bülow's prestige would now be shattered.

Fortunately for him, his second barrel was really effective. To take a shot at the Socialists is customary on all occasions; for them there is no close season. Von Bülow gave some space to them in his speeches, as a matter of course. They have already lost nineteen seats, and will lose others—the first

setback in twenty-five years. Even if, as appears, this was due solely to the appearance at the polls of most of the three million stay-at-homes of other parties in the elections of 1903, the credit for arousing this body of indifferent citizens belongs to Von Bülow and his new Colonial Secretary, Dernburg. For this he may well accept congratulations.

But if, despite the defeats of individual Socialists, the total vote of the party is correctly reported to have increased over that of 1903, Bebel and the other leaders will have no cause to be downhearted. They fight against tremendous odds. Not only is all the influence of the Court and the Government and the Church brought to bear against them, but the inequalities of the suffrage and of the apportionment of seats works directly against them, as against the Liberals. The Socialists, weakened in Parliamentary numbers as they are to be, will only speak with redoubled earnestness if they can voice the wishes of three and one-half millions where they represented only three millions of voters before. Moreover, it is upon no point of policy that they have been beaten. Their rebuke, if such it be, is connected with no particular social reform for which they have been fighting and in regard to which it might now be said that their fellow-countrymen have voted against them.

Even granting that the setback of the Socialists is significant, the main question remains, What will be the situation of the Government in the new Reichstag? It has been taken for granted that there will be a coalition of Conservatives, National Liberals, and Radicals, which will support the Chancellor. Unquestionably, he will have no difficulty in getting his Southwest African vote through the Reichstag. That much he could have obtained had he really made an effort to force it through before dissolution. But on what other questions could such a coalition be held together? The Barth Radicals have resented and rejected every overture made by the Chancellor since the beginning of the campaign. They are opposed to the kind of "personal government" on the part of the Kaiser which they have been witnessing; they are opposed to Von Bülow's truckling to the Agrarians; they have absolutely nothing in common with the Conservatives, and are sworn enemies of the protective policy. Sooner or later the Chancellor will find himself compelled to fall back on the Centre once more—certainly if there is any reactionary legislation in contemplation.

The Liberal cause, with which the *Nation* must necessarily sympathize, has indubitably regained some of the ground it lost four years ago, even though Dr. Barth himself is again defeated. The Liberals will also gain in the second ballots, of which there will be 160. Yet he who desires the spread of liberal ideas and has hopes of progressive social legislation, can find nothing in the vote to arouse enthusiasm. The reactionaries are still in control; the Chancellor, who never had any patience with the Radicals or Liberals until he needed their votes, is still in the saddle; the Kaiser continues to dream of playing a great rôle in the politics of the world, while the price of meat goes up, and more than one grievance renders the masses of his people restless and discontented. Compared with this, all the colonies of the Empire are of little moment. What the hour calls for is a statesman of broad and liberal views, capable of formulating a comprehensive reform policy, and of introducing it little by little, beginning with the principle of equal representation. Then there could be just expectations of making permanent headway against the Socialists; now any triumph over them, however unexpected, must prove to be merely temporary.

THE POPULATION OF FRANCE.

The results of the quinquennial French census, taken on March 4 of last year, were made public a few days ago. The figures have confirmed the general predictions that the period from 1901 to 1906 would show a still more marked slackening in the increase of population. Excluding French citizens in Algeria, in the colonies, and abroad, the census shows a population of 39,337,235, an increase since 1901 of only 290,322, or three-quarters of one per cent. This rate of augmentation, minute as it is, represents, nevertheless, a falling off from the period 1896-1901, when the increase was nearly 445,000.

A striking though not surprising fact is that, of the total increase of 290,000, more than 223,000 is accounted for by cities with a population of over 30,000. In other words, not only is the population of France as a whole approaching a perfect balance between births and deaths, but in the rural sections there is actual depopulation. Thirty-two Departments only showed an increase; fifty-two Departments showed a decrease; two Departments, Lot and Oise, suffering a diminution of more than 10,000. Of the great cities not all have added appreciably to their population. Paris has risen from 2,714,000 to 2,763,000; Marseilles from 491,000 to 517,500; Lyons from 459,000 to 472,000, and Lille from 205,000 to 210,000. Comparatively the best showing was made by the smaller industrial towns and by Nice, which rose from 105,000 to 134,000. On the other hand, Bordeaux has suffered a loss of 6,000, and Toulouse, St. Etienne, Nantes, and Havre are practically at a standstill.

In commenting on the significance of the figures we have quoted, the French are inclined of late to seek not so much for remedial measures as for consolation; and consolation, of course, means giving it up as a bad job. It is well enough to talk of taxing bachelors, and bestowing prizes and graduated exemption from taxes upon the fathers of large families. But such measures, if of use at all, are only adapted to cope with temporary and local phenomena. They can be of no avail in France, where the restriction of population is a peculiarity neither of a few years, nor of any locality, nor of any class. And so, recognizing how difficult it is to cope with a tendency which, if pursued consciously, will yield only to radical measures, and, if unconsciously, will not yield to parliamentary measures at all, Frenchmen, as we have said, seem to be growing satisfied with expressing perfunctory regret and looking for solace. This they find in the fact that a declining birth rate is not peculiar to France; that it has been observed in Great Britain, where it has given occasion to much serious discussion; that it is true even of teeming Germany; that, in fact, it is a widespread condition, which finds its most emphatic exemplification in France. Such reasoning is not inspiriting. With France adding less than 300,000 to her population in five years and Germany adding three and three-quarter millions, there is small comfort in the reflection that both nations are travelling towards the same ultimate point.

Another cause for consolation is, however, being frequently brought out in the French press. It consists in the rejection of the blind fetich of numbers as a national ideal in favor of the conjoined ideals of efficiency and a high standard of general welfare. For peoples as for individuals brute matter is not everything. Though the truth is old enough, Japan has recently shocked us into active consciousness of it, and Japan has been these few years our great example of a nation guided by will and intelligence towards success. Yet why look to Japan, the argument runs. France, in maintaining her prestige among the Powers all these years with a dwindling population, from the comparative point of view, has been offering fully as striking an instance of what discipline and diligence will do to offset the odds of number. Poorly provided with the raw commodities that give manufacturing supremacy—coal, iron, staples—she has, by means of a fine artistic sense, technical training, and organizing ability, been able to do more than hold her own in the industrial field. It is but a step to reason that, in the same way, the national genius will know how to utilize its moderate resources of raw human material in the game of international competition.

Guizot said that the great social movements of Europe have always attained their classical development in France. Feudalism, absolutism, and democracy

in turn have reached their fullest bloom on French soil. In the heart of probably most Frenchmen, as on the lips of many, rests the belief that France has not lost her intellectual leadership in Europe. It may not be far-fetched, therefore, to discern in this latest phenomenon of depopulation another example of France leading the way and other nations following towards a new social conception. Meanwhile she is growing in well-being if not in numbers. The Republic can to-day point to her exemption from Great Britain's huge unemployed class, from Germany's meat famines, from the chronic bread-riots of the other Latin countries. Her accumulated savings have kept Russia going for decades, and are beginning to invade wider fields, including this country. Finally, she is far advanced in legislation dealing with the vast group of social questions connected with the relations of capital and labor.

There is, of course, the undeniable fact that in the absence of such marked difference in efficiency as between Japan and Russia, numbers must count in case of a contest between France and any other European Power. This fact has imposed upon France the system of alliances and friendships which she has been building up these last fifteen years with such marked success. Yet even in this field the country seems to be approaching, though slowly, a solution which should make her independent of foreign aid. We refer to the anti-militarist agitation which has recently been so active in France. The leaders of the movement have been regarded generally as enemies of their country and as fanatics. The latter they may be, but they can scarcely be called enemies of their fatherland in working for the abolition of the present European military system under which France's numerical inferiority must always leave her the weaker.

A CATHOLIC CRAPSEY.

In the midst of its political troubles, the Roman Catholic Church has lately been disturbed by a *vox clamantis* within the fold. Father George Tyrrell, known to many on both sides of the Atlantic, has published, with explanatory notes, an English version of a letter which he wrote not long ago to a professor at one of the Italian universities. The latter, feeling doubts concerning certain articles of the Catholic faith, had asked whether he should not withdraw from the Church. Father Tyrrell declares that his reply was a *lettera confidenziale*, which was not intended for publication; it was "a medicine for extreme cases." But a copy came into the hands of some one at the Vatican, who sent the substance of the letter to the Milan *Corriere della Sera*. Father Martin, at that time General of the Society of Jesus, to which Father Tyrrell belonged, thereupon wrote to the author, complaining of the "inadmissible assertions" in the letter, which had "caused scandal to many," and demanded "a declaration to be published in the papers, repudiating such doctrines as are therein propounded." Upon refusing to comply with this demand, Father Tyrrell was dismissed from the Society, and his letter was placed upon the Index.

There is nothing extraordinary in the advice given by the priest to the professor. The ideas expressed resemble those entertained by liberal Protestants generally, and by certain Anglican Broad Churchmen particularly. It is remarkable, however, that such a letter should have been written by a Jesuit. He advises the professor to remain in the Church in spite of his doubts, and in so doing he explains or explains away the creed by interpreting it in what the Oxford Tractarians called "a non-natural sense." The letter lays stress on "the distinction between faith in the Christian revelation, in Christ as a Person, in the Church as a living corporation; and theology, which strives to translate revelation from the imaginative language of prophecy into the conceptual language of contemporary scientific thought." Revelation, he contends, is not theology; faith is not theological assent; religion is not the scientific formulation of religion. Modern criticism has undermined and overthrown traditions which were once respected; "the conservative positions are maintained by ignorance, systematic or involuntary."

In view of this, Father Tyrrell maintains that the value of the Church's teaching to the individual life, not the doctrinal forms in which it is presented, is the important thing. The visible Church is "a great desideratum," but is secondary. This idea is substantially that of Calvin, but is widened so as to be even more offensive to the Catholic mind. The sacraments are interpreted naturally, and doubt is cast on the final authority of Rome itself. The Italian professor is exhorted to disregard religion as crystallized in the decrees of Popes and councils, in the deliverances of congregations and doctors, and to find it essentially in the spiritual vision of God. Faith is not the acceptance of theological formulas; it is "a seeing of God"; but "this vision is not at command, but is given to us; and that most clearly in moments when we seem most filled with God."

He might have added that, in ancient as in modern thought, mysticism has been the refuge for the skeptic in both philosophy and theology. But it has almost always been regarded with suspicion by the authorities of the Latin Church, whether displayed in the illusions of a Maid of Orleans, or in the more disciplined experiences of a Fénelon. To the mystic, the ordinances and ceremonies are subordinate to immediate communion with God. A Church which insists primarily on obedience and intellectual assent, must be intolerant of the individualism which has its religious sources in feeling, and its standards in subjective states. Indeed, the earlier German mystical philosophers were the forerunners of Luther.

As to the propriety of the heretic remaining in communion with the Catholic Church, Father Tyrrell declares:

> Let it be granted, for argument's sake, that things are quite as bad as you say, and that the intellectual defence of Catholicism breaks down on every side as far as you are concerned. . . . Does it straightway follow you should separate yourself from the communion of the Church? Yes, if theological "intellectualism" be right; if faith means mental assent to a system of conceptions of the understanding; if Catholicism be primarily a theology, or at most a system of practical observances regulated by that theology. No, if Catholicism be primarily a life, and the Church a spiritual organism in whose life we participate, and if theology be but an attempt of that life to formulate and understand itself.

This is a condensed statement of the issue with which the entire Christian Church is now confronted. The question is, not so much whether a man is a heretic, as whether the Church is broad enough to hold him. And this question is being debated publicly or privately in nearly all the Protestant denominations of both Europe and America. No one familiar with the history or the teaching of papal Rome could suppose that such opinions as those of Father Tyrrell would be tolerated by the Catholic authorities. There may, indeed, be a difference of opinion concerning the methods employed in uncovering his heresy and in bringing him to the ecclesiastical scaffold. But the Catholic Church is neither a democracy nor a debating society, and it was a foregone conclusion that when his letter was made public, he would be beheaded by "that drawn sword whose hilt is at Rome."

ART AND THE THEATRE.

Good does sometimes come out of evil; and even such a flagrant offence against common decency as the production at the Metropolitan Opera House of Oscar Wilde's infamous "Salome," with Richard Strauss's music, may prove beneficial in its ultimate result. There is cause for thankfulness in the fact that the performance has provoked a protest from the directors of the opera house, even if that protest be not nominally based upon the highest grounds. It gives assurance, at least, that there is a point beyond which, in the interest of property if not of cleanliness, theatrical cupidity will not be allowed to go. If something of this sort had not occurred to direct public attention, by a violent

shock, to the logical consequences of the modern theory that art should be subject to no restrictions outside its own laws, the theatre might have become a menace to the sanctity of the home and the health of the community.

Students of the theatre have long noted the tendency of the contemporary stage to grow more reckless in its efforts to minister to morbid appetites. During the last thirty or forty years a great revolution has been effected in the attitude of the public to the theatre, and the theatre to the public. When, in the early seventies, there was a proposal to give the Passion Play in this city, in the closest possible imitation of the Ober-Ammergau representation, the enterprise was overwhelmed, in its very inception, by a tidal wave of public opposition. A little later the daily press resounded with denunciations of the French drama, the plays of Augier, Feuillet, or Dumas *fils*. The production of the "Daniel Rochat" of Sardou was held to be an extraordinary manifestation of managerial audacity. There were many old-fashioned folk then who thought that public virtue would be imperilled by the dissemination of such radical, free-thinking ideas. Still later anxiety was expressed over the possible effect of the performance of some highly diluted extracts of two or three specimens of the Restoration comedy. What would have been thought, then, of some of the more recent specimens of the symbolistic drama, it would not be difficult to guess.

But both theatre and public long ago rose superior to their scruples. Doubtless, each, to a certain extent, reacted upon the other. This, however, is not the place to determine the exact proportions of the responsibility. The fact remains that the theatre continued to grow bolder in its open transgressions of the proprieties, and to profit by its vulgarities, until what was regarded as the climax was reached a few years ago when, in one of the most fashionable theatres, a scene was presented of which the central incident was a rape. Yet that theatre—the significance of the statement is enormous—was crowded for months.

Since then the emancipation of theatrical art has been proceeding at a rapid rate. There are few phases of illegal passion or erotic sentiment that have not been illustrated only too copiously. Samples of exotic imagination have been imported from Russia, Italy, Belgium, France, and Germany. But, it should be noted, these all dealt with natural, even when extravagant, emotions. Now we have been led a step further, and invited to refresh our souls with a spectacle so foul in its open manifestations and secret purpose that the gorge of every healthy man must rise at the thought of it. And all this has been done in the name of theatrical art! Never was hypocrisy more gross or Phariseeism more contemptible. It is time that there should be some plain speaking on this subject. Everybody who knows anything of the world, or is not deluded by some astigmatic enthusiasm, knows that all such exhibitions are inspired mainly by but one motive, the desire to make money by means of some new and strange sensation. The talk about devotion to artistic beauty is abominable cant.

But the various managers, who strive to profit by catering to prevailing vices, are not the only responsible offenders. Professional writers who distract attention from essential abominations by dilating upon the powerful imagination, subtle fancy, and stirring eloquence of the utterer of them, must take their share of the burden. They, perhaps, are the worst offenders of all, for they sin with open and instructed eyes. The public, of course, has helped to make the present condition of affairs possible, but a large proportion of it is misled by the false guides.

It is well that the question has been raised upon so clear and plain an issue. Here, at least, there is no chance of hair-splitting. Are theatre managers, dramatic or operatic, to be allowed to practise obscenity on any pretence whatever?

LITERARY NEWS FROM PARIS.

PARIS, January 18.

In the pure and tranquil sense of the term Maurice Barrès and Anatole France are the two first men of letters of France, with no second approaching them. Maurice Barrès holds to being something more; and this he expressed in the first halting sentence of his discourse yesterday, when taking possession of his seat in the Academy. It is "to he the hrother after their death of those who have gone hefore—*le confrère après leur mort*—of the poets and scholars, the philosophers and statesmen, the priests and *grands seigneurs* who have wrought the community of France." This Nationalism of his is not to be confounded with the party of agitating politicians who for a time grasped after the name. It is a reaction of younger Frenchmen hack to their traditions of race and hahit and even of soil and air and memories of a glorious past, which the progress of revolution was obscuring. Perhaps Maurice Barrès has heen only the first superlative spokesman of what was starting up in the minds of many. It is certain that, young as he is (forty-five), he has proved a formative force among all Frenchmen who think.

He had his period of youthful disdain. Then came the great dissension in the heart of France and the dilettante died within him. He wrote first his "Romance of our Nation's Energy," building upon an acrid word which Veuillot applied to Parisians—"Les Déracinés" (The Uprooted Ones)—a whole theory of social life. This has softened into a passionate love of his native Lorraine; and his message to Frenchmen, if not "Back to the land!" is at least to remind them of their long heredlty in the fair and varying provinces of France, far from the levelling down of revolutlonary Paris. And now he salutes reverently "Our Lords the Dead!" In his child's hook on "French Friendships"—for grown-up children—he teaches his little Philip in Joan of Arc's country how to listen to the hells with their lessons of other days. This, too, he repeated in a roundahout way to the grave Academicians in his eulogy of his predecessor in the Academy, the Cuhan Heredia. That son of the Spanish conquistador, who was to put into faultless French rhyme the exotic deeds of his ancestors, came for his early studies to a provincial school in France.

The young Heredia had not, from father to son, heard the bells of France, nor wondered at the hirds painted on the copes in our churches, nor felt how divinely sweet are the taper lights flickering in hroad day at our funerals. For him the sharply defined colors and accented songs of Cuha were a necessity.

Before the Paris puhlishing season recovers from its holiday debauch, there are a few hooks still to he noticed.

"Les Métèques"—a romance of Parisian manners and morals—is not the work of a Parisian at all, hut of M. Binet-Valmer, who writes the French of Geneva. A "métèque"—μέτοικος in the Athens of Aristophanes—is an alien suffered to live in a foreign city on condition that he pays his scot. Such are Greeks and rich Americans of mixed descent in Paris—hut perhaps M. Binet-Valmer is not an Aristophanes. His style strives after color and photographic detail, now hammers and scolds, and again falls into hanality. The rich old Greek, George Avrinos, lives in the Avenue du Bois de Boulogne. His neighhor and great friend is another métèque, a Rumanian "millionaire, and consequently a prince." The Greek writes analyses of decadent poetry for the Athenian newspapers, and patronizes impresarios, hallet-dancers, young French novelists who know Paris society best—and is never ready with his money for the rent. Antoine, the Greek's eldest son, marries into the French aristocracy. On an unlucky day this wife of a Parisian Greek meets "Mr. Welstein Van Clayssen, a native of San Francisco, whose American father was of Dutch origin and had married his servant-girl, who was from Geneva with an Italian mother. This mixture of hloods had produced *le beau* Welstein, whose life is so full of adventure that it would take a hook to tell it." That is the kind of Americans we are in Paris, as seen at the small end of a Geneva telescope. What is more, Van Clayssen, who is seeing life in Paris, does it on 30,000 francs a year ($6,000), which is clearly counted hillionaire spending in Switzerland. There is a cotton merchant from Calcutta, a rich Turk, an English Lady Cynthia, and yet another American who wind in and out of this hook.

The annual novel from Paul Adam is the highly historical romance—"Irène et les Eunuques"—fifty years of Byzantine history in the life of that decorative Athenian woman who was empress for twenty years and was then left to die in exile in Lesbos. Interesting rescarch has been made in this field of late years and Paul Adam proclaims his archæological debt to M. Diehl, who

is a sure authority and quite as accessible to the general reader. Those who wish to supplement their Gibbon with the new learning mingled with very Byzantine love tales can pore over the rather metallic pages of M. Adam, who has so often narrowly escaped being a great writer.

G. Sorel, already known as applying Socialist principles to the interpretation of history, has completed his four studies of "Le Système Historique de Renan." He belongs to that younger school of which the Italian Professor Ferrero is so brilliant a representative. If the same literary talent with which this school begins should persist we shall have an interesting renaissance of historical writing, with a novelty of its own—documents interpreted on the principles of the coming years. In the immense "Histoire Socialiste," edited by M. Jaurès, there is a new volume by Georges Renard, with preface by M. Millerand, "La République de 1848."

At the other extreme M. Douais, now bishop of Beauvais, gives a substantial volume on the Inquisition in its procedure and development in the south of France; a work at first hand in a field where the author distinguished himself more than twenty years ago, when he supplemented and corrected the work of the late Auguste Molinier. His strong point is personal knowledge from the inside, of the religious and canonical traditions which have persisted from that time until now in French Catholicism. Père Lecanuet, author of the life of Montalembert, begins a complete history of the Church of France under the Third Republic: the present volume treats especially of the period ending with the final downfall of the Conservative Republic and the advent of Gambetta to power. The work will, of course, lead up to the Culturkampf of to-day, from which it takes its immediate interest. S. D.

Correspondence.

MR. RHODES ON THE ALABAMA CLAIMS

To the Editor of The Nation:

Sir: The completion by James Ford Rhodes of "The History of the United States from the Compromise of 1850 to the Final Restoration of Home Rule at the South in 1877," is an event of no small import in the annals of American historical achievements. The author, as we all know, is painstaking and impartial, and his work bids fair to continue long as the accepted authority for its period. Mr. Rhodes frankly says that the critics of his earlier volumes have been helpful to him in making corrections. Whoever, therefore, discovers an error in his pages feels encouraged to point it out.

Thus I venture to comment on one or two statements, in the chapter of volume vi. devoted to the Alabama Claims and the action of the United States in 1872 before the Tribunal of Arbitration at Geneva. Mr. Rhodes seems to have done injustice, unwittingly, of course, to an eminent man, whose public service has long entitled him to grateful recognition and high praise. I refer to the Hon. John Chandler Bancroft Davis (still living in Washington, at an advanced age), formerly Assistant Secretary of State and Agent of the United States at Geneva, then our Minister to Germany, subsequently a Judge of the Court of Claims, and not long ago Reporter of the Supreme Court of the United States. Only three men now survive of the American party in attendance at Geneva during the summer of 1872—Bancroft Davis, Brooks Adams, and myself. From a distinct recollection of what occurred during those memorable months at Paris and Geneva, and from a fairly accurate knowledge of the persons who participated in that great international lawsuit, I feel authorized to speak, both as to the character of the steps taken by the two Governments, and as to the labor performed by their representatives. I discuss this matter in the columns of the *Nation*, instead of addressing a private letter to the author himself, for the reason that it is but fair that the effect of his animadversions should be counteracted, so far as possible, in a circle of readers interested in the truth of history.

Lack of space forbids quoting Mr. Rhodes at length, or pointing out all the instances in which his narrative treats unfairly our agent at Geneva. The following extract is from page 364:

> The document entitled "The Case of the United States" is not one for an American to be proud of. It harped on the concession of belligerent rights to the Confederacy, and stated what was untrue when it said that "Her Majesty's Government was actuated at that time by a conscious unfriendly purpose towards the United States." This occurs in the first chapter entitled, "The Unfriendliness of Great Britain," wherein much that is true is irrelevant and discourteous.

This is a serious indictment. Whether the "Case" be in truth a document for an American to be proud of is, to be sure, a matter of opinion. Bancroft Davis wrote every word of that document. So far as perfect clearness of statement and felicity of expression are concerned, "The Case of the United States" may be pronounced almost faultless. That it more than met public expectation at the time is evident from the letters of approval and thanks that poured in upon the Agent of the United States from prominent men—lawyers, merchants, authors, and the like—in various parts of the country. Americans in that day were proud of the "Case." Says that most competent critic, Caleb Cushing:

> It was my opinion on reading the American Case for the first time, and it is my opinion now, that it is not only a document of signal ability, learning, and forensic force—which indeed everyhody admits—but it is also temperate in language and dignified in spirit, as becomes any State paper which is issued in the name of the United States. . . . The facts are pertinent; its reasonings are cogent; its conclusions are logical. "Treaty of Washington" (1873), p. 31.

In a word, the "Case" met the need of a vigorous assertion of our rights, in terms diplomatic and courteous. If it "harped" on the concession of belligerent rights, it must be confessed that the Counsel for the United States (Messrs. Cushing, Evarts, and Waite) kept up the harping in their Argument. (III. Gen. Arbit., pp. 10-11).

Mr. Rhodes further appears to be laboring under some misapprehension in imagining that Mr. Davis wrote what he knew (or ought to know) was untrue. It was the duty of the Agent of the United States to bring to the attention of the neutral Arbitrators the fact of the existence of unfriendly feeling on the part of the English Government. It is nothing to the point that labored attempts of to-day are undertaking to show that the people of the United States were mistaken as to the spirit animating the governing powers of England during the dark hours of the war. Such attempts may succeed in proving that our feelings caused us to exaggerate somewhat the extent of that unfriendliness. But nothing can now be brought forward to shake the convictions established in those days, after deep regret, in the minds of all friends of the Union.

As to the charge of discourtesy, perhaps the best reply is the terse remark of M. Moreau of Paris, a distinguished member of the French bar. After he had read the "Case," in the French version, he quietly observed to our agent: "Vos paroles sont douces; mais vos faits sont brutaux." No one who has ever known Bancroft Davis can for a moment imagine him to have been guilty of discourtesy in any relation of life. Moreover, the charge finds no justification in the pages of the American case.

"These objectionable statements and arguments of Bancroft Davis, so far as I have been able to discover," continues Mr. Rhodes, "did not in the least strengthen our cause." Yet some time after the Tribunal had finally adjourned, Count Sclopis, upon being pressed for an answer to the inquiry, what was it that gained the award, replied: "The case prepared by Mr. Davis. It was that which won the cause." The president of the Tribunal spoke the literal truth.

On the day appointed by the treaty, the United States laid before the Tribunal a clear, explicit, and strong statement of facts—an exposition of the duty of England, and of her failure to perform that duty; a list of the acts and omissions on the part of English officials, together with proof of oft-repeated expressions from those in authority, declaring their sympathy for the success of the Southern Confederacy. The story was told calmly, and without embellishment, yet with a cogency and force, from the effect of which there could be no escape. It was this superb marshalling of the facts that convinced the arbitrators of the justice of the American cause.

Mr. Rhodes says further:

> But chapter i. was not the worst feature in the Case of the United States. Chapters i.—v. were submitted for advice to President Woolsey, Judge Hoar, Caleb Cushing, and Hamilton Fish, but in chapter vi. Bancroft Davis gave himself a free hand, and almost wrecked the arbitration. He revived the national and indirect claims, etc.

The charge that Bancroft Davis "almost wrecked the arbitration" is entirely wide of the mark. If the clamor in the English press consequent upon the discovery that the American case did not ignore the "indirect claims," had resulted in a breakdown at Geneva, because of a refusal by England to proceed with the arhitration, the American agent could not have been held in the least accountable. The President had directed Mr. Davis to prepare the case. This labor Mr. Davis performed. He included among "*all* the claims" (to use the words of the treaty), the indirect claims, "in the exact language of the protocol."

To judge from the extract just quoted, one would suppose that Bancroft Davis, in

drafting chapter vi. had acted solely upon his own responsibility. Mr. Rhodes evidently believes such to be the fact. The truth is, so far from giving himself "a free hand," Mr. Davis acted immediately under the eye of his chief. The American case was submitted to Mr. Fish, who read it through from beginning to end, and approved it in its entirety. The secretary of state and the assistant secretary acted in perfect official harmony.

When put to the test Mr. Davis had the courage to assume any burden that it had become his duty to assume. It was the tact and the stamina of Bancroft Davis that in the presence of danger actually rescued the treaty from failure. The world may never know how large a measure of credit is due to the sagacity and the nerve of both Lord Tenterden and Bancroft Davis. Happily for England and for the United States, these two men believed each in the other. Mutual confidence and a unity of purpose enabled the Englishman and the American to work together in preparing a way by which the "indirect claims" could honorably be disposed of, and the treaty saved. After these two men, upon their own responsibility, had struck hands, it was agreed that Mr. Davis should ask Mr. Adams to take the open and visible step leading to action by the tribunal. Mr. Adams acted with equal skill. The disposition that was thereupon made of the subject matter which had threatened a rupture of the treaty, has now become familiar history. The great principle was then and there settled of the extent to which, in time of war, a neutral Government is liable for failure to observe its obligations to either belligerent. It was this initiative act, the honor of which belongs equally to the respective agents, that constitutes the crowning merit of Bancroft Davis's inestimable services to his country.

The foregoing observations have been submitted from no spirit of controversy, but only that this chapter in our national affairs may be accurately viewed. I believe that our foremost historian will gladly apply himself anew to the study of these events in order to ascertain whether, because of imperfect data, this first sketch by him of the Treaty of Washington, and the Tribunal of Arbitration, does not in some particulars need revision.

FRANK WARREN HACKETT.

Washington, January 24.

GREAT BRITAIN AND THE CIVIL WAR.

TO THE EDITOR OF THE NATION:

SIR: In the Proceedings of the Massachusetts Historical Society for the last quarter there is an interesting and important paper by the president on Lord Granville and his connection with the attitude of Great Britain towards the United States during and subsequent to the civil war, which revives the arraignment of the conduct of the British Government.

There were no doubt in the Cabinet, as elsewhere, differences, shades, and fluctuations of personal opinion and sentiment, on one of which the president's paper throws light. The premier, Palmerston, who in general might have been thought likely to sympathize with the South, was the self-proclaimed arch-enemy of slavery. But the Cabinet, as a whole, was steadily resolved on neutrality, and firmly opposed to intervention, the French Emperor's suggestion of which found no response. For mediation the Cabinet was always ready, as, considering what the British people were suffering from the cotton famine, it well might be, and of this disposition there were naturally special manifestations at those turns of the war when mediation seemed likely to be welcome. On the crisis of opinion produced in the Cabinet by one of these turns and the consequent discussion, Mr. Charles F. Adams has laid his fingers. But it was "mediation," not intervention, always of which the thought was entertained, though the acceptance of mediation by the North would have meant recognition of the independence of the South.

That Gladstone held Confederate stock is an exploded fiction. That it should ever have been credited, shows the prevalence of angry suspicion in those quarters. His Newcastle utterance was a mistake, but there can be no doubt that it was made in a spirit of perfect good will towards the North, which he believed, and at that juncture might well believe, to be engaged in a hopeless war. That the South was a nation, though a nation suddenly formed by an inevitable disruption, is a fact which will stand in history as well as in Mr. Gladstone's speech. Its Government was acknowledged, its flag flew, its laws were obeyed, its currency passed over the whole of its domain. Not for a moment did the North treat the South otherwise than as a belligerent entitled to all the laws of war. The Southerners, after their surrender, were treated as rebels, but with not less impolicy than injustice, since the consequence was the exclusion of their leading men, such as Lee and Longstreet, from a share in the work of reconstruction, which fell into violent hands.

There was no moral reason whatever why any one should withhold sympathy from the South in its struggle for independence except slavery, any design against which Lincoln and Congress had expressly disclaimed. We Liberals had our strong political motives for sympathy with the North, but they were not binding on Tories.

GOLDWIN SMITH.

Toronto, January 21.

DISCLAIMER FROM PROFESSOR MÜNSTERBERG.

TO THE EDITOR OF THE NATION:

SIR: After my return from Europe a few days ago, I found on my desk a delightful variety of interviews with me which had recently appeared in the American papers. They covered nearly the whole political globe and settled all the leading international problems. Their only weakness was that, by chance or otherwise, during my absence from America I did not speak a single political word for publication, and those fabricated interviews were partly pure inventions, partly absurd and silly distortions of private conversations.

The first taste of this method came to me four weeks ago, when the European papers brought a cablegram from Washington stating officially that I was unauthorized to proclaim the completion of a tariff agreement between the American and German tariff commissioners in Berlin. When I examined the case, I found this: At a dinner party some one asked me whether the rumor were true that there was friction between the commissioners; I answered that I had seen members of both sides that same day and that they had assured me that all went on "harmoniously." Intentionally I did not add a word with reference to the negotiations themselves. A few hours later the gentleman to whom I had spoken reported to his friend on my authority that the negotiations were successful; and this man gave it to a reporter, who understood that an agreement had been reached. He cabled to New York in the form of an interview with me that the commissioners had settled on a tariff agreement. The State Department replied to that very correctly that the Commission had no such rights—a fact with which I was not entirely unfamiliar. I then wired to the New York *Herald* how the matter stood.

In other cases I did not think it worth while to send a rectification of such worthless tales. This was especially true with regard to the inane interview on James Bryce, with Japan, the Emperor, and the Washington diplomats thrown in. It originated in an unpolitical little German paper and was manufactured by a promising young journalist, who actually did see me, but for the purpose of asking me about a scientific problem in psychology. I did not take any notice of it, as I saw that not a single German newspaper took such grotesque gossip seriously; it was nowhere even quoted. I had the more right to ignore it as three American correspondents, among them the representative of the Associated Press, assured me that they had not made any use of such an evidently preposterous interview. I could not foresee that some one would cable it, nevertheless, and that it would here go through most of the leading papers as if it had been published in Germany in a representative political newspaper. I did not discover this situation till my return, and am therefore late with my denial. I am grateful to the *Nation* for marking at once its hesitation in accepting such expressions as authentic.

Of all the inventions of that last interview none troubles me more than the suggestion that James Bryce would exert an anti-German influence in Washington. No one admires the author of the best book on the Americans more than I do, and no one feels more grateful for his continuously proven friendship for Germany. I welcome his mission to the United States from my deepest heart, just because I know that the productive activity of two such men as Baron Sternburg and James Bryce, in Washington, will best and most safely bring about that for which I have hoped and worked during my whole American career—an intimate friendship between the United States, Great Britain, and Germany.

HUGO MÜNSTERBERG.

Cambridge, Mass, January 25.

ORIGIN OF THE METRIC SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: In Hallock and Wade's "Outlines of the Evolution of Weights and Measures and the Metric System," the first mention of the metric system is ascribed to Gabriel

Mouton, vicar of St. Paul's Church, Lyons, "who first proposed in 1670 a comprehensive decimal system having as a basis the length of an arc of one minute of a great circle of the earth. . . . This geometric foot was further defined by Mouton as corresponding to a pendulum making 3,959.2 vibrations in a half-hour at Lyons. This proposition contained essentially the germ of the modern metric system, and Mouton's suggestion of the pendulum was soon repeated by Picard (1671), and by Huygens (1673)."

The honor of the proposition, however, does not belong to a Frenchman, but to an Englishman. One of the first occupations of several mathematical members of the Royal Society, which was established in the beginning of the sixties of the seventeenth century and began to publish its Transactions in 1665, was the determination of a standard measure. Christopher Wren suggested that this standard be determined by the vibration of the pendulum, since time was a natural measure that depended upon the revolution of the earth, which was supposed to be everywhere equal and uniform. Exact measurements were undertaken by Huygens, a member, and by Brouncker, the president, of the society, and it was found that the length of a carefully constructed pendulum, the duration of whose vibration was precisely a second, was 38 Rhineland, or 39¼ English, inches. All this was before 1666.

The chief desideratum, bequeathed by Bacon in his "Advancement of Learning," which the Royal Society set out to materialize, was a universal language, and the elaboration of it was intrusted to the dean of Ripon, John Wilkins, who had approached the subject as early as 1641. Wilkins worked out his project in a large folio volume, "An Essay Towards a Real Character and Philosophical Language," which was consumed in the great fire of 1666 and was reprinted two lears later. In this work the author touches upon a number of universal problems, among them also upon the question of a standard of measure. He suggests that an octaval system would really be far better than a decimal system, because it is capable of more convenient divisions by powers of two, but thinks that general custom has forever determined upon decimals, and so he does not wish to insist upon a change of it. As to the standard of measure, he mentions the previous theory of those who wanted to find it in a subdivision of a degree upon the earth, and another, based upon "the quicksilver experiment." The first he rejects as difficult and impracticable, and the latter as uncertain, on account of the varying density and gravity of the air. He is, therefore, obliged to accept the discoveries of Wren, Brouncker, and Huygens, and makes the above-mentioned length of the pendulum the standard, which he calls a foot. One-tenth of a foot is an inch; one-tenth of an inch, a line; ten standards are a perch; ten perches, a furlong; ten furlongs, a mile; ten miles, a league. A cubical content of the standard he calls a bushel, and this he decimally divides into pecks, quarts, and pints, and multiplies by tens for higher denominations. The cubical content of a bushel of distilled rainwater he calls a hundred, and this is decimally subdivided into stone, pound, ounce, dram, gram, scruple, and grain. A cube of the standard of pure gold or silver is to be a talent of gold or silver, and this is subdivided into hundreds, pounds, angels, shillings, pence, and farthings.

Wilkins concludes this remarkable consideration with the words: "I mention these particulars, not out of any hope or expectation that the world will ever make use of them, but only to show the possibility of reducing measures to one determined certainty."

LEO WIENER.

Harvard University, January 22.

Notes.

He would be hard to suit who could not find in the list of Houghton, Mifflin & Co. the edition to his taste of Longfellow's complete or separate works. In connection with the coming centenary (February 27) the firm is publishing a special Sketch of Longfellow's Life, by Charles Eliot Norton, together with his chief autobiographical poems. Professor Norton is qualified to speak of Longfellow as is no other living man.

Dr. Wilfred Grenfell is preparing what is designed to be the standard book of information about Labrador. He himself will write the chapter on economics and the coast and fjords. Various specialists will contribute the rest of the work. Revells plan to have the volume ready for publication next autumn.

The Cambridge University Press, of which Putnams are the American representatives, announces three new books: "Modern Spain: 1815-1898," by H. Butler Clarke; "The Book of Isaiah, according to the Septuagint (codex Alexandrinus)," translated and edited by R. R. Ottley, and "A Treatise on the Theory of Alternating Currents," by Alexander Russell.

Those who have not yet read E. V. Lucas's now standard "Life of Charles Lamb," will be glad to know that a new and cheaper edition of that work is to be brought out by Methuen of London, and, we suppose, by Putnams in New York. It will contain a hitherto unpublished portrait of Thomas Manning.

Doubleday, Page & Co. are to publish "Under the Sun," written by Percival Landon "in the course of annual wanderings over India during the last five years"; "My Life As an Indian," by J. W. Schultz, and "The Efficient Life," by Luther H. Gulick.

There is to be a uniform handy-volume edition of the great writers of fiction published by A. C. McClurg & Co. The first ten volumes will be brought out in the autumn of this year.

Henry Holt & Co. are printing "The Honorable Peter Stirling" for the fifty-first time. For how many dreadful political novels has that book been responsible!

Wentworth Smith's "The Hector of Germanie" (1615), edited by Leonidas Warren Payne, jr., and Thomas Heywood's "The Royall King and Loyall Subject" (1637), edited by Kate Watkins Tibbals, constitute respectively Vols. XI. and XII. of The Publications of the University of Pennsylvania: Series in Philology and Literature. In each case the text is a reproduction, *literatim et punctuatim*, of the original quarto. The second of these plays, which is founded on a novel in Painter's "Palace of Pleasure," has a certain interest, inasmuch as it appears to have been used by Fletcher in his "Loyal Subject." There have been already, however, three modern editions of Heywood's play. On the other hand, "The Hector of Germanie," which, to be sure, has but little claim to literary merit, is here edited for the first time. The play was written, it seems, just after the marriage of Elizabeth, daughter of James I., with the Elector Palatine, and, as the prologue tells us, it was acted not by professional actors, but a band of tradesmen. In a careful introduction Mr. Payne examines the question of the possible connection of Wentworth Smith with various plays of the sixteenth and early seventeenth century, and comes to the conclusion that "The Hector of Germanie" is the only authentic play of this writer extant, with the probable exception of "Nobody and Somebody" (1606). The notes that are appended to the texts of these plays are both meagre and amateurish.

Some fresh light is thrown on the discussion over simplified spelling in the January issue of the Oxford English Dictionary (H. Frowde)—Mesne-Misbirth, under Mr. Henry Bradley's supervision. Meter (a gauge), first used in connection with gas (gas-meter), detached itself about 1830, with rare tendencies to become Frenchified in its ending. Etymologically it seems allied to Meter (a measurer, agent of the verb Mete). The suffix -meter, on the other hand, was originally clapped upon Greek noun-stems, and stood for the Greek *metron*, but has since received a wide and ungrammatical extension in word-formation. The spelling seemed still more likely to be fixed when Metre (rhythm) was taken over from the Latin into Old English as Meter; but in the fourteenth century it was readopted from the French as Metre, and by and bye came along the Metre of the metric system. Can reformers say that Meter represents the derivation more truly than or as broadly as Metre? And, the orthography once mastered, is there no convenience in having both endings current for different senses? Is not the reform vainly resisting a natural, if arbitrary, disposition to differentiate the spelling when the sense-evolution takes too wide a range? This is what happened to Metal (variant Mettle in all senses) when it passed to the meaning of quality, temperament; it began distinctively to be spelled Mettle, and some time after 1706, when this was first confirmed by a dictionary, the cleavage became complete. The pronunciation remained the same as the second usage for Metal, and phonetically it would be hard to say which form should claim precedence. Meanwhile everybody recognizes the advantage of the ocular discrimination. Lastly, what shall be done to onomatopoetic synonyms like the cat's cry Mew (1325), Miaow (1634), Miaul (1632)?

As usual, the amount of historical information here brought together is enormous. Compare Minus, Minute, and the prefix Mis-, which last, as a Teutonic derivative, was most prolifically employed in the seventeenth century. Its parallel form, borrowed from Old French *mes-* (Latin *minus*),

has produced little, and is stressed in English only in the case of Mischief, Mischievous, and Miscreant. Curious is it that the southern countries of Continental Europe have a short Mile, from following the Latin model; the northern a long, after the Teutonic. The decay of hunting in England is mirrored in the word Meuse, the lucky gap in the hedge by which the hare escapes his pursuers. It is now included as archaic in county glossaries of 1884, 1886, and used with quotation-marks in the *Athenæum* in 1895. The invention of Mezzotint engraving is positively assigned to the Hessian Col. Ludwig von Siegen, who taught it to his clever pupil Prince Rupert. Mess, coupled with food, vegetables, and the like, was in vogue as far back as 1513; no quotation of it has been found for the eighteenth century, and it has become stranded on these shores as an Americanism. "In our Midst" (with variable possessive) dates from 1794, but is a nineteenth-century usage. Our new British ambassador wrote "in the camp's midst" in his "Holy Roman Empire." We are surprised not to find an entry for the Russian Mir, vulgarized in our literature some thirty years ago by Mackenzie Wallace, and surely rather to be looked for than Miryachit (a Siberian mimetic nervous disease), or than Duma, already as well naturalized as Reichstag. Milton's famous "Eagle muing her mighty youth" has a paragraph to itself for the sake of two interpretations of Mew, neither conclusive. Finally, we remark, under the substantive Might, this quotation from T. Roosevelt (in his New York volume in the Historic Towns series, 1891): "Spain . . . was a power whose might was waning." Who could have guessed his part in giving it its *coup de grâce* within seven years of the date of his writing?

We have another important contribution to Arthurian study to record in "The Arthurian Material in the Chronicles, especially those of Great Britain and France," by Robert Huntington Fletcher, which constitutes Vol. X. of the Harvard "Studies and Notes in Philology and Literature" (Ginn & Co.). The author traces accurately and with a completeness never attempted before the Arthurian tradition as it developed in the chronicles from Gildas to the end of the sixteenth century. It is not his fault if his researches have not brought to light any considerable new material. Perhaps the most interesting find of this nature noted in the work is the account of Arthur's end in the Chronicle of the Monastery of Hales which the author had already called attention to in Vol. XVIII. of the Publications of the Modern Language Association. Mr. Fletcher has earned the gratitude of all Arthurian students hy the thoroughness of his investigations in this voluminous and irksome material.

In "The Enemy at Trafalgar" (E. P. Dutton & Co.) Edward Fraser has collected picturesque details of the great battle obtained from French and Spanish sources. The treatment is anecdotic, and is reinforced by a number of illustrations and portraits. One or two of the plans reproduced are of some interest for the controversy as to Nelson's tactics, though that question is not dealt with in the text.

When Denman concluded his defence of Caroline, wife of George IV., with one of the most inapt quotations ever used by a lawyer, the town took it up and crystallized its verdict on the famous trial in the well-known epigram:

> Gracious lady, we implore,
> Go away and sin no more;
> But if that effort be too great,
> Go away, at any rate.

The sentiment of the epigram has much to justify it. The whole story of Queen Caroline is uninspiring and sordid. It has more than once been told. Prof. G. P. Clerici, however, now presents us with a new version entitled "A Queen of Indiscretions," translated into English by Frederic Chapman (John Lane). The book has for its chief attractions a series of illustrations, of which several are of interest, and some new, if not very important, evidence as to Caroline's doings in Italy.

The obvious reflection that will occur to a reader of "The Lodging House Problem in Boston" (Houghton, Mifflin & Co.), by Prof. Albert Benedict Wolfe of Oberlin College, is that the difficulty of housing city wage-earners—a question of immense importance in its moral and political implications—is being heightened by lack of special knowledge. The average notion is that proper tenement-house building and regulation would remedy most of tbe evils of the housing problem. This ignores the fact that in large cities the tenement, the apartment, and the lodging, or rooming, house are sharply distinct in the social quality and economic position of their occupants. It matters not that State laws may have included them in one definition or only vaguely recognized the different conditions under which they have developed. A general change of fashionable residence in cities brings a new class of dwellers. In this way the South End lodging-house section of Boston, formerly filled with residences of the well-to-do, has become a compact mass of houses rented to about 30,000 people by the week or month. These are mostly skilled mechanics and mercantile employees, with an exceptionally low birth rate and other social characteristics worthy of the closest study in tbeir bearing upon the morality and economic efficiency of the city population. Professor Wolfe, wbose book is the second in the series of Harvard Economic Studies, does a distinct service in pointing out tbat the lodging-house factor has been neglected in the literature of the housing problem. Tbe question as to how far the condition of the Boston South End section is typical of other large American cities is important. It must remain unanswered until the example set by Professor Wolfe shall be emulated by other well-qualified investigators.

A spirit of devout industry is manifest in "The Master of the World: A Study of Christ," by Charles Lewis Slattery, Dean of the Cathedral in Faribault (Longmans, Green & Co.). The book attempts to interpret Jesus Christ in the light of modern scholarship, but at the same time to fuse with the primary sources of information concerning him all the subsequent doctrines which have grown up around his person. The endeavor to make a clear, consistent, historical picture by combining all New Testament documents as of equal weight, is a considerable undertaking; and when Dean Slattery proposes to add to his sources all the dogmas of the ages, and even "all the present faith," one must admire his daring, rather than respect his historical judgment. As a matter of fact, the creeds have outweighed the gospels in influence upon the author, and the figure he presents is strictly according to classic dogma. Some of his original, imaginative suggestions are of questionable merit, as when he argues tbat since our Lord was "a statesman," he must have chosen a disciple like John, the author of the Fourth Gospel, "who could directly transmit a conception of Him adequate to the inspiration of the Church in all ages." Of like sort is the notion that Joseph imparted to the youthful Jesus the secret of his miraculous birth at the visit to the temple, and that the conduct of the lad with the doctors may be thus explained.

The Noble Lectures at Harvard, founded in memory of Phillips Brooks, were delivered in 1906 by the Rev. Charles Cuthbert Hall, D.D., President of Union Theological Seminary. His addresses, "Christ and the Human Race" (Houghton, Mifflin & Co.), were an attempt to set forth "the attitude of Jesus Christ toward foreign races and religions," and to inculcate mutual sympathy and understanding between adherents of Eastern and Western faiths.

In "The Story and Song of Black Poderick" (Harper & Brothers), Dora Sigerson (Mrs. Clement K. Shorter) has related, in a mixture of prose and ballad verse, a Celtic fairy-tale, the story of a young bride who, neglected by her wicked lord, the Black Earl, pined and died. In heaven the knowledge of his damnation would not let her rest, and she was permitted to spend twice seven years in hell working out his salvation. This is the sort of tale that W. B. Yeats collected in his "Fairy and Folk Tales," and that Douglas Hyde is still collecting in Roscommon and Galway. These stories are usually told in a rather bald fashion, but Mrs. Shorter has made the most of hers. Her grammar, not quite impeccable in her earlier poems, occasionally disconcerts the reader in the prose portion of this little book.

The "Esquisse historique de la littérature française au moyen Âge" (Paris: Armand Colin), which has just appeared, is the original text of the "Mediæval French Literature" which the late Gaston Paris contributed to the "Temple Primers" (Dent, 1902). In its French form, however, the work, besides being somewhat fuller, is free from the errors which disfigured the translation. Tbe numbering of paragraphs and the addition of an index and notes constitute still further improvements. M. Paris did not complete the annotation of the volume, himself, but Paul Meyer has assumed this task for the uncompleted portion, the notes of the author being in the nature of additions to the text, whilst those of M. Meyer are purely bibliographical. We may say in passing, that it seems a pity that neither M. Paris nor M. Meyer has indicated in these notes the important changes which the views of the former underwent near the end of his life in regard to the lost works of Chétien de Troies and the date of his death, as set forth in the admirable articles on "Cliges" in the

Journal des Savants for 1902. It may be remarked that the author's well-known "Littérature française au moyen âge" does not render the present work superfluous. In the first place, more than a quarter of the present work is devoted to a period not included in the earlier treatise, viz., the fifteenth century. The arrangement of material, moreover, is totally different in the two books. In the older work the treatment was according to *genres*. Here it is according to periods, so that the whole literary production of the different periods is treated in due succession.

With the eleventh volume of "L'Empire Libéral" (Paris: Garnier Frères) Émile Ollivier at last brings us to the immediate preliminaries of the great war with which his own name is particularly associated. There is much in it deserving of notice: the anti-Prussian negotiations of France, Austria, and Italy in 1869; the affair of the Belgian railways; Rochefort and the *Lanterne*. Although the old ideas as to the origin of the Franco-Prussian war which were founded on the very *ex parte* statements of German pamphleteers and historians are now fast passing out of acceptance, we have here many side-lights on the attitude of the Prussian war party that reinforce later opinion. As against this, perhaps the most remarkable page of the whole book tells the other way. It is a letter from Napoleon to Niel, written in February, 1869, at the time of the Franco-Belgian difficulty over the railroad question. In this the Emperor asks his minister of war to draw up a plan of operations for massing two armies, one towards the Rhine, the other towards the Belgian frontier. "France," he writes, "feels herself diminished since the successes of Prussia; she is on the lookout for an opportunity of reëstablishing her influence . . . without arousing the passions of Germany." The quarrel with Belgium did not concern Prussia; what was to prevent invasion and annexation? Thus ran the argument. Taken alongside of Benedetti's unfortunate Belgian proposal after Sadowa, which Bismarck so cleverly gave to the London *Times* in July, 1870, there is enough in this document utterly to condemn Napoleon's policy. It was, of course, only a flash in the pan, but a flash in the pan may explode a magazine. However much it may now be necessary to deduct from German statements about the war of 1870, it would be very easy to go too far in exculpation of France. At the close of this volume M. Ollivier leaves us at the Hohenzollern candidacy; he has planned to finish his great work in four more volumes, a wonderful task for a man now eighty-two years of age.

A rather novel book on colonies is that of Alexander Supan, the editor of Petermann's *Mittcilungen* (Gotha). The author complains that there is no "general history of colonization in chronological sequence and on the lines of world-history." Not enough is made, he says, of the territorial development, the gradual space-filling, which interests the geographer; but all attention is concentrated upon inner colonial policy. Hence he calls his work "Die Territoriale Entwickelung der Europäischen Kolonien." Thus the book is really colonization from the geographer's standpoint; and we hasten to signalize at least one strong point thereby attained. The detail maps are profuse and the atlas of colonial history appended is unique of its kind. A conspectus of the spread of the dominant white race's power is graphically presented. Of the text not so much can be said. The treatment is episodical rather than genetic; it does not afford any new and valuable points of view—in short, it is not the work of an economist or sociologist. It may be objected that Supan pretends to neither title, but it is likewise possible to retort that he should then have stuck to the exact subject he proposed to himself. The work is not alive; there is no *Leitmotiv*. The value of this book we conceive to be that of an intelligently written chronicle, for although the author does not draw upon a large or particularly reliable set of authorities, he seems to have taken from them, on the whole, their least objectionable data. If this book were translated into English it would somewhat resemble J. Scott Keltie's "Partition of Africa" in furnishing a pretty complete set of facts for students to learn, under the guidance and power of coördination of a good teacher. Inasmuch as the volume was intended to meet the needs of the growing interest of Germans in colonization, perhaps it was intended to subserve, in some degree, such an educational purpose.

It was reported in these columns some weeks ago that Saxony is the first of the German States to make a tentative beginning with the elective system in its secondary schools, especially the classical gymnasium. The project is being discussed in Prussian school circles also; and at the recent national convention of the German gymnasium teachers, Dr. Karl Michaelis, a leading member of the educational board of Berlin, delivered an address, in which he urged that a choice should be permitted to members of the higher classes only between a preponderatingly classical and a preponderatingly mathematical course. The address has appeared as a special brochure, issued by the house of Dürr of Leipzig.

Dr. Friedrich von der Leyen, a recent graduate of Marburg and Göttingen, publishes under the title "Deutsche Universität und deutsche Zukunft" (Jena: Diederichs) a vigorous attack against the growing tendency to educate for the profession rather than for the purpose of giving culture. There are plenty of specialists of world-wide fame, but a lack of *men* who will stand up for a principle. The sciences are multiplying, the organization of scientific work becomes more and more difficult. The author exemplifies his statement from his own specialty, modern philology, which is neglecting the study of the literatures. There are undoubted exaggerations in the book, but it is worth pondering over, both in Europe and in America.

The Bohn edition of Lane's "Arabian Nights" is now completed with the fourth volume, which adds a review of the origin and history of the "Nights," a translation of "Aladdin" from Zotenberg's text—both by Professor Lane-Poole—and "Ali Baba," the common rendering touched up from Galland's French—all there is in the case. The translation of "Aladdin" is sound and vigorous, and in every way more readable style than Lane had at his command. But there is one slip very strange in the past master in Arabic numismatics. Professor Lane-Poole does not seem to have recognized that "Africa" in this story means Tunis; the "land of Africa" means the country around and belonging to Tunis—Tunisia; and that, therefore, the "African magician" of our childhood is really the Tunisian magician. Africa (Ifrīqīya) was, of course, the old name of Tunis, and the way in which the name is here applied ("the city of Africa," Lane-Poole, p. 337; Zotenberg, p. 15; "the gardens of Africa," Lane-Poole, p. 396, Zotenberg, p. 69; etc.) makes it certain that such is the meaning here. Nor did Mr. Payne in his version recognize this use; yet he felt the difficulty and has notes on pp. 88 and 127 of his "Alaeddin and the Enchanted Lamp" remarking that the story-teller takes the province for a city. Burton, too, was equally in the dark. That Tunis was especially famous for magic does not seem to be elsewhere recorded. Such was, and is, the reputation rather of Morocco and of Africa farther west in general, and in this same tale the magician is also called a Maghribi, strictly a Moroccan. The "review" might with advantage have been lengthened, but within its limits (19 pages) it is an admirable piece of work. One definite conclusion is that the present general form of the "Nights" must have been reached between the accession of Saladin (1169) and the fall of Baghdad (1258). This seems tolerably certain, but perhaps the qualification "general" above will have to be taken somewhat broadly. When Galland's manuscript is published *in extenso*, as now seems probable, and Seybold has published the Tübingen "Umar an-Nu'man" we shall know much more.

The "Book of Enoch" is not exactly an "anecdoton," yet its inclusion in the "Anecdota Oxoniensia" is amply justified. ("The Ethiopic Version of the Book of Enoch," edited by R. H. Charles. Oxford: Henry Frowde.) Its Ethiopic text is now at last reconstructed by Dr. Charles on the basis of twenty-three manuscripts out of the existent twenty-nine—photographs of fourteen, immediate use of five, collations of four. The other manuscripts are also satisfactorily accounted for, and, therefore, in the present careful text and very full apparatus the task seems done with tolerable finality. The Greek text, or texts, with the Latin fragment, are also fully edited. In all these the advance on Flemming and Radermacher is distinct. When Dr. Charles publishes the revised edition here promised of his translation, the extant evidence will be in a fairly complete and accessible form. In the meantime, he has reached the following general results. He now recognizes that in 1893 he overestimated the value of the Ethiopic version in comparison with the extant Greek text. In this edition, therefore, the Greek, where we have it, is given page by page with the Ethiopic. Further, he has discovered that much of the text was originally written in verse. Again, he has come to the conclusion that the several elements out of which the book was constructed were some in Aramaic and some in Hebrew. He compares this with the part Hebrew part Aramaic state of "Daniel." But there it would be hard to explain the occurrence of the two languages by a theory of composite structure. Finally, the value of photography, and especially of its cheaper processes, is here overwhelmingly plain. To have been

able to use fourteen manuscripts and to have the type set up from one of these removes the editor of such a text as this at least into purgatory, if not into paradise.

Another valuable contribution to Oriental scholarship has come from the pen of Prof. L. H. Mills of Oxford, whose admirable "Zarathushtra, the Achæmenids, and Israel" was reviewed in the *Nation* of August 30. In the last number of the *Muséon*, published by the University of Louvain, Belgium, he has presented an edition of the first chapter of the Pahlavi or Middle Persian version of the old Avesta "Yasna" in the original type, thus affording a useful text-book on this section. This is the first edition of this text which has been prepared with a collation of all the manuscripts, many of them acquired by Professor Mills for the library of the University of Oxford. For many years he has been engaged in editing and translating the complete Pahlavi version of the "Yasna," and his task now approaches completion. The late Professor Spiegel of Erlangen edited these Pahlavi texts in 1858, but his text, valuable as it is, has become antiquated by the discovery of additional manuscripts. A considerable portion was reëdited by Professor Mills, with a collation of all manuscripts, a transliteration (which is almost equally necessary), and a translation in his "Gathas," published in 1894. The majority of the remaining non-Gathic section has now appeared, chiefly in the *Journal of the American Oriental Society*, the *Journal of the Royal Asiatic Society*, and the *Zeitschrift der deutschen morgenländischen Gesellschaft*, both in transliteration and translation. It is especially gratifying to note that Professor Mills hints that these scattered editions and translations are to be reprinted in book form as soon as possible, so that we may hope to have a companion volume to his "Gathas," which will contain the remainder of the "Yasna," long a desideratum to the student of Zoroastrian religion, and perchance of value to the theologian as well in these days of dawning interest in comparative religion.

The Egyptian Research Account, for which exclusively W. M. F. Petrie is now working, reports, as the result of the first season's investigation in the Nile Delta, the discovery of a great Hyksos camp, with valuable data relating to that race of invaders, the identification of the site of the temple of the High Priest Onias, and the determination of the location of the store-city, Raamses, built by the enslaved children of Israel for the Egyptian monarch. The identification and study of the other store-city, Pithom (cf. Exod. i. 11), was made somewhat more than a score of years ago, as the initial work of the still active Egypt Exploration Fund.

The Rev. Henry Martyn Field, last of the famous Field brothers, died at Stockbridge, Mass., on Saturday. He was born April 3, 1822, the youngest son of Dr. David Dudley Field, who for sixty years was a prominent New England clergyman. When Field was twelve years old, he entered Williams College, and was graduated in 1838. After studying theology he began his ministerial life as pastor of the Third Presbyterian Church of St. Louis, before he had reached his majority. For five years he labored in what was at that time a far Western country; he then resigned and spent a year in Europe. Returning to America, he became pastor of a Presbyterian church at West Springfield, where he remained from 1850 to 1854. In the latter year he came to New York as one of the editors and proprietors of the *Evangelist*, and later he became sole editor and proprietor. His association with the paper covered a period of forty-four years. In 1875-6, Dr. Field travelled around the world, describing his experiences in the two volumes entitled respectively "From the Lakes of Killarney to the Golden Horn" (1876), and "From Egypt to Japan" (1877). These books were followed by a number of others—chiefly impressions of travel—all of which have attained considerable popularity. Dr. Field also wrote the lives of his brothers David and Cyrus. He has been a voluminous contributor to newspapers and magazines.

Moritz Steinschneider, the Hebrew scholar, died Monday in Berlin in his ninety-first year. Professor Steinschneider was born in Prossnitz in 1816. He equipped himself for his later work as a student and bibliographer of Hebraic and Oriental literature by a long course of study in various German universities. He began to teach in Prague in 1842; and in 1845 he went to Berlin, where for many years he was connected with different schools—among others a high school for girls. He was the author of many standard bibliographical works, dealing with Jewish manuscripts in the Bodleian, and in the libraries of Munich, Berlin, and other cities. Professor Steinschneider's article on Jewish literature in the Ersch and Gruber's Encyclopædia is the first adequate treatment of the subject to appear in extended form.

News comes of the death, January 15, of Prof. Émile Louis Burnouf, at the age of eighty-five His father was one of the great founders of Oriental philology, and he himself was a scholar of distinction. His most important work was done while he was director of the French School at Athens, a post to which he was appointed by Duruy, in 1867. His "Histoire de la Littérature Grecque" is, perhaps, his best known book.

The Faculty of the Harvard Law School has awarded the James Barr Ames prize of $400 and a bronze medal, which is given every four years to the author of the most meritorious law book or legal essay in the English language, to the late Frederick William Maitland, formerly Dowling professor in Cambridge University, England. The award was made while Mr. Maitland was still alive, but the decision of the judges did not reach him before his death. The award was based on Mr. Maitland's three volumes of the Year Book Series of the Selden Society.

The resources of the New York State Library on January 1, 1907, are shown by the following table:

	Volumes.
General library and travelling libraries.	442,789
Duplicate volumes	171,088
Total number of volumes	593,877
Number of pamphlets, about	487,300
Number of manuscripts, about	265,000
Number of travelling pictures	27,397
Grand total in library	1,373,574

The statistics of the enrolment of students during the present winter semester in the universities of Germany show that the number of women who frequent the universities that admit them to matriculation is steadily increasing. At present there are seven German universities, all but one in South Germany, which admit women on a full equality with men. These have now an enrolment of 254 women students, as compared with 211 during the summer semester and 140 a year ago.

NEWS FOR BIBLIOPHILES.

The Tennyson collection of Prof. Albert E. Jack of Lake Forest University was sold on Monday by the Anderson Auction Company of this city. An uncut copy of "The Falcon," in the original blank buff paper covers, printed for copyright or for use of the Kendals, who acted it in December, 1879, brought $200; "The Cup," uncut, the third of Tennyson's privately printed plays, written for Henry Irving and Ellen Terry, who performed it on Christmas Day, 1880, $180; "The Promise of May," the rarest of Tennyson's privately printed plays, produced at the Globe Theatre, in London, in 1882, $180; "The Sailor Boy," printed for Tennyson's use by the Emily Faithfull Victoria Press, London, 1861, $100; "Poems. By Two Brothers," written by Alfred and Charles Tennyson, and the former's first publication, London, 1827, $65. The rage for Tennyson rarities is not so great as it was a few years ago, these figures being below those paid for the same works in the Morgan and Arnold sales.

A hitherto unknown copy of the Latin correspondence between Luther and King Henry VIII. was sold at auction at Sotheby's in London on Tuesday. The correspondence, which concerns the time when King Henry, prior to the English Reformation, won the title of Defender of the Faith, was printed in London, 1525. Only three copies were known of before. This, the fourth copy, was bought on behalf of Mr. Quaritch, for $1,275.

On February 6, the Anderson Auction Company will sell a miscellaneous collection, including books on Lincoln and the Civil War, and Garrick's "Lying Valet," printed at Philadelphia "at the desire of some of the officers in the American Army [Clinton's Thespians] who intend to exhibit at the playhouse for the benefit of families who have suffered in the war for American liberty." Hildeburn gives the date of this publication as 1778, but the date in the auction catalogue is 1776. Hosmer's "Early History of the Maumee Valley," a pamphlet printed at Toledo in 1858, is another interesting little piece.

On February 4 and 5, the Merwin-Clayton Sales Company of this city will offer the library of the late Col. William E. Fitch of Albany. The series of books on Freemasonry, one hundred and seventy lots, is one of the largest put on the market in recent years. For the most part they are modern books, though there are a few American items printed a hundred or more years ago, including "Discourses Illustrating the Principles of Freemasonry," by T. M. Harris, Charlestown, 1801, and "The Freemason's Monitor," Albany, 1797. Several lots contain pamphlets relating to William Morgan and the anti-Masonic excitement in Central and Western New York. Among these is a copy of David Brainard's "Light on Masonry," Utica, 1829. Accord-

ing to John Camp Williams in his Utica bibliography, at least five editions were printed in Utica in 1829. Among other books in the sale are a few items of Americana, including the Salem edition of the famous "Letters" sent to England by Gov. Hutchinson; Adam Hodgson's "Letters from North America," 1824; Henry Lee's "Oration in Honour of the Memory of Washington," the rare Brooklyn edition, issued by Thomas Kirk, one of the first books printed in Brooklyn. On February 6, the same firm will sell a collection of autograph letters and documents, including a fine A. L. S. of Lord Nelson, letters of Bryant, Holmes, Whittier, Longfellow, and Mark Twain, a manuscript stanza, five lines, in Whittier's hand, and several documents signed by Napoleon.

On February 5 and 6, C. F. Libbie & Co. of Boston sell the libraries of the late William T. Pierce of Watertown, Mass., and Prof. J. M. Rice of the Annapolis Naval Academy. Mr. Pierce was chief engineer of the Metropolitan Park Commission of Boston, and his sets of engineering reports, park reports of various cities; and books on road-building will interest the specialist. Among items for collectors are a series of first editions of Henry James's books; the first edition of Barlow's "Vision of Columbus"; a series of sixty-seven water-color views of old buildings in Montreal, in a quarto album; and an autograph poem by Samuel Sewall, a paraphrase of Chapter 26 of Isaiah, 3 pages folio, dated 1698. There is also a set of the Brinley Catalogue with the Index; a set, volumes I. to XI., of "American Book-Prices Current," and other bibliographical works. For the ex-libris collector is a collection of American book-plates, including a large number of Canadian, undoubtedly the most extensive series ever offered for sale.

On February 6, Sotheby, Wilkinson & Hodge of London sell the library of the late A. Jiminez, including some good illustrated sporting books. A copy of Catesby's "Natural History of Carolina, Florida, and the Bahama Islands," with upwards of 200 colored plates of birds and animals, the second (and best) edition, 1754, 2 vols., folio, is one of the notable items.

An exhibition of artistic book-bindings by Charles Meunier, one of the best known of the French craftsmen, is now being held at Dodd, Mead & Co.'s, in this city. Some eighty-odd examples of his work are shown. M. Meunier studied drawing at the Beaux Arts, and became a painter. He then studied sculpture, modelled medals in high and low relief, and finally took a course in architecture and ornament. Then, beginning at the very bottom in a bookbinder's shop, he mastered the art in all its branches.

The late Lady Burdett-Coutts owned one of the finest copies of the First Folio Shakespeare in existence, clean, 12¾ by 8 inches. It was bought for her at the sale of the George Daniel library in 1864 for £716 2s. At that time this was a record price. The highest previous price was 158 guineas, paid by James Lenox of New York for the Lichfield-Baller copy.

A third copy of Sir Thomas Grantham's "An Historical Account of Some Memorable Actions," mentioned in the *Nation* of January 24, is reported from the John Carter Brown Library of Providence. This copy is of the edition of 1716.

STUDIES IN PHILOSOPHY.

Concepts of Philosophy. By Alexander Thomas Ormond. New York: The Macmillan Co. $4 net.

There are three main parts to Professor Ormond's book: (1) an analysis which sets forth the two methods by which man seeks to realize his world: the method of external observation, which results in science, where the aim is to translate agency into terms of natural causation; and the method of inner reflection, which results in metaphysics, where the aim is to construe agency in terms of prevision and finality; (2) a synthesis which, while it justifies the two methods revealed by the analysis, sets forth the necessity of a synthesis of them and an attempt to realize it; (3) a series of deductions, which might more properly be called corollaries, dealing with a number of themes of general philosophical interest. There are added a supplementary chapter on "Man and his Beliefs," a short appendix commenting on the mutation theory, another on the use of the term "consciousness," and an index. The analytical table of contents affords an excellent outline of the work as a whole.

Professor Ormond sees in Kant the great figure in modern philosophy, who by his "Copernican revolution" rescued philosophy from confusion and gave it promise of progress and sobriety. By this revolution philosophers were instructed to seek a solution of their problems, not by beginning with a world of objects supposedly indifferent to our attempts to understand them, but by beginning with the understanding itself, in order to discover what demands must be met if our craving for knowledge is to be thoroughly satisfied. This point of view Professor Ormond adopts, but he avoids with remarkable skill many of the Kantian difficulties. In his "Analysis," for instance, the reader is not asked to attempt to get at the understanding in its purity, uncontaminated with experience. He is bidden, rather, to consider what he is about in his ordinary intellectual operations. He will then discover that he looks out upon a world of things which he attempts to relate in certain ways, by finding out how they operate upon one another; but he will discover also that this method of relating things leaves a region of his interests untouched. For he is himself the individual who does the relating. Taking note of that fact, he looks within upon the world of consciousness which he calls "self," and which is a world of purposeful activity. He will find also that these contrasted points of view of outer observation and inner reflection disclose, when followed out, that they are controlled by certain basal principles which turn out to be the most important "forms" and "categories" of the Kantian system. They have lost, however, their *a priori* aloofness.

Professor Ormond now finds that these contrasted points of view institute a kind of dialectic. They are, at first sight, rivals; and their products, on the one hand science, with its principle of natural causation, and on the other hand metaphysics, with its principle of finality, strive to supplant one another. A deeper insight, however, shows that their apparent opposition is a genuine motive for a progressive synthesis. Science is led to recognize with increasing clearness, as it passes from physics to sociality, and from sociality to religion, that its principle of natural causation, although applicable in all these regions, tends, however, to recognize a deeper nature of things, which is the ground of all natural causation, and the source of its agency. Science is thus brought into friendly relations with metaphysics. For in the inner world where the self is conscious of its own purposeful activity, metaphysics has disclosed the deeper nature of selfhood and the principle of its operation. Thus the way to a synthesis of science and metaphysics is opened. Following Professor Ormond's lead along this way, we are instructed in the doctrine that "consciousness, when adequately conceived, is the great reality" (p. xxix.), or, as he also says, "consciousness is the stuff out of which all other world-substance is, in the end, manufactured" (p. 256).

The book aims not only to develop this doctrine, but also to make clear through its discussions "that when reason asserts its full prerogative, not only as a theoretic faculty, but also as will, it is able to emancipate man from the skepticisms of partisan thinking and direct him in the path of the realization of the highest ideals of his nature" (p. 17). Thus, following many illustrious predecessors, Professor Ormond would discover in philosophy a cure for current ills, which, for our time, arise mainly from the "narrowing effects of specialism, subjective and objective." The cure for inadequate thinking is, most assuredly, more adequate thinking. That is itself the perennial justification of philosophy. A clearer and more rounded vision of things leads to emancipation. But we must ask of any doctrine claiming to offer us emancipation, How far does it minister to that clearer and more rounded vision? For our faith in the general efficacy of philosophy can never be a reason why we should assent to a particular view of the world. We say this not in order to create the impression that Professor Ormond attempts to abuse our intelligence by turning an obvious conviction into an argument for his philosophical doctrine of consciousness as the great reality, but in order to suggest that the practical aim of his book will be measurably realized if its philosophical doctrine is sound. Indeed, we believe that the apparent appeal for attention to a specific doctrine based on the general importance of philosophical speculation is not only outworn, but decidedly misleading. For the spirit of emancipation should be with us at the start. If the suspicion is in any way aroused that the highest ideals of our nature which we may realize are current ideals which our speculations should justify, then philosophy has fallen from the estate of a disinterested inquiry to that of a special pleader. Ideals should, if possible, emerge from philosophy and win acceptance by their consequent inevitableness.

Now we confess that Professor Ormond's book has aroused in us the suspicion that he has—without malice, we may admit—developed his philosophy in support of certain beliefs, but has not exhibited it as a source from which those beliefs spontaneously spring. He tells us, for instance,

that "the synthesis of philosophy only completes itself when it has vindicated and included in its scheme of certitude those judgments of belief which spring out of fundamental moral and religious grounds" (p. 17). This may be true, but if a synthesis of philosophy is effected to attain such vindication and inclusion, it will have the coloring of an apologetic and a hard fight to exclude prejudiced witnesses. And this difficulty will be much increased if the judgments of belief which are to be vindicated and included in the scheme of certitude are for the most part such as Professor Ormond conceives them to be; namely, the beliefs which are held by enlightened Christian people, belief in a personal God, in mediation between God and man, in moral freedom, in the soul's immortality, in sin and salvation. It is not our contention that it is impossible to ground these beliefs philosophically. It is, rather, that they can be so grounded, not when philosophy is made to include them, but only when they are exhibited as the natural outcome of a philosophical view of things. But Professor Ormond does not appear to exhibit them after this manner. He takes them rather as current beliefs arising in man's history and shapes the concepts of philosophy in their interest. These beliefs did not originate in philosophy. They emerged from human experience under conditions measurably open to scrutiny. Like other beliefs, they have been subjected to the routine of experience for their justification, their modification, or their rejection. Accepting their validity, we may exhibit the philosophy which they imply or even necessitate, but in that case they become data for philosophy and not beliefs which philosophy has vindicated and included in its scheme of certitude.

If, however, these beliefs are to be taken as data for the construction of a philosophy to include them, we find for ourselves no genuine illumination of them in Professor Ormond's doctrine. For we do not follow with conviction either his argument why "consciousness is the stuff out of which all other world-substance is, in the end, manufactured," or his attempt to ground ideals and beliefs in this doctrine. An inquiry into the ultimate stuff of things is undoubtedly important, and we may discover—indeed we must discover—that it is a kind that carries ideals and beliefs with it in its operations, but it does not, therefore, justify them. For, most assuredly, it carries also with it in its operations error and illusion. Its life's history is at once comic and tragic, ridiculous and sublime. Yet adequate knowledge of it would be a boon, for we could then control it for our desired ends. Our results would be justified on their merits, but not by its constitution. For consciousness is just the sort of stuff which fashions ideals out of itself, and finds, therefore, justification in the measure in which it attains self-expression, much as a man fashions his character out of his own substance and estimates the result by the adequacy with which it expresses his nature. May we not then conclude, since self-expression is the proper function of consciousness, and since the best of current beliefs and ideals are the highest examples of self-expression, that consciousness is, therefore, the great reality? Indeed, Professor Ormond warns us that we must not make the mistake of identifying consciousness with what logicians and psychologists often call "mere awareness," assigning it thus only a cognitive function. "By consciousness" we are to mean "an activity, an energy, that becomes aware of itself and its object. The fundamental form of consciousness, so conceived, is selfhood." But time-worn difficulties here confront us and refuse to be swallowed up in this attempt to engulf all distinctions. Most assuredly the stuff of this old world toils somehow on, producing varied products out of its restless activity, stars, lands, and seas, with here and there some creature who can value the result with enthusiasm or despair, but to call that stuff consciousness, to make of it a self gifted with conscious prevision of what it is about, is to plunge us into confusion. Instead of beholding existence clarified, we behold it as the riddle which confronted Job.

An Introduction to Philosophy. By George Stuart Fullerton. New York: The Macmillan Company. $1.60.

This abridgment of Professor Fullerton's "System of Metaphysics," published a year ago, contains some additional chapters intended to adapt the book to use in classroom; but it has many of the defects which were noticeable in the larger treatise. The logical divisions are imperfect, and the several parts of the work are not well articulated. Instead of a coherent and systematic presentation of the subject, we have a series of essays on certain fundamental problems of metaphysics. Professor Fullerton writes, however, very intelligibly, and uses few technical terms. In almost every chapter, indeed, he introduces an imaginary person whom he calls "the plain man," to whose opinions, we think, rather too much importance is attached. Of course, much can be said in favor of a "common sense" view of the world, and "the plain man" should doubtless have a hearing in the philosophical forum; but the scientific philosopher must sooner or later part company with the common-sense amateur. Professor Fullerton frequently vacillates between critical conceptions and that naïve consciousness which at first may promise to clarify philosophical theory, but which leads only to difficulty and obscurity.

As in his larger volume, Professor Fullerton pays much attention to the doctrine of "an external world," and his conclusions seem to us the least satisfactory part of his system. The question, "Is there an external world?" is either tautologous or it is meaningless. For unless externality is immediately given, it can never be reached by inference; and to say that it is immediately given is a mere assumption. Like many writers on philosophy, Professor Fullerton seems to be between the devil of dogmatism and the deep sea of subjective idealism, but his *via media* is rather unpromising. The volume would be more useful, if there were fuller references in it to the philosophical theories of the later French and German authors.

The Apocalypse of St. John. By H. B. Swete. London: Macmillan & Co.

An English commentary on the Revelation of John, with a sane method of interpretation, has been greatly needed, and Professor Swete has ably met the need. Following the plan mapped out in his commentary on Mark (1898), he devotes in the present volume over two hundred pages to introductory matters, such as the apocalyptic type of literature, the sources, purpose, date, style, text, doctrine, and authorship of the book, Antichrist, and the history and methods of interpretation, some eighteen topics in all. To this he adds over three hundred pages of notes, based, with few exceptions, on the text of Westcott and Hort, and replete with septuagintal and patristic references. He ends with a complete vocabulary of the Greek words and satisfactory indices.

The very title of this edition is significant, not "Revelation" but "Apocalypse of St. John." The document belongs to a distinct type of writing, the apocalyptic; and this type, though often fantastic in its outward form, is not to be despised, for the faith which produced it has, as Prof. J. H. Gardiner observes in his "Bible as English Literature," "ennobled this outward form into the vehicle of the most elevated thought yet attained by the Jewish race." Again, this apocalypse is not a bare compilation of previously existing Jewish or Jewish-Christian documents, but the work of a man of insight, who takes the material inherited from the past and fuses it by the heat of his own imagination into forms which become in the process original. It is not simply apocalypse, but prophecy.

In the method of interpretation Dr. Swete stands on the sound principle that this Apocalypse, like other apocalypses, since it is a tract for the times arising out of a definite period of persecution, must be interpreted in the light of the situation. In this Apocalypse a conflict is revealed between the Church and the World, or more precisely, between the Asian churches and the Roman Empire. Domitian is insisting upon the Cæsar cult. (Dr. Swete puts the date about 90, without mentioning the opinion of Harnack, based on Reinach, which fixes it exactly at 93.) In the light of this situation, the Apocalypse of John is to be understood. To be sure, Dr. Swete believes that St. John's pregnant words will be fulfilled in times yet to come, and hopes to see in "the progress of events ever new illustrations of the working of the great principles which are revealed." But such convictions are not to be confused with distinct methods of interpretation which see in the Apocalypse "a detailed forecast of the course of mediæval and modern history in western Europe," or which explain the Antichrist as the Pope or the Papacy, or which, by spiritual, that is, allegorical exegesis, discover in the text whatever is needed for a given purpose.

Striking is the fact that Prof. Swete, though a successor in spirit to Lightfoot, Westcott, and Hort, is compelled to dissent from these Cambridge scholars in their certainty as to the unity and the authorship of the Apocalypse. He lays stress, it is true, on the essential unity of the book in opposition to the theories of sources promulgated by Völter, Vischer, Spitta, and others, and to the modified form of these theories proposed by Weizsäcker, Bousset, and Porter; at the same time he admits candidly that his own theory of unity "cannot be pressed so far as to exclude the possibility that the extant book is a second edition of an earlier work, or that it incorporates

earlier materials" (p. c). Further, in reference to the conviction of the three Cambridge scholars that the author of the Fourth Gospel is the author of the Apocalypse, he says that that "hypothesis is open to doubt, and perhaps will always be open to doubt." Dr. Swete inclines strongly to the view of most critics that the author of the Apocalypse is John the Presbyter, not John the Son of Zebedee.

This indication of the scope and method of Dr. Swete's edition must suffice to show that we have an English commentary comparable to Bousset's. In the details of exegesis there is, of course, debatable matter even when the general method of interpretation is agreed upon. Into these points we cannot enter here, except to note that, to Dr. Swete, the Antichrist is neither the Pope nor Tiamat; that the beast from the sea is the "hostile world power represented by Nero and Domitian," and the beast from the land is the "religious power represented by the Asiarch and the priesthood of the Asian temples of the Augusti." (pp. lxxxvii and 158 ff.). The number 666 or 616 is a cryptogram, and even if Nero Cæsar suits the *gematria*, it is "possible that the number of the beast holds its secret still." It remains only in this brief notice to say that the book is excellently printed and arranged, and that a touch of reality is given to it by the photographs of Nero and Domitian, and of Patmos as it looked a score of years ago.

My Pilgrimage to the Wise Men of the East. By Moncure Daniel Conway. Boston: Houghton, Mifflin & Co. $3.

Ten of the eighteen chapters of Mr. Conway's itinerary have to do with India, where, as soon becomes evident to the reader, are to be found the Wise Men of the East. The remaining chapters describe the author's early home, give his reflections on some of the Wise Men of the West, and launch him in circumstantial detail upon his adventurous journey. For the trip described took place so long ago that it was almost like an adventure to travel through India, whither, not direct, but by way of California and Australia, this modern Ulysses sailed in the early eighties.

But this retrospect gives a special charm to the book. Well furnished with introductions, Mr. Conway had an opportunity to see many distinguished people; and his interviews with the great Indologist, Hunter, with the notorious Madame Blavatsky, and with the celebrated Hindus of that period are of especial value, although his somewhat naïve attitude toward the Wise Men of the East provokes an occasional smile. Apparently, Mr. Conway went to India convinced in advance of the superiority of Hindu religion to that of the West, and it is not strange that he was received with open arms by the Hindus, who were only too pleased to be told by a Westerner that the Christian religion was inferior to their own. Even that arrant fraud, Madame Blavatsky, seems for a time to have imposed upon the somewhat indiscriminate admiration of the pilgrim, and it is with a sigh that he truthfully portrays her as she really was; though he does not allude to the common belief of Anglo-Indians that she was in the beginning merely a Russian spy.

Mr. Conway's acquaintance with Hindu literature is so very vague that the reader must be warned of the valuelessness of such literary criticism as his fertile mind offers, for in this respect ignorance is no bar to his daring. Thus he suggests that the ending of a Sanskrit drama was altered to suit conditions arising on the advent of Buddhism, whereas the drama was not written for more than a thousand years after this event. The author's comments on Zoroastrianism have much the same force, only they are offset by his frank confession that "the true religion was that of Zoroaster," and the reader is prepared for the excess of zeal natural to the convert. It is to be hoped that the many interesting items strewn through the book are not so carelessly recorded as is the (printed) transcription of a letter received from John Bright, which appears in facsimile and is then printed. Mr. Bright signs himself plainly enough "very sincerely yours," and this appears in the printed version as "very respectfully yours."

The one note that jars in these recollections of a venerable teacher is that teacher's too evident pride in his own mental superiority. "My heresies" are flaunted almost too often in the face of the reader, who finally, in the last chapters of the book, is treated to a reconstruction of the character and social position of Jesus Christ, which to some will be shocking and to others will be only an additional proof of how far a fixed idea can carry a man from the realm of sober probabilities. For in all this pilgrimage Mr. Conway is interested mainly in religious phenomena, and it is not strange that he should conclude with a chapter or two on his own disbelief. So he sketches for us the "immeasurable crime," not of Judas, but of Paul (no "St." stands before the abhorred name in Mr Conway's version of that sinful character); Jesus was "a gentleman of local distinction" (not at all the humble character presented in the New Testament), numbering among his very intimate friends the Lady of Maudleyn Castle, the whole conception of Mary Magdalene being a Christian adaptation of a Buddhist story.

As a critique of the Christian religion Mr. Conway's book demands no further discussion. As a record of travel it is of permanent value, since it vividly portrays not places, but people, most of whom have long since passed away.

By the Light of the Soul. By Mary E. Wilkins Freeman. New York: Harper & Brothers.

Nothing could be more inevitable than the way in which, like a homing pigeon arbitrarily carried far afield in a wicker hamper, Mrs. Freeman's transplanted genius orients itself by a moment's circling in the alien air of New Jersey, and then with one joyous swoop heads straight for New England. To her mind, normal human beings are those who live in small, chilly, frame houses, into whose diet sweet cake enters largely, who die for the truth, or more heroic yet, deliberately condemn themselves to eternal damnation by lying in a just cause. She firmly believes that the fiercest passion may find its only manifestation in stormy repression. Consequently, you accept Maria Edgham's mother, stern Puritan, married to an easy-going New Jersey commuter doing business in New York, you accept the New England aunts, you conscientiously try to accept Maria Edgham herself; but when it comes to believing in Maria's peculiar complication (to specify this would be an injustice to the story) and her subsequent behavior, you can only say "such a situation may be possible, it may have actually existed, but the fact of sounding quite incredible makes it a ticklish matter for fiction." Animal spirits have never been Mrs. Freeman's distinguishing trait, and while young Maria, Mrs. Edgham, and Aunt Maria, if a trifle shopworn, are faultlessly seen and described, the mass of other characters seem either perfunctorily conventional or shadowy.

There is genuine knowledge of human nature in the way Mrs. Edgham's harsh tongue and golden heart make a less monotonous and truer home than the beautiful Ida's wooden smile, but Ida herself arrives at such woodenness as to become flatly nonexistent. To take one instance—unless bent on remarriage, her type of schemer would never miss the value of a bewilderingly beautiful daughter as a social lever. In fact, Ida's structure has been imperfectly realized, also that of Wollaston Lee; throughout, the minor figures have been drawn with irritating superficiality, and the tardy introduction of a benevolent lady-dwarf, with a palatial drawing room modelled upon the famous chair of Sir Richard Calmady, borders perilously upon burlesque.

With all of this, Mrs. Freeman keeps her accomplished touch as a story-teller. If the present work lacks the unity and beauty of "A New England Nun," at least in it she is seeking an enlarged horizon and rather receiving fresh impressions than remaining satisfied to repeat those already used. This very condition, though temporarily disappointing, gives promise that when she has struck somewhat deeper in a new soil, we may hope, not for pale repetitions of past achievements, but for a widened interpretation of human nature, whether the field be the silver-and-satin-finished suburban residences of New Jersey, rich with the fragrance of roast chicken, or the ancient cake-blighted homesteads of New England.

Historic Hadley: A Story of the Making of a Famous Massachusetts Town. By Alice Morehouse Walker. New York: The Grafton Press.

This volume of somewhat more than local interest is the second in the Historical Series of the Grafton Press, edited by Dr. Henry R. Stiles. So largely are the lands of the early settlers now passing into the hands of aliens that the book is especially timely, serving to rescue from virtual oblivion many interesting facts of the first years of the town, and its important part in the later history of the State. The voluminous manuscripts of Sylvester Judd, now carefully guarded in the Forbes Library at Northampton, and his "History of Hadley," completed after his death, exhaustive and final as they may be, are not within reach of the general reading public, which cares little for elaborated detail and painstaking historical accuracy. But many persons enjoy these tales of peril and

bloodshed, effort and ultimate reward, when served to them in facile form. The little book, too, is accurate, never sacrificing the facts to readability or picturesqueness. Familiar traditions are always carefully scrutinized. In this class comes the oft-told tale of the regicide judges, Goffe and Whalley, who, escaping from England, had at first taken refuge in Boston, but, royal vengeance still pursuing, fled yet farther westward to New Haven. Here they were permitted to remain in peace for a time, but receiving news that orders for their arrest had reached our shores, they made their way to Hadley, to the sheltering home of Parson Russell. Incredible as it may seem, they lived here for many years unknown to the other inhabitants of the settlement. This much is authentic history. But the story that during an unexpected Indian raid and massacre the settlers were suddenly rallied and commanded in a most expert manner by a stranger of venerable aspect, to the end that the Indians were completely routed, the stranger himself disappearing as soon as victory was assured, has been, alas! found by late historians to be but picturesque fiction, even embodied as it is in the well-known old engraving of the early perils of our forefathers, and in Cooper's "Wept of Wish-ton-Wish," and Scott's "Peveril of the Peak."

From the settlement of the hamlet of Quonektacut in 1659, its story is told through many vicissitudes; we learn of Mary Webster, most noteworthy witch of Hampshire County; of the establishment of churches, schools, the Hopkins Academy; the setting off of Amherst, "the East Precinct"; the march of Gen. Burgoyne and his entertainment in Hadley, after his surrender, in the hospitable home of Col. Porter, to whom he presented his sword—an invaluable relic still preserved by descendants; of Shays's rebellion, of Jonathan Edwards, and of later happenings, even to the death of Bishop Huntington. But with the surprising influx of peasant foreigners we must note the passing of the romance of the great "river of pines." It is well to have the story of one of its typical villages so pleasantly embodied in a picture whose separate parts retain a just perspective in a well-balanced whole. The little book has value both literary and historic, and considerable narrative charm.

Life and Letters of the First Earl of Durham. By Stuart J. Reid. 2 vols. New York: Longmans, Green & Co. $10 net.

Lady Durham once wrote to her husband:

> I have a speech to tell you to-day of Charles's which I think will amuse you. The children were all talking last night at dinner, and Fanny was saying that, when the history of England came to be written a hundred years hence, your name would perhaps be mentioned in it. Upon which Charles said: "I hope they will put it, 'In the reign of George the Fourth lived the famous Mr. Lambton—he was a man of considerable talents.'"

If it were a toss-up between that childish characterization in one sentence and Mr. Reid's 800 pages, we could almost hope the latter would lose, for these volumes are an extreme illustration of that obsession of bigness which now seems to afflict most writers of English biography. Lord Durham was an important figure in his time and way, but his career was cut short by death at forty-two, and nothing that he was or did or even promised merits so ponderous a sarcophagus as Mr. Reid has provided.

Durham was a man of many fine parts and dashing qualities. A born aristocrat, he was yet a radical; "Radical Jack" was his sobriquet among the workingmen. But that he had higher gifts than those of mere agitation, is shown by the fact that John Stuart Mill had high hopes of him, and was ready to follow his political lead. A successful speaker on the hustings, and a Parliamentary orator of weight, Durham's chief title to fame is his Report on Canada. He was sent thither as governor-general, with exceptional powers, at the time of the rebellion of 1837-38, and showed his mastery of the situation not only by successfully dealing with the disaffected elements on the spot, but by his full and philosophic recommendations to the Home Government in the matter of a sound colonial policy. So just and sure was his insight in this great governmental question that his Report has recently been reprinted as a sort of classic in its kind, a fit vade-mecum for colonial administrators everywhere. Into the interesting details of Durham's Canadian experience Mr. Reid goes fully, bringing out all the aspects of what Durham with too much reason considered his cowardly betrayal by the English Government that had sent him out. This led him to resign, and, in his state of failing health, hastened his death. One valuable service his biographer does in dispelling the malicious story that the Report was not Durham's own. "The matter," sneered Brougham, "came from a felon [Turton], the style from a coxcomb [Charles Buller], and the dictator furnished only six letters, D-u-r-h-a-m." But Mr. Reid's investigation of private papers, including Buller's, convinces him that while Durham, as was natural and proper, used material secured for him by his secretaries, in ideas and presentation the great Report was the product of his own brain and hand.

Carl Snoilsky, hans lefnad och skaldskap. Af Karl Warburg. Stockholm: Geber.

With this volume Professor Warburg has again enriched Swedish literature with one of his admirable literary monographs. While in his "Viktor Rydberg" he presented a panorama, as it were, of Swedish culture during the latter part of the nineteenth century as centred in its most many-sided representative, the volume on Snoilsky is the story of a single life, though even here we see mirrored the spirit and movements of the times. The letters from the poet to his friends, which are scattered through the volume, not only are a welcome supplement to the five volumes of his poetical work, in that they throw interesting glimpses on his inner life, but show more clearly than his poems could what he thought of the literary and social movements of his day.

While still in school Snoilsky was known as a poet of promise, and when he left the university, in 1864, his position among the younger literary men of the time was secure. From Italy, where he spent the winter of 1864-65, he sent home one poem after the other, and when a number of them were collected, it was felt that here was a new singer. Here was no echo of Tegnér, here were youth, enthusiasm, and originality. The brilliant and overflowing "Opening Song" especially took everybody by storm. In a letter to a friend he speaks of his "obdurate determination to see in Italy what it is, not what it was. I know," he continues, "it is a bold statement, but nevertheless I assert that I have been, though very inferior to my predecessors, the first to have courage to give expression to a realistic view of this land of the ideals." The succeeding years, during which he resided a short time in Spain and in Paris, were nearly barren of poetical inspiration. He was not happy. He had married young, and had obtained a position in the Foreign Office; but he suffered in the stiff society life in Stockholm. He amused himself with collecting coins and books. He wrote afterwards to a friend; "It was absurd of me to think that I could live in the long run like the rest of them in our petrified, conventional society."

The revolt came in the summer of 1879, when all Sweden was stirred by the news that its most cherished poet, recently elected "one of the eighteen" in the Swedish Academy, had suddenly resigned his government position and left Sweden, alone. His marriage was dissolved, and shortly after he married again. In his second wife he found a discerning critic, whose sound judgment and sympathetic insight he often acknowledged. The great change in his life reflected itself in his poetry. Not only was there a decided increase in his productivity, but a deepening in his conception of life and of poetry. He had always been a liberal, and had often given poetical expression to his enthusiasm for freedom, independence, and unconventionality. But there had been an individualistic, aristocratic touch that conveyed an impression of coldness; the inward and outward storm through which he had gone opened up in his heart the well of sympathy for all who suffered, and his liberalism deepened to a radicalism that made one critic ask whether Snoilsky were not, after all, a radical of Ibsen's type, for whom the petty reforms of the day were mere trifles, not worth a strong sentiment. It may be doubted whether these social poems, "The Servant Brother," "Aphrodite and the Grinder," and others represent poetically a higher quality. Certain it is that they won for him the sympathy and admiration of circles to whom his more artistic productions made less appeal. In his exile his patriotic poems also began to occupy an important part of his work. Poetically these stood higher than the social poems; we find among them some of his most masterful productions, such as "Old King Gösta," "Olof Rudbeck," "The White Lady," "The Home Coming," and "At the Fair of Vernamo."

Snoilsky's letters from this period—"la seconda primavera," as his biographer calls it—contain many expressions of his social and poetical point of view:

> I am well aware of my chief defect, that I have not from childhood lived the life of the people. One-sided classical culture and education have made me, like the majority of our littérateurs, less fit to speak a language that the mass of the people can understand.

In 1889 Snoilsky returned to Sweden, to

take the position as chief librarian of the Royal Library in Stockholm. The appointment caused much opposition, both in the press and in the Diet. Suoilsky was, of course, not a trained librarian, but he was a bibliographer of rank, and we have the word of his successor, Dr. Dahlgren, who *is* a trained librarian, to the effect that his administration was highly successful. During the last years of his life he was engrossed in official duties and felt less and less inclination to poetical production. He died in 1903.

Drama.

Comedy Queens of the Georgian Era. By John Fyvie. New York: E. P. Dutton & Co. $4 net.

One of the chief motives, apparently, which prompted Mr. Fyvie to the composition of this somewhat formidable volume was a fear lest the public interested in ancient theatrical history should form erroneous estimates of the character of the different remarkable women whose abilities lent such lustre to the English stage during the eighteenth century. In this respect his work certainly is one of supererogation. No one ever dipped into the scandalous chronicles of that era, which unhappily are only too abundant, without discovering that the frailties of most of these heroines were fully as notorious as their fascinations. Inasmuch as they have all been in their graves for a century, it was scarcely necessary, and not in the least profitable, to subject their memories to the modern process of muck-raking. But it is only fair to say that his book, as a rule, shows a praiseworthy desire for accuracy, a careful sifting of a great mass of contemporary evidence, and a quick eye for significant facts. Of course, he has nothing, or very little, that is new to tell, but he creates a certain impression of freshness by drawing liberally from sources of information not in common use. To the casual reader, unlearned in such matters, his narratives will be entertaining, and, after a fashion, instructive. They furnish some vivid sketches of the theatrical life of the period, and prove that in a good many respects it very much resembled that of our own times. But, like most other publications of the kind, this one is silent on the points which alone could have much vital interest for students of to-day, descriptive details of the technical methods employed by these stage queens, hints concerning their interpretation of famous passages or characters, some means of comparison between their actual achievements and those of their successors. There is no doubt of their attractions or their triumphs. The main question now is whether their renown was due solely to surpassing genius or partly to the inexperience of their public and the complacency of their critics.

Mr. Fyvie seems to be surprised at the tremendous success, on its first production, of "The Beggar's Opera," which made Lavinia Felton Duchess of Portland; but it was almost as popular fifty years ago, when Sims Reeves was the Capt. Macheath. The appetite of modern theatregoers for the startling or the vulgar is to the full as hearty as that of their great-grandfathers. The strange story of the half-crazy Charlotte Charke, less familiar than most of the others, was worth telling, perhaps—though scarcely at such length—for the glimpse it affords of the life of the strolling player. It might have been illustrated by Hogarth. His life of Kitty Clive is full, and doubtless authoritative, but he does not bring that delightful termagant so vividly before the mind's eye as does Mrs. Clement Parsons in her rapid sketch. He lacks the grip of essentials and the sparkling style. In the case of Peg Woffington he is less fair than usual, almost playing the part of Devil's Advocate. He relies mainly on the anonymous biography of 1760, and where the facts are in doubt, does not hesitate to employ innuendo. Of course he has no difficulty in shattering the fanciful ideal of Charles Reade or in demonstrating the slovenliness of Augustin Daly's book, which was inspired largely by his managerial plans, but nobody ever imagined that Peg was a vestal. The marvel is that, coming out of the gutter as she did, she should have risen so far above her original level. She was one of the worthiest of the whole sisterhood of sinners. She is not in the same category with George Anne Bellamy. Why Mr. Fyvie should deem it worth while to devote so much space to the monotonous recital of her profligacies and those of Frances Abington and Mrs. Baddeley, is not easy to understand. Abington, of course, was a valuable actress or Garrick would not have endured her petulance as he did.

There is more justification, perhaps, for his damaging arraignment of Perdita Robinson, who was not altogether the suffering saint she is popularly supposed to have been, although her shortcomings do not operate as whitewash upon the reputation of the rascally Florizel. Two of his best chapters relate to the queer adventures of the still queerer Becky Wells, who experienced every extreme of fortune, and the career of the brilliant Dora Jordan, who, after living as the unwedded wife of the Duke of Clarence for many years in great honor and affection, was discarded when he succeeded to the British throne, and died in circumstances which have never been fully explained. Whether the theory of Mr. Fyvie that the Duke profited largely by Miss Jordan's theatrical earnings is true or not, it is not wholly inconsistent with the character of his egregious family, and is partly supported by the liberality of Queen Victoria to his children. In the matter of paper, print, and illustrations the book is admirable, and in literary quality more than respectable.

George Bernard Shaw was fortunate in having the services of such an accomplished actress as Miss Ellen Terry in the introduction of his farcical comedy, "Capt. Brassbound's Conversion," to an American audience. Without her, the performance which took place in the Empire Theatre on Monday evening, would probably have fallen rather flat. The piece has no dramatic value, the plot and more than one of the personages, including the heroine, being almost grotesque in their improbability; but it is, nevertheless, exceedingly amusing. The dialogue is rich in humor, wit and satire. Indeed, there is scarcely a dull line in it, but the fruits of shrewd observation, ignorant or wilful misapplication, humorous fancy, crude social and political theories, and all sorts of intellectual vagary are mixed up in it so inextricably, that any attempt to sort them with the view of discovering some sane and practical purpose underlying the whole composition would be hopeless. But absurd as the conduct of Mr. Shaw's personages may sometimes be, the revelation of their character in speech is often extraordinarily felicitous. Nothing could be much more veracious than the sketch of the mean, sly, fawning, treacherous little guttersnipe, Drinkwater, whose assurance is only equalled by his arrant cowardice. Lady Cecily, the supposed product of some idealized Socialistic Utopia, is a creature of pure fantasy, but the effect of her imperturbable benevolence upon hostile spirits is exhibited with admirable humor. Miss Terry played the part with such refinement of manner and perfection of natural grace, such an air of accustomed authority and fearless self-confidence, that her behavior seemed humorous rather than absurd. In many ways she showed the power of real acting to create illusion. It is a pity that Mr. Shaw, who, as a dramatist, has much in common with W. S. Gilbert, should not be endowed with some measure of the latter's sanity.

The production of an original quasi-historical romantic tragedy in blank verse, by an American author, is so rare an event upon the American stage that it deserves special consideration. Percy Mackaye, the author of "Jeanne d'Arc," which was presented in the Lyric Theatre by Miss Julia Marlowe and E. H. Sothern on Tuesday evening, is not so fine a poet as Stephen Phillips, but he has written an exceedingly meritorious play, dealing with a stirring subject in a worthy and dignified manner. He has followed the accepted facts of history with sufficient fidelity, has embellished them skilfully with supernatural machinery, and has produced a workmanlike drama which is likely to find a place in the permanent literature of the American theatre. It contains vigorous and melodious verse, ingenious and effective situations, and some good characterization. The central figure of the Maid, with her rural simplicity and rhapsodical faith, is very well drawn. She is introduced first at a village festival, where, being left alone with a dying soldier, she cheers him with the story of her visions. The incident is well imagined and well told. Next the Maid detects the Dauphin, who has hidden among his courtiers at Chinon, declares his legitimacy—which is confirmed by a miraculous apparition—and is entrusted with military command. The third act is outside Orleans, where she is at first repulsed and wounded, but afterwards carries the city by assault. In the fourth she completes her mission by crowning the King at Rheims. The last act shows her betrayed and deserted at Rouen, and the curtain falls upon her execution. There is a great deal of good, original work in the play, together with much that is feeble. As the composition of a beginner it is full of promise. Unfortunately, it was not presented on Tuesday with the spirit which it deserves. Miss Marlowe interpreted the ecstatic side of the Maid with the right simplicity and fervor, and showed a fine frenzy in rallying the beaten troops, but her impersonation was somewhat over-sentimental and refined.

Mr. Sothern, too, lacked life and variety as the meditative Alençon. Few of the subordinate players revealed much familiarity with the ways of romantic acting, and still fewer had the least notion of how to utter blank verse. In this respect even the principals failed. This is one of the reasons why the cause of the poetic drama is so desperate.

George Alexander has waived his rights to the new version of "Faust" upon which Stephen Phillips is engaged, and the work will therefore be undertaken by Beerbohm Tree, who will act the part of Mephistopheles. But the production is a long way off yet, for the manuscript is not to be delivered until September.

The Shakespeare Festival at Stratford-on-Avon next April will be the most remarkable yet held. The performances will be under the direction of F. R. Benson. Forbes Robertson and Miss Gertrude Elliott will appear in "Hamlet"; Mr. Bourchier and Miss Violet Vanbrugh will be seen in "The Merchant of Venice"; in "Othello" Lewis Waller will be the Moor and H. B. Irving Iago, while Miss Evelyn Millard will appear as Desdemona. George Alexander has agreed to play the leading part in "As You Like It" or "Much Ado About Nothing"; and Sir Charles Wyndham and Miss Mary Moore have also promised their services. Mr. Benson's season at Stratford-on-Avon will extend over three weeks, beginning on April 22; and the repertory this year will be enlarged by the production of "All's Well that Ends Well" or "Troilus and Cressida," two plays which Mr. Benson has not yet produced on the stage. "Love's Labor's Lost" is also to be given. There will also be seen at Stratford-on-Avon a great historical pageant with singing pilgrims carrying floral offerings to the tomb of Shakespeare; and a Shakespearean anthem, probably with a musical setting by Sir Hubert Parry, is to be sung.

The old theatre at Weimar, notable in the history both of the drama and of music, is to be closed. The week from February 9 to 16 will be given up to special performances, including Schiller's "Räuber," Goethe's "Iphigenie," and Wagner's "Lohengrin."

An exhibition of "engraved portraits of famous actors of the olden time" will be open at the Grolier Club in this city until February 16.

Music.

FANNIE BLOOMFIELD ZEISLER.

The Russians have lately taken such complete possession of our concert halls, so far as solo recitals are concerned, that it comes quite as a surprise to have to record the appearance of some one else beside Gabrilowitch, Lhévinne, Scriabine, Petchnikoff, and the rest of them. Mrs. Fannie Bloomfield Zeisler, at Carnegie Hall on Saturday afternoon, recalled the fact that there are Americans, too, who can play the piano; and later on we are to hear Mme. Samaroff, who is an American, despite her Russian name, and probably Joseffy, who, though born in Hungary, has become an American by right of long residence.

A year ago it was announced that Mrs. Zeisler was a victim of nervous prostration, brought on by overwork. She had the good sense to take a sufficiently long rest, and her playing indicates that she has suffered the loss of none of the fine qualities that have made her famous. She plays the Schubert-Liszt "Erlking" with the same stirring dramatic energy as of yore; she interprets a Beethoven sonata (in this case op. 31, No. 2) in the semi-classical, semi-romantic spirit which is proper to that master; she sings the melody of a Chopin scherzo with exquisite feminine tenderness and depth of feeling; she has the power to reproduce the bold rhythms of a Chopin polonaise without seeming to aim at a mannish display of strength; she knows how to reveal the poetic beauties hidden, for most pianists, under the technical difficulties of a Liszt étude; in short, she is a pianist of the first rank, one of the few whose playing never results in boredom.

But why did she play that Sérénade of Rachmaninoff? Have we not Russians more than enough to take care of their own music, and should not the American composer, Edward MacDowell, who has written much better pieces than that Sérénade—who, in fact, has written better piano music than any living Russian, or any dead Russian, for that matter, except Rubinstein—should not Edward MacDowell be played by American pianists? A great wave of sympathy for this man, who has raised American music to the European level, has swept the country; the sales of his music have greatly increased; the Mendelssohn Glee Club is raising a fund for him with the aid of many other musical societies in all parts of the country; but the professional pianists continue to ignore the very music which thousands are just at present most eager to hear. They held aloof from the music of Chopin and Schumann in the same way while those masters were living. They waited many years after Beethoven's death before playing his sonatas. But is it necessary to repeat the follies of the nineteenth century in the twentieth?

GRIEG'S "LYRIC SUITE."

One of the most interesting novelties of the musical season was the "Lyric Suite" of Grieg, which had its first performance in America at last week's Philharmonic concert. When the factitious excitement over Richard Strauss has died away it will be seen more clearly that the greatest of living creative musicians is Edvard Grieg. To be sure, he has written little during the last decade, because of the precarious state of his health, but what he does write is sure to live. The Suite referred to has special interest for us because the world really owes it, in its orchestral form, to a naturalized American citizen—Anton Seidl, who adored Grieg almost as much as he did Wagner and who never ceased regretting that the great Norwegian had written so few pieces for orchestra. He endeavored to increase the scant list by arranging four of the lyric piano pieces ("Lyrische Stücke"), opus 54, for orchestra. After Seidl's death Grieg revised the manuscript. Under his direction a performance was given at Copenhagen; he found Seidl's arrangement "undeniably very good from his point of view, but too heavy for my intentions. The whole Wagnerian apparatus was used for my mood pictures, which did not in all cases suit me." Before sending it to the publisher he secured the permission of Seidl's widow to revise the orchestration thoroughly, and by way of acknowledging his indebtedness to Seidl for discovering the availibility of these piano pieces, he forwarded her 1,000 marks as her share of the receipts from the publisher.

As arranged by Seidl, the suite included the number called "Bell Ringing," one of the strangest pieces ever written—an attempt, and a weirdly successful one, to imitate the mingled consonant and dissonant sounds made by bells. Seidl's version emphasized its singularity; but evidently Grieg feared that it would prove too much like caviare to the general, so he omitted this, and the four pieces he used are the plaintive, idyllic "Shepherd Lad"; the rustic and characteristically Norse "Ganger," or "Peasant March"; the dreamy "Nocturne," and the superbly Norwegian and Griegian "March of the Dwarfs," the wild and fantastic main theme of which is interrupted by one of those tender and exquisitely modulated melodies, the secret of which Grieg, almost alone among all composers, seems to have inherited from Schubert—a *cantabile* which, nevertheless, differs from Schubert's as widely as the scenery of Austria does from the fjords of Norway.

While Grieg has written little for orchestra, he has a keen instinct for beautiful coloring. His version of the four piano pieces sounded the more enchanting, coming as they did after the third symphony of Brahms, whose music, in the words of Tchaikovsky, "lacks the chief thing—beauty." Those who missed the Philharmonic will have opportunity to hear the "Lyric Suite" to-night at Cooper Union Hall, or to-morrow night at Carnegie Hall, as performed by the People's Symphony Orchestra under Mr. Arens. The programme of the concerts referred to include also Chadwick's "Melpomene" overture and a "Southern Fantasy," by W. H. Humiston, which will have its first public performance.

A purely orchestral programme, without soloist, has been made up by Walter Damrosch for the next New York Symphony Orchestra concerts, Saturday evening and Sunday afternoon, February 2 and 3, at Carnegie Hall. To all those interested in the development of American composers the announcement of "The Festival of Pan," by F. S. Converse, will prove of special interest. Mr. Converse is among the foremost of the younger American composers. He is the successor of the late Prof. J. K. Paine at Harvard, and has several works to his credit, notably an opera, "The Pipe of Desire." The programme also includes: Symphony No. 3 (Rhenish), Schumann; love music and Brangaene's Call from Act II., "Tristan and Isolde" (arranged for concert performance by Walter Damrosch), Wagner; Variation on an Original Theme, Edward Elgar.

Mme. Olga Samaroff, the pianist, is to be the soloist with the Philharmonic Society of New York on Friday afternoon and Saturday evening, March 1 and 2. She will play with the Pittsburgh Orchestra in Pittsburgh on April 5 and 6. In February she is to play with the Boston Symphony in Boston, New York, Washington, and Brooklyn.

Though only forty-one years of age, A. C. Glazounoff, the Russian musician, is soon to celebrate the twenty-fifth anniversary of his début as a composer. A symphony by him was produced when he was sixteen. Russia, and especially St. Petersburg, where Glazounoff is a professor at the Royal Conservatorium, is preparing a series of festivities for him; and Cambridge University, England, has offered him an honorary musical degree. That university, it will be recollected, conferred a similar honor on Grieg, Saint-Saëns, Bruch, Joachim, and other distinguished musicians. At the festival in St. Petersburg the programme will include the composer's first symphony and his latest, No. 8, which is nearly completed.

Wagner relics are rising in the market. At a recent auction in Berlin the original score of the famous "Schuster-lied," from "Die Meistersinger," was bid up to $650, while a collection of about twenty letters to the opera singer, Franz Betz, brought $350.

Art.

OLD MASTERS AT THE ROYAL ACADEMY.

LONDON, January 15.

If the Winter Exhibition of Old Masters is the Royal Academy's "expiation," as I believe Rossetti called it, no one can deny that the Academy "expiates" this year with less distinction and splendor than on many former occasions. For twenty-eight years the Academy has been showing old masters; but the supply in the country is not inexhaustible, and this winter there is no sensationally sudden appearance of a long neglected masterpiece. Most of the fine things have already been exhibited not so very long ago.

A look at the catalogue impresses one with the number of distinguished masters represented—Dürer and Holbein, Botticelli and Bellini, Mabuse and Antonio Mor, Palma Vecchio and Luini, Raphael and Sodoma. Many of these names are already tumbling before the picture detective, or reviving old battles, the Raphael, in particular, Sir Charles Robinson's Madonna dei Candelabri, with its American rival, offering an irresistible opportunity for going over the old argumeuts for and against. To look at the exhibition itself is to find that in most cases it does not justify the array of names. There are, to be sure, interesting things. A Portrait of a Lady, a small half-length—whether its painter was really Holbein as the catalogue states, whether the Lady is really a Queen of England as authorities suggest—has its charm in the delicacy of the flat modelling, the primness and severity of the Holbeinesque expression and pose, the discreetly folded hands without a hint of compromise, and in the beautiful painting of gold-embroidered stuffs and many jewels; but the picture, for all its charm and care and accomplishment, is not one Holbein would have taken special pride in claiming. There are paintings with the decorative impressiveness that the Primitives, as a rule, could give to their most conventional and impersonal work. When all is said, however, the painting that stands out with a more personal quality than the stock-in-trade of any one school or generation, the painting with an individuality that leaps to the eye and makes itself felt, is from Earl Spencer's collection at Althorp, a portrait by Nicholas Lucidel, whose name is by no means one of the greatest and most widely known in the group. The Lady who sat to him may have been, as the maker of the catalogue seems to think, Anna von Botzheim, who came of a well-remembered Nuremberg family. But it makes no difference who she was. The interest of the picture is in the character given to the pleasant though not all too beautiful face, the handling of the complicated detail of ornament and the mastery of its subordination. The loveliness of color, crimson and white lit by the gold of chain and embroidery against a quiet gray background, Whistler would have approved. It is of this picture one brings away an impression to add to the gallery in one's memory of the great or delightful portraits of the world.

The work of the Flemings and Dutchmen of a later period—to which another room is devoted—is entirely overshadowed by the vigor and glory of Franz Hals and Rembrandt. By Hals there are only two pictures, and of these one alone is of the finest quality. There are only four attributed to Rembrandt. And yet they dominate not this one small room merely, but the entire exhibition. Here, again, it is Earl Spencer who has contributed the most notable canvases. From him comes the memorable Admiral de Ruyter, every inch a man born to command, whether it was De Ruyter or not who stood for it. To this picture Hals gave for all time the dignity and force that were De Ruyter's in life, adding, moreover, a splendid sobriety of color in the black and white of his dress, a blunt elegance in pose, and a strength, a swagger, in the painting that no one has yet surpassed. And it is from the Althorp collection that a little Portrait of a Boy by Rembrandt, once called Portrait of William of Orange, also comes. It is unfinished, as the catalogue describes it, but no one would have had Rembrandt add another touch; it is simplicity itself, a half-length, against a quiet, black background, and it is handled in a way that is unexpectedly suggestive of Velasquez. In this respect I know of no other Rembrandt quite like it. Often, before this, Hals and Rembrandt have been seen at the Academy in greater numbers or more famous canvases. But as I made the rounds of the far larger collection of English pictures of the eighteenth and early nineteenth centuries, I could forget neither the De Ruyter nor the Boy once known as William of Orange. They seemed to come with me, to cling to me, so as to set the standard, judged by which the Gainsboroughs and Reynoldses and Romneys could be accepted as nothing more than graceful decorations, the Hoppers and Raeburns and Lawrences nothing more than, at the best, vigorous puppets. It is not every one who can be vigorous like Hals without vulgarity, refined like Rembrandt and yet absolutely true to life.

There are several most delightful Gainsboroughs, one in particular with a more sensational attraction than technique or even subject can ever be to the general public—the Portrait of Miss Linley, that, when it suddenly came up for sale at Christie's from no one knew where, dirty and shabby, was sold for no less than 9,000 guineas. This is one of the rare romances of the auction room, nowadays, when every picture of merit of every master of renown is supposed to have been traced, measured, judged, and catalogued. Perhaps the most unexpected thing in the story or romance is that the picture has the advantage of being very charming, and would still seem so if its discovery had been less sensational. The face is sweet, with a little of the oversweetness of many of Gainsborough's ladies; but there can be no qualification to one's pleasure in the delicacy, the exquisiteness of the painting in the gold-embroidered low bodice—the portrait is only a bust—and the white and gold scarf. These are the details over which he was apt to linger with greater sympathy and insight than over the details of the face. The English portrait painters of his generation seemed afraid of the character that artists like Rembrandt and Hals and Velasquez prized, even if found in the ugliest model or sitter, above the Book-of-Beauty prettiness of so many of Gainsborough's and Reynolds's women.

The finest of the Reynoldses came, like the finest Rembrandt and Hals and Primitives, from the collection at Althorp. These are the Portrait of Margaret Georgiana Countess Spencer and her Daughter Georgiana, afterwards Duchess of Devonshire, the mother encircling with her arms the child who stands on a table clasping her mother's neck, in a composition built up with the stateliness and the grace that Reynolds brought to the grouping of his figures; and the Portrait of John Charles, Viscount Althorp, a small boy, in the old-fashioned costume of the day, standing in a spacious conventional landscape as characteristic of the period. He is charming, with hardly more than a suspicion of the sentiment that Reynolds's descendants exaggerated into mawkish affectation. But you cannot get rid of the feeling of convention in the deliberately posed figure and his deliberately composed surroundings, when you remember that other child presented so simply, with no picturesque accessories.

Still less can the Sir George Sinclair, Bart., as a boy by Raeburn, and Edward, fifth Earl of Darnley, also a small boy, by Hoppner, bear comparison with the Rembrandt. Both children, like Reynolds's little Viscount, are placed with the picturesqueness of the studio in a landscape designed according to formula and not nature; Raeburn's boy is seated on a rock, Hoppner's leans against a rock, as you may be sure neither their own family nor the painters ever saw them sit or lean. The convention has already become more artificial than it was with Reynolds; the essentials of life, character, reality prized by Rembrandt, are forgotten.

It would have been wiser had the collection ended here, that is, chronologically. But the work of British artists has been carried down to yesterday, and has been selected with so little discrimination that it can produce no other effect than to make one deplore the sad and complete degeneracy of British art. A picture by Wilkie seems to

hang in the place of honor, in the centre of one of the smaller rooms, for no other reason than to explain how this degeneracy came about. It is his Chelsea Pensioners Reading the Waterloo Dispatch, and belongs to the Duke of Wellington. The composition is crowded with as many figures as would fill a three-volume novel—soldiers bringing the news, Chelsea pensioners listening to it and drinking in front of a public house, women, children, dogs, horses, uniforms, and almost everything has a story or a meaning or an association, so that the description serving as key to it takes up a whole half-page of the catalogue. The great tradition, even the charming convention, has gone, and in its place is a tedious conscientiousness in a multiplicity of details that art has nothing to do with, an absorption in subject, a smallness of pictorial idea and composition. And, after all, if this is what was wanted in the beginning of, or just before, the Victorian era of dulness and pettiness, how infinitely better it was done by a Fleming like Teniers, as you have only to walk back to the room of the Rembrandts and Hals to see! Wilkie was probably one of the most overrated mediocrities who ever painted in England. He did more than almost anybody to reduce the Royal Academy to its present condition of weakness and decay.

There is "expiation" of a kind, I fancy, in the room after the Wilkie, where you find a collection of pictures by men who died more or less recently. Not in the hanging, of course, of two pictures by Leighton, one the elaborate but empty Syracusan Bride Leading Wild Animals for Sacrifice to the Temple of Diana. It was first exhibited, the catalogue says, in 1866—some years later therefore than the notorious Procession of Cimabue. But it makes you understand why Leighton, who as painter is of such meagre interest now, was hailed as the coming genius when he first appeared upon the scene, young and radiant, from his studies in Munich and Florence. The Pre-Raphaelites, superabundantly supplied with ideals as they were, could not quite shake off the influences of Wilkie and his followers. Leighton, trained abroad, designed and painted his pictures on a more ambitious scale; he had a sense of bigness. And yet he could not escape from subject any more than Wilkie, nor could he see it pictorially: only, with him, it was not domestic, but classical, as his admirers pointed out with awe.

The irony to-day is to find hanging with him, and classed as "Deceased Masters," artists for whom the Academy had, so long as they lived, never an honor to spare: Alfred Stevens—by whom there is only one small portrait, of W. Blundell Spence of Florence, but what character in the head, what dignity, what restraint; John Linnells, not very great, perhaps, but who could paint landscape far better than most of the Academicians of his generation; the two Scotchmen, Alexander Fraser and Sam Bough; and James Charles, who has not yet been dead a year. Charles exhibited at the Academy, but was better known as an exhibitor at the International and the New English Art Club. Painters had the greatest respect for him. The Academy, however, never gave him the chance to write the initials A.R.A., much less R.A., after his name; the recognition might well have come sooner. His work is scholarly by the side of Leighton's, with which, I should add, it cannot be compared as far as subject is concerned. The few pictures here are mostly landscapes. Even when Charles made use of the sort of subject beloved by the British public—as in his Fifty Years Ago: Her Wedding Gown, an old woman gazing upon her youthful finery with the pathos that is popular—his theme was merely the concession of the artist who must live somehow; but you can see that his real interest was in the problems of light and atmosphere it suggested; that to him, personally, the old woman and her story were of much less account than the exact values of the flowers set in a row against the window beyond. He was a painter, preoccupied not with anecdote, domestic or classical, but with the painter's problems, which he approached always in the spirit of the student. For his work, the test of comparison with old masters is rather too severe, and this is why, of the examples now gathered together, none strikes one as so satisfactory as The Chalk Pit, which does not pretend to be anything more than a study of white chalk cliffs in sunshine.

N. N.

Since the South Kensington Museum has made a special exhibition of those works of Giovanni Bastianini, which it had bought eagerly as Renaissance originals, there has been much writing about the sculptor-forger of Fiesole. A welcome addition to this literature is "Giovanni Bastianini e Paolo Ricci; Scultori Fiesolani," by Canonico Dionisio Brunori (Florence: Tipographia Domonicana). This illustrated pamphlet professes only to give the life of its hero, as seen by a kinsman. Its horizon is that of Fiesole, and it pays little attention to works in foreign possession. In recompense it affords a vivid picture of the struggles of a nineteenth-century sculptor with a fifteenth-century soul, and makes some contribution to the anecdotage of art. Born in 1830 of a peasant family, Bastianini, at the age of eighteen, bound himself to the Florentine antiquary, Freppa, in consideration of two francs a day and his studio expenses. This contract was less burdensome than it has been represented, for Bastianini worked also on his own account—a practice that Freppa winked at, though it cost him at least one rueful experience. Freppa taught his familiar to read and write, thus reinforcing his instinctive love of the Quattrocento with some knowledge of history. Bastianini's training as a sculptor had been the most desultory, but in the early twenties he made the colored bust of Savonarola that was exhibited a few years later in the Palazzo Riccardi as a splendid original of the fourteenth century. Bastianini promptly avowed its authorship and his fame began to rise. In 1864 was modelled that marvellous bust of Beniveni that stood for a time in the Louvre before the Slaves of Michelangelo. When the maker declared that it was merely a faithful portrait of Giuseppe Bonaiuti, a workman in a tobacco factory, there were contemptuous denials that this masterpiece could come from an ignorant peasant. In rejoinder the artist offered to make a duplicate, but died in 1868 before the promise could be fulfilled. In 1876 his group in the modern taste, "The Dance," received a medal at the World's Exposition at Philadelphia. Other pieces of this style are reproduced in the pamphlet before us, and curiously there is nothing archaic about them. They represent merely the high average of post-Berninesque Italian sculpture. The archaistic pieces, which were made for a matter of a few hundred francs, are now sold on their merits in the thousands. His life may be regarded as successful, but it recalls the sad waste of talent caused by the modern craze for the pseudo-antique. We must close with a characteristic anecdote. On one occasion Freppa came into Bastianini's studio, exultant over a tiny Madonna, "true Quattrocento," that he had bought at a bargain. Bastianini was constrained to tell his employer that this was one of the outside jobs, that the mould was in the studio, and that if Freppa liked the thing he could have as many as he wished. The biographical sketch of Ricci, a sculptor who practised an ingenious polychromy with porphyry and similar hard materials, is of minor interest, and serves chiefly to stiffen the brochure for the shelf.

We are not informed whether Julia Cartwright's "Early Work of Raphael" (E. P. Dutton & Co.) is a reprint. As long ago as 1895 Mrs. Ady contributed to *The Portfolio* her "Raphael in Rome," which begins abruptly where this little book leaves off, and this book has all the air of a first part of that study. At any rate, it gives in readable form the facts of Raphael's life and career, up to the year 1508, as they are received by the Morellian school of criticism. Much more than that it hardly pretends to give, and for any detailed appreciation of the artistic qualities of Raphael one must look elsewhere.

Houghton, Mifflin & Co. have announced a series of authoritative books on landscape architecture long out of print. First will come Humphry Repton's "Art of Landscape Gardening," revised and edited by John Nolen. This will be followed by Thomas Whately's "Theory and Practice of Landscape Gardening," edited by F. L. Olmsted, jr., and the work of Fürst Pückler von Muskau on his own park in Germany, translated by Samuel Parsons, jr.

The list of Fra Filippo Lippi's works must be enlarged by a Madonna and Child which has recently been brought to the President's office in the Palazzo Riccardi, Florence. This panel long stood over the altar of the Castello Pulci, near Signa. When that building was converted into an insane asylum, the picture was brought, with others of less importance, to the museum of San Salvi, where it has remained unregarded, in the secretary's office, for a matter of ten years, its existence being known only to a few connoisseurs. It will soon be put on public exhibition in the Hall of Luca Giordano. The panel is tall, rounded at the top, and in the original massive Renaissance frame, with disengaged Corinthian columns. The composition resembles closely that of the Madonna with Four Saints in the Accademia, the architectural setting of which it practically reproduces. The pose is, however, reversed, the Child standing at the Virgin's left. The figures are of life size, and shown to the knee. It is notable among the

Frate's pictures for the brilliance and excellent preservation of the colors. The Virgin's mantle is the conventional blue, her tunic a remarkable crimson brocaded with gold. The line is more fluent than is usual with the Frate, and, since this must be one of his latest works, the fascinating possibility is raised that he may here reveal the influence of his gifted pupil Botticelli.

A loan exhibition of rare Chinese porcelains in aid of various charities is on view at Duveen Brothers' gallery, No. 302 Fifth Avenue. This is one of the most remarkable collections of porcelains ever shown in New York city, comprising specimens from the cabinets of such collectors as J. Pierpont Morgan.

The Art Institute of Chicago and the Municipal Art League opened their annual exhibition of works of artists of Chicago and vicinity on January 29.

The authorities of the Bibliothèque Nationale are organizing for the forthcoming spring an exhibition of portraits, drawings, and miniatures taken from or appearing in some of the finer illuminated manuscripts of the sixteenth century.

Col. Borgatti's long researches in Castel Sant' Angelo, Rome, as reported in the *Tribuna*, have led him to the following revolutionary conclusions: The building was begun by Hadrian as a conical pyramid, and decorated with the rarest marbles and Grecian sculptures. At his death the work was unfinished; probably the level of the sepulchre had not been reached. Antoninus changed and greatly enlarged the plan, choosing the form of a drum upon a square basement, and providing a place of burial for all the Imperial family and their descendants. He lived to build only the core, his own vault, and the tomb was continued irregularly, from cheaper materials. During the Renaissance it was greatly enlarged as a fortress, so that one may say broadly that it remains as "one of the most remarkable, or rather as the unique, example of an Italian fortification in use from the fourteenth to the nineteenth century. It perpetuates the work of Taccola, Rossellino, Alberti, San Gallo, and others, down to Bernini." We shall await with interest the arguments for the theory here baldly stated.

The French archæological expedition at work on the island of Delos has been able to extend its operations very considerably. North of the Hieron an extensive hall of columns has been laid bare, with an inscription stating that it was built by the Macedonian King, Antigonus Gonatas. In the same neighborhood a tomb from the Mycenæan period was found. New streets, extending from the theatre, have been exposed, and in several of the houses fine statues were found, one of Polyhymnia being particularly beautiful. South of the Hieron the archæologists unearthed a circular monument, probably the shrine of the wealthy Athenian family of Heros Archegetas; and near by an esplanade hewn into the rocks with fine extra large lions, dating from the pre-Persian age, the stone evidently from Naxos. New chronological data have also been found, one of the stelæ containing a list of the names of all the priests during the second Athenian occupancy of the island. Numismatics, too, have been enriched, especially with additions of Attic silver coins.

Jacques Reich has added to his collection of etched portraits of famous Americans one of Andrew Carnegie. This portrait, an admirable likeness, is well up to the level of his previous work.

Thirty pictures of the Barbizon school collected by H. S. Henry of Philadelphia, were sold at auction in this city last Friday night by the American Art Association. They brought in all $352,000. The highest price was paid for Troyon's Le Retour à la Ferme, $65,000. This picture brought $24,500 on February 29, 1896, at the dispersal of William Schaus's pictures in this city. The feature of the sale was the high prices for small Corots; seven of them ranged from $7,000 to $24,000. The prices in detail were as follows: Corot—Chateau Thierry, $9,800; Premières Feuilles, $7,000; The River, $20,600; Nymphes jouant avec un Tigre, $19,100; Meditation, $15,600; Le Matin au Bord du Lac, $11,300; The Glade, $24,000. Daubigny — The First Shades of Night, $4,800; The Harbor, $5,000; Farm at Villerville, $6,700. Decamps, Les Contrebandiers, $7,100. Delacroix—Lion Attaqué, $4,400; Tigre Serpent, $6,700; Arabe Montant à Cheval, $7,200; The Release of the Princess Olga, $11,100. Diaz—The Forest, Fontainebleau, $5,200; Whisperings of Love, $5,500. Dupré — Sunlight, $8,300; Twilight, $13,000. Fromentin—The Falconers, $3,800. Géricault—Starting for the Race at Rome, $3,000. Millet—The Retreat from the Storm, $6,700; The Shepherdess and Her Flock, $15,000. Rousseau—Landscape, $4,900; Paysage en Sologne, $6,400; Sunlight, $21,600; Twilight, $10,100. Troyon—The Farrier, $7,600; Going to Market, $16,000; Le Retour à la Ferme, $65,000.

On February 1, the Anderson Auction Company of this city sells some engravings, etchings, and drawings, partly from the collections of Dr. S. M. Burnett and James R. Pitcher. The sale includes some New York views, a few etchings by Rembrandt, and a series of etchings by Charles Jacque.

Science.

THE NEW SECRETARY OF THE SMITHSONIAN.

In the selection on January 23 of Charles Doolittle Walcott to fill the post of secretary of the Smithsonian Institution, the regents pay tribute to the worth of a man who by painstaking work, and without the influence of university surroundings, had already attained the highest administrative office in science which the Government of this country could bestow. Succeeding J. W. Powell in the Directorship of the National Geological Survey in 1894, at a time when there was a bitter struggle for partisan control of that service, Mr. Walcott immediately applied himself to reconstructing the bureau and lifting it to a plane above individual and sectional hostility. His success in this effort is attested by the general favor in which the work of the Survey has been held for a period of twelve years and the generous cooperation that it has received from scientific workers throughout the country. The Congressional grants for the maintenance of the Geological Survey have been nearly doubled during Mr. Walcott's administration, and to this department has been entrusted the expenditure of the millions of dollars annually devoted to the vast irrigation or "reclaiming" enterprises in the far West.

Born at New York Mills in 1850, Mr. Walcott began his official career as a geologist and paleontologist when, in 1876, he became attached to the New York State Survey. A few years later he was made assistant geologist of the United States Geological Survey. In that service he was official paleontologist 1888-1893, and chief geologist 1893-1894, advancing in the last-named year to the directorship. During his incumbency of this last office he held for a limited period the secretaryship of the Carnegie Institution at Washington and an *ad interim* assistant secretaryship of the Smithsonian Institution, in charge of the United States National Museum (following upon the death of the acting curator, G. Brown Goode). Mr. Walcott's administrative ability is further indicated by his work tending toward the coördination of the scientific departments and bureaus of the national capital.

However important to the knowledge and general development of the natural resources of this country may have been the labors of Mr. Walcott as director of the United States Geological Survey, his position in the field of science will probably be most permanently fixed through his contributions as an original student of invertebrate paleontology. His investigations, carried on through a period of over a quarter of a century, upon the most ancient faunas, are a monument of diligent research; and they have done much to revolutionize the views of geologists regarding the development of life-forms and the relationships existing between the land-surfaces and water areas of the Cambrian and pre-Cambrian periods. Mr. Walcott's latest work, which is soon to appear, is a review of the Cambrian brachiopoda of the world; it will probably be the most comprehensive monograph of a world fauna that has ever been published. Much material bearing upon this subject was obtained by a special expedition sent into the interior of China in 1903.

Mr. Walcott, though not a university man himself, rising from the ranks of the public schools, has been a recipient of many university degrees (from Chicago, Johns Hopkins, Pennsylvania, etc.), and upon him was conferred, in 1898, the Bigsby Medal of the London Geological Society.

We have been asked to call attention to the fact that a number of copies of Dr. Sven Hedin's "Scientific Results of a Journey in Central Asia, 1899-1902" still remain unsubscribed for. The work, which was originally planned to be published in four volumes with two volumes of maps, has, on account of the wealth of material, swelled out so that, when completed, the descriptive part alone will occupy four volumes; and the first of these contains the same number of illustrations (500) which was intended for this whole part of the work. But in spite of this expansion the subscription price of £15 has remained unaltered. The

Swedish Riksdag appropriated 75,000 kronor as aid in the publication, but this sum will not suffice to cover the expenses connected with the printing. Besides the four volumes of Dr. Hedin's own descriptive account, there will be two volumes of contributions by various scientists: Meteorological Observations by Dr. N. Ekholm; Astronomical Observations by Prof. P. G. Rosén; Geological Collections by Dr. H. Bäckström and Prof. G. De Geer; Botanical by Prof. G. Lagerheim, and Zoölogical by Prof. W. Leche. The Atlas of about 100 maps on a scale of 1:100,000 and 1:200,000 will constitute an important feature. Mr. Himly of Wiesbaden will edit and publish the ancient Chinese manuscripts and inscriptions from the third century which the explorer brought home with him. The two volumes of the description which have so far been published are devoted to the Tarim River, and to the lake of Lop-Nor. Of the other volumes parts of the Meteorological Observations and of the description of the Zoölogical Collections have appeared. Prof. Leche, the author of the latter, visited the St. Petersburg museum for the purpose of making comparisons with the specimens of Asiatic fauna in its collections, and found that a large number of the specimens which Dr. Hedin brought home are hitherto unknown or very rare.

E. P. Dutton & Co. will publish the English edition of Jean Finot's "Race Prejudice," which attempts to do away with the ancient notion of distinction among races.

In the *Philippine Journal of Science* for November, 1906, Dr. Charles S. Banks, entomologist of the Bureau of Science at Manila, lists the mosquitoes of the Philippines so far as known, and describes some new species. In all, eighty-three species, subspecies, and varieties of culicidæ are enumerated, embraced in thirty genera in six sub-families. There have been collected eight more unidentified species, so that, even before work in this direction has been done in the higher altitudes of the Philippines, the islands are already credited with almost as many kinds of mosquitoes as are found in the United States. *Stegomyia fasciata* Fabr., the yellow-fever mosquito, has been attributed to the Philippines by various writers, who have inferred that there will be danger of yellow fever when the Panama Canal is open. Dr. Banks has found, however, that the Philippine *Stegomyia fasciata* presents ornamentation differing from the *Stegomyia fasciata* Fabr. sufficiently to be considered a sub-species, hence he says:

Unless further search should prove the presence of *Stegomyia fasciata* Fabr. in these islands, the fear of an epidemic would be unfounded unless *Stegomyia fasciata persistans* Banks [the new sub-species] should prove to be able to convey yellow fever.

The French Academy of Sciences has received from the Prince of Monaco a report on the chief features of his scientific campaign in the Arctic last year. The most difficult work was the geodetic survey of the hitherto unexplored mountain region of Spitzbergen. A party of seven Norwegians and one Frenchman covered 1,600 miles over the interior glaciers, and obtained a complete chart of the region, which is covered with glaciers, only the summits of the mountains showing above the ice.

The International Congress on School Hygiene, which is to be held at the University of London August 5 to 10, will deal with methods for the first and subsequent medical examinations of school children; school work in its relation to the duration of the lessons, the sequence of the subjects, and the season of the year; the school in its relation to tuberculosis; and the lighting and ventilation of class-rooms.

Prof. Ernest W. Brown, now professor of astronomy and mathematics at Haverford College, Pennsylvania, has been awarded the gold medal of the Royal Astronomical Society for his researches on the mathematical theory of the motion of the moon. Professor Brown will continue his work next year as a member of the faculty of Yale.

Sir Michael Foster, Unionist member of Parliament for London University since 1900, died this week Tuesday. Born in 1836, he was educated at Huntington Grammar School and University School and College, London. In 1867 he entered upon his career as a university teacher; in 1869 he became professor of practical physiology at University College, London; in 1870, praelector of physiology, Trinity College, Cambridge; and from 1883 to 1903 he was professor of physiology at Cambridge. From 1881 to 1903 he was secretary of the Royal Society; and in 1899 president of the British Association. His "Text-Book of Physiology" has gone through many editions; he was also the author of "Lectures on the History of Physiology," and joint editor of the "Scientific Memoirs" of Huxley. In 1900 he came to San Francisco, where he delivered a course of ten lectures on the history of physiology at the Cooper Medical College. He was knighted in June, 1899. He consented to enter Parliament on the condition that he should not be regarded as a party man, but as the guardian of interests of science.

Prof. Adam Paulsen, head of the Meteorological Institute, Copenhagen, died January 11, aged seventy-four. He is best known by his studies on the Aurora Borealis, carried on in Greenland in 1882, and described in his "Observations internationales polaires" (1882-3).

Finance.

RAILWAYS BORROWING ON THEIR NOTES.

It was pointed out in this column, a fortnight ago, how the enthusiasm over new issues of railway stock, with valuable "subscription rights" to existing shareholders, gave way to apprehension over the effect which such increase in supply of stock might have on values. The phenomenon was the familiar one of supply increasing suddenly and enormously, while demand remained unchanged. What has happened since the recent announcements of $400,000,000 to $500,000,000 of such new issues has been economically logical—declines of 20 to 80 points in the most active railway stocks. But the uncertainty aroused by the December announcements was not the end of the matter, because it was perfectly well known that still other railways were waiting to borrow money which they imperatively needed. James J. Hill of the Great Northern, as has already been noted, had declared that necessary new work on our railways would cost "a yearly average of $1,100,000,000." Some two weeks ago President W. W. Finley of the Southern Railway wrote, referring to his section of the country alone:

The work of providing the necessary additional track will require a vast output of capital. How it is to be provided is everywhere a matter of grave concern to railway managers. It must be borrowed.

But the question remained, how and on what terms could the money be borrowed, when so great a part of the country's available capital had been mortgaged, for a year or two ahead, to the three or four great railways which were first on the ground with their requisitions? To some degree, the fall in stocks itself would help matters, because a shrinkage, say of 20 per cent. in values of existing securities, releases a similar fraction of the capital previously tied up in them. But what is gained, through this process of relief, is likely to be lost through the influence of that very decline on the feelings of investors. In other words, when the price of outstanding stocks is falling rapidly, holders of money are not enthusiastic about buying new stocks. The capitalist is the party to dictate terms. The railways must have the money, whereas he is under no necessity to buy their securities. He naturally, therefore, waits to see what the companies will bid.

There are three ways in which this bid of the railways may be raised. They may, for instance, offer long-term bonds, at exceptionally low prices; they may offer such bonds at unusually high interest; or they may tender both inducements, but in the form of notes maturing a few years hence. To all three expedients, there are objections. A railway which sells bonds for less than par—at 80, let us say—must redeem them at 100 at maturity. But this means that it pays for its capital not alone the 4 or 5 per cent. annual interest, but the 20 per cent. discount, which must eventually be recovered. Nor will it find its future credit and borrowing power unimpaired by such concessions. If, on the other hand, a railway, accustomed to pay 4 per cent. annual interest on a fifty-year mortgage bond, were to offer 5 or 6, the life of that mortgage will extend through years when the same capital might readily be procured at the old rate.

These considerations have induced companies to borrow on their notes, secured as a rule by pledge of stocks or bonds from the railway treasury. On such notes, running two or three years, the railway may pay 6 per cent.—it may even sell them at a moderate discount—and still preserve its position for the future. By the time the notes mature, the condition of the money market will probably have changed. Bonds can then again be sold on the basis of 4 per cent., or stock at advantageous figures, and with the proceeds the maturing notes can be quietly taken up. This was the procedure adopted under somewhat parallel circumstances during 1903; it has again been seized upon this month, when the market for new securities was visibly blocked. Within the past few weeks, the Chicago and Alton has sold $6,000,000 short-term notes, the Boston and Maine $3,000,-

000, the Erie and the Chicago and Western Indiana $5,000,000 each, the New York, New Haven and Hartford $10,000,000, the Southern Railway $15,000,000; and at length, this week, the New York Central and its subsidiary lines a lot of $50,000,000. These notes as a rule carry 5 per cent., but the banker's commission and the discount in the price commonly lift that rate to 6. The magnitude of these issues has attracted wide notice. In 1903, although the railways sold in all some $150,000,000 notes, no single lot was issued for a larger amount than $10,000,000. It is therefore quite possible that the total of four years ago will this year be exceeded.

We have seen the advantages of this form of borrowing, from the point of view of the railway. It is a matter of record, also, that the experiment in 1903 resulted satisfactorily. With the exception of one railway, the notes then issued were taken up at maturity, and replaced with stocks or bonds sold at good terms, in the prosperous investment markets of 1905 or 1906. But the practice, nevertheless, is of questionable wisdom. It heaps up a floating debt, and floating debt, when nothing can certainly be known as to conditions when the notes fall due, is traditionally dangerous The peril is not merely theoretical; for borrowing on notes has been directly responsible for some of the most serious mischief in our railway history. As far back as 1873, the famous September panic was occasioned by the maturing, at a most inconvenient hour, of a block of Northern Pacific Railway notes, accepted by the banking house of Jay Cooke & Co. It was floating debt, which in 1893 carried down the Atchison, the Union Pacific, the Northern Pacific, and the Reading—though, it should be observed, the notes whose default brought matters to a head in that year were as a rule the recourse of desperation, adopted to stave off a crisis which could in no other way be even postponed. But the historic fact as to risk which attends such policy, remains.

Financial conditions of the present day resemble closely neither those of 1873 nor those of 1893. The earning capacity of the roads is known; they do not, as in those other years, depend for a surplus on one-half their mileage, while the rest traverses a barren and unsettled country. But the laws of credit are the same, and experience at least dictates avoidance of former pitfalls. The danger in the present case lies, not in the notes just being issued, but in the adoption of the recourse as a habit, to be repeated whenever circumstances—a blunder in past financiering, waste of money in purchase of rival lines, or indulgence in speculation by the community at large—create an unfavorable money market.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 7, 1907.

The Week.

The withdrawal of Senator Dryden of New Jersey from the contest for reëlection has an importance rising far above his personality. It was because his claims were merely pecuniary, because his methods and those of his machine were such as to debauch and disgrace New Jersey, that the revolt set in which has now brought about the end of his public life. In many ways his defeat typifies a movement in politics which has to be reckoned with. There was, first, a protest at the polls. The State nearly went Democratic. Thousands of Republicans openly voted against their ticket because it was supposed to represent Dryden. His rebuke in his own county of Essex was emphatic. Under these circumstances a handful of Republican members of the Legislature undertook to prevent Mr. Dryden's return to the Senate. He had the party organization behind him. It was certain that he would get the caucus nomination. But six Senators and Assemblymen announced that they would not go into the caucus, nor be bound by it. Senator Everett Colby was the leading bolter. The "new idea" in Jersey politics was embodied in him. He had won a great personal victory with it in 1905; he had apparently suffered defeat with it in 1906; but his work had told. He had shown the people what even an individual with courage and directness and persistence could accomplish single-handed. It was his example which inspired the men who withstood Dryden, and his leadership which has finally triumphed in the failure of all the proud Senator's cherished ambitions. We have never had a better illustration of the downright efficiency in politics of hard and steady work, with a single worthy object in view, undertaken by men who, without surpassing talents, yet know their own minds, are not afraid, not easily tired or shaken off.

The last extension of our pension system did not cost the Government by any means so much as had been estimated. The question is whether a similar agreeable surprise is in store when the McCumber service-pension bill goes into effect. It appears certain that many thousands of veterans who might have got pensions under the old-age order refrained from doing so. Commissioner Warner estimates that one-third of the "unknown army" of 100,000 still unpensioned old soldiers will now proceed to file claims. If all came in, it would add some $8,000,000 to his present estimate of $15,000,000. On the other hand, Chairman Sulloway of the House Committee does not think that more than $6,000,000 a year will need to be charged to the account of the new law. The additional expense entailed by the measure, it should be remembered, is due rather to increases of existing pensions than additions to the roll. For instance, the sixty-two-year-old veteran who was not pensionable at all until the promulgation of Order No. 78, and the statute that embodied the same construction of "disability," will, under the proposed law, have his allowance increased at a stroke from $6 to $12 per month. That a general service-pension act will bring something like equilibrium in the pension system is doubtless true. Ever since the Civil War it has been the general assumption that the existing laws were only tentative, and additional steps in the direction of liberality were yet to be taken. That Senator McCumber's measure will satisfy all the veterans and stop the flood of private pension bills, however, by no means follows.

From the Postal Commission's budget of recommendations, too sweeping in their range and insufficiently fortified with facts, the House Committee, according to Chairman Overstreet's statement of Saturday, has selected the two most sensible suggestions for inclusion in this year's appropriation bill. The others will be indefinitely pigeon-holed. We are to have a six months' weighing of the mails, according to class, number of pieces, and length of haul. After it is completed, there will be some other basis than guesswork for discussions of the profit or loss in the cent-a-pound rate. Why anybody should have undertaken a revision of the rates and classification without information of exactly this sort, is one of the mysteries of officialdom. The other inquiry which Congress will authorize is into the general methods of the Post Office Department. This is also needed. If new business methods are to be adopted, we trust that one detail may be a method by which the Post Office will be credited with the work it does for the other departments of the government. The paper deficit will be made the pretext for slap-dash proposals, so long as the Post Office remains in the position of a concern whose biggest contracts have to be charged to the profit and loss account.

The predicted fight over the River and Harbor bill on the floor of the House began joyously last week. Having everything to gain and nothing to lose, the "Great Lakes to Gulf" members can contend for their pet project with undivided zeal. As Representative Theodore E. Burton pointed out in his speech, the chief objection to the project is that it had been urged for only six weeks past, and in some essential features is of very doubtful practicability. As in the case of the thirty-five-foot channel to Philadelphia, it is an open question whether the desired result can be secured at any price remotely resembling a legitimate investment. Mr. Burton explained the committee's policy to be the granting of adequate appropriations for projects of certain utility, rather than the frittering away of public money on experiments and the temporary sustenance of moribund schemes. There exists to-day a long catalogue of river and harbor projects which were at one time urged upon Congress, and approved by engineers, but for which the demand has completely died out. The commercial demand for the Mississippi Valley waterway has yet to show its permanence. Evidently there still remains in Congress more than a little respect for that statesman of a bygone day who, after it had been shown to him that his cherished improvement plan was to consist in making a river flow up-hill, responded, "Only give us the appropriation, and we'll find a way to do it."

The "People's Lobby" leaps suddenly to light, exposing a committee amendment to one of this year's appropriation bills, designed to weaken the Pure Food law. It is an amendment providing that no Federal money shall be available to pay, wholly or in part, salaries or expenses of State and local officials. It is doubtless true that such a provision would knock Secretary Wilson's present plans into a cocked hat, yet Chairman Tawney's defence of the amendment is not without point. Its purpose was, he said, "to check the very apparent and growing tendency of the States to reduce or eliminate altogether their appropriations for pure-food inspection, and let the Government stand the entire expense." Coöperation between State and Federal authorities is talked about more than ever before. Does it, in fact, mean that the States are leaving all the trouble and expense to the National Government? That agitation at Washington stimulates action in the State Legislatures is well known. Not only pure food laws, but railroad-control measures, corrupt practices acts, and many other lines of legislation, were accepted by the States generally before Congress had got ready to act. But, if Mr. Tawney's opinion is backed by facts, they are disposed to be content with passing laws. The point is at least

worth attention. If the States are trying to save money by depending upon the Federal Government, they should consider that local and interstate inspections are different things. Chicago paid the penalty for neglect by having all the worst meat from the stockyards saved for the home market.

Our standpatters will do everything except come to the point. Here is Secretary Shaw telling the New Hampshire Board of Trade that what we need in this country is a "zone" into which raw materials may be imported free for the purpose of being made into goods purely for the foreign trade. This, the Secretary thinks, would enable our manufacturers to compete with foreigners, and go forth to conquer the world market. He got his idea, apparently, from the old "Zona Libre" of Mexico, though that was a very different affair. But what an innocent giving away of the whole tariff fraud this notion is! Mr. Shaw frankly confesses both that protection imposes a heavy tax upon Americans and hampers them in their manufacturing development; but what is his inference? Why, that it would be wellnigh criminal to lift the burden from our own people, but that we must resort to every trick and dodge to make life easier for foreigners. We imagine Americans would look over the fence of Mr. Shaw's "zone" with mingled emotions. They might even be prompted to tear down the fence, and get a taste themselves of those cheap goods which the Secretary would make such desperate efforts to supply to Asiatics and Europeans, though sternly forbidding his fellow-citizens to touch them.

In his recent book, "The Tariff and the Trusts," Franklin Pierce of this city has a chapter on shipping, which should be read by those who wish to get a just view of the subsidy promoters at Washington. The argument is powerfully set forth that it is really our antiquated navigation laws and the crushing effect of the protective tariff which have so nearly driven the American merchant marine from the sea. This, in fact, is admitted by the franker among the advocates of bounties. They say, The laws will not let Americans buy ships abroad, and they make the building at home artificially expensive; therefore, you must give a bounty to make up the difference. Mr. Pierce, of course, contends rather for the repeal of the barbarous shipping laws and the lifting of tariff weights off the builders of ocean-going vessels. But this is to imply that what is wanted is the getting and sailing of ships, not merely their building. Yet from the orthodox protectionist and subsidy point of view, the latter alone is contemplated. We must bend all our national energies to "making work," not to obtaining the results of work. To construct ships is much more important than to have them when built. Nowhere does this protectionist confusion of thought appear more glaring than in the subsidy arguments; nowhere is the application of Bastiat's "sophisms" more needed.

W. C. Brown, senior vice-president of the New York Central Lines, is unhappy because people do not love our railways. "I do not think," Mr. Brown writes, in a letter just made public, "you or any other man of ordinary prudence would for a moment think of investing money in a business against which every man's hand, from the President down, seems to be raised, and in the defence of which few men hoping for political preferment dare raise their voices." In order to allay this irritation, Mr. Brown would have President Roosevelt—who is our ever-present help in time of trouble—make "an appeal for fair and reasonable treatment" for the railways. Without undervaluing in the least the potency of our President's words, we suggest another remedy which we cannot but regard as more effective: that our railway managers so conduct their enterprises as to win public sympathy and support. There is no hope of peace for our railways until their managers grasp the notion that a public service corporation is not a mere private undertaking, but is a great public institution. We hardly need to remind him that within a few months his own railway has been heavily fined for giving rebates to the Sugar Trust; that discrimination in favor of the Standard Oil Company has, in one form or another, been pretty general and systematic; that Pennsylvania Railroad officials have been found guilty of gross favoritism to coal companies in which they own stock; and that Edward H. Harriman has been plunging in Wall Street with about $50,000,000 of Union Pacific funds and the credit of the company at his back. But these violations of the law would not have provoked the anger which Mr. Brown deplores had not the mind of the public been already prepared by a long series of annoyances and injustices. It should therefore be the settled policy of a corporation, like a railway or a telegraph company, to make every possible concession to public opinion and even prejudice. There must be no room for complaints that the corporation is indifferent to the welfare or even the comfort of its patrons, no basis for charges of injustice. Mr. Brown assures us that "such abuses and hurtful practices as did exist have been stopped." If that be true, if the corporations are observing those principles of fair play which we expect from individuals, he need labor under no further apprehension; for, no matter what President Roosevelt or any one else may say, when the railways really deserve popular regard they will get it.

The chances for a peaceable solution of the Church controversy in France seem to be distinctly brighter; but at the same time the signs point to the probability of ministerial changes and party rearrangements before a final, complete accord. Should agreement be reached on the basis of the demands recently formulated by the bishops, it could but be regarded as a decided setback for the Government. Leases for the use of church property are to be concluded between the mayors of the municipalities and the curés for a period of eighteen years. The curés, to qualify legally, must be under the authority of the Catholic bishops, and in this manner the latter have received that official recognition which has been the great point in dispute during the entire controversy. Further, the bishops demanded, and the Government has agreed, that such contracts between the priests and the municipalities must be identical throughout the country. But how can they be made so unless the central government actually direct the mayors to give their assent, a course of action which M. Briand has promised to follow? Given, then, the assurance of uniform treatment throughout the country, with legal recognition of the hierarchy and the gratuitous restoration of the churches, are not the opponents of the Government in a position to say that the Ministry has assented to a virtual Concordat? M. Briand has, indeed, travelled far on the way towards conciliation. First, he gave the Church a Separation Law more moderate than its prime movers desired; then he gave it the benefits of the law of 1881; then he gave it the benefits of the law of 1901, and refused to close the churches in any case. Now he gives away part of the Government's contention by recognizing the Catholic bishops. Is he ambitious, as is hinted in some quarters, to succeed M. Clemenceau as the head of a Moderate coalition? Stranger political conversions have happened.

The final outcome of the elections for the German Reichstag will be in accordance with the results of the first balloting. The Socialist representation in the Reichstag will be reduced to less than fifty members. All the other parties are stronger. The Conservatives and Anti-Semites show a combined increase of about a dozen over 1903, the Liberals and various Radical parties of about fifteen, and the Centre from five to eight. Where the Emperor's great victory comes in it is hard to see. The Centre, against which the Government directed its attack, has gained fully half as many votes as the Conservative par-

ties upon whom alone the Government can depend at all times. The increase in the Liberal and Radical vote will scarcely prove an unmitigated blessing to the Government, for, even though these parties rally in supporting the Kaiser's colonial policy, they will not fail to use their augmented strength in pressing for a real Constitutional government. As for the Socialists, it is easy to exaggerate the loss they have suffered. It matters comparatively little whether fifty spokesmen or a hundred voice their discontent in the Reichstag, as long as their popular strength suffers no diminution. The fact that a party may gain 250,000 votes and lose thirty-five seats, is only an argument against an antiquated electoral system.

The course of the primary elections for the Russian Duma is being generally interpreted as indicating the final choice of a more conservative body than that which met on May 10, 1906. The Government seemingly persists to the end in its policy of manipulating the franchise laws to its own advantage. The ban on Professor Milyukoff, who sought to qualify as a tradesman franchise-holder in St. Petersburg, is the latest instance. On the other hand, it is characteristic of Russian politics during the last two years that, simultaneously with the electoral outlawing of the leader of the Constitutional Democrats, should come the removal, at least as far as Moscow is concerned, of the restrictions imposed on the right of assembly for political purposes other than revolutionary. The new Duma will be less radical than its predecessor, but that will be due more to a general drift towards the opportunistic policy of taking what one can get while fighting for more, than to the actual creation of a strong conservative party in the Duma. No amount of jugglery in political arithmetic will create a conservative Duma out of an electorate 95 per cent. radical; and that proportion, we believe, is not exaggerated.

A cartoon in *Punch* depicts Augustine Birrell as a knight returning from a fruitless quest for an Education Bill, and being sent off at once by the head of the knightly order, Sir Henry Campbell-Bannerman, on a still more forlorn pursuit of Home Rule. Mr. Birrell has certainly been entrusted with the most laborious undertakings of the Liberal Government. Scarcely has he finished a half-year of the most exhausting physical and mental exertion on behalf of the Education Bill, when he is selected for what is probably the most thankless post in the gift of the Government —that of Chief Secretary for Ireland, just vacated by James Bryce. No one who has held that position has ever satisfied the Irish; and Mr. Birrell is also going to offend many of his countrymen when he undertakes the gigantic task of getting a Home Rule measure through Parliament. His tact, his talent for conciliation, his ability to suggest fair compromises, all mark him as the man best fitted to succeed Mr. Bryce. "The touches of humor and humanity with which he graced even the most arid debates on a technical and controversial measure have proved," says the London *Tribune*, "his possession of a magnetism and a personality which must appeal to the sensitive and imaginative temperament of the Irish people." In his new office Mr. Birrell will find his educational experience of great value, for the state of education in Ireland is admittedly shocking. He will also be in complete sympathy with Mr. Bryce's policy of interfering as little as possible with the liberty of the individual or with freedom of expression. Nor will he be afraid of an expression of the sentiments of nationality, for he must agree with Mr. Bryce that "nationality is a fine thing, which stirs people up and binds them together, even if the forms which that expression takes are not always those which we would ourselves think best."

In the address which the Hon. Richard Burton Haldane, as Lord Rector of Edinburgh University, gave the other day, he advanced some ideas about the modern opportunity for educated men in public life. These, while not novel, were freshly pointed. They have to do with what has been called "unofficial statesmanship." In all countries the thing exists, but it is, we think, spreading more rapidly in the United States than elsewhere. This may be because our leisure class has been multiplying. We now have more people with time and money to devote to philanthropy and large affairs of state. It may be also that the pricking of the civic conscience is more felt. If a census could be taken of the unofficial workers and organizations that aim to supplement or correct or compel the labors of men in public office, the list would surprise people who have not looked into the matter. Scarcely one function of government can be mentioned, in connection with which some private society or association has not been formed to see that it is properly discharged. We have our prisons, and also our prison-reform associations. What would have become of civil-service reform or ballot reform or primary reform or corporation-law reform, without the large number of public-spirited citizens who have banded themselves together to work for those causes, it is impossible to say. Everywhere, behind actual Government, stands a sort of shadow Government keeping watch upon it. Beyond all question, it is a great opening and appeal which many of our best see in such ways of serving the state. More and more of them are cheerfully giving thought and labor to these forms of unofficial statesmanship, which are helping to make our official statesmanship more wholesome and more effective. It is one of the methods by which the intelligent and moral classes are acquiring a sort of indirect representation in the work of administration, and are exerting a power often greater than if it were direct. There are more ways of serving the state than are dreamed of in the philosophy of the politicians.

In the English-speaking world it has not been possible to rouse more than the most languid interest in Tolstoy's minute and severe writing down of Shakespeare. Whether, as the Russian would doubtless say, out of blind national pride, and stupid clinging to a literary tradition very like a fetich, or for better reasons, these attacks have been pretty lightly dismissed, in England and the United States, as the aberrations of a man of genius. In France, however, more notice has been paid them. The countrymen of Voltaire have felt it necessary, even with all regard for the Russian alliance, to come to the rescue of the imperilled bard. In the issue of *Les Lettres* for January 15 is a whole symposium of French writers and artists on the question whether Tolstoy has made out his case. We cannot say that any of these gathered opinions seem very illuminating. Émile Faguet maintains that there is in Shakespeare much that is excellent, much that is good, much that is mediocre, and much that is bad. Hence he feels justified in asserting that he is not a victim of "the Shakespeare superstition," but he hastens to observe that neither does he give in to the Tolstoyan superstition. But it is not necessary to go on quoting. The whole tone of the symposium is not badly given in the brief letter from Ludovic Halévy:

> Why attach so much importance to a *boutade* of Tolstoy's? One ought not to seek amusement in nagging great men. They are too rare; and Tolstoy is truly a great man. "War and Peace" is an extraordinary book. I have read it four or five times; and, now that you have made me think of Tolstoy, I am going to read it again.

Perhaps the best way of dropping the whole affair is to take a hint from Matthew Arnold and try to imagine what Shakespeare himself would say of such literal-minded criticism. Point out to him in the Elysian Fields that he fell into the conventions of the theatre of his day; that many of his scenes are repulsive; many of his puns execrable, and a serene smile would momentarily illumine his shade, as he would ask: "I know all that, but what does it matter?"

OUR RELATIONS WITH CANADA.

It is an open secret that Secretary Root is devoting himself to a settlement of all outstanding questions with Canada and Newfoundland. His visit to Ottawa was carefully labelled "social"; but it is sometimes hard to draw the line between diplomacy and hospitality. "Three men around a table" was Lord Salisbury's idea of diplomatic opportunity; and Mr. Root had his feet under the same mahogany with several Canadian statesmen. Whatever he may have learned from them could but reinforce the inference from many other indications, that now is the time to agree with Canada quickly, whilst we are in the way with her. The Canadian opportunity is one that, for twenty years past, American statesmen have fairly incurred reproach for neglecting; it will be a lost opportunity, if not speedily embraced.

On our side, the desire to reap advantage coöperates with the wish to avert loss, in prompting to a comprehensive adjustment of our relations with Canada. There is profit in being on good terms with such a neighbor. In New England and along the Great Lakes the hope for reciprocal trade agreements with Canada has not died out. It may be said to have been even heightened. Gov. Guild of Massachusetts has lately borne testimony to the feeling of his State. Among Massachusetts business men, he states, "I am gratified to learn that the sentiment in favor of immediate tariff revision is overwhelming." That looks chiefly northward. New England manufacturers wish free coal from Nova Scotia. They also desire that something be done to prevent their goods from being struck by the maximum rate of the pending Canadian tariff bill. Furthermore, the situation is daily growing more critical. The Newfoundland *modus vivendi* was but for a year. It is doubtful if the English Government would extend it. A new and larger and more permanent arrangement is required. Then there is the other fisheries agreement, the *modus* which has remained in force from year to year since 1888. Under it, American vessels have privileges in Canadian ports; but there is a strong feeling over the border in favor of abrogating it. The Minister of Marine and Fisheries said the other day in the Dominion House of Commons that he would not give a definite opinion whether the *modus vivendi* should be abolished.

This attitude of comparative indifference to trade with the United States is one which Canadian statesmen are more and more taking, and doing it in all sincerity. The Premier himself made a most explicit statement on the subject, a day or two before Mr. Root reached Ottawa. Sir Wilfrid Laurier said to the House:

> There was a time when we would have given a great deal to have trade concessions from our American neighbors. They chose in their own way to refuse them. We have done pretty well without them, and at the present time we do not expect anything of that nature.

This is the literal truth. Canada today feels herself mistress in her own house as never before. She is rapidly developing a vast territory in the west. Immigration is flowing in at her doors. Her manufactures are multiplying. Exports are mounting. Canada is to-day building more railroads than the United States. Plans are afoot whereby Canadian produce can be sent abroad the year round without resorting to a single American port. There is in all this imperial as well as national politics. The net result is that we have to-day to deal with a Canada in whom the sense of pride and self-sufficiency is constantly strengthening. Canadians have thriven under our coldness. What we lost by the inconsiderate abrogation of the reciprocity treaty with them of fifty years ago cannot now be regained.

Still, there are some things which Canada frankly wants of us. She would still like a free market here for her fish. She would be glad to supply Americans with herring and cod as cheaply as Senator Lodge's smugglers do, and more honorably. Canada has also a warm interest in the sealing regulations. There, too, the United States could offer something for something. And there are, as well, a few disputes about water power, and its distribution, in rivers partially under the jurisdiction of either country, which ought to be composed, and which must enter into any complete agreement. In the same speech from which we have quoted above, the Canadian Prime Minister said:

> If it were possible at this moment to settle all the differences which we have at Sault Sainte Marie River, Rainy River, Fraser River, Niagara River, and also John River, we should be doing as much as we can do for Canada in existing circumstances.

There is thus fair bargaining material; but it is not what it was ten years ago, or even five. To extract any real gain out of the situation, the United States must show a much more conciliatory disposition than in the past. We have sought to brow-beat Canada; the time has come to try to placate her. No more pressing question confronts us in the whole range of our foreign relations. It will doubtless be one of the first things taken up by Mr. Bryce with Mr. Root this month. Both men are capable of large conceptions; both know how to seek the good of their own nation in that of the other. Feeling between Great Britain—who must do the negotiating for Canada—and the United States was never more excellent. The time is ripe, therefore, for a large and generous agreement.

THE FALL IN STOCKS.

The sharp break in prices on the Stock Exchange, at a time of year when advances are usually looked for, has provoked an outburst of inquiry, conjecture, and prediction in financial circles as to what is to happen to American prosperity. These declines have been startling enough; a continuous fall of 25 points or more in the most active stocks will inevitably start surmises as to what it foreshadows outside of Wall Street. The theories called forth by this movement of the market are curiously divergent. The New York *Herald* has been at pains to collect opinions of various foreign financial notabilities as to whether there is or is not a "campaign against America" in progress in financial London. The experts gravely reply that nothing of the kind exists, the venerable Lord Avebury in particular declaring that "there is no jealousy or ill-feeling among the English bankers towards our fraternity in the United States."

Jacob H. Schiff of this city has given out an interview, in which he suggests that the present state of affairs in the American market is misunderstood in Europe, and that we are merely "suffering from an excess of prosperity which is simply overwhelming us"; that our industries cannot get labor enough to meet their orders; that our railways are short of necessary equipment and facilities to do the larger business pressing on them; and that the country's banks can provide only part of the requisite working capital. This diagnosis is doubtless correct; but we cannot quite agree with the opinion that European financiers have not comprehended that part of our situation, and we do not observe in Mr. Schiff's remarks an explanation of the very point at issue—namely, the shrinkage of values.

Alexander Gilbert, president of the New York Clearing House Association, came somewhat closer to the facts in his speech at the State Bankers' dinner last week Wednesday. Recalling the earlier days of New York banking, he remarked:

> We had our periods of extraordinary business demands and our periods of great speculative activity, mostly professional then as now. But we never blamed it on the currency. We realized that the combined credit of the country could not finance phenomenal business activity and phenomenal Wall Street speculation at the same time, and it is just as true to-day as it was then.

It is even more true; for the reason that banks which provide for the needs of speculators depend for such facilities, more than at any previous time, on deposits lent them by other banks. When a great trade expansion occurs, resources of Wall Street banks not only do not enlarge correspondingly, but, as the bank statements of 1906 make plain,

they are actually reduced. During more than a year past, sober and experienced critics, both at home and abroad, have been warning Wall Street that it was trying a dangerous experiment. These warnings were based expressly on the grounds now referred to by Mr. Schiff. To what extent our experts in high finance and high speculation gave heed, the history of the last eighteen months is a witness. The Stock Exchange has within that period seen speculation for the rise on a scale of the wildest extravagance, going on in the face of deficits in bank reserves, of a 125 per cent. rate for Wall Street demand loans, and of 6½ or 7 per cent. for good merchants' paper.

For this situation we have heard various defences and apologies. One was that speculation was no more to blame for the exhaustion of capital than was trade; and that, since no one will be so absurd as to criticise trade for "booming," it is equally unreasonable to criticise speculation. Another was that, if people believe in prosperity, they will believe in a higher stock market; and if they believe in that, they will buy stocks; and that all the remonstrance in the world cannot prevent them from so using their own money. Purely as theory, there is some sense in this reasoning; but it happens not to accord with the facts. It is an open secret that the speculative operations of last spring and last autumn not only did not originate with the general public, but that such outsiders were conspicuous by their absence.

The bidding-up of prices, the "cornering" of stocks, and the resultant manipulation, were beyond question inspired and conducted by financiers of enormous personal resources and still more extensive credit. Both were apparently used to the limit. The help which insurance surpluses secretly gave in 1901 was obtained this year from at least one railway treasury, that of the Union Pacific. The expedient of increasing the Union Pacific dividend, so that at the very moment when the strain of commercial activity was severest, this "professional" speculation was again stirred up to the pitch of frenzy, can hardly have been forgotten. The immediate result was an extremely precarious condition of the money market. But our eminent speculators did not abandon their purposes; on the contrary, when the credit facilities of Wall Street approached exhaustion, recourse was had on a quite unprecedented scale to European lending institutions. With the kind coöperation of the United States Treasury, which deposited money with banks that would import gold, Wall Street borrowed huge sums from abroad. Clearly, all this could continue only so long as Europe remained complaisant, and some time ago it was evident that the "financing of Wall Street by London" was nearing an end. What has lately been witnessed on the Stock Exchange is, we should suppose, the perfectly logical corollary to the chapter of incidents which we have just summed up.

Does the decline in stocks mean anything more? This is a question which is asked with some anxiety. It is not at all improbable that some relaxation in trade activity is at hand; the very fact that facilities of production and distribution have been so heavily overtaxed would point in that direction. With that relaxation, decline in the price of some commodities which have been lately pushed to abnormal heights, would reasonably come. The result of such readjustment always depends on the manner in which credit has been employed in trade. We are of opinion that it has been employed, as a rule, conservatively, and that the effects of the mischievous excesses of Wall Street "high finance" will for the most part be confined to Wall Street. None the less, the exploits of these powerful gamblers, unscrupulous as experience has shown them to be, both in their attitude towards finance in general and in their use of banks and corporations, subject to their control, are a grave peril to our financial stability in the future.

THE EFFECTS OF EMIGRATION ON ITALY.

The immigration problem is so insistent with us that we often forget that the countries which send us our immigrants have also this problem reversed. In Italy, for example, thoughtful men have begun to regard emigration as a national calamity, or at least as the symptom of calamitous conditions. Prof. Pasquale Villari, the most eminent living Italian historian, and a pioneer in social investigation, utters in the *Nuova Antologia* a warning which cannot fail to attract attention on both sides of the Atlantic. What does it mean, he asks, that emigration from Italy has grown from about 100,000 in 1876 to 726,000 in 1905, with no signs of diminution? It means, he replies, that Italy is confronted by an agrarian question which dates in one form or another from Roman times.

Senator Villari describes with impartiality the *pros* and *cons* of emigration. It cannot be denied that emigration brings many quick returns. Last year, for instance, Italians sent or took back to Italy savings amounting to $80,000,000, or 400,000,000 *lire*, by which their families are enabled to live above penury, or they themselves, in the case of those who return to settle, to buy small freeholds, and build homes. The departure of superfluous laborers increases the wages of those who remain. Life abroad helps to educate those who go. These are the chief benefits.

Now for the disadvantages. In northern Italy, where the workmen migrate for six or eight months and come home to pass the winter, on the proceeds of their labor, those winter months are spent in idleness or worse. The tavern gets most of their money. Drunkenness has increased enormously, owing to the substitution of bad spirits for country wines, venereal diseases are in some places epidemic, crime abounds, and the percentage of insane from alcoholism mounts year by year. These returned emigrants are like sailors ashore after a long cruise; but whereas Jack Tar's spree may last a day or two, theirs extends over several months. The harm done to the moral standard of a community where this method of life becomes habitual need not be pointed out. Under normal conditions the Italian peasant is most industrious, patient, and frugal; emigration, by supplying him with the means of loafing and of vicious habits, threatens to undermine his excellent qualities. Moreover, under the best circumstances, it breaks up family life and loosens ties which should be a man's hostages to virtue.

But the great torrent of emigration pours, not from the North, but from the South, and Southern Italy offers special problems—historical, economic, governmental, and social—of which emigration is an alarming symptom. Until recently the Southern Italian did not emigrate; some said he was too lazy, others that he was too servile from long maltreatment. But about ten years ago the annual emigration from the South rose to 82,335; in 1905 it had more than trebled, and last year the number was probably 250,000. Whole districts have been depopulated; at Marsico Nuovo 6,000 out of 11,600 have gone, at Pignola 3,900 out of 6,400. Villages are deserted, or remain with only their old men, women, and children. Farms lie idle. The very community which not long since was on the verge of starvation from having too many mouths to feed, now runs a similar risk from not having hands to till its fields. In 1901 throughout Italy it was estimated that 9.10 per cent. of the families lacked their head, either through death or emigration; in the Basilicata the percentage was 22.7 and in Calabria 29.1; to-day the proportion for the latter provinces must be much larger. It is to be noted, further, that the proportion of emigrants who return (estimated at 40 per cent.) is decreasing. Few come back even now from Argentina, and as the recent swarms get a foothold in the United States, it may be expected that few of them will care to return for good to Naples or Sicily. Meanwhile, philanthropic organizations in Northern Italy are actually considering the feasibility of sending colonists to the deserted or undermanned sections in the South.

Senator Villari recognizes that for the

present emigration is a necessary evil; men must eat or die. He shows that the Southern Question which confronts Italy and is the source of the depleting emigration cannot be solved quickly. The real solution will involve a complete change of civilization, a change in which material and moral remedies must be equally applied. Southern Italy lacks coal and iron and waterpower. Of these necessities, the last can be procured by a wise storage of rainfall. Agriculture, which in some parts is still carried on by the methods and tools with which Virgil was familiar, must be modernized. Irrigation must be carried out on a large scale. Industries must be introduced. But all this requires capital—capital guided by intelligence and enterprise and public spirit—qualities which Southern Italian magnates have never possessed.

And while the material basis of economic health is being supplied, so that no inhabitant need emigrate because of hunger, the moral conditions must be improved. From time immemorial the Italian peasant has been neglected. The artisan class, the bourgeoisie, the clergy, the aristocracy, have had their periods of abundant life; but the *contadini* have always been left out in the cold. Says Senator Villari:

> They feel this abandonment; they know that everywhere else they find better compensation for the work of their hands, and they abandon a country which for them has always been a step-mother rather than a mother. . . . At the Simplon I asked some of them who came there in search of work, "Do you love Italy?" They replied, laughing, as if I were speaking of some person unknown to them, "Our Italy is whoever feeds us."

"Our Italy is whoever feeds us." There is a sentiment which offers grave problems to European statesmen. With emigration as easy as it is now, we have reached that point of free competition in the world's market for labor which some economists have urged as the ideal condition. If America offers a greater return—in money, comforts of life, advantages of education, social position, political rights—to America men will come. The country which does not wish to be drained of its best must offer some of the attractions which America holds out. For Italy the hopeful feature is that the King and Government are alive to the danger, and that leaders like Senator Villari are agitating for a remedy. Perhaps also we should add, as a sign of hope, that they see that no superficial palliative will suffice, but only a fundamental reorganization of social and economic conditions. The penny-wise might argue that a process which brought $80,000,000 a year into Italy must be good. But Senator Villari knows that a nation's most valuable asset is the character of its people. Emigration is bleeding Italy of her best agricultural blood—of something not to be valued in *lire* or in dollars. If only the dregs of her peasantry be left, what shall the tribute of her emigrants profit her? And the distress which threatens Italy must also sooner or later press for relief in Austria and every country which is now swelling the flood from the Old World. Here is a force which, though silent, is irresistibly moving toward social and industrial reform in Southern Europe.

THE ARTIFICIAL PAGAN.

When "Salome" came to town two weeks ago there were not wanting critics who spoke of the "pagan" spirit that animated Wilde's play and Richard Strauss's musical commentary upon it. This was only an illustration of the prevailing tendency to saddle upon the ancients the vagaries of our own times. The pagans, with few exceptions, are dead and cannot defend themselves. If they could speak they would probably protest against being made stalking-horses for modern attacks on established standards of thought and modes of life. They might argue against the assumption that what is anti-Christian was necessarily ante-Christian, or that Théophile Gautier's views of the end of life were their own. "Because a man says things that are not tolerated in good society among you, he is not necessarily a pagan," would run the complaint. "You might as well call one a pagan who does not like automobiles or prefers writing letters to telephoning. We were a simple folk and quite incapable of nourishing your twentieth-century disenchantments. Please leave us alone."

It is dwelling on an elementary truth to point out the error that we are constantly falling into of reconstructing past ages or constructing future worlds entirely after our own spiritual image. Jack London offered a striking instance of this in his "Sea Wolf" some years ago, when he set himself the task of creating a Nietzschian superman. He followed all the master's specifications. He made his hero blond and he made him a beast. Everything else was quite as it should be with the ordinary superman of commerce—splendid human beauty, superhuman physical strength and agility, sardonic humor, and a conscious hatred for all the commandments that ever held on either side of Suez. The result was, to say the least, unconvincing. Wolf Larsen was not only a blond beast who destroyed everything in the way of his appetite, but he had read Darwin and Herbert Spencer, and, what is worse, quoted them constantly. He was a superman, he knew it, and he would not let the reader forget it. When he cut your throat, for instance, he would be likely to tell you just how much of mechanical reflex motion, conscious cerebro-motor desire, and atavistic impulse entered into the act. How poor Nietzsche would have spurned this imitation *Uebermensch*, who was only a combined football centre and biologist running amuck! Possibly, Nietzsche would have disdained even to point out that *his* superman would have no conscience, no philosophy, no introspection; that he was one of the fair-haired barbarians who broke into Italy under Radagaisus, and that when he did cut throats, he would do it as instinctively as the butcher fells his victim or the automobilist his prey.

Our carefully constructed modern "paganism" lifts its head and roars aloud in George Moore's latest book, the "Memoirs of My Dead Life." With the work as a whole there is no need to deal here, except to say that in his preface, which assumes the form of an *apologia*, Mr. Moore destroys Christianity and the family, and substitutes for the Bible Gautier's "Mademoiselle de Maupin." In the series of autobiographic tales which follow he advances some constructive ideas of his own. We may take two incidents from the latter to illustrate his conception of heathenistic thought. In a Paris restaurant the author comes across a fellow-countrywoman, an Irish waitress, who is visibly dying with consumption and who stirs him to pity. So much so that he goes home and writes a poem to her which, of course, is not sent, and in which he tells her how much he would like to take her away to some warm clime where—what? Where the sight of her wasting away should stir him to tender pity and induce him to melancholy thought, where he might carry her to the window day by day and feel her lighter in his arms, and where he might lay her to rest finally under the sod and drop a gentle tear upon the fresh soil—and presumably go call on another young lady.

It is open to doubt whether Alcibiades would have found much taste in that particular draught of pleasure, or whether he would have taken to the ideal daily life of a Parisian friend of Moore's, which is described with some detail in another part of the book. This friend rises at noon-time and lingers over his breakfast till late in the afternoon, sipping at many cordials and talking with friends also sipping cordials. At four or five o'clock this Parisian journalist gets to work on his daily article, and is through before dinner. After dinner he takes his article to the newspaper office, waits to correct his proofs, and then away to the lights of the boulevard and to life. Thence, as Pepys would say, home, about four o'clock A. M., and so to bed. This certainly is not the life most of us lead who must work somewhat more than two hours a day; but, certainly, too, it is not the life the average pagan led two thousand years ago. Mr. Moore's friend somehow impresses us as flabby with good living

and lack of the open air and exercise. His friends were undoubtedly fellow "artists," and their chief topics of interest, shop and sex. Our genuine pagan, on the other hand, was a busy man, and a good all-round man. He worked at his trade, he acted as a legislator and a juryman, he took part in the festivals and theatrical representations, he carried his shield stoutly when war broke out with the neighboring city, he could run, dance, sing, wrestle in the palæstra, deliver a pretty good oration, and do a number of other things that kept him out of much of the foolishness that our modern "pagans" would erect into a system. He ate garlic and millet, and did not suffer from neurasthenia. Life in Latium was not life in the Latin Quarter.

STATUS OF GENRE PAINTING.

An inspection of the current art exhibitions would show *genre* painting almost completely in abeyance, and the void would be quite as noticeable in Paris or Munich as in New York. London alone would suggest that this kind still has life—and were better dead. Such American painters as Mount and Eastman Johnson, who had an eye for the characteristic in our life and a hand to present it with charm, have hardly left successors. In France the late Alfred Stevens seemed the last great "little master," though the kitchens of Joseph Bail, the laundries of Degas, and certain decorations of Albert Besnard, which are really glorified *genre*, prove that the style still has vitality there. But in general the painting of scenes of everyday life is not merely neglected, but discredited. A delightful form of art has fallen unduly under the scorn visited upon all anecdotal compositions.

The causes of this obscuration are not far to seek. Classicism merely tolerated *genre* as an inferior form. Jan Steen was vulgar, and so were the Bible subjects of Rembrandt. Among old-fashioned folk this conviction still holds. We have heard a charming old lady before a sunny canvas of Henri Martin, peopled with ruddy haymakers, observe, "Comme c'est vulgaire!" Not classicism, however, but romanticism, dealt familiar painting its death-blow. Since Géricault, Delacroix, and the landscapists of the thirties, it has been imperative that painting should be imaginative. Now the easiest way to be imaginative is to be exotic; and as a matter of fact for nearly two generations painters have deliberately devoted themselves to the unfamiliar. The search for the overtly picturesque has led from Polynesia to Finisterre. Orientalism has been the extreme phase of the movement that has also inspired the numberless illustrations of peasant life. Landscape has not escaped the romantic glamour, the country being exotic to the town-dwellers. Even the so-called realist movement has been merely a bastard romanticism. Its subjects have been almost without exception *outré;* its appeal has been not to experience, but to surprise or shock.

It was, after all, easy to stifle an art in its dotage. When one considers the gulf between Hogarth and Wilkie, and the abyss between the latter and the Royal Academy of this year of grace, it is clear why the English-speaking world, at least its intelligent minority, should hold *genre* painting in contempt. And yet in the past it has not connoted tiresomely painted cross-sections of stupidly observed life. It has given scope to the exquisite genius of a Vermeer of Delft and a Chardin, it has engrossed the more robust temperaments of a Rembrandt, a Velasquez, a Manet, and a Daumier. In the decorative painting of the Italian Renaissance it has left a record of entrancing playfulness. Evidently, it is a sort of art not lightly to be put aside, especially if its decadence has not been inevitable, but simply the fault of a century of incapable practitioners. As a matter of fact, it has merely sunk with all the other arts and handicrafts that were not caught up by the ground swell of romanticism. Thus the rehabilitation of *genre* painting becomes, like that of architecture or textile design, for example, solely a question of loving, sensitive, and intelligent practice.

That *genre* painting should be revived hardly needs argument. If only to open the eyes of our generation to the beauty that lies at its door, if only to leave some worthy memory of our walk and conversation to posterity, we need the interpreter of everyday life. Our anecdotage need not be handed down; it will surely become stale before we are gone; but the look of our streets and interiors is as worthy of commemoration as the little salons of old Amsterdam or the piazzas of old Florence. What stands in the way is the cheapness and prevalency of photography, which gives merely the data, falsifying the impression of the times, and even more the surfeit of illustrations, superficial and mannered, which seem to be the record we wish, but are actually nothing of the kind. For seventeenth-century Holland we may consult Hals, Terburg, Jan Steen, the Ostades, Metsu, and a score of others. For nineteenth-century America our grandchildren will consult the files of the magazines. The difference speaks for itself.

Happily, there are suggestions of a revival of this homely art, and paradoxically enough, it is the impressionists who bear the gifts. It is the followers of Manet and Monet, who profess an entirely impersonal devotion to problems of light, that are actually producing as if incidentally the best *genre* painting. At home one may recall Childe Hassam's occasional excursions in this field, Tarbell's transcripts of country-house and studio life, the fresh and vivid impressions of New York streets by Glackens, John Sloan, and George Luks. Good *genre* is rarely brusque; it desires a quiet relish of the human comedy. Truly in the great tradition of *genre* seem to us Jerome Myers's visions of our slums. Here is the brooding quality that constitutes the dignity of a homely art: here is the balance between personal interests and play of chromatic light and shade, that one notes in the sober products of the Dutch school. One may observe also in the so-called "intimists" in France—the latest offshoot of impressionism—an approach to the mood of true *genre*, though they all make, for our purpose, an exaggerated use of artistic mystery. An intimist crossed with a well-trained but open-minded realist should make pretty nearly the ideal recorder of our times. But there will be rather little encouragement for such a person so long as half-trained and over-refined people unite in an equally benighted indifference to one of the most engaging and satisfying forms of graphic design. Especially, we must first be delivered from the tyranny of the belated and inexorable romanticists.

THE ANTHOLOGY.

I.

It is true, as others have already pointed out, that Dr. Mackail in reëditing his volume of "Select Epigrams"* has failed to take advantage of the labors of certain German scholars during the intervening sixteen years,† and has thus missed the proper historical perspective in his Introduction. And this is regrettable, since such omissions leave the reader with a feeling of uneasiness even where the purpose of a book makes the neglected points of slight significance. As a matter of fact, Dr. Mackail's volume is one of the few really excellent works of English (or, one may add, European) scholarship dealing with the classics as a human production. Here in brief compass, and with suitable aids to comprehension, one has the substance of a whole fascinating literature; just to have rendered the epigrams so closely, yet with such unfailing charm, was alone a notable achievement. Still more signal is the accuracy with which he has selected what was essential in the great bulk of traditional matter, so as to leave in the end the impression of something closed and complete in itself. Exigencies of modern taste compelled him to omit the more characteristic epigrams of Strato's "Musa Puerilis," as well as the too passionate and luxuriant numbers of Rufinus, which might seem to form an integral part of the Anthology;

*"Select Epigrams from the Greek Anthology," edited with revised text, translation, introduction, and notes, by J. W. Mackail, professor of poetry in the University of Oxford. New York: Longmans, Green & Co., 1906. The first edition appeared in 1890.

†The most important work has been done by R. Reitzenstein, whose "Epigramm und Skolion" (Giessen, 1893) I have drawn upon in this essay.

hut a little reflection will show that these ardors of the flesh are almost as foreign to the heart of that literature as would be the more classical elevation of mind. If he has erred, it has been in the pardonable direction of hospitality. It would he hard to hlame the maker of any anthology for including the perfect epitaphs of Simonides, and one can understand the temptation which led him to increase the number of those in his new edition. And yet I am not sure whether the artistic harmony of the book is not a little marred hy such lines as these "On the Defenders of Tegea":

Through these men's valor the smoke of the burning of wide-floored Tegea went not up to heaven, who chose to leave the city glad and free to their children, and themselves to die in the forefront of battle;

whether, if anything were to be added to the section of "Epitaphs," that town of Arcady could not have furnished a more fitting example in the verses by its poetess, Anyte:

No bridal chamber for thee, nor pride of marriage—but above this marble tomb thy mother has raised a virgin figure, having thy stature and form, O Thersis; so can she speak to thee, even dead.

For it cannot he stated too strongly that the real Anthology is something far removed from the classic poetry of Greece, something in which the note of the fifth century sounds as a sharp intrusion. Echoes of the older poets there are, of course—Homeric epithets and evident reminiscences of Lesbos and Teos. And, strange as it may seem, Plato on one of his sides comes closer to the spirit of the Anthology than does any other of the great writers, so much so that the transition from the opening scenes of the "Phædrus" to some of the epigrams in Dr. Mackail's section of "Nature" demands only a slight readjustment of the mind. But the resemblance is momentary, and always the graceful dallying of Plato is the balancing of himself, so to speak, for a plunge into the depths. His conception of love and heauty that follows in this same dialogue is as widely remote from the human indulgence of the pseudo-Plato of the Epigrams as, to make another comparison, Eros, the suhduer, of the true Anacreon is different from the mischievous boy-Eros of the Anacreontica.

II.

These superficial resemblances merely serve to emphasize the contrast between the gravity (the σπουδαιότης one might say, had not the word heen vulgarized since Matthew Arnold's day) of the genuine Greek literature, and the lightness, often triviality, of what supplanted it. For this fresh flowering of wit is not so much a continuation of the oid schools of poetry, as a new *genre* sprung from the coalescing of two modes of expression very characteristic of Hellenic life, but hitherto kept in a subordinate place. From an early date it had been the custom to enliven the drinking part of a dinner with the rivalry of song. There were regular rules for the sport. A subject was proposed, perhaps the lines of some well-known poet quoted, and then each man in turn had to display his ingenuity. The other form of verse was the epigram, or actual inscription, whether it were the brief commemoration on stone of the dead or some prayer or word of thanksgiving to the gods set up with a gift or statue in a temple. Great poets did not disdain to exercise their art in this way, and a few of the genuine epigrams of Simonides and his rivals from the fifth century are as perfect as any work of human wit can be. Brevity, dignity, and a certain rounded completeness were the essential qualities of such writing; and the elegiac couplet soon proved itself the inevitahle medium. At an early date collections of inscriptions were made, and the forger followed in the field. From puhlishing spurious verses under the name of Simonides or another, it was an easy step to turn the epigram into an avowed form of literary expression.

Meanwhile, this trick of composing imaginary inscriptions made its way to the banquet hall. It introduced a new kind of lure to name some one of the illustrious dead, and then call on each guest to compose a suitable epitaph; for death in those days, as always, had its poignant appeal for a reflective Epicureanism. "Drink, for once dead you never shall return," is a refrain as new as it is oid; and love?—

When I am gone, Cleohulus—for what avails? cast among the fire of young loves, I lie a brand in the ashes—I pray thee make the burial-urn drunk with wine ere thou lay it under earth, and write on it, "Love's gift to Death."

From such an example it is easy to see how the epitaph could merge with the erotic elegies which had been sung at the tahle. The two subjects flowed together naturally; and even where this did not occur, the peculiar form of the inscription imposed itself upon the elegy. From this contact came the epigram as we have it in the Anthology—a brief poem in eiegiac metre, written for the most part in the closet, but with something of the point and self-sufficiency of the actual engraving on stone, combined with the zest and flavor of the hanquet. It might take the form of an epitaph; it might, as the supposed accompaniment of a temple-gift, sum up some experience of life; it might, as the inscription of a statue, invite to repose by the wayside; again, freeing itself from these restrictions, it might merely philosophize on the vanity of things or play with the passions. It was distinctly a new *genre*, having well-defined rules and suited to the spirit of the disenchanted centuries after the political fall of Greece.

III.

The beginnings of the epigram as a recognized literary kind has been traced hack to two poets, the founders of the Doric, or Peloponnesian, and the Ionian schools. Of the first of these, Anyte of Tegea, little is known. She was, apparently, a younger contemporary of Theocritus (the fact is important, considering the character of their inspiration), and about 300 B. C. published a book of epigrams which were much imitated in later ages. Meleager opens his garland of poets with the "many lilies of Anyte," and to another epigrammatist she was the "female Homer." There had existed for some time in Arcadia a school of bucolic poetry, largely, it may be supposed, of a popular sort ("soli cantare periti Arcades," says Virgil), in which the rustic gods, Pan and Hermes, and the nymphs played an important rôle. So far as is known, Anyte was the first to express this spirit of homely pastoral life in elegiac couplets. Only a handful of her poems have heen preserved, but they are sufficient to show the exquisite transparency and delicate finish of her work. Some of them are on the humhlest themes, such as this supposed inscription for a shepherd's crook, or pipe, or ivy cup:

To hristly Pan and the Nymphs of the farm-yard Theodotus the shepherd lays this gift under the crag, hecause they stayed him when very weary under the parching summer, holding out to him honey-sweet water in their hands.

Others are mottoes, actual or imaginary, for fountains and statues:

I, Hermes, stand here by the windy orchard in the cross-ways nigh the gray sea-shore, giving rest on the way to wearied men; and the fountain wells forth cold stainless water;

or this, perhaps the most radiant of all the pictures in the Anthology:

This is the Cyprian's ground, since it was her pleasure ever to look from land on the shining sea, that she may give fulfilment of their voyage to sailors; and around the deep trembles, gazing on her bright image.

The gods of the fields and the sea in these epigrams prevail over those of the cup. For the wanton muse of *Wein und Weib* we must turn to the Ionian Asclepiades of Samos, whose singing, according to Theocritus, was as high ahove his own as the locust surpasses a frog in sweetness. Others before him, we may believe, had reduced the love-elegy to the brevity and turn of an epigram, but he first, it appears, developed these banquet verses into a conscious literary *genre*. His themes were those that are so familiar to us in the erotic poets of Rome who copied the Alexandrine school. There is the lover at the closed door of his beloved, the *paraklausithyron*, which, in the imitation of Tibullus, contains one of the most romantic lines of Latin poetry: "En ego cum tenebris totâ vagor anxius urbe"; there is the appeal to the night-lamp, whose repetition continues down to the elegy of André Chénier:

Et toi, lampe nocturne, astre cher à l'amour,
Sur le marbre posée, ô toi! qui, jusqu'au jour,
De ta prison de verre éclairais nos tendresses,
C'est toi qui fus témoin de ses douces promesses.

The gist of it all is in two perfect quatrains of Asclepiades himself:

Sweet is snow in summer for one athirst to drink, and sweet for sailors after winter to see the Crown of spring; hut most sweet when one cloak hides two lovers, and the praise of Love is told hy hoth;

and,

Let us drink an unmixed draught of wine; dawn is an handbreadth; are we waiting to see the hedtime lamp once again? Let us drink merrily; after no long time yet, O luckless one, we shall sleep through the long night. [The words of Catullus: "Nox est perpetua una dormienda."]

From these two singers of Arcadia and of Samos and, of course, from other contributory sources proceeded a great body of epigrammatic literature, continuing well down into the Byzantine Empire. Some of the writers were poets of fame, such as Callimachus and Philetas; some hid their obscurity under the forged names of Plato or another; others were grammarians, or philosophers, or men of the world—courtiers, perhaps, who took this method of summing up, half-seriously and half-joco sely, the disillusion of years. Many came from Asia, and were in no true sense of the word Greeks at all. In the first century before Christ, one of these writers,

Meleager, who was born at Gadara (Ramoth-Gilead) of Northern Palestine, made a selected anthology of this literature so far as it already existed, adding a number of elegiac quotations from the older classical poets. Successive editors altered and enlarged the collection, until the Anthology, as we now have it with its thousands of epigrams, was formed in the late Middle Ages by scholars of Constantinople.

IV.

Naturally, the work of so many men during so many centuries comprises a variety of styles and ways of looking at life; yet the impression of the whole, especially when so sympathetic a critic as Dr. Mackail has eliminated the superfluous, is singularly consistent. Beneath the ever-changing play of sentiment run two qualities, two ideas, that give the Anthology its special flavor—the sense of transitoriness and a certain indescribable kindliness or friendliness of spirit. There was in all these poets an unusual age-consciousness; the glory of Greece was behind them, and they wrote in a kind of twilight, awaiting the night. The past is always an insistent reality with men of imagination; its influence was incalculably strong in the most fervid periods of Greek creation; but in the later pagan world it was present in a way almost incomprehensible to us. To one sailing in the Ægean Sea how many monuments of former greatness spoke on every coast—famous cities reduced to villages, proud states fallen into subserviency, memories of stirring battles. The temples were spoiled of their treasures, yet enough remained to show the nobility of an art now forever lost; the old plays were still produced on the stage, but they served only to mock the sterility of the present. These poets of the late Hellenic world were still in a way members of the ancient civilization, they spoke the same language and worshipped, or named, the same gods; but what a gulf of impassable experience lay between them and their ancestors. It is not strange that the shadow of transitoriness enveloped all their thoughts. That feeling, of course, is universal to mankind and is never long absent from poetry, but in the Anthology it has a tone and pathos all its own. Homer felt it when he put those great words into the mouth of one of his heroes: "Ah, friend, if once escaped this battle we were evermore to be ageless and deathless"; but then follows the Homeric conclusion: "Now let us go forward, whether we shall give glory to another man, or he to us." The feeling is latent in the epigrams of Simonides on those who perished in the Persian war, as in the two lines over the Spartan tomb at Thermopylæ: "O passer-by, tell the Lacedæmonians that we lie here obeying their orders"—but with it what endurance of duty! The difference in the epigrams is all in the moral. The will has been loosened and the foreboding of brevity leads not to greater resolve, but to relaxation; and in the same way, in place of the boast of immortality through duty performed—the "praise that grows not old"—comes the call to pleasure and ease.

You may say that the conclusion, too, is common to a large body of poetry outside of the Anthology. So doubtless it is. You will find it, to go far back to the seventh century, in the elegies of Mimnermus; it is the philosophy of Horace and, through him, of men of the world generally. Yet, if one reads these poets and the epigrammatists side by side, one catches a difference of note and emphasis, a something that sets the two classes wide apart. Perhaps it is the suspicion of weariness in the diction of the epigrams that renders them so distinct from Mimnermus, while they lack that final adjustment of language which makes of Horace's most questionable Epicureanism almost a lesson in austerity. Only one who reads in the original will quite understand such a distinction; but there are other differences that inhere in the substance of the epigrams. One feels that to these later moralists their very skepticism is something old and long-ago experienced, and that so it assumes with them a tone of badinage even when most mocking and bitter. It is as if some one at the banquet table, when the wit flagged, forgot himself so far as to speak solemnly of the end of things, and another were to rebuke him lightly:

All life is a stage and a game; either learn to play it, laying by seriousness, or bear its pains.

(Is it accident that the very word "seriousness," σπουδή, is that which is naturally applied to the classic literature of Greece, while game, παίγνιον, was the technical term for these later expressions of wit?) And then another after another of the guests takes up the challenge, until one ends with this *reductio ad absurdum*:

All is laughter, and all is dust, and all is nothing; for out of unreason is all that is.

And yet not quite the end. Not laughter, but silence, awaited that world finally, as it awaited the banqueters.

Thou talkest much, O man, and thou art laid in earth after a little; keep silence, and while thou yet livest, meditate on death.

V.

For the spirit of resignation lies beneath all this laughter and incentive to joy. One is struck by the repetition here and there of the great motto of ancient Greece: *Think as a mortal*; and by the change in its meaning. The words are no longer, as they were in Pindar and Æschylus, and even in Demosthenes, a warning against the insolent pride, or *hybris*, that would storm the heavens, but a plea for ease: "Haste not, toil not; as thou canst, give, share, consume; think as a mortal." This humanity is merely an aspect of that accepted comfort of littleness which forms the compensation for the too clear perception of mutability. One feels this most strongly in the section of the Anthology headed "Religion," for the very gods have shrunk in their dimensions, like the desires and ambitions of their worshippers. "Small to see am I Priapus who inhabit this spit of shore," begins one of the epigrams, and another, which Dr. Mackail entitles "Fortuna Parvulorum," is still more pathetic in its humility:

Even me the little god of small things if thou call upon in due season thou shalt find, but ask not for great things; since whatsoever a god of the commons can give to a laboring man of this I, Tycho, have control.

To me there is something divinely tender in this *little god of small things*, this turning from Olympus, so far away, to one of the *di minorum gentium*, and in this *ask not for great things*.

This is the cry that runs all through the Anthology; but the one thing passionately desired and prayed for, the one seemingly small boon, was beyond the giving of the great or the little gods. No wish is repeated so continually by these poets as the longing for remembrance. All things are fleeting; nothing is our own, not even this spark of life which is owed to Death; but, Oh, grant that after our going some interposition of human memory come between us and utter obliteration. That longing is common, a commonplace, if you will. The heroes of the Iliad felt it in the underworld; and the pains of the lost in Dante's Inferno are pointed by the dread of being forgotten among the living. But the desire in this fading pagan world is something different from these. The craving of forgetfulness or the prayer for remembrance lies naturally at the heart of this literature, which springs from the epitaph and the inscription. It is not only that the dead cry to the living to be kept from oblivion, but the living themselves beg a place in the thought of strangers and passers-by. "Sit beneath the poplars here, wayfarer, when thou art weary," runs the writing on a wayside tomb, "and drawing nigh drink of our spring; and even far away remember the fountain that Simus sets by the side of Gillus, his dead child."

In the end that comfort of little things and this craving to be remembered are but signs of the coming together of the sense of transitoriness and the spirit of kindliness, which mark the character of this whole literature. Kindliness—yes, if any one word can convey the innermost quality of these epigrams, it is that. They are kindly in many subtle ways. Personal friendship is celebrated warmly enough, as in that well-known epigram of Callimachus:

They told me, Heraclitus, they told me you were dead,
They brought me bitter news to hear and bitter tears to shed.
I wept as I remembered how often you and I
Had tired the sun with talking and sent him down the sky.

And now that thou art lying, my dear old Carian guest,
A handful of gray ashes, long, long ago at rest,
Still are thy pleasant voices, thy nightingales, awake;
For Death, he taketh all away, but them he cannot take—

But more than this is the subtle friendliness with the world at large that pervades almost the whole Anthology. It extends to the gods, who are very near to help, as a human friend would be. It explains the "charm of nature" (the words actually occur in one of the epigrams) felt by these writers in the protected valleys and wayside fountains, as it exaggerates their disease at the salt, estranging sea. Among men the feeling is fostered both by prosperity and misfortune. Does the sailor accomplish a safe voyage? Forthwith he records his thankfulness at some shrine of Poseidon, with a prayer for general mercy: "Holy Spirit of the great Shaker of Earth, be thou gracious to others also." Does he perish by the way? Some stranger or comrade buries him with an inscription which speaks at once his desire of remembrance and his good-will toward others: "Well be with you, O mariners, both at sea and on

land; but know that you pass by the grave of a shipwrecked man."

It is not possible here to follow this note of kindliness through all its obvious and hidden manifestations. There is nothing quite like it, I believe, to be found anywhere else, and more than any other quality it lends to the epigrams a beautiful and unique distinction. Its gentleness does not belong to the great pagan world, and might remind one rather of the new spirit of Christianity. So, when one reads the call to rest of Hermes to those "whose knees are tired with heavy toil," the temptation is strong to compare it with the words of Jesus, "Come unto me, all ye that labor and are heavy laden." But the similarity, it need not be said, is fallacious. There is no new-born faith underlying the mercy and friendliness of the Anthology, nor any touch of the mysticism, such as that in the Rubaiyat, which makes the whole world kin—and kind. The spirit is here rather the last offspring of skepticism, the brotherhood of those who have cut off the long hope and must find their comfort together and in the way of small things. But it must not be therefore inferred that the impression left by the Anthology is one of moroseness or despondency. Occasionally the word of bitterness escapes, or a phrase of less jocular satire; but these are quickly repressed as errors of taste against the occasion. Something of this is due to the origin of the epigram, but something also to the recollection of the great civilization of which these men were still the disinherited heirs. "Though thy life be fixed in one seat," writes an epigrammatist of the age of Augustus, "and thou sailest not the sea nor treadest the roads on dry land, yet by all means go to Attica that thou mayest see those great nights of the worship of Demeter; whereby thou shalt possess thy soul without care among the living, and lighter when thou must go to the place that awaiteth all." These poets, whose names for the most part mean so little to us, had partaken in memory of the *great nights* of Hellas, and their soul was made lighter thereby for the descending path.

P. E. M.

NEWS FOR BIBLIOPHILES.

The *Nation* of January 24 contained a brief note to the effect that Sotheby, Wilkinson & Hodge of London would offer at auction early in the spring a small but choice collection of books, made by a member of the New York Stock Exchange. Various details in regard to this library have been published in England and America, but most of these accounts have been inaccurate. The sale will be held in March. The collector is William C. Van Antwerp, whose aim has been to gather a library of not more than 200 volumes, which, as a whole, should be illustrative of English literature from Caxton to Tennyson. Every book should be notable from the point of view of literature, history, or association; should be a first-class rarity, and the best specimen procurable.

From such a collection it is not easy to make a selection for special mention. The four volumes, however, which stand preeminent are, perhaps, the First Folio Shakespeare, the first edition of Walton's "Complete Angler," the Kilmarnock Burns, and Hawthorne's copy of the rare Boston edition of Hubbard's Indian Wars. The First Folio is the Rowfant copy, a fraction more than thirteen inches in height, and with every leaf genuine. For size, perfection, and soundness it is probably surpassed by not more than three existing copies of this most valuable of all printed books. Of the forty-three copies placed by Sidney Lee in his Class I., twelve only are thirteen inches or more in height. The MacGeorge copy, for which Marsden J. Perry of Providence paid, according to Sidney Lee's estimate, "some gigantic sum not less than £6,000," measures only 12⅞ inches in height. The first edition of Walton's "Angler," 1653, is also the Rowfant copy, one of the finest extant, in the original sheep binding, and with leaves as crisp and clean as when issued. The extreme rarity and the poor condition of most copies may be accounted for by supposing that the book was carried in the pocket to be read by patient fishermen by the streamside. The Kilmarnock Burns, that first edition of Burns's poems, published at Kilmarnock by John Wilson, 1786, is equally notable for condition, being nine inches by six, in the original blue paper covers, and entirely uncut. Not more than two other copies in this condition are known. The Burns Cottage Association at Ayr, Scotland, paid £1,000 in 1903 for a copy in similar condition, though probably somewhat inferior.

The fourth book mentioned above, Hubbard's "Narrative of the Troubles with the Indians in New England," was published in 1677 by Boston's first printer, John Foster. The work in itself is very rare and valuable, especially with the genuine "Map of New England, being the first that ever was here cut," but the evidences of former ownership in the Van Antwerp copy make it a great treasure. The volume was the property of the Hawthorne family of Salem for more than two hundred and twenty-five years. It contains the autograph of the first immigrant of the name, "William Hawthorne, Senior, his booke, 1677." There are autographs of William's son, the "witch-judge," John Hathorne; and of half a dozen other members of the family in different generations. The autograph of Nathaniel Hawthorne appears in four places. On the blank leaf, which completes signature "n," he has written:

> Nathl Hawthorne's Book,
> given him by his Kinswoman,
> Miss Susan Ingersoll. 1838.

Of early printed books Van Antwerp owns two Caxtons: Cicero's "Of Old Age and Friendship," 1481, the Rowfant copy; and the "Chronicles of England," 1482, the Bryan Fairfax and Osterley Park copy. The "Vitae Patrum," translated by Caxton and printed by Wynken de Worde, 1495; Higden's "Polychronicon," also 1495; Voragine's "Golden Legend," 1527; "The Dictes and Sayings of the Philosophers," 1528, are large books from the press of Wynken de Worde. Besides these there are two little books, "Stella Clericorum," 1531, and "Cura Clericalis," 1532, both stitched and unbound as issued. A fragment of the "Stella Clericorum" in the University Library at Cambridge is the only other copy of either that is now traceable. Of books printed by Richard Pynson, there are three: "The Siege of Troy," 1513, and "The Fall of Princes," 1527, both translated by John Lydgate; and the first edition of Alexander Barclay's "Ship of Fools," 1509. The "Ship of Fools" lacks fifteen leaves. The "Golden Legend," printed by Julian Notary, 1503, is one of five known copies.

As fitting companions to the First Folio, there are exceptionally fine copies of the other three folios. The Second Folio, formerly the property of the Rev. John Lucy, has the rare Aspley imprint. The Second Folio was, it will be remembered, printed by Thomas Cotes for five different booksellers, each sharing the expense and each having his sole name on the title-page of his portion of the edition. Robert Allot seems to have had the largest interest. Probably four out of five copies that come upon the market have his name. The other sharers in the edition were John Smethwicke, Richard Hawkins, Richard Meighen, and William Aspley. While good copies with the Allot imprint sell frequently for from £100 to £200, a copy with the Hawkins imprint sold in 1903 for £850, and one with the Smethwicke imprint in 1902 for £690. The late Halliwell-Phillips said of the Aspley imprint:

> It was remarked by Malone, and more recently by Boaden, that, after more than half a century's experience and observation, they had never seen but one copy with the name of Aspley on the title. Aspley's edition is indeed of such extraordinary rarity that few persons, even among those especially interested in Shakespearean bibliography, have ever been able to see it.

Though the Third Folio contains the seven additional plays, it has also the rare title, dated 1663, without the names of the "seven plays never before printed in folio," and the leaf containing only Ben Jonson's verses, both of which were suppressed and cut out of almost all copies when the title dated 1664 was printed. The new 1664 title, as well as its companion leaf, containing the portrait by Droeshout with the Jonson verses below it, is also in this copy. Besides the folios there is an unusual series of the quartos: "A Midsummer Night's Dream," 1600; "The Merry Wives of Windsor," 1619; "King Lear," 1608; "Henry V.," 1608; "The Whole Contention" and "Pericles," 1619; "The Taming of the Shrew," 1631; "Romeo and Juliet," 1637; "Two Noble Kinsmen," 1634; and "Sir John Oldcastle," 1600. "The Rape of Lucrece," the rare 1624 edition, was Narcissus Luttrell's copy, with his initials and the price he paid for the book (four pence!) written on the title. The McKee copy, with the printer's mark and imprint cut from the title and restored, brought $1,925 at Anderson's in 1901. The "Poems" of 1640 is the Rowfant copy, with a fine impression of the rare portrait by Marshall.

Mr. Van Antwerp's copy of the second edition of Chaucer, 1542, is probably the finest known. It measures 13½ by 8 9-16 inches, and may be called large paper. Mr. Hoe's copy, 12⅝ by 8¼ inches, is described in his catalogue as "unique for size." Sir Thomas Malory's "Story of the Most Noble and Worthy King Arthur" is the rare edition printed by Thomas East, about 1570. It is practically perfect, a small corner of one leaf only being in facsimile. The Ashburnham copy lacked six

leaves and the Huth copy has the title in facsimile. Harding's "Chronicle," printed by Richard Grafton, January, 1543, is the earliest issue.

Among books by sixteenth century writers is Samuel Daniel's "Works," the earliest issue of the first edition, with the title-page dated 1601 (most copies are dated 1602), large paper. Queen Elizabeth's arms are impressed upon the vellum covers. Thomas Drant's translation of two books of Horace's Satires, published in 1566 under the title of "A Medicinable Moral," is unique, containing two leaves of errata not found in any other copy and not mentioned by any bibliographer. Heywood's "An Hundred Epigrammes," 1550, is in superb condition, and the only copy known. Holinshed's "Chronicles of England, Scotland, and Ireland," the rare 1577 edition, is large and fine, measuring 11½ by 7¾ inches. It contains all the illustrations, including the scarce folding wood-cut of Edinburgh. Sidney's "Arcadia," 1590, the exceedingly rare first edition, was formerly Richard Farmer's, then Gregory Lewis Way's, later Frederick Locker's. Sidney's "Defence of Poesie," printed by William Ponsonby, 1595, is the first edition and the only copy known, the one from which the University Press of Cambridge made a reprint. Spenser's "Faerie Queene," 1590-96, is a fine specimen of the first issue of the first edition with the four unpaged leaves at the end of the first volume and the blank spaces instead of the Welsh words found in most copies.

Among the choicest of the seventeenth century books is the first edition of Milton's first book, "A Mask presented at Ludlow Castle," 1637, afterwards given the title of "Comus." The corner of the last leaf is in facsimile, but the book is so rare that it is all but unprocurable in any condition. The "Paradise Regained," 1671, is entirely uncut, the leaf measuring 7½x5 inches, and is undoubtedly the finest example known.

The great eighteenth century books are scarcely less interesting. The first edition of "Robinson Crusoe," 1719, is in the original calf as is also the first edition of "Gulliver's Travels." The latter is the earliest issue, the portrait with the name underneath instead of in the oval surrounding the head. Moreover, on the second title of volume i. is the inscription, "Oliver Goldsmith, 1766," in Goldsmith's autograph The first editions of Goldsmith's own books are also worthy of mention. "The Deserted Village" is on large and thick paper. A similar copy sold at auction for £100 at Sotheby's, London, in June, 1902. "The Traveller" is the first edition, 1764. This book has been sought after for years, but the only other copy known is in a private library in London. "She Stoops to Conquer" is the first issue with all the "points," in the original paper cover, uncut, and, without much doubt, unique in this state. "The Good-Natured Man," 1768, is also the earliest issue of the first edition. Gray's "Elegy" is the first edition, and the "Odes" which were "snatched from Dodsley's hands" by Horace Walpole to become the first issue of his Strawberry Hill Press, is a fine uncut copy with an autograph letter from Gray inserted. Inserted also is a single leaf "To Mr. Gray on his Odes" by David Garrick, of which, according to Austin Dobson, only six were printed. The first edition of Boswell's "Life of Johnson," 2 vols., 1791, is uncut; and among other interesting matter inserted, is the earliest autograph letter of Dr. Johnson known to be in existence, written at Lichfield, July 27, 1732, when Johnson was twenty-three years old.

The number of nineteenth century books is not large, but each is notable. The first edition of Keats's "Poems," 1817, is a presentation copy, the identical one which brought $500 at the Arnold sale, May, 1901. The "Endymion," 1813, is uncut, of the earliest issue, with the correct half-title, the single erratum, and the two leaves of advertisements at the end. There is a complete set of the Waverley Novels, all in boards, uncut, besides first editions of many of Scott's poems, and the proofsheets of Scott's last work, the "History of Scotland," with autograph corrections by the author. Swinburne's first book, "The Queen Mother and Rosamond," 1860, is the rare first issue with all the "points": Pickering's name on title, slip of errata, and label reading A. C. Swinburne. It has, besides, an autograph inscription on the half-title "D. G. Rossetti, From his Friend, A. C. Swinburne."

Although no special effort has been made to secure rare Americana, the collection includes a number of interesting volumes, in addition to the copy of Hubbard's Indian Wars already described. Richard Eden's translation of Peter Martyr's "Decades," 1555, the first collection of voyages in English, is a fine and perfect copy with the rare unpaged leaf "A Letter to the Duke of Muscovie" between folios 309 and 310. That great collection of voyages, by Samuel Purchase, 5 vols. folio, published 1625 and 1626 as "Purchas, his Pilgrimes," has the engraved title dated 1624 (in almost all copies it is 1625), and is in the original vellum binding with the faded blue string ties, and many uncut leaves. The fifth volume is of an earlier issue than that described by Loundes, Sabin, and others.

LUTHER S. LIVINGSTON.

A "Bibliography of the State, Town, County, and Territorial History of the United States," compiled by Thomas L. Bradford, M.D., and edited and revised by Stan. V. Henkels, will be published in Philadelphia by Henkels & Morrison. There will be five volumes, including about seven thousand titles, double indexed. The work will include books published up to January 1, 1904.

A set of the first octavo edition of Audubon's "Birds of America," 7 vols., 8vo, 1840-1844, in the one hundred original parts, will be offered by the Merwin-Clayton Sales Company of this city in the auction of Gen. Garret H. Striker's library, February 13 and 14. Only one set in parts seems to have been sold at auction in recent years. This belonged to the late L. H. Chubbuck of Boston, and brought $315 in February, 1904. In the Striker sale will be offered a complete set of the New York *Mirror* from the first number, August 2, 1823, to the last, December 31, 1842, 20 vols., 4to. Samuel Woodworth was the founder and first editor, being succeeded by N. P. Willis, and he by George P. Morris.

On February 19 and 20 there is a sale of autographs belonging to C. G. Boerner at Leipzig. The catalogue covers a wide field in art, music, and letters. There are seventy-four items concerning the royal house of Prussia; and men like Bismarck, Blücher, and Moltke are well represented.

At the auction of Sotheby, Wilkinson & Hodge, January 14 to 18, the following sales were made: Shakespeare's Second Folio, 1632, imperfect, £29 10s.; Sheridan's "Rivals," first edition, 1775, £9 15s.; Sidney's "Arcadia," first edition, 1590, imperfect, £165; Dickens's "Pickwick Papers," first edition, 1837, with autograph, £11 5s.; Byron's "Poems on Various Occasions," Newark, Ridge, 1807, £38; Shelley's "Zastrozzi," first edition, 1810, £16 10s.; Huth Library, edited by Grosart, twenty-nine volumes, 1881-1886, £18 5s.; Pope's "Essay on Criticism," first edition, 1711, £15 5s.; Boydell's "Shakespeare Gallery," £16 10s. At a sale held by the same firm on January 23, Defoe's "Fortunate Mistress," first edition, 1724, brought £10 10s.; Fielding's "Tom Jones," "Joseph Andrews," "Amelia," and "Voyage to Lisbon," first editions, £14 12s. 6d.; Dr. Syntax's three "Tours," Rowlandson's plates, first editions, 1812-1821, £20; Sterne's "Tristram Shandy," first edition, except vol. i., 1760-1767, £13 10s.; Kelmscott Chaucer, 1896, £49.

Correspondence.

GRILLPARZER'S "MEDEA."

TO THE EDITOR OF THE NATION:

SIR: The recent performance in Boston, by Mr. Conried's company, of Grillparzer's "Medea," for the benefit of the Germanic Museum at Cambridge, called forth a pamphlet on that drama, by Mr. William Guild Howard of Harvard, valuable both in itself and as testifying to the growing general interest in one of the world's greatest dramatists. That American colleges have hitherto neglected the Austrian writer is not strange, in view of the fate which so long pursued him in Germany. More than any man of genius who wrote in the German tongue Grillparzer has suffered from the wilful depreciation of the literary historians of Germany. During a long period, not only critics of the stamp of Wolfgang Menzel—whose littleness has escaped oblivion only because he dared to attack the great—but writers like Gervinus and Julian Schmidt, utterly failed to grasp the significance of the Austrian dramatist. Within recent years, however, there has grown up in Germany a Grillparzer literature inferior in volume and minuteness of critical research only to that which steadily gathers around the names of Goethe, Schiller, Lessing, and Heine. In France, Grillparzer has found in Prof. Auguste Ehrhard of the University of Clermont-Ferrand perhaps his most charming biographer and most discriminating critic ("Le Théâtre en Autriche: Franz Grillparzer").

Mr. Howard's appreciation of the "Medea" is quite noteworthy as probably the first attempt in the English language to set forth adequately the merits of the play, and of the entire trilogy of "Das Goldene Vliess," of which it forms the concluding part. He justly says of the character of Medea her-

self, as depicted by Grillparzer, "We shall dare place beside her only the very greatest tragic characters in the modern European drama—Racine's Athalie, Hebbel's Kriemhild, or Shakespeare's Lady Macbeth." Within the compass of a few pages, Mr. Howard could not trace the relationship between Grillparzer's drama and Euripides's "Medea" further than to remark that "it may be doubted whether, of the many dramas in European literature treating the fate of Jason and Medea, the first, that of Euripides, is not, next to Grillparzer's, the least antiquated." He evidently would take issue, as must every student of Grillparzer, with one of the most recent English translators of Euripides, Sydney Waterlow, who, in the preface to "The Medea and Hippolytus" (The Temple Classics), remarks: "His portrayal of Medea . . . has never been recreated in a modern masterpiece."

We may forgive Mr. Waterlow for ignoring, with the multitude of lesser dramatists who have attempted to modernize the story of the golden fleece, the great Corneille, of whose "Médée" the learned Corneille editor, M. Marty-Laveaux, wrote: "La Médée de Longepierre, représentée en 1694, s'est maintenue au répertoire pendant tout le cours du siècle dernier, et a fait complètement oublier celle de Corneille." But the absence of any allusion to Grillparzer in this connection is, indeed, surprising. Whatever the absolute merits of Grillparzer's "Medea," (of which no English translation exists), there can be no doubt that it reproduces the atmosphere and the spirit of the Greek play more nearly than any other modern drama on the subject. The student of comparative literature will, indeed, find endless scope for his fancy in contrasting the characters of Medea and Jason as portrayed by Euripides on the one hand, and Corneille and Grillparzer on the other. Grillparzer, it is true, has softened the characters of both Medea and Jason, but how true to the calculating egotist of the original is this description of Jason by Medea in the Austrian drama:

For him and him alone the world was made,
And nothing lives except to prompt his deeds.
To own in thought what may elude his clutch,
He dares his fate and risks the fate of all.
If glory tempts, he kills without a pang,
And if a woman, why, he simply grasps.
Let break what will, he has what he desires;
Right is his deed, for what he wills is right.

Grillparzer's Jason, through all his vacillations and inconsistencies, could never have indulged in the utterly un-Greek sentimentalism of Corneille's:

Mon cœur, qui se partage en deux affections,
Se laisse déchirer à mille passions.
Je dois tout à Médée, et je ne puis sans honte
Et d'elle et de ma foi tenir si peu de conte.
Je regrette Médée, et j'adore Créuse.

Grillparzer's hero and heroine, too, have their sentimental moods, but note the exquisitely realistic touches in that pathetic scene where Medea attempts to force Jason's unwilling attention upon the song Creusa has taught her:

Medea. Jason, I know a song.
Jason. (Ignoring her, and continuing his address to Creusa).
And then the tower!
Dost thou remember it, on yonder shore,
Where thou didst weeping with thy father stand
When I took ship and sailed for far-off lands?
I had no eye then for thy flowing tears,
For full my soul was of my future deeds.
A gust of wind detached thy veil from thee,
The waves received it and I sprang for it.
And carried it with me, to think of thee.
Creusa. Hast thou it still?
Jason. Remember, many a year
Since then has passed; the winds have borne away
Thy pledge. 'Tis gone.
Medea. Jason, I know a song.
Jason. Thou then didst call to me, "Farewell, my brother."
Creusa. As now I call: "My brother, hail to thee!"
Medea. Jason, I know a song.
Creusa. She knows a song
That once thou sangst. Hear! Let her sing it.
Jason. Yes, yes! What was I saying? 'Tis a habit
That mocking clings to me from childhood days,
And makes me dream and talk of far-off things,
That are not now and nevermore shall be;
For even as the youth lives in the future,
So with the past together lives the man.
And no one in the present fully lives.
A moment back I was a valiant hero,
And had a precious wife and gold and goods,
And mine a place was where my children slept.
(To Medea)
What didst thou want of me?
Creusa. Sing thee a song,
Which in thy youth thou sangst here in our home.
Jason. That singest *thou!*
Medea. As best I may.
Jason. Indeed!
Wouldst thou then with this poor and childish song
Give back my childhood and its happiness?
No, let it be! We must cling to each other,
Because it happened so, and 'tis our fate;
But let us have no songs and childish things.
Creusa. O let her sing! She tried so hard to learn,
And now she knows the song, and——
Jason. Well, then, sing!
Creusa. The second string, remember!
Medea. (Passing her hand over her forehead with an expression of pain.)
O, forgotten!
Jason. Thou seest, I knew full well, it would not do!
To quite another play her hand is used;
The dragon sang her magic art to sleep,
Which had another note than thy pure song.

Corneille, who follows Seneca's Latin play in many Gallicized lines, as in the

Va, bienheureux amant, cajoler ta maîtresse,
(I nunc, superbe, virginum thalamos pete)

returns in the conclusion to Euripides's terrible arraignment:

Horreur de la nature, exécrable tigresse!

In Grillparzer's "Medea," as in the Greek tragedy, Medea and Jason confront each other in the last scene, but whereas the classic play ends in bitter mutual reproach, and Medea departs unmoved, predicting evil to Jason, the modern poet provides a nobler climax. The touching conclusion of her apostrophe to Jason reawakens the sympathy of the spectator:

Bear then what has been meted out to thee,
Thy lot shall be what thy deserts demand,
As thou before me liest on the ground,
Thus lay in Colchis I before thee once,
And prayed for mercy. Hadst thou mercy then?
The sacrilegious fingers grasped thy fate,
Although I called: "Death is thy touch to thee."
Take then what sullenly thy heart desired,
Thy death. But I take bitter leave of thee;
It is the last farewell, fore'er the last,
I bid thee now, my husband. Fare thee well!
In all the terrors that engulf us both,
In all the sadness which the future bodes,
I still say, fare thee well, O husband mine!
A fate of sorrow darkening looms for thee,
Yet be prepared to meet thy stern decree,
In suffering stronger than thou wast in deed.
And if thy anguish greater than thy strength,
Let my surpassing woe console thee still,
For I have done what thou hast merely borne.

In that melancholy note of resignation which so often resounds through Grillparzer's works, Medea's last words are:

Bear, suffer, learn to expiate!

GUSTAV POLLAK.

New York, January 28.

LINCOLN'S STORIES.

TO THE EDITOR OF THE NATION:

SIR: Everything about Lincoln has perennial interest. It seems now that by his own account his little stories were told with a serious purpose as a relief from discussion, or to convey in a pleasant form something in itself not so pleasant. In England this habit of his made the impression of levity and did him harm. In the last year of the war I was a guest of Seward at Washington, now the beautiful and brilliant, then the gloomy and miry. One morning I picked my way across from Seward's house to the Government buildings for the honor of an interview with the President of the United States, the head of the great cause to bring to which the assurance of English sympathy was partly the object of my visit to the United States. I was taken to a hall upstairs, a door opened, and Abraham Lincoln was before me. For the figure I was prepared; but a glance at the face at once dispelled the idea of levity. On that face instead of light-heartedness sat melancholy, care, and the deepest sense of responsibility. The report that after Chancellorsville Lincoln had meditated suicide, though preposterous, was less wide of the mark than the charge of levity. In the course of the conversation which followed and which turned mainly on the state of opinion in England, Lincoln told one of his little stories. Not knowing what is now revealed, I regarded this as an instance of habit, perhaps Western, and thought that the President was relieving his burdened soul by taking, as it were, an intellectual pinch of snuff.

Never was crime a more fearful blunder than was the assassination of Lincoln by a Southern hand. It proved the ruin of Reconstruction. I cannot help thinking that Lincoln mistook the nature of the problem with which he had to deal, taking for a rebellion, as he always did, that which in fact was not a rebellion, but the sudden creation of a new nationality by a rupture which was inevitable and had been long foreseen. But the influence of his character on Reconstruction would have been inestimable. We know into what hands, when he was lost, Reconstruction fell. GOLDWIN SMITH.

Toronto, January 29.

OPEN SHELVES.

TO THE EDITOR OF THE NATION:

SIR: It was with considerable surprise that I read the note on the open-shelf system on page 34 of the *Nation* for January 10. I hardly supposed the system needed further championing in America. In England there are local conditions of patent rights in indicators, and of "shutinedness"

in humanity, that have delayed the introduction of open shelves; but with that we need not concern ourselves.

In the main building of the Public Library of Cincinnati the placing of books on open shelves began in the spring of 1900. The number of books so placed has increased, until at present there are 50,000 where the public may consult them without let or hindrance. This is a large open-shelf collection, possibly the largest in any one library building. I have not been conscious that the open shelf is a failure in Cincinnati. Surely the patrons of the library show their appreciation by the number of books they take for home use, 489,671 in the year 1906. The circulation in one year from the main building in Boston, according to the latest statistics, was 299,647; in Pittsburgh, 222,901; in Cleveland, 354,469; and in St. Louis, 455,898. It seems hardly necessary to explain that the books on the open shelves are selected books; that the rare books—the books difficult to replace, the sets of bound periodicals, the art folios—are not on open shelves. There were, at the close of 1906, 269,707 bound volumes in the main building, and 60,381 pamphlets, so that the open-shelf collection constituted about 18 per cent. of the bound volumes.

People do steal books. It was my fortune before coming here to have two years' experience as an assistant in what was at that time a reference library most hedged about with safeguards against the purloining of its books. During those two years more of that library's books were offered for sale to second-hand dealers than have been of the books of the Public Library of Cincinnati in any two years since the introduction of open shelves.

There is economy in the handling of the circulation, as we have fewer attendants in the circulating department than there were seven years ago, and the circulation is larger by one-third. As to economy of space, I am at a loss, as there is no more space to economize. With the influx of people who take books for home reading has come even a greater influx of those who come for the entertainment of reading, or for more serious consultation within the building, so that there is standing room only—and not much of that—during the busy hours.

One reason for the large use of the main building in Cincinnati is certainly its fortunate location downtown on a busy street, but another is as certainly the facility with which the patrons may get what they come for—books. N. D. C. HODGES.

Public Library of Cincinnati, January 28.

AN EARLY PLAN TO EXCHANGE PROFESSORS.

TO THE EDITOR OF THE NATION:

SIR: When the time comes for some writer to trace the incidents and tendencies in the academic world which helped to bring about a better understanding among nations through the interchange of professors and lecturers, consideration should certainly be given to a curious incident, some account of which is to be found in the recent "Life and Letters of Leslie Stephen," by Prof. F. W. Maitland. As long ago as 1864, Henry Yates Thompson, a young English graduate of Trinity College (B.A., 1862), proposed to endow a lectureship at Cambridge University, England. In the words of Leslie Stephen's biographer:

The lecturer was to be appointed by the President and Fellows of Harvard, but was to instruct the English Cambridge in "the History, Literature, and Institutions of the United States of America." This generous offer the Cambridge Senate rejected. The question on which a vote was taken was whether by way of experiment a lecturer to be nominated by Harvard and approved by the Vice-Chancellor should be allowed the use of one of the university rooms for a single course of lectures. By 110 votes to 82 the Senate decided that it would not make even this tentative approach towards an acceptance of Mr. Thompson's proposal.

I venture to call attention to a few other details regarding this matter. Soon after his graduation Mr. Thompson visited America, spent some time in and about Boston, and became deeply interested in what he saw. Late in the year 1864, on his return to England, he addressed his plan of a lectureship to the Hon. Edward Everett, once minister to England, and ex-president of Harvard. Young Thompson felt keenly the want of information in England as to things American, "*especially among the upper classes*," as he wrote. He desired to provide for the delivery of a biennial course of twelve lectures during one term at Cambridge, the lecturer, or reader, to be appointed by the President and Fellows of Harvard, and—in his own words—the lecturer's "sole qualifications to be American citizenship, and the opinion of his appointers that he is a fit person." The plan of a foreign lectureship he considered so entirely novel to English authorities that he was unwilling to bring the matter in the first instance before his own university. He preferred to gain Mr. Everett's aid in offering the scheme to Harvard, and then to have it presented officially to Cambridge from Harvard. Otherwise it was likely, he thought, to meet with no very serious attention.

Mr. Everett's death early in 1865 probably delayed the plan. But it was presented to the Harvard authorities in the spring, met with their approval, and under date of May 8, 1865, was sent to the Vice-Chancellor of Cambridge by President Hill of Harvard, who expressed his desire for a "cordial assent." The plan reached England so late in the term that consideration was postponed till after the long vacation. Objections began to be heard in England. It was said that it could form no part of any acknowledged branch of university education. The fear was expressed that the lectures might become "a sort of democratic propaganda." As the true aim of the project seemed likely to become befogged, Mr. Thompson determined to publish the correspondence, expecting doubtless to arouse the Cambridge Senate to the large importance of his plan. The correspondence, together with some illuminating comment from Mr. Thompson, appeared in the autumn of 1865, in the shape of a small pamphlet, labelled 'For private circulation only." In 1866 the fate of the plan was decided. Let Professor Maitland's words conclude the story:

It will probably be thought by modern readers that when Stephen told Lowell that a cry of "Socinianism" was raised, this was a joke. It was nothing of the kind, . . . the drum ecclesiastic was resoundingly beaten. "Are members of the Senate aware," wrote one of the drummers, "that Harvard University, as far as it professes any form of religion, is distinctly Socinian, or if Americans prefer the term, Unitarian?" Another gentleman thought good to say in print that by receiving a lecturer from Harvard we should "pander to that which is perhaps the worst vice inherent in the North-American character, namely, SELF-CONCEIT." Such were the amenities of the time; such was the use made of capital letters; and such was the wisdom of the Senate. It had been believed and hoped at Cambridge . . . that if Harvard had to appoint a Thompson lecturer the choice would fall in the first instance upon Lowell.

HENRY BARRETT LEARNED.

New Haven, Conn., January 28.

THE ENGLISH VIEW OF THANKSGIVING

TO THE EDITOR OF THE NATION:

SIR: The publication of "Loyalist's" eccentric communication to the *Oxford Magazine* of December 5 in your issue of January 10, led me to call the Vice-Chancellor's attention to the matter, and he has addressed to me, with a view to its publication in a communication to you, the following letter:

Magdalen College, Oxford,
January 21, 1907.

My dear Dyer:

I am obliged by your calling my attention to the letter of "Loyalist" in the last *Oxford Magazine* of last term. To show how little general stir it made, I may say that I had neither noticed nor heard of it before you spoke of it. I do not know who "Loyalist" may be, but I think I may at once say, if it is not too obvious to be worth saying, that the real opinion and feeling of Oxford is much more truly shown by the considered and official action of the Dean and Chapter of Christ Church than by the irresponsible criticism of an anonymous correspondent of the *Magazine*—a criticism which I hope the writer might be willing to modify on fuller consideration.—Yours sincerely,

T. HERBERT WARREN.
Vice-Chancellor of the University of Oxford.

From the above it will appear that at least two people in Oxford have read "Loyalist's" letter, the vice-chancellor and the editor who inserted it. How far the editor was from printing it as *an English view of Thanksgiving* will appear from the following note expressive of his view, which is to appear in the *Oxford Magazine* to-morrow, the first issue after the one of December 5, which contained "Loyalist's" letter:

At the end of last term we published an indignant and singularly ill-informed protest, signed "Loyalist," against the action of the Dean and Chapter of Christ Church in allowing a Thanksgiving Day Service to be held in the Cathedral. "We may," said the writer, "be as friendly as we will to the Americans in Oxford, as men, but surely it behooves us to remember that their national festivals are held to celebrate the defeat of our arms On these occasions they are rebels and traitors, and to encourage them is, morally, to be guilty of treasonable practice." We confess that we hardly thought that this letter would be taken seriously. It was, however, printed in the New York *Nation*, and we publish in this number two replies to it, one from no less distinguished a scholar than Professor Goodwin of Harvard, an honorary D.C.L. of this University. We therefore hasten to explain that, if we had thought that "Loyalist's" letter represented any serious body of British opinion, we should have suppressed it for very shame at the ignorance and prejudice which it exhibits. It is bad enough to be compelled to approve of every

contemporary action of one's own Government, but if that compulsion is to be made retrospective, then we are all "rebels and traitors," and what a burden lies upon the consciences of our lecturers in modern history! And, further, as our correspondent points out, Thanksgiving Day is not the same as the Fourth of July.

May I, as one who has always had at heart the adequate religious observance of Thanksgiving at Oxford, say frankly and fully that this part of our most ancient national observance was inaugurated here by an Englishman, the Rev. Ernest F. Smith of Lincoln College, sometime archdeacon of the diocese of western Pennsylvania. The first service was held in 1905 at the university church (St. Mary's), and then there was no "Loyalist" in the field against it. The second service was that of this last year in the Cathedral. The American Prayer Book was used on both occasions. That the Rhodes scholars—to whom were assigned in the Cathedral Church of Christ the seats occupied at other services by the scholars on that foundation—fully entered into the celebration in the spirit which prompted the authorities who made it possible, is shown by the votes of thanks unanimously passed and communicated to Mr. E. F. Smith and others concerned. The sermon—a memorable one—preached at the Church of St. Mary the Virgin, Oxford, on Thanksgiving Day, 1905, by the Rev. G. H. S. Walpole, rector of Lambeth, formerly professor of dogmatic theology in the General Theological Seminary, New York city, U. S. A., has been published here by G. S. Mowbray of No. 106 South Aldgate Street. The second Oxford Thanksgiving sermon, preached by the Rev. E. F. Smith, and deeply appreciated by his hearers, among whom were many English subjects, has not, I am sorry to say, as one who profited by hearing it, as yet been published.

LOUIS DYER.

Balliol College, Oxford, January 22.

SIMPLIFIED SPELLING AGAIN.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, Mr. W. S. Booth, quotes a passage of Bacon's against phonetic orthography, as tho it had some bearing on the proposals of the Simplified Spelling Board, which desires only to accelerate that inevitable simplification of our spelling that has been going on for centuries. Apparently he is in favor of arresting this movement now. It is therefore very kind of him to suggest that the reformers should "direct their attack upon the makers of dictionaries" and obtain "the admission of their reformed spellings each in its proper place." And perhaps he will be pleased to learn that some 150 of the simpler spellings recommended by the Board are already preferred by Webster, some 180 by the Century, and more than 200 by the Standard. Probably the future recommendations of the Board will be received hospitably, since the Board now numbers among its members the editors of Webster, the Standard, and the Century in the United States and the editors of the Dialect, the Etymological, and the Oxford English Dictionary in Great Britain.

A MEMBER OF THE SIMPLIFIED SPELLING BOARD.

New York, January 28.

Notes.

"The Trust Movement in British Industry: A Study of Business Organization," by Henry W. Macrosty, is in the press of Longmans, Green & Co.

Hereafter the English quarterly *Mind* is to be published by the Macmillan Co.

A very desirable addition to the Muses' Library of E. P. Dutton & Co. will be the Poetical Works of Thomas Lovell Beddoes, edited by Ramsay Colles.

The Cambridge University Press will publish a complete edition of William Dunbar's works, edited by Dr. H. Bellyse Baildon. There will be notes of sufficient extent to elucidate the meaning of the text.

The Oxford University Press issues Gilbert Murray's translation of the "Medea," "Trojan Women," and "Electra," bound together in a single volume.

"Notes on Chaucer," written and published by H. B. Hinckley of Northampton, Mass., will probably be ready for distribution in September. Five hundred copies will be printed.

Henry Frowde will soon publish a volume by T. S. Omond, which sketches the history of prosodical criticism in England and America during the last two hundred years.

The first volume of Cowley's Works in the Cambridge English Classics (G. P. Putnam's Sons) contained all the poems published in the folio which appeared the year after his death. The second volume, now issued, contains the earlier writings from the edition of 1637, together with the plays and essays. The editor, A. R. Waller, is preparing a Supplement of Notes, biographical, bibliographical, and critical. Cowley lives to-day, so far as he lives at all, in his Essays, which have a rare flavor of leisure and learning. It cannot be said that this edition, with its reproduction of the old spelling and its inclusion of so much that is dull, is the best for the reader who merely desires his comfort, but for the scholar it is altogether admirable.

T. F. Tout's "Advanced History of Great Britain" (Longmans) serves a double purpose. It belongs to a series designed for school use, and its form is adapted to this end. But it is also one of the most convenient volumes of easy reference we remember to have seen. The narrative is pointed and succinct, but broad enough to include a clear account of political and constitutional changes; the maps are abundant and simple, and there are a number of genealogical and other tables, including a list of ministers and Governments since 1689.

Two more volumes have been added to "The Political History of England," published by Longmans, Green, & Co.: vol. iv., From the accession of Richard II. to the death of Richard III., 1377-1485, by C. Oman; vol. v., From the accession of Henry VII. to the death of Henry VIII., 1485-1547, by H. A. L. Fisher. The scope and importance of this work have been sufficiently indicated in reviews of previous volumes. Those now before us fully maintain the standard of their predecessors. Professor Oman, whose literary output is marked by great unevenness of quality, is nearer his best than his worst in his contribution to this series. His account of the Great Rebellion of 1381 is particularly good, and his description of Agincourt is excellent. Professor Oman belongs to that new school of historians which, discarding the "drum and trumpet" style of description so deservedly stigmatized by Green, sees in a close study of the details and realities of the battlefield an important branch of the historian's art. His account of Agincourt is remarkable and convincing. Towards the end, however, the author flags. The Wars of the Roses prove as much of a stumbling block to Professor Oman as to most historians, and his treatment of the Joan of Arc episode, though sane and correct, is too pedestrian even for such a publication as "The Political History of England." The author of vol. v. would have risen to the height of the incident. There is no one writing history in England at the present day with more delicate historical and literary perception than Mr. Fisher. His application to tutorial duties at New College is a loss to a much wider circle, for it cannot be said that what he has so far produced represents all that he is capable of. One must, however, be thankful for what one can get, for it may be doubted whether any volume in this series will surpass this one in that indefinable something which may best be described as quality. It is not worth while quibbling with the author on small matters of style and accuracy, for his volume is excellent reading. His two great figures, Henry VII. and Henry VIII., stand out boldly and reasonably fashioned, even when shorn of many of the trappings with which a more rhetorical generation of historians used to adorn them.

Samuel Pepys had a dual personality, and J. R. Tanner, who is responsible for a new edition of his "Memoirs of the Navy," in the beautifully produced Tudor and Stuart Library of the Clarendon Press, is very insistent on the less generally appreciated side of it. Pepys, the administrator, thorough, painstaking, informed, strict in the execution of duty, will never win the allegiance of the reading public from the other Pepys; the Pepys who danced and sang, who enjoyed getting behind the scenes and putting over-rouged Nell Gwynn and Knipp through their parts. Still, many of those who love the Pepys of the Diary will turn with pleasure to catch a glimpse of the business side of the man; it could not be better set out than in this charmingly printed and produced edition.

In the same series appears Sir Henry Knyvett's "Defence of the Realme" from a hitherto unpublished manuscript now edited by Charles Hughes. Knyvett was a country gentleman, a soldier and a magistrate who, when England was, as it appeared, threatened with a Spanish invasion in 1596, composed this little treatise for presentation to Queen Elizabeth. In it he set forth with the authority of his long experience his views as to the best way to muster, train, equip, and handle an army to beat off the invasion. Concerning these matters several points of interest arise, Knyvett's views as to the long-bow, then fast falling into disuse, light artillery, and cavalry being of value for students of the military art. His style is direct with an

occasional quaintness of turn, hut not in itself noteworthy. The editing is satisfactorily done.

It was to be expected that the letters of a scholar as distinguished as the late Dr. George Birkheck Hill—who would have been christened Boswell Johnson if the fates had any real sense of the fitness of names—would not he long allowed, in this age of puhlicity, to remain unthumhed, unsorted, undivulged. So we have them in a volume of nearly three hundred pages (Longmans, Green & Co.), edited hy Dr. Hill's daughter, Mrs. Crump. They cannot in fairness be ranked high in epistolary literature, hut with the connecting bits of biography they give us some insight into an impressively though not winningly individual character, and furnish a sufficiently detailed account of a scholarly career more than creditahle in its achievements and not lacking in heroic and pathetic features. We have our douhts whether the man or the career needed to he described in anything more extensive than a small memorial monograph; hut, as a volume has heen given us, we should he duly grateful for the glimpses we get of Swinburne, Burne-Jones, and other interesting men, and for some of Dr. Hill's frank utterances on literature and politics. There are a few capital sayings and anecdotes, the best of which is reported of Gladstone, who, speaking to Dr. Hill of the latter's great edition of Boswell, remarked: "You have succeeded in doing what Macaulay attempted to do and failed—you have suppressed Croker."

"Highways and Byways in Berkshire," hy James Edmund Vincent, with illustrations by Frederick L. Griggs, is issued in New York hy the Macmillan Company. Berkshire is emphatically a riparian county, since its upper houndary is marked for one hundred miles hy the winding Thames, and it can claim a larger share of the river than any other county. The Berkshire Downs have not been so well written up as those of Sussex and Surrey, but they are, next to the river, the great natural feature of the country, and remain the same as when the Britons fought each other there. The Downs are the paradise of fox-hunters, and are used more and more as exercising grounds for racing stahles. Where these exist, the poverty of the peasants is less grinding and the wages higher. Mr. Vincent's hook has three main interests: the Thames hank, which he explores in great detail; the historical associations; and Windsor Castle, to which he devotes many pages. Mr. Vincent is peculiarly intimate with Windsor Castle in virtue partly of his presence as special correspondent at numerous royal functions, and he has admitted into his narrative a personal tone of reminiscence, which has not hitherto been present in this series. But what one may regard as questionahle taste to-day will doubtless strike posterity as very much to the point when such chronicles as this will he ransacked for gossip and minor antiquities. There is soher history enough throughout, and in this volume, as in the others of the series, the reader is introduced to many an old country house not magnificent enough to he mentioned in the ordinary guide-books, hut adorned each with its own legends and private tragedies. Berkshire is not especially rich in literary associations. It is the background of Miss Mitford's writings, and contains what little is left of Cumner Place, the scene of Amy Robsart's death. But its chief boast so far is that it was the county of the author of "Tom Browu," who made its White Horse famous. When scoured—at present it is much neglected—this huge figure, 374 feet long, carved in the Downs, can he seen for twenty miles, and eclipses all the rest of its kind in England. This is the sixth volume of the series illustrated hy Mr. Griggs, whose charming drawings ornament almost every page.

The charm of S. Parnell Kerr's "From Charing Cross to Delhi" (London: T. Fisher Unwin) is its audacity. The author made a demi-tour of the best-known part of India, woke up one morning, remembered there was a train that would take him to Bomhay in time to catch the next steamer home, and incontinently fled hack to England. He saw four towns and a cave, and therewith wrote a new book about the country, not only describing but also analyzing the oft-described and oft-analyzed. Such self-confidence deserves recognition and almost inspires respect. Naturally, the book is of little value except as a *tour de force;* hut it may he granted that it is clever and entertaining, which is all the author would claim for it.

"Due Process of Law Under the Federal Constitution," by Prof. Lucius McGehee of the University of North Carolina, helongs to the series of Studies in Constitutional Law (Edward Thompson Co.), which attempt to describe critically the actual working in our law of certain fundamental ideas. It should he as interesting to any intelligent reader as to the professional man, since it deals accurately and clearly with a suhject of which some phase or other is under daily discussion. The regulation of railway rates, the protection against impure food, the suppression of child-lahor and of monopolies, the validity of a decree for divorce based on constructive service, are hut a few of the prohlems in which "due process" is involved. Though the author usually states the views of the court in its own words, he succeeds in heing concise as well as readable; aud he criticises modestly, hut firmly, as in the case of Haddock v. Haddock (201 U. S., 562), and in the interesting lynching case of *Ex parte* Riggins (134 Fed. R., 404). The rules expounded are as far as possihle based on decisions of the Supreme Court of the United States.

Arthur Train, assistant to District Attorney Jerome, and one of the puhlic prosecutors of New York, who is already known as author of a good hook of short stories, now gives us, in "The Prisoner at the Bar" (Charles Scribner's Sons), a set of most interesting sidelights on the actual administration of criminal justice in our large cities. The voice is the voice of the expert, though the hand is rather that of the journalist. But the point of view is by no means journalistic, and the book is thoroughly serious in tone. In these days of lurid trials it is well that so crying an evil as the domination of the courtroom by the press should be thus exposed by a competent authority:

> It is no fiction to say that in mauy cases the actual trial is conducted in the columns of yellow journals. . . . Judges, jurors, and attorneys are caricatured and flouted. There is no evidence, however incompetent, improper, or prejudicial to either side, excluded by the judge in a court of criminal justice that is not deliherately thrust under the noses of the jury in flaring letters of red or purple the moment they leave the courtroom. The judge may charge one way in accordance with the law of the land, while the editor charges the same jury in douhle-leaded paragraphs with what "unwritten law" may hest suit the owner of his conscience and his pen. "Contempt of court" in its original significance is something known to-day only to the reader of text-books.

Prof. Alfred E. Garvie of Hackney and New College, wrote a number of years ago an exposition of the Ritschlian theology which is prohahly still the hest interpretation in English of the teaching of Alhrecht Ritschl. In 1904 Professor Garvie conducted a class for lay preachers in a London Congregational Church, and from the outlines of his lectures he has prepared "A Guide to Preachers" (A. C. Armstrong & Son). The hook is elementary, heing designed for men without divinity school education, hut its counsels are in harmony with sound scholarship and conform to good taste.

Mrs. Anna Rohertson Brown Lindsay's plea for militant Christianity, which was puhlished in 1903 under the title "The Warriors," appears in new dress with the title "The Warrior Spirit in the Republic of God" (The Macmillan Co.). Mrs. Lindsay is preparing a volume for the United Study of Missions Series, to he entitled "Christus Victor."

Excellent taste has heen shown in the preparation of "The Sacred Seasons," a collection of readings for the Sundays and Holy Days of the Christian year, from the writings of Bishop Moule of Durham (E. P. Dutton & Co.). Spiritual edification has been the aim of the compiler, "F. M. Y." The volume is beautifully printed and illustrated, decorations for each of the prominent church festivals having heen arranged and drawn hy Miss E. A. Ihbs, chiefly from illuminated manuscripts in the British Museum.

The just puhlished Archæological Report of the Egypt Exploration Fund details the results of its work during the season of 1905-06. Messrs. Naville aud Hall have continued their excavations at Deir el Bahari of the ruins of the XIth Dynasty temple, but no great additions have heen made to the previous knowledge of the general plan of the structures. At the very close of the campaign, in the centre of the western end of the temple, was discovered the heginning of a sloping descent which the excavations of the present season may prove to lead to the tomh of the King, Neh-hetep-Rā Mentuhetep. The great find of the year was, however, a life-size painted statue, in sandstone, of a Hathor cow, perfectly preserved, standing in an elahorately decorated chapel huilt for Thothmes III. The shrine has been rehuilt in the Cairo Museum, and the statue removed thither. For the Græco-Roman Branch, Messrs. Grenfell and Hunt returned to Oxyrhynchus, and turned their attention once more to its ruhbish-heaps, in the search for papyrus fragments. Their work was the most successful that they have yet to record. In two different mounds the remains of two "classical libraries"

were discovered. As usual, the papyri had been torn up before they were thrown away, precisely as we tear up written papers before committing them to the waste-basket; but in one of the mounds two cores of rolls were found containing ten or twelve columns each, others containing five or six, and many more of a column or two each. About half of the find remains yet to be deciphered; but among the nine longer pieces, all of the second or third century, may be noted thirteen columns of fifteen lines each of pæans of Pindar. The previously extant fragments of his pæans count only about a dozen lines altogether. There are also about a hundred complete, or nearly complete, verses of the lost "Hypsipyle" of Euripides. The longest prose fragment contains twenty-six columns of a text of the "Symposium" of Plato, but by far the most remarkable and valuable gives us fourteen columns, averaging about forty long lines each, and parts of three or four columns more, of a new history of Greece. The period covered is from 396 to 394 B. C., and the quantity of information, not found in Xenophon or Diodorus, is very considerable. The finders are disposed to assign the work to Cratippus, who is said to have continued the history of Thucydides. Among other discoveries may be noted a leaf from a Latin papyrus manuscript of Sallust's "Catiline," a piece of the lost Greek original of the Acts of Peter, another of an unknown version of the Acts of John, and especially forty-five lines on vellum of a lost Gospel, of striking interest.

Another French author to find representation among foreign classics prepared for American students is Édouard Pailleron, the poet and dramatist, whose "Le Monde où l'on s'ennuie" has just been brought out by Ginn & Co., edited by W. R. Price of the East High School, Rochester, N. Y. Pailleron's poems and essays will be recalled by readers of the *Revue des Deux Mondes*, to which he contributed until his death in 1899. This brilliant comedy, full of keen satire on French political, social, and intellectual life as focussed in the Parisian salon, won for Pailleron a seat in the Academy.

Since the autobiography of Della Rocca no book of the same class has appeared in Italian literature that affords better reading than the "Ricordi di Gioventù" of Giovanni Visconti Venosta (Milan: Cogliati). The period covered is 1847-1860, and the chief interest is for Milan at the time of the revolution of 1848, and under the Austrian rule after the revolution failed. There are many glimpses of the best known figures of the Risorgimento, Garibaldi, Manara, Cavour, Farini; there are details of the Five Days, that are new and instructive; there are incidents of notable interest. Among the latter may be mentioned the one in which Visconti Venosta narrates how, after the war of 1859 had broken out, he and many others passed hours daily at the gate of Turin, by which the first French troops were expected to arrive. Each day he noticed a Sardinian cavalry officer standing somewhat aloof but in the same state of expectancy. At last one afternoon the longed-for French troops arrived, and Visconti Venosta turned and saw the Sardinian officer looking at them, his eyes filled with tears. It was the young Duc de Chartres, the exiled son of Louis Philippe, then serving in Victor Emmanuel's army; he had not seen a French uniform since, in his childhood, Louis Philippe was driven from Paris.

The Colonial Director of Germany, Dr. Bernhard Dernburg, is indefatigable in instructing the people of the Fatherland in the actual status of the German colonial problem, and particularly on the importance of the colonies to supply the German manufacturer with his raw materials. It is now announced that he has in preparation a detailed work on the subject of the German colonies, which is to appear in the near future.

A graphic illustration of the trend of human thought is to be found in the statements of the *Publishers' Circular* as to the literary product of England last year. The number of books printed was 8,603, a number greater by 351 than that of the previous year. Almost exactly a fourth (2,108) were novels and juveniles, showing an increase of 375 works. The only other advance of importance was in educational books (127).

An "Exposition Internationale du Livre" will be held at the Grand Palais, Paris, from July till October. The show aims at including every phase in the production of books, newspapers, and advertising.

A large number of MSS. that have been stored away in the vaults of the Town Hall at Merthyr Tydfil are to be examined. They relate to the early history of Wales, and contain information about Prince Llewellyn.

Tablets in memory of William Blake will be put up by the London County Council at No. 28 Broad Street, and in memory of Charles Reade at No. 70 Knightsbridge.

The report of the English Folklore Society for 1906 speaks of steady progress. Among the most interesting papers are "The Folklore of Dolls," by E. Lovett and "The Grail and the Mysteries of Adonis," by Miss Jessie L. Weston. The year's publications include the seventeenth volume of "Folklore," edited by Miss Burne, and a Bibliography of Folklore for 1905, compiled by N. W. Thomas. The additional volumes for 1904, 1905, 1906 will be put out in the course of the next few months. These will be "Jamaican Song and Story," by Walter Jekyll; "Popular Poetry of the Baloches," by M. Longworth Dames, and the "Folklore of Lincolnshire," put together from printed sources by Miss Peacock and Mrs Gutch. One guinea annually entitles a subscriber to all the Society's issues. The money should be paid to the Hon. Treasurer, Edward Clodd, No. 5 Princess Street, London, E.C.

The Italian ministry of public instruction issued recently the report of Prof. Ettore Pais on the universities in the United States. Professor Pais spent nearly a year here, not long ago, and visited the chief institutions in all sections of the country. His descriptions and criticisms, while written primarily to inform Italians, are interesting to Americans, as coming from an eminent scholar. What strikes him particularly is the opportunity for variety which our conditions offer. In Italy, universities are all of one type, and vary solely in the ability of their professors; here, new types spring up, new experiments are made, there is a general atmosphere of hopefulness and enterprise, with hospitality for scholars from all over the world. Professor Pais is astonished at the richness of our libraries; at the large sums assigned in universities like Harvard to poor students; at the custom of inviting foreign professors for brief terms; at the social life of the students; at the immense gifts of private citizens. He regards coeducation as a success, and athletics, even when carried to a harmful extreme in individual cases, as a strong element making for moral health. He suggests that if Italian university students had this outlet for their animal spirits they might not become riotous or spend their time in dissipation. As a sign of the importance which the American public attaches to its chief universities, he cites the fact that the presidency of Harvard has been suggested as a fitting position for Mr. Roosevelt when he shall cease to be President of the United States. Professor Pais is not blind to the defects of our institutions, but he lays most emphasis on what they do and have rather than on what they lack. The former is positive, the result of American intelligence; much of the latter is in a fair way of being supplied. "The American is an admirable fusion of Celtic vivacity and the slow reflection of the Teutonic races with the firmness and self-control of the English stock." Professor Pais evidently believes that this new racial amalgam will not be inferior to any of its ingredients, and that American universities justify this optimistic belief.

The episodes of the Oxford Historical Pageant, noted in our issue of January 24, will fall into two divisions, separated by "A Masque of Mediæval Education," in which the Liberal Arts and their votaries will figure. The earlier series will include (1) The Legend of Saint Frideswide and the Founding of Oxford; (2) The Election and Coronation of Harold I. (1035); (3) The Teaching of Theobaldus Stampensis, from which we may trace the beginnings of the University; (4) the Granting of the Charter of the City by Henry II.; (5) the Riot on the Arrival of the Papal Legate, Master Otto (thirteenth century); (6) A Scene from the Life of Friar Bacon; (7) the Massacre of the Clerks on St. Scholastica's Day (1357), and (8) the Turning Back of Archbishop Arundel from his pursuit of the Lollards by Proctor Birch of Orlel, with his academic bills and bows (1410). Among the scenes from the later period will be the Founding of Christ Church by Wolsey, Cranmer's Recantation, Amy Robsart's Funeral, Elizabeth's State Entry in 1565, the Opening of the Bodleian Library by James I. in 1605, Laud's Reception of Charles I., the Expulsion of the Fellows of Magdalen, etc. Last of all will come the Giving of Degrees to the Allied Sovereigns in 1814, a scene which should afford scope for some striking effects of color.

The annual report of the Nebraska Library Commission, in a summary of progress since the Commission began its work, five years ago, calls attention to the following facts: (1) The number of public libraries in the State has increased from twenty-six to fifty-five; (2) eight new library buildings have been erected; (3) the number of

trained librarians in the State has increased from about four to over twenty; (4) a system of travelling libraries has been established consisting of 106 libraries, which last year reached 177 different communities, and had a total circulation of 32,780 volumes.

STUDIES IN HISTORY.

English Local Government from the Revolution to the Municipal Corporations Act: The Parish and the County. By Sidney and Beatrice Webb. New York: Longmans, Green & Co. $4.

The English poor law system, whose beginning dates back to the reign of Queen Elizabeth, was radically reformed in 1834. Most, though not quite all, of the old municipal corporations, many of which long antedated the poor law, were reformed in 1835. In 1888 a Tory Government, quickened to action by the inclusion in its ranks of the Liberal-Unionists, reformed local government in the counties, deprived the nominated magistrates assembled in quarter-sessions of the powers which at least since the fifteenth century they had exercised over county administration, and set up county councils elected on a democratic franchise. In 1889 London local government, except as regards the City of London, was similarly reformed. In 1894 another stage was reached and a Liberal Government called into existence parish councils, also popularly elected, to discharge administrative duties in small rural parishes hitherto in the hands of vestries more or less intimately connected with the Established Church. In 1900 vestry government in London, also in some degree even then still interwoven with the parish economy of the Established Church, was abolished; and for the twenty-eight local government areas of the metropolis, municipal councils like those in Provincial England since the Municipal Reform Act of 1835 were created. Thus between 1834 and 1900, with the exception of the City of London, which is to-day still untouched by reform, the entire system of local government in England and Wales—county, municipal, and parochial—was new modelled; and put under control of popularly elected bodies, acting under supervision, more or less close, of the Home Office, the Board of Trade, or the Local Government Board; and through these State departments in London also under some measure of constant supervision by Parliament.

With the exception of the poor law system none of the displaced systems had had adequate treatment from English historical writers until the publication of the first volume of Mr. and Mrs. Sidney Webb's "English Local Government from the Revolution to the Municipal Corporations Act." Gneist and Redlich had dealt with sub-departments of the subject; and there are a few monographs covering particular phases, such as the police and the management of highways. But with these exceptions hitherto the chief, if not the only, sources of information have been reports of Royal Commissions or Parliamentary committees, issued as Blue Books preliminary to reforms; and for the eighteenth century, before the days of Royal Commissions and Blue Books, the committee reports and the petitions, which were then entered in full on the journals of the two Houses of Parliament. The lack of an authoritative and comprehensive history of English local government is now to be most adequately filled; for Mr. and Mrs. Webb have planned their work in five or six volumes. The first runs to 664 pages; but the subject is so exhaustively treated, and every statement is so fully supported by footnotes, that only two areas of local government—the parish and the county—are covered. Even here the history is not carried further back than 1689; and in each case the story ends with 1835.

The Revolution of 1689 is a good starting point, for the reason that after the Restoration all oversight by the central government had come to an end; and from that time until the Board of Poor Commissioners—now the Local Government Board—was created as part of the reform of the poor law system in 1834, municipal corporations, magistrates, and other officials who were entrusted with town, county, and parish government, were freer from supervision than at any other period in the history of English local government. The Home Office was the only State Department which, during these 146 years, troubled itself in the least with local government, and what may be described as the police laws were the only matters of which it took some spasmodic concern. The Government—that is the Cabinet and the Parliamentary majority which supported it—seldom evinced the least interest in local government.

With great fulness of detail, all supported by authorities unearthed during eight years of investigation of parochial and county records, Mr. and Mrs. Webb describe the organization of parish and county government in 1689, explain its working, and trace the changes. Each type of parochial government—the open vestry, which comes nearest to the New England town meeting, and the close vestry—is carefully examined, and the success or failure of each is interestingly traced. Except in London, the vestries were neither so corrupt nor so incapable as might have been expected, in view of their constitutions, the absence of any continuous supervision from the central government, and in view of the changing social, economic, and industrial conditions of the century and a half under review. One fact which Mr. and Mrs. Webb's study brings out is that zeal for the public service, which is so characteristic of English public life to-day, is comparatively new.

In what is now the metropolis, outside the city of London, vestry rule was most obviously a failure. The vestry system became utterly inadequate to the needs of the enormous and constantly growing populations, and there was much maladministration. In some of them there was "boss" rule, with all the sordid and squalid characteristics which are associated with "boss" rule in American municipalities. Tammany never produced a worse "boss" than Joseph Mereeron, who, from 1787 to 1837, was in almost absolute control of the great parish of Bethnal Green, and who, Tammany-like, extended his sphere of influence, and was associated with a group of corrupt magistrates of the urban areas of the County of Middlesex. These magistrates made the licensing system, the administration of the police laws in regard to houses of ill-fame, county contracts, county balances, and official patronage, a continuous source of graft.

The nature of the work precludes any attempt at literary finish. Quotations from manuscript records, and from the contemporary literature of the subject, necessarily bulk large in text and footnotes. But the narrative flows easily; and, as new light is thrown at every turn on old and hitherto unexplored institutions, no student of English government will assert that the subject has been too exhaustively handled.

Men and Women of the French Revolution. By Philip Gibbs. Illustrated with twenty-eight plates reproduced from contemporary prints. Philadelphia: J. B. Lippincott Company.

This is an interesting volume; fascinating would not be too extravagant a term to apply to it, at least in parts. It cannot profess to be a serious contribution to the history of the French Revolution, has neither footnote nor reference, exhibits no knowledge of the researches of Aulard, Biré, Sorel, Duruy, Wallon, and hundreds of other scholars, who have upset our old ideas on a number of questions, and it gives the author's reading of disputable points (and they are countless) dogmatically. He does not show even any very profound acquaintance with the writings, journals, pamphlets, and official correspondence published during the first half of the last century, and, as far as we can gather from the text, he has read only the memoirs of the Prince de Ligne, Gouverneur Morris, Mme. Roland, and perhaps half a dozen others, and has left unread a good many much more germane to his purpose. On the other hand, the events of the period, both social and political, are shown forth in a fresh and attractive setting, its tragical and pathetic incidents are narrated with contagious emotion. Indeed, the book, though somewhat grandiose in style, is just the sort to spur on an indolent reader to make the acquaintance of other, and possibly more accurate, works on the French Revolution.

But the inaccuracies are manifold and distressing, and not the less so that, in some cases, they seem to be the result of pure carelessness. We read at page 45: "He [Voltaire] from his exile at Cirey, in Switzerland, was the master-mind of intellectual France." Mr. Gibbs was, of course, thinking of Ferney, for, in a later part of the work, he gives Cirey correctly as in Champagne; besides, Ferney was not in Switzerland, either, but on the French border. Still, the account of Voltaire and of his influence on events will be read with pleasure, even by those who recall Macaulay's fine essay. The following passage will give a fair idea of Mr. Gibbs's way of putting things:

> There was one man not in Paris—exiled indeed from France—who did not sit at that table [Baron d'Holbach's], but whose ghost was always there grinning over the shoulders of the guests, and animating them to their wildest words. It was the ghost of an old man with a death's-head face, the pallid skin drawn tightly over the cheek-bones, the sunken eyes gleaming from their sockets with the fire of a sardonic humor. It was François Arouet, called Voltaire . . .

the caricaturist of life's ironies. . . . It is amazing now, in the light of after events, that Royalists and nobles should have gone to Cirey [Ferney], as to the shrine of a saint, to hear that withered old man philosophize, with his queer perpetual grin, over the evils of their own class; that they should have kissed his withered hand and shed tears of emotion as he lay back in his tuh-like chair denouncing and satirizing a society of which they were the representatives, and destroying with his light, subtle irony beliefs which, if they were no longer believed, would drag these people to the dust.

Mr. Gibbs's portrayal of Mirabeau is vigorous, full of life and color, and more convincing psychologically, perhaps, than that of Carlyle. As a pendant, he presents a small vignette of Mirabeau's antagonist, Maury. And here, too, the demon of inaccuracy lies in wait for him: "After the Revolution, when the forces of reaction were triumphant, he obtained his reward by becoming archbishop and cardinal." When the forces of reaction were triumphant, Maury's reward was to find himself a prisoner in the Castle of St. Angelo, after scurrying out of France with the utmost dispatch. He was made cardinal and archbishop *in partibus*, but it was during the Terror. His appointment to the archbishopric of Paris by Napoleon, in spite of the Pope, was the occasion, or rather consequence, of the only pun the Gallic Cæsar is ever known to have made. At first, he insisted on his uncle, Cardinal Fesch, accepting the dignity. "Never, sire, without the Pope's institution," was the answer; "*Potius mori!*" "'*Potius* Maury?'" repeated Napoleon. "Then Maury it shall be."

Mr. Gibbs would have delighted Dr. Johnson; where he hates, he hates. He applies the lash to Bailly, Lafayette, Necker, and poor Madame de Staël. Cardinal de Rohan, Égalité, and some other disreputable people whom he describes, were bad enough, in all conscience; but he darkens the picture so deeply that we can scarcely discern the outlines; while he writes sympathetically of persons who were quite as bad, and, in a few cases, much worse. He draws an affecting picture of the love-making of Marat. His description of Camille Desmoulins is eloquent and dramatic; but he does not succeed in proving that the Attorney of the Guillotine was anything but a poor, hysterical creature, after all. It is a matter of personal liking or disliking; there is no holding the scales of even-handed justice. Indeed, he has all the merits and the defects of the romantic, as opposed to the scientific, historian.

CURRENT FICTION.

A Sovereign Remedy. By Flora Annie Steel. New York: Doubleday, Page & Co.

Mrs. Steel's new story—to borrow a term from the theatre—calls for thirty-eight speaking parts, not to mention strikers, carousers, villagers, revivalists, motors, chauffeurs, and general chorus. It contains eight deaths (chiefly sudden or violent), a hotel fire, a shipwreck, a strike, a crystal-gazer, a young lady who had grown up in the British Isles without ever seeing a coin of the realm; and two strange young gentlemen cyclers who, colliding on a Welsh mountain, discover that they bear the same name. The pair further discover that while "Ned" is striving honorably to divest himself of a huge fortune, "Ted" inclines to look upon a bank account with the covetous eyes of non-possession. By way of convincing Ted that money is nothing, Ned (who is an hereditary lord) proceeds to toss a handful of sovereigns into a neighboring pool. By this symptom you at once recognize the true modern idealist. There is also an old gentleman who makes you think of William Godwin, merely, perhaps, from his power of boring; there is a general arraignment of the whole construction of human society; there is a great deal of beautiful scenery. Lavishness, in fact, is the note of the whole story. Let no one attribute the color and movement of Mrs. Steel's earlier books to the purely external inspiration of East Indian subjects. "A Sovereign Remedy," which deals with quiet Welsh villages and a minor manufacturing town, has full as much incident as "The Face of the Waters." She can be just as eventful out of her own imagination, as when she has the whole Indian Mutiny to draw upon. Only, in this case, the effect on the reader is not unlike that of those terrible hotel menus "American plan," comprising the foodstuffs of the entire universe under one day's dinner, which bewilder you into longing for a discriminating and thrifty table d'hôte. For instance, the episode of Gwen, Mervyn, Myfanwy Jones, Alicia, Hwfa Williams, and the whole Welsh revival is matter in itself for a complete novel. As for Aura—the girl who prettily feeds a gold coin to her cockatoo—she fairly overtops the romantic heroines of Scudéry herself. Those exquisite creatures, while driving away their favored admirers with tragic outeries, usually had a sub-conscious idea of later reconsidering their suits. Aura, from an uncommonly fine-drawn piece of sensibility, not only rejects a highly eligible suitor whom she prefers, but on the same day accepts his rival. As far as can be discovered, she is guided by a pure and selfless intuition that the maternal instinct will find freer scope when the husband is not too distractingly adorable.

In outline, this last touch has a very modern air. Suffice to say that over the thin ice of a distressing and vital problem Mrs. Steel glides with all the lightness in the world; so lightly as to leave you rather indignantly asking why she did not either Ibsenesquely face it, after the manner of Miss Elizabeth Robbins, or leave it alone, like the ladylike, practised, old-fashioned novelist that she is.

The Diamond Ship. By Max Pemberton. New York: D. Appleton & Co.

Another machine-made yarn of crime and alleged mystery. The Diamond Ship is a huge floating repository of the booty collected by an organized band of jewel-thieves. Their leader employs the methods of a captain of industry, and his operations are conducted upon a vast scale. This we take to be according to approved modern usage. Dick Turpin is dead and buried, and his simple ways with him. The murder of a single person may still serve respectably the purposes of detective fiction, but there is no longer much to be hoped for from the theft of a single diamond. Our up-and-coming thief has an army in his employ, and makes use of the latest corporation methods. Naturally, our accomplished detective must discard his revolver and microscope in favor of searchlight and rapid-fire gun. By way of indemnification we must apparently yield him something in the way of probability. The Diamond Ship, though of strange appearance and long in commission, has never been sighted by any other craft, naval or otherwise. Dr. Ean Fabos not only divines its existence, but, having given himself the tip, makes his way to it without delay or difficulty. He is not permitted to take possession of it until he has run dutifully through a number of elaborate, if flimsy, adventures. In these adventures the usually helpless maiden is involved. We are not sorry when the time comes for her to take the bold doctor off our hands in the usual way.

Truthful Jane. By Florence Morse Kingsley. New York: D. Appleton & Co.

It is pleasant to come upon fiction which, whatever its order, is evidently what its author intended it to be. "Truthful Jane" is not a remarkably good story, but it has a certain modest integrity which places it above the ruck of petty inventions. A tale of simple sooth to please such knitters in the sun as are loath to have their peace invaded by the sombre, the ingenious, or (to do them justice) the silly.

Elias, Jahve, und Baal. Von Professor H. Gunkel. Tübingen: J. C. B. Mohr.

No figure of Biblical history stands out more grandly than that of Elijah the Tishbite, and none of the heroes of the Bible has left a more powerful impression upon the imagination of succeeding generations. The son of Sirach sang of the "prophet of fire, whose words burned like glowing coals"; the Old Testament closes with a prophecy of his return to earth; mediæval legend recounts his conflict with the Antichrist; and it is said that the traveller in the Arabian peninsula may yet hear stories of Elijah which have never been reduced to writing. The chapters in the books of Kings in which the tales of Elijah's prowess are recounted are among the most interesting in the Bible, and their power and beauty are not more felt by the child than they are admired by the student. Critical study of these narratives has not been wanting, but for the most part it has been partial and fragmentary, and not in a form to come to wide notice. Appreciation of the literary prophets is, of course, more easy and leads to more certain results, and accordingly books on Isaiah and Amos have multiplied; while monographs on Elijah have been allowed to become hopelessly out of date; and for opinion concerning him one is obliged to seek out incidental references in Old Testament histories and theologies. The articles in both the well-known Biblical encyclopædias are inadequate.

The brief essay of Professor Gunkel supplies at last a worthy critical and literary estimate of the Biblical material concerning Elijah, and also a clear portrayal of the great prophet's work and his service to Israelitish religion. One is compelled to

admire the skill with which the Berlin professor orders his material, the cogency with which he presents his opinions, and the sympathy and fineness of feeling manifest in his estimate of literary qualities. In a group of German students who were talking of Gunkel in a university corridor one declared, "Er hat *mich* nicht begeistert!" but the speaker set himself down thereby as an altogether exceptional person. The same power of awaking enthusiasm which characterizes Gunkel's lectures is evident in the flowing pages of his study of Elijah.

The presence of legendary material in this portion of the Old Testament is evident to nearly all thoughtful readers. Professor Gunkel shows clearly that the accounts of Elijah's deeds cannot be regarded as historical, and his exhibition of the distinctive differences between history and legend, and the grounds which compel the classification of the chapters on Elijah under the latter head, is of much force. But he is not a writer who dismisses an ancient story lightly as soon as he can dub it a legend. On the contrary, he is persuaded that legends have a value all their own, greater often than that of history; and that much valuable historical material may be deduced from them. The legend is a folk creation. In it popular imagination and feeling have had full sway, and it testifies, therefore, to the beliefs and aspirations of the masses of the people more fully and truthfully than do the ancient histories of kings and their wars. The author of this essay on Elijah has used the legends which gathered around his hero to present a picture of the popular piety in northern Israel in the ninth century before Christ, and the result is most interesting.

Professor Gunkel's estimate of the character of Elijah is not essentially different from the popular impression. Despite the word "legend" over the account of the ravens and the widow's cruse, and even over the narratives of the slaughter of the priests of Baal and the flight to Horeb, the critic has in reality the same conception of Elijah as is found on the cards given to Sunday-school children. Shall we say, then, that there is no profit in criticism? By no means, for the critic has an understanding of the work of the prophet and his mission to his time which is lacking in the popular conception. Elijah in the Sunday-school is a Christian, who happened to live in the times of Jezebel. But to the historian of the Hebrew religion he is the hero who saved the God of Moses and kept a nation true to its ancestral faith. At a turning point in the national life, his zeal for the old and simple ways and for the national God was a towering and beneficent force. To the modern man the saint who was fed by ravens is a dim and doubtful figure, but the prophet who would stand for no "limping on both knees," is a real man.

Professor Gunkel has written a most fascinating book in a very important, and somewhat neglected, field of Old Testament research. The volume is unpretentious, but it will be consulted gladly by scholars, while for laymen who read German a better example of the output of modern critical scholarship could hardly be found.

Court Life in the Dutch Republic (1638-1689). By the Baroness Suzette van Zuylen van Nyevelt. New York: E. P. Dutton & Co. $4 net.

The Baroness van Nyevelt inspires confidence at once by her familiarity with Fruin, the greatest of all Dutch historical critics, and with Professor Blok, his pupil, the historian. Her word pictures are of an age of exaggerated etiquette, when Church and State were in close alliance and also in perpetual friction. She reveals the foibles as well as the grand characteristics of holders of the helm of a state contemptible in size but potent in influence.

The chief characters in the first act of her drama are Amelia van Solms, one of the great and good women of the House of Orange, and her daughter-in-law, sister of Charles II. of England, and mother of the stadtholder, King William III., with various other notable women, famous for fascination, mischief-making, or womanly vigor and charm. Prince Frederick Henry and his grandson William, who foiled the schemes of Louis XIV., are the prominent male characters. Not a few diplomatists, burgomasters, and public men are drawn to the life. In cases of subjective doubt, the baroness relies upon Fruin's well-nigh infallible judgments. The narrative fitly opens with a description of the visit of Mary de Medicis, the widow of Henry IV. of France, to the Netherlands in 1638. Driven from France by Richelieu, after seven years of exile at Brussels she appealed to his allies, the Dutch States-General, in order to obtain her return to France. At Amsterdam "the Star of the Medicis" was welcomed with the peal of bells, the firing of guns, twenty companies of militia, and the escort of a brilliant bodyguard of young men of wealth, who kept horses "as an honest exercise for body and mind." The festivities on the water were as wonderful as the brilliant pageants on land. In the negotiations which followed, the idea of a marriage between the son of the Prince of Orange and the eldest daughter of Charles I. of England was first suggested. As the ex-Queen Mary was on the point of leaving for England, she engaged to act as intermediary in this important and delicate affair. Thus began the train of influences which, for the weal or the woe of the nations, drew the two governments of Holland and England into close relations. Succeeding chapters tell of the youthful suitor, William II., and of the little Princess Mary, who came under the care of her mother, Queen Henrietta Maria. The third part of the book is devoted to William III. and his marriage and life with Mary, daughter of James II. of England. Here the author shows familiarity with the best results of recent historical investigation. The narrative closes when Mary leaves Holland for England, never to return.

The real value of this excellent book, illustrated and indexed as it is, consists in its descriptions, rich in coloring, of the social life of the period, the Dutch golden era. We have family life in the upper classes, religious influences, literature and art, society and diplomacy. The bitterness between the Orangeists and anti-Orangeists, the strife of parties, the cumbrousness of the Dutch system of government, are all sympathetically explained.

The Law of Contract. By Sir William R. Anson. Second American copyright edition. Edited by Ernest W. Huffcut. New York: Oxford University Press.

Sir William Anson's text has been so popular in England that it has run through eleven editions—a result largely due to convenience of size. In scholarship the book marked no material advance, for it was preceded by the works of Leake and Sir Frederick Pollock. Since the first edition appeared, in 1879, there has been much scholarly discussion; but as the author has meanwhile been engaged upon other matters, it is not surprising that the text of the successive editions has failed to keep pace with the advance of scholarship. Even in the latest edition, the text quotes (p. 100), without objection, the faulty definition of *consideration* as either *benefit* or *detriment*, although the author now appends a better definition of his own. Still worse, the text continues to discourage clearness of thought in a manner for which this author is principally responsible; namely, by treating under the head of "reality of consent" (p. 162) some matters which render the contract not non-existent, but merely subject to an affirmative defence. Further, one still finds the scanty and unscholarly chapters on Agency—chapters not nearly as good as the book's own average. These are almost random instances of the necessity for thorough revision. Some of the defects of the text are rendered harmless by the work of the American editor; but the disease is so deep-seated that a perfect cure cannot be expected from any editor, and certainly cannot be afforded by an editor who says (p. 4) that "conveyances, grants, and gifts are conveniently spoken of as contracts."

Drama.

Ibsen: The Man, His Art and His Significance. Haldane Macfall. New York and San Francisco: Morgan Shepard Co. $1.50 net.

This book, the latest contribution to the growing body of literature about Ibsen, is a curious compound of indiscriminating eulogy and sound criticism. In his laudation of Ibsen as a dramatist and poet, and in his estimate of the revolution effected by his works, Mr. Macfall ranges himself among the most ecstatic and least judicious worshippers of the illustrious Norwegian, but in the consideration of his moral, social, and political theories he often exhibits refreshing sanity. Mr. Macfall sees clearly enough the egregious fallacy involved in Ibsen's ideal of a nation composed entirely of free and independent wills—a democracy of conflicting egotisms—and the utter illogicality and unfairness which he often exhibits when dealing with the relations of the sexes. What he fails to discern, apparently, is that the significance of the purely social and political plays must

be greatly impaired by the fact that they are based upon radically false premises.

So far as the life and personality of Ibsen are concerned, Mr. Macfall seems to have been entirely dependent upon the details given by Jaeger, Archer, Gosse, and others, and Ibsen's own published correspondence. His book, therefore, will have no biographical interest except for those unfamiliar with the subject. For them it provides a convenient and fairly full narrative. It not only gives synopses of all the plays in their order, but also furnishes explanations of their motives, intent, and symbolism, which, if they are not authoritative—and it must be remembered that Ibsen himself (though nobody believed him) repeatedly and vehemently protested that there was nothing allegorical about his plays—are at least interesting. Everybody, of course, is at liberty to supply his own interpretation.

Mr. Macfall is of those who hold that "Brand" illustrates the folly of trying to put an ideal pietism into practice amid the stern realities of life. In that case Ibsen must have wished to demonstrate the practical absurdity of the doctrine which he preached his whole life long. According to this, if Brand was an evangelical fanatic, it was his plain duty to be "his individual self" in spite of all. The clue to the real moral—if there be one—lies perhaps in the last words of the tragedy, "He is deus caritatis." Are these a cynical fling at the golden rule or an intimation that Brand perished because there was no love in his colossal egotism? At all events "Brand" is a superb poem and a trenchant satire. Peer Gynt, of course—we have Ibsen's own word for it—is Brand's antithesis. He is an incarnation of the lusts of the flesh, as the other was a spiritual zealot. Each was thorough in his way, while Julian the apostate ("Emperor and Galilean") was neither one thing nor the other. Perhaps, as Mr. Macfall argues, the plays were intended to form a trilogy, but the point is not of much importance.

The later prose pieces, with two or three exceptions, may be taken at their face value, and this is not particularly enhanced by the wider applications which Mr. Macfall, with other commentators, attributes to them. This process can be employed upon any play that ever was written, inasmuch as any individual may be held to represent a class. Only devout Ibsenians will deem the encomiums which Mr. Macfall lavishes upon the plays wholly justified. Some of them even would hesitate at the epithet "sublime," which he uses rather freely. That Ibsen is a master mechanic, a wonderful observer, a most powerful satirist, and an expert analyst of the meaner human motives no competent judge would dream of denying. But something more than mere craftsmanship, biting cynicism, and fearless plain speaking is needed to make a great drama. Nobility of thought, freshness of imagination, and above all things essential truth are indispensable.

Having proved his capabilities as a dramatist by the adaptation of his own novel, "The Morals of Marcus Ordeyne," William J. Locke has now written an original comedy. The new piece bears the title of "The Palace of Puck," but the story is entirely modern. The play has been acquired by Frederick Harrison for production at the London Haymarket. "The Morals of Marcus" will be produced by Charles Frohman in New York next season.

Word comes from Paris that William Busnach is dead. For long years he was the unique adapter of romances to the stage, his infinite jest and excellent fancy making even the bitterness of Zola's "Assommoir" pass with the public. He had tried his hand at Balzac, he had collaborated with Maupassant. Where the theatre is a branch of literature he had an honorable place, enduring, if not immortal.

Music.

Die Musik in Böhmen. Von Richard Batka. Berlin: Bard, Marquardt & Co.

Bohemian music is a subject of special interest to Americans, because the greatest of the Bohemian masters, Antonin Dvorák, wrote his best works during his three-years' sojourn in New York as director of the National Conservatory. In Dr. Batka's little monograph we discover the reasons why Bohemia had come to be regarded, by the eighteenth century, as a musical training school for all Europe. Six centuries ago Bohemian fiddlers and flute players were already famed in other countries. In the days of Karl IV., Prague was the gayest of European capitals, a paradise for musicians. A reaction came with the Hussites, who tolerated religious hymns, but tabooed all instruments, in some cases even the organ; wherefore the Church gradually lost its commanding position, and the development of the nation's music became chiefly secular. The village schoolmasters were indefatigable in teaching their pupils how to play. Students formed bands and played marches, dances, and more serious works, partly for their own delight, partly to earn a living; Gluck, as a student at Prague, was a member of one of these bands. But the strongest impulse came from the aristocracy. Every nobleman of means had his domestic orchestra, made up chiefly of his servants—no one could wear the livery in those days unless he could play some instrument. It was therefore no poetic license on Wagner's part when he spoke, in one of his novelettes, of a band of Bohemian musicians on a country road playing, for their own delectation, Beethoven's septet, "with a precision and a depth of feeling rarely equalled by a trained virtuoso."

Yet, with all this musical atmosphere and enthusiasm, the Bohemians seemed to lack the gift of creativeness, at least in the sphere of art-music. One day, at Liszt's house in Weimar, Herbeck expressed the current opinion that, after all, the Bohemians were only reproductive musicians. A Bohemian happened to hear this, and he promptly vowed to himself to remove this reproach from his country if he could. This man was Friedrich Smetana, of whose struggles to fulfil his vow Dr. Batka gives a touching account. He was self-taught; but that, perhaps, was no impediment to one in whom the musical faculty was so strongly developed that he could copy from memory what he heard a band play, and then arrange it for four strings—a useful faculty to one who was too poor to buy music. His countrymen took so little notice of his efforts in behalf of a national art that he was more than once on the verge of committing suicide. He sought consolation with the Schumanns, Robert and Clara, who treated him curtly. Liszt alone lent a helping hand, and thus it came about that Smetana became the Bohemian Liszt, so far as the writing of symphonic poems is concerned.

Dvorák, too, became a follower of Liszt and a writer of symphonic poems, but not till towards the end of his career. And this conversion was made in America Brahms had first discovered the genius of Dvorák (whose melodic gift he often confessed he envied), and he wished to make him one of his fold. Dvorák did, for a number of years, devote himself chiefly to absolute music—symphonies and quartets—but while he was in New York he became an intimate friend of Anton Seidl, under whose influence he became a Liszt and Wagner enthusiast.

As a matter of course, Dr. Batka devotes some pages to the famous folk-music of Bohemia, which so strongly influenced both Smetana and Dvorák. He points out that not all of these tunes are purely Czechish; some are obviously Italian operatic airs, transplanted from the theatre to the street. Others, he maintains, are echoes of melodies in the symphonies and sonatas of Haydn and Mozart. The reasoning, however, by which he arrives at this latter conclusion is not above criticism. The instrumental character of the melodies in question, he argues, precludes the idea that it was the composers who borrowed them from the folk-song. But folk-song elsewhere (noticeably in the neighboring Poland) is instrumental in character, having been modified by the peculiarities and tonal limitations of the favorite instruments.

Jeremiads innumerable have been written about the degeneracy of the operetta into musical farce and vaudeville. A few weeks ago, Reginald de Koven's "Student King" was brought out at the Garden Theatre, heralded as a return to the good old comic opera type. It proved, however, too dull to do much good. Its successor at the same theatre, "The Little Michus," is, on the other hand, a musical play which may be ranked with the masterworks of Gilbert and Sullivan, Strauss, and Suppé. The plot may not be novel in its central idea, but its development leads to many new and amusing situations, which are made the most of by the members of the cast, notably, George Graves, who takes rank at once with our most popular musical comedians. The score is by one of France's leading composers, André Messager, who has the gift of writing music which is at once pleasing to the untutored public and the educated listener.

Wassily Safonoff will conduct at the next Philharmonic concerts (Friday afternoon and Saturday evening) the ninth symphony of Schubert and the "Francesca da Rimini" fantasy of Tchaikovsky. The Schubert and Tchaikovsky numbers will be separated by Victor Herbert's violoncello concerto, which will be played by the Belgian, Miss Elsa Ruegger.

Art.

"THE INTERNATIONAL."

LONDON, January 20.

The International is the one society which gives an important show of modern work in London. The aims of Whistler, the Society's first president, were as broad as those of the Academy are narrow. The annual exhibition, he said, was to he an Art Congress, a name still retained on the cover of the catalogue; it was to represent not one, hut all schools, all countries. This was a new departure, indeed, in a land where an Academy, that is supposed to set the artistic standard, has no use for the foreigner, except occasionally to strengthen and hold up its palsied hands. And the second condition was that work once admitted must be treated and shown, not anyhow as if the gallery were an auction room, hut with the care and respect it deserved.

The Society has, up to the present, managed to ohserve these conditions with a success really astounding. But this year, in the exhihition at the New Gallery, it must be confessed there are many signs of falling away from Whistler's ideal. In the first place, the "Art Congress" has dwindled from Whistler's hig conception, and for the first time has composed itself of its own memhers—a fatal hlunder. In the second place, the arrangement of the galleries is not so careful as usual. The Sculpture hall has suffered less, and is again the heautiful white court it has been since the Society moved into the New Gallery, though the work itself, as a collection, has hefore now heen much finer.

When it comes to the work exhibited, the Society is proved, even under these changed conditions, still international in something more than name. The exhihiting may be restricted to members, hut American, French, Spanish, Dutch, German, Belgian, and Russian, as well as British artists, are represented. Much of the work that comes from abroad you may not like, but at least it has vigor. This is why two men like the Spaniards Zuloaga and Anglada simply overshadow every picture that hangs near theirs—they have power, they have individuality, though you may think the former wasted and the individuality unpleasant. Zuloaga keeps to the now familiar types, to the same coloring, except that in one picture a yellow-haired girl now appears. He is mannered heyond helief; his pictures may at times suggest a study of Velasquez, at others a closer knowledge of Goya. But he is always Zuloaga. Anglada's color scheme, this time called Pomegranates, is, as color, extraordinary. What it is all ahout does not matter. I can see the great mass of the fruit that gives the picture its title, I can see that there are figures of women, and a white horse, but I do not believe Anglada himself knew what they meant: he was no doubt satisfied, as I am, if they helped him to get the heautiful color which was his object.

It is the same with almost all the foreign members. Widely as they may differ in methods and aims, they are alike in deliherately using their own eyes. I have seen finer examples of Besnard and Aman-Jean, of Boldini and Blanche, of Franz Stuck and Miss Cecilia Beaux. But there is not a portrait hy one of these artists that is not full of ohservation, that is not technically accomplished, that does not endeavor to assert the painter's individuality. It is the same with the landscapes. You feel that Cottet has looked for himself upon the stern town of Avila; that Claus and Buysse have discovered their effects of sunlight and atmosphere for themselves; that Baertson has heen dazzled by just such a vivid passage of red on the roofs of Ghent in the light of the setting sun. And so again, you find readiness and ahility to face fresh prohlems in the work of the German Sauter as in that of the Frenchman Louis Legrand, who hoth, each after his very different manner, have been ahsorbed in the study, the analysis of the quality of light. You find it in Bauer's romantic impressions of Spain, in Kuehl's German harhors and rivers, even in the curiously murky pictures—an Archer, and Christ and Peter—that Hans Thana this year has sent.

I have not exaggerated in saying that the British pictures cannot stand the test of comparison with the work from abroad. Let me take, to explain what I mean, a picture that, in size and suhject, is one of the most ambitious—The Golden Age, hy C. H. Shannon. He has never done anything on so large a scale, or so elahorate in composition as this huge green landscape, with its group of nude figures in the foreground. Conscientious, painstaking toil has gone to the making of the picture; neither inspiration nor vitality. Place one of Zuloaga's ladies in the centre of the composition, and the nudes would dwindle into mere spaces of not particularly pleasant color; horrow a gleam of light from Baertson, and the green landscape would he no more real than the trees and flowers of the old-fashioned sampler. Mr. Strang's Al Fresco and Playtimes are so clumsily reminiscent of the Venetians that you can only wonder why a man who, whatever his qualities, cannot count among them refinement or grace or gorgeous color, should have so hetrayed himself. And on all sides you are faced hy these mistaken—or worse—reëchoes of other men and other days. The portraits are unusually lacking in interest. There is really only one with genuine distinction and any individuality whatever. This is Mr. Nicholson's Miss Alexander. He has made his composition hoth daring and amusing. The lady, in riding hahit, is seated low on the canvas, and the entire hackground heyond her is filled with an equestrian portrait. But Mr. Nicholson cannot quite forget his color prints, and the arrangement would he more appropriate to a wood hlock than to canvas; the picture is flat. These are the defects. But Mr. Nicholson is not forever copying or reechoing somehody else. Of the British landscapes there is less to he said. Not one of great merit or ambition stands out from the rest. A few are pleasant and peaceful. Mr. Pryde's are more than this, for he adds an artificial elegance that, if ohvious, is not ineffective.

The hlack-and-white has heen selected more intelligently, hut up till now, when possible, the work of one man was grouped together—and it is only by this grouping that small drawings and prints will tell in a big exhibition. Now the work is scattered. Prominence, moreover, has been given to drawings that are nothing more than the studies you might see in any artist's studio or the painter's notes for his pictures: interesting, it is true, when they come from an artist of distinction like Puvis de Chavannes, though even his Étude pour le Travail for the Amiens decorations seems out of place in an exhihition of this kind. But when the sketches and memoranda are hy men who are not great, to display them with every possible honor hecomes simply ridiculous. To he sure, there is a charcoal drawing of Old Battersea Bridge hy Whistler. Grouped around the Whistler, or scattered throughout the room and in the halcony, is much of importance and interest: etchings hy Max Klinger, who, however, has let subjects engross him until in some of his plates it seems almost as if he had used his needle for no other purpose than to tell a story; lithographs hy C. H. Shannon; wood engravings hy Timothy Cole and Henry Wolf; aquatints of London hy Mr. Pennell; watercolors of hirds by Mr. Crawhall; prints of various kinds by Louis Legrand; etchings hy Baertson; lithographs hy Hans Thoma and Storm van 'sGravesande; drawings for illustration hy Miss Elizaheth Shippen Green, who has recently heen made a memher of the Society. But, with all this material, the mistake has heen not to use it in the sympathetic manner which once made the black-and-white room at the International crowded with people who, for the first time, hegan to understand that hlack-and-white could he, and is, as serious and delightful a hranch of art as any other.

I need not say much of the sculptures. M. Rodin shows only two husts, one in hronze of Bernard Shaw, one in marble of Lord H. de W., hoth disappointing, and a little hronze Frère et Sœur, a heautiful group, simple, graceful in line and form. Lamheaux has a huge hronze group, so out of scale in the court that it is difficult to see it, and another of himself, seated, a portrait in which the character he discovered evidently interested him more than the other qualities one looks for in sculpture. A special feature has heen made of the work of Prince Paul Trouhetzkoy; it is clever, hut has not quite the distinction that makes one forget cleverness. The most splendid thing in this section is a votive lamp for the Cathedral at Saragossa hy Harry Wilson. He has made of it a gorgeous arrangement of hronze and silver and enamel worthy of the huilding in which it is to hurn. Nor, though working for the old Cathedral, has Mr. Wilson tried to pose as an old master-craftsman. Nothing could he more original than his design.

N. N.

Since the work of Francesco Botticini has been confused with that of Cosimo Rosselli, Botticelli, and Verrocchio, so protean a painter is fair game for a connoisseur in search of a doctor's degree. The expanded dissertation by Ernst Kühnel, "Francesco Botticini," Heft xlvi. of the series Zur Kunstgeschichte des Auslandes (Strasshurg: Heitz), is a creditahle performance. After the researches of Cavalcaselle, Bode, and Berenson, there remained rather little to do in the strict connoisseurship of the suhject, but Dr.

Kühnel has extended the list to twenty-four works (not including the example in the Holden Collection, Cleveland, nor that recently acquired by John G. Johnson of Philadelphia), and has given a readable account of an artistic career that, beginning with Neri di Bicci, was to end in the *milieu* of Verrocchio and Botticelli. One may note also an interesting digression on the vogue of the subject Tobias and the Archangel Raphael in the second half of the fourteenth century. Various explanations of a sentimental sort have been offered; Dr. Kühnel very reasonably holds that the foundation of Raphael guilds for charity accounts for the case adequately. The writer should also be praised for keeping a clear head on the artistic merit of Botticini. We are not even required to believe that the vastly overrated Tobias with the Three Archangels of the Accademia is a masterpiece. Appended to the text are fifteen heliotype plates containing forty pictures, being a complete graphic compendium of the subject. The monograph gives good promise of the author's course in connoisseurship and criticism.

It is only the extraordinary lack of pictorial achievement by the Jewish race that could make the work of Ephraim Mose Lilien seem worth celebrating as "The New Art of an Ancient People," as M. S. Levussove celebrates it in a thin volume published by B. W. Huebsch. It contains fourteen specimens of the skill of a black and white designer neither more nor less able than many others of the modern German school. A certain racial accent in subject and types, possibly even in imagination, marks the best of these designs, and at times they reach a weird power, but in general they are only not commonplace because the convention in which they are executed is not yet threadbare. When it has become so, it is doubtful if there will be found enough substance in the drawings to make them anything more than examples of a temporary fashion in book-illustration.

L. H. Holden's small gallery of Italian old masters, near Cleveland, O., is so little known to American students of art that a summary, illustrated account of its best pictures, by Mary Logan Berenson, in the *Rassegna d'Arte* for January, deserves notice. Most of the collection was bought from the indefatigable but unfortunate collector, James Jackson Jarves. The Holden pictures number some fifty, the most interesting of which, as attributed by Mrs. Berenson, are an enthroned Madonna with Four Saints, by Lorenzo da San Severino—one of his loveliest works; a Nativity and an Adoration of the Shepherds, of Bramantino's school; a portrait of a man and wife, by G. B. Moroni; two heads by Justus of Ghent from the Urbino series, and finally a Madonna and Child ascribed to Leonardo, with an interesting background depicting the Castello at Milan. This ambitious attribution has been supported by Holman Hunt and Rio; Ambrogio de Predis is Mrs. Berenson's suggestion. In the same number of the *Rassegna*, A. Ratti notes the discovery of a new Petrarch portrait in the Ambrosiana. The tiny panel shows the heads of the Laureate and of Gian Galeozzo Visconti lightly drawn in. Both are much effaced, but time has treated the poet more kindly than the potentate. The work seems hardly contemporary, and the whole criticism of the panel remains to be undertaken. Meanwhile the miniature is artistically superior to all other likenesses of the recluse of Arquà.

The Corcoran Gallery of Art in Washington opens its first annual exhibition of contemporary American oil paintings to-day. The exhibition will continue till March 8. About four hundred canvases have been hung. The prize of $1,000 offered by W. A. Clark of Montana and the Corcoran Gold Medal have been awarded to Willard L. Metcalf for his painting May Night. It is a moonlight picture of a colonial house, in front of which stands a blossoming horse chestnut tree. The Corcoran Silver Medal and the Charles C. Glover prize of $500 go to Frank W. Benson for Against the Sky. It is a picture of a girl standing on a hill, her veil tossed in the breeze, her figure against a background of white clouds and blue sky. The Corcoran Bronze Medal and the V. G. Fischer prize of $250 go to E. W. Redfield for Lowlands of the Delaware—a snow scene, with the sun shining through a group of trees. Among the other paintings are five by John Sargent. The principal one is his portrait group of the four surgeons of Johns Hopkins University, Dr. Osler, Dr. Welch, Dr. Kelly, and Dr. Halstead. Irving Wiles is represented by two portraits. J. W. Alexander's The Butterfly, two canvases by J. Alden Weir, one a landscape and one an ideal head; Childe Hassam's June, Robert Henri's Spanish Dancer, five paintings by Cecilia Beaux, and three by William M. Chase are among the more notable contributions.

The annual exhibition of the Architectural League of New York opened Sunday in the galleries of the American Fine Arts Society. It will continue until February 23.

The American Society of Miniature Painters announces its eighth annual exhibition —April 6 to 30—at the gallery of Knoedler & Co. in this city.

The exhibition of the work of Alfred Stevens will open in April at Brussels. The Royal Society of Fine Arts and the Society of Contemporary Art have undertaken the joint management.

A fairly representative exhibition of the work of Ernest Lawson, who won the Seaman medal for the best landscape at the Pennsylvania Academy, will be open at the New York School of Art until February 9. On the same date an exhibition of water-colors by Walter Launt Palmer will close at Noé's gallery. Portraits by Wilhelm Funk are on exhibition until February 16 at Knoedler & Co.'s gallery. Among the portraits are those of Sir Caspar Purdon Clarke, Richard Watson Gilder, and Gen. Horace Porter. Examples of wood engraving by Timothy Cole will be exhibited at the National Arts Club until February 20.

Conrado Ricci, chairman of the newly organized Central Commission of Antiquities and Fine Arts, has drawn up a scheme for the reform of the art schools of Italy. It is proposed to bring about a closer correlation of the arts, by having all students trained in the technic of painting, sculpture, and minor decoration. At the government schools of Rome and Milan, courses in the care and restoration of pictures will be given in the hope of standardizing the present unscientific and merely personal methods in vogue.

Science.

In March Doubleday, Page & Co. will publish Commander Peary's story of his Arctic expedition, under the title of "Nearest the Pole." There will be an Introduction by President Roosevelt, and illustrations from the collection of 1,200 photographs taken by Commander Peary.

The *National Geographic Magazine* for January opens with a profusely illustrated review of the recent history of aerial locomotion by Dr. Alexander Graham Bell. He believes that "the practicability of aerial flight by man is no longer problematical." He pays a high tribute to the late Professor Langley for placing the subject on a scientific basis and practically originating the art of aerodromics. A bibliography of the principal works and papers on the subject, furnished by the Smithsonian Institution, is appended. In the "New Inland Sea," Arthur P. Davis of the Reclamation Service describes the irrigation works on the Colorado River and the progress of the inundation of the Imperial Valley of California by the break of 1905. A relief map and reproductions of photographs give a graphic representation of the cutting work of the "New River." In a report of the proceedings at the presentation of the Hubbard Medal to Commander Peary are addresses by President Roosevelt and others and Dr. F. A. Cook's story of his ascent of Mount McKinley. There is also given Secretary Root's address before the Trans-Mississippi Commercial Congress on South America.

In Petermann's *Mitteilungen*, number 11, Professor Woeikow of St. Petersburg contributes an interesting study of the distribution of the earth's population under the influence of natural causes and of human activity. It is accompanied by two colored charts, from which we learn that the only place south of the equator in which the density of the population is 150 to the square kilometre is the western half of Java. Dr. Thalbitzer gives an account of his linguistic and ethnographic investigations among the Eskimo of the east coast of Greenland, in which he says that he took 150 phonographic records of native ballads, children's songs, and stories. Among the other subjects treated are the lakes of the Salzkammergut in Austria, and a journey in Tripoli by Hanns Vischer.

The December number of the *Zeitschrift der Gesellschaft für Erdkunde* of Berlin contains an interesting preliminary report by Dr. Hans Steffen of Santiago, Chili, a member of the Chilian commission on the great seismic movement which on August 16, 1906, overwhelmed Valparaiso. According to this report the destruction was confined in the main to the region of the coast Cordillera and the central longitudinal plateau comprised between lat. 31° 40′ and 35° 30′ S.—an area extending approximately 260 miles north and south. No serious destruction was noted beyond the Andean chain in Argentina, although the earth tremors penetrated as far as Buenos Ayres. A safe estimate places the number of killed in Valparaiso at not less than

3,000. Dr. Steffen, while admitting that the cause of the earthquake is still problematical, is inclined to classify it with the so-called tectonic earthquakes. It is significant, however, and with a direct bearing upon the question of the interrelationship of volcanic and seismic phenomena, that at the time of the Valparaiso disturbance the volcano of Chillan, in lat. 36° 45′ S., opened out a new crater, from which steam and ashes began to issue on August 16.

The ever-interesting problem of the rate of recession of the Niagara Falls forms the subject of Bulletin No. 306 of the United States Geological Survey (1907), prepared by G. K. Gilbert, whose work in this field is already well known to geologists. The results presented in this paper are elaborated from a study of the surveys of the crest-line of the river, made in 1842, 1875, 1886, 1890, and 1905, and of camera-lucida sketches made by Basil Hall in 1827. The conclusions reached by Mr. Gilbert are widely divergent from those that have been put forth in most works of geology, and suggest an interesting point in the physics of river erosion—the capacity of an overloaded stream or a stream of large volume to cut a course rapidly through hard rock and the inability of a smaller stream to effect what would appear its proportional amount of excavation. Thus, the Horseshoe Fall, which carries much water, has been receding (or lengthening the Niagara gorge) at an average rate during the last sixty-three years of somewhat more than five feet per annum, whereas the American Fall, which throws but a thin sheet of water over the brink, has been receding, during a period of seventy-eight years, at the average annual rate of less than three inches. In some parts of the American Fall absolutely no changes in contour can be detected in the period from 1855 to 1895. Mr. Gilbert makes no effort to use his data to determine the time required to cut the gorge for the six miles above Lewiston.

In the advance report, just issued, for the year 1906 of the chief of the Biological Survey, Department of Agriculture, one of the most interesting problems is the reduction of the noxious rodents of the West, which work such havoc with the crops. It has been known for a long time that many of the small rodents are subject to epidemics. It was not until recent years that the nature of such epidemics and the possibility of utilizing the bacilli of disease for destroying animal pests have been appreciated. Such diseases appear often to be limited to particular species or to a group of closely related species, and hence are harmless to man and to domestic animals. The bacillus of a disease fatal to one of the above species was discovered some years ago by Prof. C. V. Piper and Dr. S. B. Nelson, then connected with the experiment station at Pullman, Washington; but the work was not completed, owing to lack of the necessary funds. The work has been taken up by the Biological Survey in coöperation with the State experiment station at Pullman, with every promise of successful results. "Confidence is felt that the discovery and isolation of the bacilli responsible for fatal diseases in the case of rabbits, prairie dogs, field mice, and other noxious rodents is entirely practicable."

Reports on late observations of terrestrial magnetism have been made by L. A. Bauer (inspector of magnetic work and chief of division of terrestrial magnetism, assistant, Coast and Geodetic Survey), and they appear as Appendices lii. and iv., 1906, Throughout the year, five magnetic observatories have been in constant operation—in Maryland, in Kansas, at Sitka, near Honolulu, and in Porto Rico. But observation is conducted in addition, in no less than forty-three States and Territories. From tables given the fact appears that the work of the year has been largely in those regions where magnetic data are most needed—west of the Mississippi, and in the Hawaiian Islands. From determinations of the three magnetic elements in many different localities, it has been possible to give a complete account, for the entire United States, of the secular change, and to map out the extent of the reversals noted in the report for last year. Observations at sea, already proved of value, have been continued on ships of the bureau (Commerce and Labor), chiefly the Bache, Patterson, and Explorer. In the Atlantic Ocean, Gulf of Mexico, and the Pacific Ocean, the three magnetic elements were determined at forty-seven different points. Accompanying appendix iv. are an isogonic chart, and secular change tables. So many reliable and well-distributed determinations of the magnetic elements have been made by the Survey within the past seven or eight years, that very accurate magnetic maps of the United States are now possible, and this chart is the first of a new series. The last one, published in 1902, was in such demand that a second edition was required very soon, now nearly exhausted in its turn; so that the new chart is especially welcome. It is made from accurate observations at 3,500 widely distributed points in the United States. Considering the area involved (over 3,000,000 square miles, nearly one-sixteenth of all the land surface of the world), we now possess the most complete magnetic survey of any country.

During the present year but one periodic comet is due to return. This one, discovered by Giacobini at Nice on December 20, 1900, was at that time very faint, with a small, nebulous disk, and no tail. Its elements, calculated by Professor Kreutz, give its period as about seven years. Toward the end, then, of 1907, we may expect to discern once more this cosmic visitor, which passed its perihelion about December 3, 1900.

The New York Academy of Sciences is planning to celebrate the bi-centenary of the birthday of Linnæus, May 23.

The thirty-eighth general meeting of the German Anthropological Society will be held in Cologne in August, 1907. It is proposed that this meeting be constituted an International Congress, and the Cologne Anthropological Society has issued an invitation to persons interested in anthropology and archæology to attend the Congress. It is proposed to arrange a tour of two or three weeks in the Low Countries and France to take place after the Congress. A complete programme will be published soon.

Miss Agnes Mary Clerke, a scientific writer, died in London, January 20, at the age of sixty-four. An "astronomical correspondent," writes to the London *Times*:

During the last century two ladies only were elected honorary members of the Royal Astronomical Society—Caroline Herschel and Mrs. Somerville. The new century soon saw fresh honorary members elected, and among them Miss Agnes Clerke, whose last important work, "Problems in Astrophysics," was of such great scientific value that the Astronomical Society could no longer ignore her claims to public recognition by them.

She was born in Ireland in 1842, resided in Italy 1870 to 1877, and in 1877 began writing for the Edinburgh *Review*. She had travelled widely and had made observations at the Royal Observatory, Cape of Good Hope. Her list of published works includes: "A Popular History of Astronomy During the Nineteenth Century," 1885; "The System of the Stars," 1890; "Familiar Studies in Homer," 1892; "The Herschels and Modern Astronomy," 1895; "Problems in Astrophysics," 1903; "Modern Cosmogonies," 1906; and articles in the "Encyclopædia Britannica" and the "Dictionary of National Biography." In 1893 she was awarded the Actonian prize of one hundred guineas for her works in astronomy. On July 26, 1906, the *Nation* published a note on the second and completely revised edition of her "System of the Stars." The *Nation* reviewer remarked that Miss Clerke thoroughly understood "the work of observatories, their problems, and their methods"; and that a "well-worn copy" of her "Problems of Astrophysics" would be found in every observatory. The correspondent of the *Times*, referred to above, sums up as follows her position as a writer and critic of astronomical research:

Her keen insight into the true significance of observed physical facts was as wonderful as her fluency and command of language, so that both from the literary and scientific standpoints she must be ranked as a great scientific writer.

The death of Dmitri Ivanovitch Mendeléeff last Saturday at St. Petersburg removes the greatest of Russian chemists. Professor Mendeléeff was born at Tobolsk, Siberia, in 1834. At the age of twenty-two he was graduated at the University of St. Petersburg, where he remained as *privat-docent* for three years. He then went to Heidelberg, but returned to the Russian capital in 1861 as professor of chemistry at the Technological Institute, succeeding to the same chair at the university in 1864. His work was both practical and theoretical, and covered a wide field. But he will be remembered chiefly for his formulation of the Periodic Law, which had already been vaguely surmised by other scholars. He discovered that the atomic weight of the elements varies by definite proportions, corresponding to the variation in powers of combination. This theory, plainly valid for certain groups of the elements, has not yet been worked out through the whole system. It is, however, sufficiently practical to have led Mendeléeff, in 1871, to assert the existence of three elements, which were then unknown to experimental chemistry, but which were afterwards discovered and named gallium, scandium, and germanium. His "Principles of Chemistry," published in 1870, has been translated into a number of languages.

Dr. Émile Javal, the eminent specialist on the eye, has just died. Dr. Javal was himself blind for a number of years before

his death, and wrote a book which might be called a kind of *vade mecum* for the blind in the general conduct of life.

Finance.

Credit and Its Uses. By William A. Prendergast. New York: D. Appleton & Co. $1.50 net.

This is the tenth volume in Appleton's Business Series, and is written by a "credit man" familiar with his subject in some of its practical bearings. Unfortunately, the author was not so well equipped to handle the theory of credit, and the result is a work serviceable at some points and altogether unsatisfactory at others.

Part I. deals with the functions and organization of credit. Mr. Prendergast considers it necessary to explain that credit is "one of the elements or branches of political economy" and to preface his volume with a brief disquisition upon the rise and progress of that science. He then assembles various extracts from common economic treatises, and, adding some desultory remarks of his own, offers the resulting mixture as a theory of credit. Incidentally he informs us that the Bank of Amsterdam was established during the Middle Ages (p. 7). The whole discussion should have been radically amended before publication, or should have been omitted. The author has more respect for economic science than familiarity with it, and might well have confined himself to his specialty.

Part II. treats of what Mr. Prendergast calls the "primary divisions of credit," viz., banking credit, capital credit, public credit, individual or personal credit, and commercial credit. The discussion of the last two divisions is reasonably satisfactory; the first three are very poorly handled. A competent "credit man" is not necessarily equipped to write upon banking, corporation securities, and public loans; and our author has not taken the task with sufficient seriousness. From either a theoretical or a practical standpoint, these three chapters are singularly barren, and it is hard to see how they can be of service to student, financier, or investor. That upon public credit, for instance, opens with the observations that the "different races of the earth are represented by many diverse forms of nationhood," that "high credit is indispensable in modern society," and that wherever "there is credit there is debt." It then offers some very general and commonplace considerations about public debts and expenditures, without treating a single topic incisively; and passes on to consider, almost at haphazard, bonds and treasury notes, President Cleveland's bond issues, and State and municipal indebtedness, without giving the least evidence that the author has fairly grappled with his subject. A fair sample of the substance and style of this chapter is the following passage, which contains about all that is said concerning the debts of our American States:

> The diversity of interests, agricultural, mining, manufacturing, and commercial, represented in the States imposes just as important considerations for the judgment of the statesman as do those of the Federal Government. The fact that in all matters of strictly local concern the State has a free hand under the Federal compact, makes the duty of each in advancing its own interests and maintaining its credit just as primal a necessity as if each State were an entirely independent principality and accountable to no one. The credit of the States has been subject to the same curses that have crept into other political organisms, and in some cases these abuses have taken the form of outright repudiation of obligations, from which the creditor is without relief. The national Government is a sovereign one; and in all matters where the Constitution does not define certain rights and duties as belonging exclusively to the Federal Government the sovereignty of the States has not been impaired. This rôle of sovereignty carries with it an element of danger to those who purchase the obligations of a nation or State so conditioned, for it means that they may be at any time repudiated. Venezuela has obligated itself to pay certain sums to England, France, Germany, and Italy, and the customs receipts have been mortgaged as security for the payment of the amounts awarded by the Hague Tribunal. But a war between many nations might bring about a condition of affairs whereby the effects of this decision would be entirely upset. Treaties between nations are binding until they are broken. . . .

How such a paragraph ever slipped by the editorial staff of a responsible publishing house, we find it hard to conjecture.

In Parts III. and IV. the author reaches topics with which he is reasonably familiar, and treats in a competent manner such subjects as credit departments, sources of information concerning the credit of individuals or companies, mercantile agencies, methods of analyzing and safeguarding credits, the credit man, collections, suspended accounts, and the like. He reinforces his discussion helpfully by reproducing copies of many of the forms and instruments employed in credit transactions, and this part of the volume is a convenient repository of information not readily obtainable elsewhere. Part V., in similar fashion, treats of bankruptcy, credit insurance, and various efforts to improve the organization and administration of credit. If the author had confined himself to these aspects of his subject, he would have served his readers well, and given no occasion for serious criticism.

The growth of commercial instruction has created an undoubted demand for books treating of practical business operations, and this opens a legitimate field for publishers' enterprise. Men of practical knowledge are certainly needed for the work; but if they are to produce anything more than technical treatises confined to the narrow fields of their various specialties, they should take their tasks seriously and equip themselves properly for dealing with the broader aspects of their subjects. Your "mere theorist" sometimes makes sad work of practical affairs, but his worst performances are as nothing compared with the havoc that a practical "credit man" can work with a systematic treatise upon credit.

BOOKS OF THE WEEK.

Annual Report of the Board of Regents of the Smithsonian Institute. Washington.
Annual Report of the Light-House Board. Washington.
Babylonian Expedition of the University of Pennsylvania. Edited by H. V. Hilprecht. Vol. XX., Part 1. Philadelphia.
Bacon's Essays. London: Cambridge University Press. Putnams.
Baldwin's Revolutionary Journal. Bangor, Me.
Balzac's Pierrette. Edited by Theodora de Sélincourt. Henry Frowde. 85 cents.
Bancroft, Hubert H. Some Cities and San Francisco. The Bancroft Co.
Beaumont and Fletcher Works. Edited by A. R. Waller. Vol. IV. London: Cambridge University Press. Putnams.

THE BURROWS BROTHERS COMPANY OF CLEVELAND, OHIO
issue monthly, a catalog of rare, scarce and unusual books. They also offer librarians and collectors their fully annotated list of Americana and a specially prepared brochure on American history which tells of the publications issued by them and of those in contemplation. A post-card suggesting that such material would be appreciated will have immediate attention.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 14, 1907.

The Week.

President Roosevelt is reported as ready to fight anybody who urges him to fight Japan. Such an attitude is suggestive of the great responsibility, with the large power, that rests upon any public man who may give a slant to public opinion, for or against war. In this Japanese affair the Administration has shown excellent judgment. Secretary Root has refused to treat the newspaper alarums as anything but a joke. The Secretary of War, far from displaying any desire to pose as an organizer of victory, has said that he would resign rather than have a war at all. And the President has fought almost truculently for peace. The net effect has been to make the whole bent of the nation towards a peaceful settlement of the difficulty. Now, this general inclination for peace is half the battle against war. It is as easy to cultivate a peaceful as a belligerent disposition. Either the Swettenham blunder or the Japanese complication would have sufficed, if the American press had been of the inflammable and warlike temper of 1895 or 1898, to set the country by the ears with England or Japan; but the calm good sense exhibited this year has made it plain even to unscrupulous politicians that they have nothing to gain by yelling for war.

Woodrow Wilson's book on "Congressional Government" brought out the immense power of committees in shaping legislation. What the committee is to the whole House, a skilled and experienced chairman may be to the committee itself. We have probably never had a better illustration of this than in the case of Representative Theodore E. Burton, and the Committee on Rivers and Harbors. His long service and particular competence have given him great weight and authority. This was signalized in the long debate on this year's large bill, authorizing appropriations of over $80,000,000, in the course of which he was not defeated on a single point of any consequence. Nor was this due to want of hot attack. A powerful Congressional combination was formed to force the fourteen-foot Mississippi channel scheme as an amendment, and the champions of the thirty-five-foot channel in the Delaware were almost equally insistent. But Chairman Burton met and vanquished them all. He thus succeeded partly because of his established prestige. The House has learned to have confidence both in his fairness and sound judgment. But Mr. Burton also makes himself a master of his subject. The debate proved, for example, that he had a better grasp of the technical features of the Mississippi improvement than had its stoutest advocates. This was rather amusingly shown when he called upon Representative Bartholdt to name one engineer who did not hold that the fourteen-foot channel would require canalization. After some fumbling, Mr. Bartholdt adduced the "Business Men's League of St. Louis." Mr. Burton naturally laughed.

Perennial hopefulness that the Senate in extra session will be less protection ridden than in regular session, probably accounts for the announcement that Senators will be convened after March 4 to consider a treaty of reciprocity with Germany. That such an agreement is highly desirable, even urgent, cannot be denied. The application of the maximum rates of the new German tariff to our exports was put off for a year expressly with a view to giving this country time to make the requisite concessions on German imports. It is a matter of vital importance to our foreign trade. Of this, our tariff experts returning from Germany are convinced—protectionists that they are. The German Government, after doing so well in the elections, will be less than ever inclined to delay enforcing the higher rates against us. It is, indeed, a business that requireth haste, and the treaty cannot too soon be laid before the Senate. If it is to remain absolutely Bourbon in tariff matters, the country is entitled to know the fact at the earliest day possible.

The project for subsidizing international airship lines, to which Representative John Sharp Williams has given ear, is deserving, so far as we can see, by every test which nowadays is applied to legislation. It will *make work* for Americans, and when a project does that, it does not matter in the least who has to pay for it. Merely to fish the unlucky aeronauts out the Atlantic would require a force of men to which we could point with pride. But the great point is that here we may steal a march on all our rivals. Our ordinary floating marine was destroyed, as we all know, because other countries first hit upon the vitalizing idea of subsidy. The recent subsidy bills in Congress have been merely efforts to recover spilt milk. Why worry about water-ships when airships are soon to displace them? Let us rather take the lead at once in subsidizing airships. Of these, at the expenditure of a few millions a year, we can have the first and the biggest fleet in the world.

An interesting aftermath of last year's interstate commerce agitation, is the campaign for reduction of passenger rates now in progress in several Western and Southern States. From the side of the railroads themselves this is doubtless regarded as merely another manifestation of the unreasoning "hostility" which is crippling and shackling our great business enterprises. But there are aspects of this campaign which go to show the short-sightedness of such a view. We doubt if any unbiassed person can read the reports of debates in the Legislatures of Kansas, Missouri, and other States, or the proceedings before the Wisconsin and other State railroad commissions, without perceiving that there exists a very wide and genuine disposition to do full justice to the railroads, to treat them not only fairly, but generously. We have seen this especially in the proposals to discriminate between lines on the basis of a fair return. The old way of expressing popular wrath against extortion was to pass a law fixing a flat rate and to try to compel all roads under all conditions to conform thereto. In very much that way, the States which first created railroad commissions made it the duty of these bodies to settle all the rates under their jurisdiction at once. Of late, as Prof. Frank Haigh Dixon and others have pointed out, the tendency has been to create rate-making agencies that can allow for diverse and changing conditions. These are being recognized in the present work in actually fixing rates. In both Kansas and Missouri, for instance, the two-cent fare bills now pending give to branch and local lines the right to charge a higher rate per mile than the more important roads. In Wisconsin, where the Commission gave exhaustive hearings to the representatives of the railroads as well as the citizens and organizations urging lower fares, some of the lines made such a convincing demonstration of the fact that a two-cent rate in their cases would be unprofitable, that a recognition of the difference between roads advantageously situated and those which cannot afford to provide two-cent passenger transportation, is thought likely to be a permanent feature of the State's railroad policy.

For all of the month during which Gov. Hughes has now been in office, the politicians at Albany have been narrowly watching him in order to "get a line" on him. He was a new man in politics. How much did he understand of the

game? The great men of the party have stood about the Governor very much with the baffled air of the critics, as Dr. Holmes described them, standing about Emerson—pointer dogs in the presence of an unknown animal. But they, and the people of the State, are beginning to find out what manner of man the new Governor is. Mr. Hughes means to be Governor. With nothing theatric about him, he has made it plain that he is the head of his own Administration. He holds his consultation in the open. Sly party Nicodemuses no longer go to the Executive Chamber by night, or by subterranean passages and the back door. Mr. Hughes has also put it beyond doubt that he intends to strike hard for pure and efficient government. His prompt routing out of petty grafters and incapables from the Capitol is an earnest of the business-like. sense and reforming zeal which he brings to his office. Such an administration is a refreshing novelty in this State. The attitude which Gov. Hughes means to assume towards the Legislature has also been pretty clearly indicated. He said last week: "The time for the Governor to give his opinion of a bill is when it comes before him for either signature or veto." This is a general rule which is not only correct Constitutionally, but one calculated to save the Governor a great deal of time and worry. In the larger matters of constructive legislation, however, it is doubtful if the Governor will be able, or will desire, to maintain entire detachment. On some reform laws for the benefit of the people of the whole State he has set his heart. In their drafting he cannot fail to take a deep interest. But from the run of the work of the Legislature it is sound policy for him to keep his hands off. All in all, the new Governor acts like a man in a fair way to master the unfamiliar task set him by the people.

The presumption is generally against the multiplication of educational and other public and semi-public institutions when those we already have are so in need of money. But the proposed New York Observatory and Nautical Museum, which the Legislature has been asked to charter, makes out an exceptional case. New York is almost the only large city which possesses no astronomical observatory of any rank. Although the chief port of this country, we have no "institution devoted to the interests of the navigator, to the investigation of new methods and new discoveries in shipbuilding and ship-sailing; no museum where can be studied the development of the modern vessel, where can be found the charts and aids to the navigator." The need for study of tides and currents affecting the shipping of this port as well as for investigation of navigation problems generally, is doubtless great. An institution formed for these purposes would also have a secondary educational value to the general public and would shortly become one of the show-places of the city. The influential men who are promoting this enterprise are doing a real service to the city which gave the world the Clermont and the Monitor.

John D. Rockefeller's gift of $32,000,000 to the General Education Board—the largest of the kind ever made—is, we believe, money wisely spent. In the first place, all our institutions of learning are confronted with the serious problem of maintaining the efficiency of their teaching force. The recent rapid increase in the cost of living has pressed very hard on teachers of all grades, from the kindergarten to the professional school. Those who have already embarked on the career are keenly pinched; energetic and ambitious young men see little to attract them in a calling which does not promise fair support for a family. If, then, we are to keep our schools and colleges abreast of population and progress, we must raise salaries all round. Thus it is that, in spite of the Carnegie Foundation for the Advancement of Teaching, and in spite of other generous donations to the cause, there has hardly been a time when gifts for educatiou were more needed. Moreover, Mr. Rockefeller's millions are placed in the hands of skilful administrators. The General Education Board is not, from the very nature of its work, a conspicuous institution. It has no building to catch the eye; it merely occupies such offices as a firm of lawyers might hire. But it has the advice of the best experts as to the investment of its funds and the expenditure of the income. Educators are aware that it has already amassed an enormous amount of exact and perfectly classified information in regard to the schools and colleges of this country. If you wish to know the status of any college—the attendance, the resources, the curriculum, the strength of the faculty, the standards of scholarship, the intellectual and moral conditions—the General Education Board can usually furnish the facts, so far as they are to be had. It has won a reputation for discretion and liberality that has warranted this colossal addition to its resources.

Prof. E. A. Kirkpatrick of the Fitchburg State Normal School has set forth in the *Popular Science Monthly* the results of an extensive test of the vocabularies of school children and college studeuts. With Webster's "Academic Dictionary" as his subject-matter, he selected one hundred words by taking the first, last, or other definitely placed word on every sixth page, submitting this list for the subject to mark with plus signs, minus signs, or question marks, and then setting down that person's vocabulary by applying the proportion known to the 28,000 words in the book. Children in the second grade, he finds, understand, on an average, 4,480 words apiece. In the eighth grade of the grammar school, the figure rises to 12,000—more than are in the Bible. In the freshman year of the high school the pupil's vocabulary reaches 15,640. In the senior year of the high school it passes the limit set by a Milton concordance, and stands at 18,720. Vocabularies among college students average 20,120 words, or about the number used by Shakespeare. Each number represents, be it remembered, "all words that you would not, as to their meaning, have to look up in a dictionary if you saw them in a sentence." Plainly, then, whatever may be the shortcomings of the rising generation, deficiency in vocabulary is not among them. As corroborative testimony, we have the tests ingeniously made by several well-known scholars on their own vocabularies. Three results of such inquiries, reported to us by a correspondent, were 33,500, 35,250, and 37,000 English words respectively. Nor would an inquiry among those of most meagre academic education be likely to show results so much inferior as might be supposed. Any one who has taken the trouble to examine the two most despised members of the literary family, the paper-bound thriller for boys and the paper-bound romance for young women—typified, say, by "Old King Brady" and "A Working Girl's Wrongs"—knows that, while the ideas and emotions conveyed are simple to absurdity, the language is not particularly easy. Both, perversely as it seems, are a good deal nearer the stilted diction of the eighteenth century than are the pages of a high-grade magazine.

Spanish America forges to the front in the news with reports of war threatened in Central America, an insurrection in Argentina, and another in preparation or already in being in Venezuela. In spite of last summer's outburst of enthusiasm over the Pan-American Conference and Secretary Root's missionary journey to the Latins, in spite of the absolute necessity of a ship subsidy enabling us to monopolize the trade of South America, it is a fact that we are little interested in the affairs of the republics to the south of us, and that their only chance of attracting notice is by raising a row. Thereupon we send dowu a white cruiser, on whose clean decks Central America makes peace and renews, with beautiful optimism, that ideal of a Central American federation and those numerous treaties of amity and arbitration which amuse the foreign concessionary on the hunt for timber lands. And yet it must be that the southern republics produce something

besides revolutions, nitre, and provincial cédulas. There is an intellectual life stirring. Chile has produced respectable historians; Argentina is ambitiously seeking to develop a new Latin civilization, largely on the French model. Evidently, they have an opera, for we hear now and then of Calvé coming from Buenos Ayres to New York, and a theatre, since Ermete Novelli, whom New York has not seen, comes to us from the south. How much of all that life do we know?

Germany presents the remarkable spectacle of both sides in a struggle rejoicing in victory. The Centre points, with justifiable pride, to its notable achievement in repelling the Government's attack and returning to the Reichstag with augmented strength. The Emperor rejoices over the downfall of the Socialists, whom he had not dreamt of overthrowing. He is the Cadi who ordered the tall dyer to be hanged in his own doorway, and when it was ascertained that the doorway was too low and the dyer too tall, gave orders that a short dyer be found and hanged instead. Complete figures for the new Reichstag indicate only a modest majority for the Government. Should Conservatives (59), Reichspartei (21), National Liberals (55), Radicals (46), Agrarians (23), Anti-Semites (6), and independents (10) rally to its support, it will count 220 votes against the 177 votes of the Centre (105), Socialists (43), Poles (20), Alsatians (7), Guelphs (1), and Danes (1) But, except on the specific German Southwest Africa budget, it is scarcely possible to conceive such an unholy alliance as one between Agrarians and *Freisinnige*. The election has robbed the Socialists of the gain which popular dissatisfaction with the Agrarian policy brought them in 1903, and something more. But the gain has gone for the greater part to the Centre and the Liberals, and the chronic difficulties of the Emperor with his Reichstag have not apparently been removed.

A treaty concluded a short time ago between Germany and Denmark offers confirmation of the truth that he who endures to the end in politics shall be saved. The agreement harks back to the old Schleswig-Holstein question, which has been responsible for more aching heads among historians than any other topic of ancient or modern times. The treaty of 1866 between Austria and Prussia provided that the northern districts of the duchy of Schleswig, which had been incorporated by Prussia after the Danish war, should be restored to Denmark after a plebiscite had been taken. Such a plebiscite the Prussian Government has carefully avoided taking, until Denmark in the present treaty has made formal acknowledgment of the *status quo*. In Germany the treaty is regarded with all the more satisfaction, because it puts an end to the anomalous position by which the children of Schleswig parents who, after the war of 1864, chose to remain Danish subjects, have been prevented from becoming either Danish or Prussian citizens owing to differences in the interpretation of the treaty of peace. There was thus created a class of men without a country (*Heimatslose*), whose unfortunate legal position was responsible for much of the discontent with which German rule has had to contend. Like the Poles, Hanoverians, and the French of Alsace-Lorraine, the Danes have been represented by a small faction in the Reichstag. In the latest election they have chosen one member. He, too, will probably disappear soon.

The Persians, who are often called the French of Asia, are displaying qualities which should entitle them rather to comparison with France's neighbors across the channel. It is one thing to win a Constitution from an autocrat by means of a carefully engineered popular uprising; it is another to maintain popular unity after the initial success, and to continue extorting concessions without resorting to terror. The Russian liberals, for example, have not yet learned how. The late Shah was brought to promise constitutional government a few months ago by a general secession among the middle and upper classes of Teheran, who abandoned the capital and established a new "tent city" in the grounds of the British legation. Admirable order was preserved then, and order seems to prevail now in the conduct of the Parliament's campaign against the Shah. The latter has probably been forced to yield because of the support which the liberal movement draws from Persia's two sworn friends and protectors—Great Britain and Russia. The attitude of the former is indicated by the incident we have cited. The influence of Russian conditions, if not of the Government itself, is discernible in the disturbances reported to have occurred at Tabriz, which, situated not far from the Caucasian border, has undoubtedly experienced the revolutionary fever.

That the English Liberals are nettled at their thwarting by the Lords is undoubted, but that they have decided that "the House of Lords must go," we may well question. The Attorney-General's speech to that effect last Friday was admittedly more rhetorical than official. So daring and important a party programme would scarcely be announced by anybody but the Prime Minister. Sir Henry Campbell-Bannerman, it is true, held pretty stern language about the upper House, at the time of its slaughter of the innocent Education Bill; and Winston Churchill has talked of a possible dissolution in 1908 on the issue of the supremacy of the Commons. But presumably all this looks more to party strategy than a fixed party policy. If the Liberals are expecting the Lords to throw out some popular bill and so give them a fine chance to appeal to the country, they will find, we believe, that the Lords will take precious good care not to accommodate them. Hence the cry against the Lords is not to be taken as going very much beyond *Punch's* version of it: "Mr. Birrell says he will give the Lords *one more chance*, and then! Why, then, he'll give them another." Furthermore, we may be pretty sure that nothing will be done, or even decided upon, until after the London County Council elections early in March. If the Liberals lose as heavily as they did in the recent borough elections in London, they will not have the stomach to attack the Lords very savagely.

Within the span of W. H. Russell's life, now ended, the world saw the beginning and the high development of war correspondence. Before the Crimean War it could scarcely be said to have existed. Such information as newspapers got from the seat of war was haphazard and irregular. But after Russell's remarkable work in 1854-56, giving as it did to the English people a flood of light upon the organization and maladministration of the army, as well as accounts of military operations, the war correspondent has been almost as much of a necessity as the commander-in-chief. He may be an affliction to the officers in charge: Gen. Sherman wanted the whole genus hanged; but at least in all wars waged by democratic countries, he is a fixture. The people who raise and pay for the armies will insist upon having news from the front. Japan was able in her last war to keep the correspondents at a distance from the firing line, and to suppress news until after knowledge of it had ceased to be an advantage to the enemy; but even Japan, as she becomes more democratized, will be compelled to meet the public demand for information about battles. Russell was not merely an extraordinary war correspondent, with a keen eye for strategy and a signal mastery of details; he was a great traveller and shrewd observer. His account of Bull Run raised a loud outcry in this country; but more noteworthy every way was his "Diary," recording his observations in the South on the eve of the Civil War. With every prepossession in favor of his friends and hosts in that region, he was yet compelled to set down his conviction that their system was an anachronism. The economic blunder as well as the moral wrong of slavery was demonstrated by Russell with something of the precision of Olmsted.

LIMITING MONEY IN ELECTIONS.

William R. Hearst, shocked by the discovery that somebody paid as much as $250,000 as a candidate for Governor of New York, is again calling attention to the need of a law limiting expenditures in elections. He does not, however, approve of the recommendation of Gov. Hughes, that the sum beyond which a candidate may not lawfully go, should be fixed by statute. That would be all wrong, Mr. Hearst argues, since it would "prevent any financial independence on the part of candidates." But it would also prevent any one with a degree of financial independence as high as Mr. Hearst's, and political scrupulousness as low as his, from buying nominations and personally conducting a campaign with his own check-book.

This subject however, is one that should be discussed without reference to personalities. Indeed, we are free to say that one of Mr. Hearst's points seems to us well taken. This is that a limitation should be put upon the amount that may be expended by anybody, candidate or committeee, in elections. Our corrupt-practices laws have been largely tentative. We have been feeling our way. In this State we now have an act forbidding corporations to contribute to campaign funds; and Congress has passed, and the President signed, a bill to prevent in the future such scandalous diversions of the funds of insurance companies as were made to aid in the election of Mr. Roosevelt. But with these old sources of supply now cut off, will not the resulting tendency be to turn to candidates able and willing to pay for their own campaigns? This danger was clearly exemplified in the case of Hearst. His being made a candidate for the Governorship was undoubtedly due in part to the fact that he stood ready to spend large sums to secure the nomination, and at least a quarter of a million to further his election. This startling illustration of what a rich man might do with his purse to gratify his political ambition, clearly had much to do with the proposal to restrict the amount which candidates for office may pay out. This, we think, should be done; but something also should be done to limit the cost of an electoral canvass, in whatever way the sinews of war may be obtained.

When we set about in earnest the strengthening of our corrupt-practices legislation, we shall not be too proud to take a leaf out of English experience. English elections, a hundred and fifty years ago, or even seventy-five years ago, were more corrupt than American elections have ever been. Franklin's description of British electoral methods as he observed them—tainted with bribery throughout—has been often quoted. The tax on candidates for Parliament long continued onerous—the heavy expense necessarily being in good part corrupt. Lord Durham's biographer records the fact that one of his contested elections cost him $150,000. The buying of votes was open. Reform was slow in coming. Indeed, there died at Oxford last year an old man who lived so much in the past that it was his habit, in the good old early Victorian fashion, to sally forth and unblushingly try to purchase votes for his favorite candidate for Parliament. As this practice has now become sufficient to unseat a successful candidate, the old gentleman's support was, naturally, considered as a thing to be afraid of even while duly grateful for.

When, however, English reformers went to work to extirpate electoral corruption, so far as legislation could do so, they made a thorough job of it. Various ballot acts and election commissioners acts led up at last to the Corrupt and Illegal Practices Prevention Act of 1883. Its full text shows it to be extraordinarily minute and sweeping. Every conceivable activity of a candidate or his agent is foreseen and regulated. Directly to our present purpose, there is rigid limitation of election expenses. The date when they legally begin to run in any constituency; the persons by whom they may be made; the forms of declaring them under oath—all is provided for with the utmost detail. Finally, there is the fixing of the "Maximum Scale." This determines the amounts that may lawfully be expended in a Parliamentary election in the different constituencies. The sum varies, both with locality and the number of voters. In a borough election, where the number of electors on the register does not exceed 2,000, the maximum amount that may be legally expended is £350; above 2,000 the sum is put at £380, with an additional £30 for "every complete 1,000 electors above 2,000." In a county, where it is presumably more difficult to "get out the vote," the permitted expenses run higher—£650 for a register not exceeding 2,000, with an additional £60 for each 1,000 voters more. There is a lower rate, in all cases, for Irish constituencies.

The testimony is conclusive that this law, enforced as it is by the courts, has been the means of rendering English elections very much purer than they used to be. The time has come for us in the United States to proceed, by similar legislation, against the great evils of the use of money, almost certainly corrupt when too lavish, in our elections.

RUSSIAN FREEDOM AND FAMINE.

In the London *Times* there is an appeal for aid in behalf of the famine-stricken peasants of Russia, signed by Nikolai Shishkoff, a member of the Zemstvo Relief Association of the Government of Samara. This is his third experience in the task of combating starvation. He was in the great famine of 1891-92, in the lesser visitation of 1899, and he declares that the present famine "bids fair to become one of the most awful calamities that even Russia has ever witnessed." There has been destitution for several months; actual starvation was ushered in with the new year; but the floodtide of misery is expected to come about the end of March or the beginning of April.

Conditions are described by Mr. Shishkoff with mathematical precision, varied by comments on local conditions. In twenty-five provinces the crops have been far below the average, and in eight or ten there has been a total failure. In Samara the grain harvested has been less than half the amount sown. As far back as the middle of last November, one-fourth of the horses and cattle had perished. Cottages are being demolished for fuel; clothes, utensils, cattle, future crops, and labor are being sold; the last supplies of rye flour or millet are mixed with bran, grass seed, chaff, and even straw; and thousands have been living for months on acorns. When relief-kitchens are established, many of the poorest cannot come, because they dare not face the cold without clothes and shoes. And the present winter is the bitterest the Continent has known for many years. Says M. Shishkoff:

> I have myself seen a peasant carry one of his children, wrapped up in the remnants of a sheepskin cloak, to our kitchen, put the child down, perfectly naked, on a bench, and take away the rag of a cloak to bring his other child in.

What are the causes that have made such conditions chronic? In the simplest terms, the population to feed has been rapidly growing, while resources—land, working capital, and intelligence among the cultivators of the soil—have been either at a standstill or actually declining. According to Prof. Vladmir G. Simkhovitch, writing in the *Political Science Quarterly*, the average number of dessiatines of land for each male peasant in the fifty governments of European Russia (the dessiatine equals 2.7 acres) has declined from 4.8 in 1860 to 2.6 in 1900, or almost one-half, while farm stock has sunk from 1,456 per 1,000 of the population in 1870, to 1,026 in 1900, and horses from 169 to 145. Professor Simkhovitch adds:

> Small as these peasant land-holdings are, they might have been sufficient in a country where education, self-reliance, and honest work are encouraged. But not so in the Empire of the Czar, where almost every educated man is suspected as a political criminal, and where the education of the peasant has been systematically suppressed.

And if there be human grit and industry to overcome even such obstacles, there are the Imperial taxes. The land-

tax ranges anywhere from 100 to over 200 per cent. (counting in the accumulated arrears) of the possible land-income, while indirect taxes amount to 45 rubles in an annual peasant budget of 100 rubles. Whether owing to lack of land, unscientific methods of cultivation, or exacting contributions to the state, famine, in the last interpretation, spells absolutism.

The Government has not failed to recognize the state of affairs. Famine in a time of revolutionary upheaval calls for attention, and the peasants have accordingly received a succession of favors. Their acquisition of land has been facilitated. But the Stolypin Ministry has chosen to find the main root of the evil in the communal system under which the peasants have held their land since emancipation, and has set to work to do away with it. Emancipation found the Russian peasants dwelling in village-communities (the *mir*), on land belonging to private owners or the Crown, whose serfs they were. Emancipation liberated them from their masters and gave them land to cultivate; but as a guarantee for the payment of the redemption money advanced by the state to the commune, the submission of the peasant to the *mir* was emphasized. Wherever he went, he carried his peasant status with him. At home he cultivated his share of the land allotted him periodically by the commune. As an artisan in the city, he was still responsible for the debts and taxes of his village.

This exceptional status of the peasant the Government has now done away with. In the full light which terrorism casts upon a throne, it was discovered that it had been the original intent of the Czar Liberator to introduce, with emancipation, an individualist régime, and that the communal system, as we have said, had been made use of as a financial expedient. The term of forty-nine years had been fixed for the redemption of the peasants' debts to the state. What more simple than to hasten the process? Accordingly, a ukase of November 16, 1905, declared that from January 1, 1907, the peasant debts would be considered extinguished, and therewith the *raison d'être* of the commune was done away with. There followed various concessions in the form of land grants, till the ukase of November 25, 1906, crowned the work by decreeing for every peasant liberty to dissociate himself from his commune, with a claim of personal proprietorship in the assignment of land he had enjoyed within the *mir*.

The action of the Government has been characterized as a sop to the peasants, whom it would charm away from the arms of the revolutionists. But it is more than that. It is a direct blow at one of the main pillars of the ideal edifice erected by the Russian Social Revolutionaries, who undoubtedly sway the vast mass of peasant opinion. From their revolutionary ancestors of the reign of Alexander II. they had inherited the belief that, with its rural communal system, Russia offered an unparalleled field for social reconstruction. The *mir* was an essentially socialistic organization that might be improved upon, but was so much ready gain as it stood. Thus the dissolution of the *mir* is undoubtedly intended to cut the ground from under the Revolutionaries.

EXPLORATION AND NATIONAL ADVERTISING.

Reports of noted geographical achievements come thick and fast nowadays. We have scarcely, so to speak, warmed up to Commander Peary when a message reaches us from Sven Hedin of Stockholm, Tibet, and the Pamir. In Europe exploration at present enjoys the patronage of the "very best people." A royal lecturer in the person of the Duke of the Abruzzi addresses royal audiences in Rome and London on his latest work in Africa, and King Edward VII. rises to move the customary vote of thanks to the speaker of the evening. The French Academy of Sciences assembles to consider the report of the Prince of Monaco's discoveries in Spitzbergen. From Belgium we are informed that a national expedition is soon to be dispatched to the Antarctic, whence another great national expedition, the British under Capt. Scott, has only recently returned.

If to the Duke of the Abruzzi and the Prince of Monaco we add the Duke of Orleans, who in 1905 added his name to the list of Arctic explorers by sailing his Belgica up the east coast of Greenland to a "farthest north" at 78° 16′, we face the interesting fact that princely blood is coming to the front in a field of commendable activity. In a sense, kings, thrones, and principalities have always been zealous in encouraging geographical enterprise, from old Hatasu, who dispatched her Egyptian admiral for spices to the land of Punt, through another queen who sent her admiral westward in search of souls more precious than spices, and Prince Henry the Navigator, to Leopold of Belgium sending Stanley to Africa, and Oscar II. of Sweden, who has backed Sven Hedin's ventures in Central Asia. But it is one thing to unroll unknown continents by deputy, like Mark Twain's climbing the Matterhorn through a telescope, and another to assume the actual dangers and hardships of exploration. This our modern princes of discovery have begun to do, as admirably exemplified in the case of Luigi of the house of Savoy. He has brought to the work not only the courage and devotion of his crusading ancestors, but modesty and a spirit of *noblesse oblige* which has allowed his companions to enjoy their full share of the labor and the resulting glory.

Commander Peary has repeatedly appealed to our sense of patriotism in the matter of the conquest of the Pole. The same fervent national sentiments characterize the Duke of the Abruzzi's speeches. It is valuable work, this sliding and floating and climbing, painstaking, disinterested, scientific work, but it is also work for the glory of *il rè* and *la patria*. Nor is the feeling one that we can call mere patriotic vanity. With it, consciously or unconsciously, dwells the conviction that such triumphs of the flag redound to the material welfare of the fatherland by enhancing its dignity and spreading abroad its name among the nations. Especially is this true of the smaller states or the countries that, by themselves, would not be reckoned as first-class Powers. The empires of the earth can hold a place in the first rank by armies and many ships; the weaker members must seek to gain eminence in more peaceful ways. Literature is one field where they may win against the force of numbers; witness Norway's Ibsen and Björnson or Denmark's Brandes. Geographical exploration is another. Thus, to go back to Italy one more, we cannot see how one can read Commander Cagni's account of the famous dash for 86° 33′, so modestly and simply told, without gaining in admiration for a Mediterranean race that could cope successfully with the terrors of the Arctic. Before such proof, Anglo-Saxon ideas as to Latin "softness" should vanish; and though the initiated may have known before this of the intrepid industry of the Italian day laborer and the skill of Italian engineers, professional men, and scientists, it needed a hair-raising performance to proclaim the fact to the world.

Some such conviction of the value of geographical exploration as an advertising medium undoubtedly underlies a venture like the proposed Belgian Antarctic expedition. Belgium needs no colonies even if they are only ice and seawater; at present she has all the difficulties she cares for with Congo and with the King. But Belgium is an aggressive, a "live" country, and it cannot fight because it is small and neutralized. Moreover, it has vast manufacturing interests and large stores of capital to invest, and as a capitalist and a producer it needs advertising. A signal *coup* in the scientific world would increase Belgian prestige in Russia, in Japan, in other parts of the Far East. To her the Antarctic Circle is a vast Hackensack Meadows, on which she has sent her devoted sons to smear in letters a degree of latitude wide, "Use Charleroi Coal," or "Katanga Rubber—the Best," or "Kaffirs Cry for Liège Refrigerators." There is no intention here of imputing selfish motives to a scientific undertaking by which all the world

must profit. The point made is only that in this form of activity national well-being seeks to realize itself no less than in actual war for customers and colonies.

Rich men in our own country have not been slow in following the example set by royal explorers of Europe. It is a blessed thing to own a roomy steam-yacht. It is more blessed to clap a party of scientists and photographers on board and run them up to the Bering Sea in summer, where they map and sound and botanize and zoölogize for the benefit of human knowledge, and to the greater glory of the owner of the boat. It is a sport that can never be vulgarized, and it appeals to primal instincts. We have no monsters now whom one can fight except the Trusts, and no swamps to drain except politics. Only the unmapped ice-field, the unscaled mountain, and the uncrossed desert hold forth opportunities for the spirit of the conquistador.

AUTOMOBILE RACING.

Is automobile racing on the wane? The question is being widely asked in consequence of the evident falling off in public interest in the race week at Ormond, Florida. The last Vanderbilt Cup race did, it is true, attract greater crowds than ever before, but the conditions were so unsatisfactory as to make the contestants themselves say it would probably be the last on the Long Island course. The projectors of the Long Island Motor Parkway propose to run their special dustless automobile highway down through the island under what would be ideal conditions for straight-road racing. So far as we are aware, they are not yet concerning themselves with such contests, but are merely preparing an exclusive automobile road on which the motorist proper may travel as fast as he pleases without fear of the country constable. For the spectators, a race over a long, straight road, like the beach at Ormond, has obvious disadvantages; they can only witness the start or a lightning finish—a half-minute's enjoyment hardly worth travelling far to get.

As yet there is no proposal to build in this country an elaborate motor-race track similar to that now being constructed within twenty miles of London, in the heather and pine region of Surrey, by the Brooklands Motor Racing Club. This organization, duly authorized by the Automobile Club of Great Britain and Ireland, is laying out an elliptical track two and three-quarters miles in length, the sharper ends of the ellipse banked up to great heights for reasons of safety. For some distance the outside edge of the track is to be twenty-six feet higher than the inside edge—if we may trust the London *Spectator's* figures. Throughout the summer and autumn there are to be held a number of races for valuable cups and trophies, for which the entrance-fees will range from $80 to $260; and it is confidently expected that the races will be so exciting as to attract sight-seers from the Continent, as well as from all over Great Britain. So far as possible, the language and customs of horse-racing will be adhered to; even handicap contests are looked forward to when once the season is well under way, and the track has been tried out.

Naturally, this elaborate plan for motor racing has led to considerable inquiry as to whether it is likely to help or hinder a sane development of the sport. Since road-racing in England no longer attracts any attention, the argument that the new track will tend to end the use of public roads for racing does not carry much weight. As the *Spectator* points out, English manufacturers have in the last few years been endeavoring chiefly to produce strong, comfortable, quiet, and simple cars, which are at the same time good hill-climbers and reasonably cheap. In this development speed has not played the main part, and as a result the makers have met with great success in giving the public the car it wants. Any such thing as a craze for racing which would hinder this progress along sound and conservative lines ought to be severely frowned upon. The manufacturers, it is true, might like a track on which to try their cars. But the question of safety is also to be considered. With all its precautions, the Brooklands Club can give no assurance that there will not be terrible accidents.

Had the *Spectator* wished to quote an English racing expert, it could have turned to Charles Jarrott's new book on motor-racing, called "Ten Years with Motor Cars." Speaking of the value of racing to the industry, this famous driver declares:

> I am personally of the opinion that a speed race, pure and simple, without other conditions, is not now as beneficial to the industry as it was two or three years ago. It is very difficult to define the line where horsepower becomes abnormal, but nevertheless I cannot help thinking that cars containing engines developing 150 horsepower are not the vehicles which we are wanting, or which are necessary to teach us the valuable lessons I have set forth. . . .
>
> Speed, pure and simple, now teaches us nothing. Speed was never necessary for sport, and its sole value at the present moment is the assistance it gives to the quick elimination of the competitors through accidents. The problem should be efficiency for given size and weight. As the sporting side of racing is now practically non-existent, the driving factor and the individual skill of the driver should be put at the biggest discount possible, and every facility given for a decision to be arrived at on the efficiency, or otherwise, of the vehicle itself. The only justification for motor-racing at the present time is that it benefits the industry, and when the time comes, as come it must, that it does not benefit the industry, that very day racing will be finished.

At the same time, Jarrott thinks that the debt the industry owes to the sport ought not to be overlooked. He is afraid that the next generation of automobilists will be unable to remember that the great speed-racing which took place between 1896 and 1906 had much to do with the perfecting of well-designed and carefully made cars. Undoubtedly, Mr. Jarrott is right in saying that the early racing established the reputation of some of the great French automobiles, like the Panhard-Levassor and the Dietrich. Our own American manufacturers, who have made such wonderful strides of late years, are careful to advertise any racing successes that they now achieve; but, after all, they would, we think, prefer to dwell more upon the endurance tests, which are growing in frequency. We may be wrong in thinking that the craze for speed is subsiding even with those who are buying their first cars, and that more and more people are satisfied with moderate horse-power where they once looked for forty or fifty. But whether right or wrong about this, we are certain that more and more intending purchasers look to tests like the Glidden tour when making up their minds what to buy. Nor does it seem to us likely that, even if there is a cessation of racing, there will be any falling off in the remarkable progress of the American car.

LAPPONI ON SPIRITISM.

The late Dr. Giuseppe Lapponi's book on "Hypnotism and Spiritism," which made such a stir at Rome—coming as it did from a man who had been medical adviser to two Popes—has now been translated into both German and French. It will be read with interest by the curious, and may afford some satisfaction to the credulous. It is not, however, as was reported, an unconditional endorsement of spiritualism. In discussing hypotism, he traverses ground already made familiar by the investigations of Charcot and his school, of Bernheim, Liègeois, and Pierre Janet. That part of the book which deals with spiritualism is, however, a strange mixture of caution and superstition. It shows how easily a man of scientific training may lose his footing when a fixed idea takes possession of his mind.

Dr. Lapponi writes of the "Facts of Spiritism," but among them he includes reports of unusual phenomena which are far from being well authenticated. He nowhere relates his own experiences; all these "facts" are reported at second hand. He cites the famous Crookes case as if the account were beyond question; and tells of the Indian

maiden who appeared to the Crookes household in a cloud, and spent the day with them, thus enabling the English investigator to test her reality by taking her photograph and temperature. Dr. Lapponi also accepts the narrative of the Pansini family, which was vouched for by an Italian archbishop, a bishop, an archdeacon, a Protestant minister, and some politicians. Two children in this family lived miraculous lives; one of them was a clairvoyant, and both of them had the power of disappearing mysteriously, and of reappearing, in a comparatively short time, at distant places.

Though Dr. Lapponi admits freely that there have been many instances of self-deception and fraud, he seems, on the whole, to have had few misgivings about "spiritistic" phenomena. He gives a list of great men who have been "the best known witnesses and partisans of spiritism." It must be said that his list is somewhat surprising, and does not add to the confidence which one feels in Dr. Lapponi's statements and conclusions. Among these "witnesses and partisans" are numbered Walter Scott and Victor Hugo, Gladstone and Lincoln, Humphry Davy and Tyndall, Lombroso and Oliver Lodge.

Dr. Lapponi rejects certain hypotheses which have been constructed to explain the facts reported. They are not, in his opinion, phenomena of a diseased brain, for "a great number of extraordinary manifestations of spiritism are concerned with purely physical facts which modify the natural conditions of objects or of material instruments without any interposition of intelligence or of human volition." He prefers a supernatural explanation, and describes all animate nature as a hierarchy. As man is above the lower animals, so there are beings superior to man both in intelligence and physical power. They form a series on a scale of gradually increasing perfection. These superior beings have the power to interfere in human affairs; but they are not always accessible, and may not always come when invoked. He writes:

> I affirm that the most severe modern criticism, which is now called *hypercriticism*, cannot deny the existence of a certain number, however small it may be, of real spiritualistic phenomena, unless it refuses to be logical and sincere in accordance with its general methods of investigation, unless it prefers to close its eyes to the full light of the sun.

That is, after all allowances and deductions, there is still a residuum of facts which point unmistakably toward spiritualism.

When a man of science takes such a position, the proper inquiry to be made is not so much how the occurrences can be explained, as why he believes that such occurrences have taken place. No doubt, a natural history of those who profess to have observed these extraordinary phenomena would throw much light upon the trustworthiness of their reports. Many become spiritualists upon what they suppose is sufficient evidence, and in this number are to be included all those who are deceived either by themselves or by others. It seems strange, however, that Dr. Lapponi should not have reasoned about such phenomena as he would have done had they been ordinary natural occurrences. Given a great number of unusual events, if in a majority of cases they can be proved to have been illusory, the probability, scientifically speaking, is overwhelming that any remaining phenomena which cannot at present be explained are yet capable of a natural explanation.

Those who regard spiritualism as a religion will be grieved at Dr. Lapponi's estimate of its ethical value:

> Spiritism is always dangerous, baleful, immoral, and should be forbidden and condemned unrestrictedly, in all degrees, under all forms, and in all its possible manifestations. At most, there may be some excuse in special cases for a study of spiritistic phenomena, by authorized persons of acknowledged competence, provided they have no part in producing the phenomena which they investigate.

This conclusion seems to mean that spiritualism, although not necessarily fraudulent, is diabolic. Familiar spirits should not be summoned from the unseen world, but if some misguided Saul sees fit to invoke a Witch of Endor, those who are properly qualified may test the reality of the apparition. A loophole is thus furnished for "psychical researchers"; of course, they are "authorized persons of acknowledged competence."

THE PROFESSION OF BOOK-AGENT.

Book-agents, as they themselves confess, enjoy none too high a repute. The word calls up a vision of the amiable college-boy who spends his vacation in trying to persuade the lawyer, the doctor, and the minister of a country village to buy Ridpath's "Cyclopædia of Universal History" or Talmage's "From Manger to Throne." No one wants the books, but every one subscribes in order to help the poor fellow out. He is an object of charity. Then, there is the leering person who tries to render dull and decorous works attractive by labelling them "Court Memoirs," and assuring you that they must be kept out of reach of the children. His prototype it was who sold hundreds of copies of Young's "Night Thoughts" to virtuous farmers by pretending that this portentously pious poem was naughty. More disagreeable still is the aggressive woman with sets of standard authors which every gentleman must buy or write himself down an ignoramus. And finally we have those book-agents who have recently been sued in this city for unloading on rich and silly persons, at fabulous prices, so-called *éditions de luxe* of Shakespeare, Thackeray, Roosevelt, and other classics. Only last month we noted the pathetic case of a woman who gave $6,250 each for sets of Shakespeare and Thackeray, and $6,000 for Roosevelt. When she had paid her money, she found she had got merely "well-known and easily procurable copies" of these authors—tricked out with special title-pages, "certain illustrations of showy character, but intrinsically of little value," and gaudy bindings. These several types of book-agent, who bulk large in the eye of the public, have blackened the name of the whole tribe.

And yet there are book-agents whose skill in a field which demands fine intelligence entitles them to rank in the learned professions. We described last week the extraordinary library of William C. Van Antwerp of the New York Stock Exchange. Mr. Van Antwerp, like J. Pierpont Morgan, Robert Hoe, and other collectors, is doubtless well informed as to the "points" of rare books; but neither he nor any other man could get together such a library without the help of experts in this country and London. He must consult them as to prices, provenience, and the minutiæ of bibliographical knowledge. These literary *cognoscenti* seem as reluctant as orthodox physicians to advertise themselves. They are few in number: Boston, New York, and Philadelphia may not contain, all told, more than five or six. If, however, the fashion of book-collecting spreads, there may be room for one or two more. The calling is not one which we urge young men to enter; for it may easily become overcrowded.

The agent of whom we speak must in the first place know books from the collector's point of view—and that is to know a great deal. A competent clerk in any bookshop can tell you all about the current issues—publishers, number of volumes, styles of binding, prices, dates of various editions, and much else besides. If you inquire for Barnes Newcome's "Lectures on the Poetry of the Affections," he does not spend half an hour in vainly hunting through "The Publishers' Trade List Annual," but he informs you offhand that those lectures were, according to Thackeray, delivered at the Newcome Athenæum, though, unhappily, never published. This clerk can also enlighten you as to the merits and defects of such editions of standard authors as are often on the market. He, of course, remembers that in 1860 there were two issues of the first edition of Hawthorne's "Marble Faun," the second with the additional "Conclusion" occupying four pages. But for your expert this is a mere beginning. He is familiar with the rarities. He can show you

all the words which were changed in the second edition of "The Scarlet Letter," and the reset printer's imprint on the verso of the title; he can enumerate and distinguish the nine different title-pages of the first edition of "Paradise Lost," and so on through the whole range of English literature—and perhaps one or two foreign literatures as well. He must be versed in prices also; what First Folios and Second Folios of Shakespeare brought at the London auctions ten years ago; what present values are. He must also be acquainted with the stocks of Quaritch and other great dealers; with the offerings at auction; with the contents of the best collections, public and private, here and abroad; and with the tastes of the principal collectors. Many of these facts are duly recorded in works of reference; but in order to use such authorities your expert must bring to them a mass of information of his own, extraordinarily copious and exact.

With this knowledge as a basis, he can, if he possess sufficient tact as a negotiator, build up a legitimate and profitable business as agent and as consultant for either seller or buyer, as the case may be. He learns, for example, that an English duke is forced to dispose of his library containing some Shakespeare quartos. He is also aware that Marsden J. Perry of Providence is the man who wants them; and he may thus very properly act as go-between, give each man sound advice as to the value of the property, and effect a sale. He sees in a catalogue a presentation copy of Lamb's "Tale of Rosamund Gray," and he brings it to the attention of a certain Massachusetts jurist whose hobby is presentation copies from famous authors. He bids at auctions for buyers who prefer to remain unknown, and who trust to his skill and honesty in purchases involving thousands of dollars.

Nor is this book-agent, with all his specialization, deficient in general culture. Indeed, he enjoys unusual and by no means neglected opportunities to cultivate a taste for literature. The collector is often ridiculed as the man who buys but never reads. When Frederick Locker-Lampson, he of the Rowfant Library, protested to Bedford, the famous bookbinder, that a volume did not shut properly, Bedford retorted, "Why, bless me, sir, you've been *reading* it!" Mr. Locker-Lampson is not, we incline to believe, an exception in that he actually had ventured to look into the book. Even in verifying errata and seeing if the misprints accord with the specifications, the collector must do some desultory reading. And the expert on whom the collector relies must, in his wide ranging through the best books, inevitably acquire something more than a mere tincture of literature. He cannot, any more than his brother-in-blood, the connoisseur in art, dwell on mere externals.

THE AIM OF WOMEN'S COLLEGES.

The progress of education has developed the boast that no girl has so little money that she cannot go to college. Scholarships, personal helps of many kinds, and opportunities for self-support open the portals to all those who are ambitious enough and clever enough to enter in. But an even prouder boast is its counterpart, that no girl is so rich that she cannot go to college. A girl born to comfort and ease, who presumably will always be supported from the family funds unless she is supported by a husband, and who has no compelling personal inclination toward some definite form of work, can claim her four years of college life without losing her harmonious connection with her native surroundings. Some people may think her foolish or "queer," but as large a number of equally "nice" people either think her wise or forget to make any remarks whatever. Even in those centres where in more ways than one fashion sets its face against the intellectual, no girl loses caste by choosing to educate herself. She may have to struggle against family prejudices to gain her wish, but she can later return to her old haunts and be received as unquestioningly as if she had never passed the flaming ramparts of her little world. To urge upon girls who do not need to support themselves, or who have no definite careers in view, the desirability of going to college, has grown to be comfortably superfluous. It is with just such girls that many of our colleges are now being filled. Natural and obvious forces will steadily increase the number, until, within another generation or two, the girl who does not go to college will be the exception, about whom will gather those statistical and apologetic explanations with which men seem ever irresistibly impelled to honor our simple and candid sex.

The colleges and the young women of the country no longer ask either our briefs or our prayers. They have found each other out to their mutual satisfaction and contentment. But we ourselves, the outside observers, are still too restless to leave the subject. Our curiosity is still unsated, our approval is still limited or misapplied, and our disapproval still raises an annoying dust from battered straw, or honestly confuses diverse issues.

Some arguments against a college education for girls have grown gray in the service, while the answers to them have more and more assumed the lively shape of patent facts, from the contemplation of which only the wilfully blind are excluded. That college women can be, as they certainly ought to be, well and easily domesticated, any one with eyes may see. But there are arguments for a college education which are too intangible to be called patent facts, and which yet contain the substance of things hoped for in building up a righteous nation. To deal with them is to leave tabulated figures behind us and to open our minds to the freshening consideration of our deepest convictions.

But before making positive statements it may be well to interpolate two negations as a guard against some favorite misunderstandings.

In the first place, in claiming that a college education yields certain large benefits, no one wishes to assert that colleges are the only means by which these advantages may be gained, or to deny the fact that some people who have no college degree are much better educated than some people who have several degrees. The only fair claim is that as education is now planned and as society is now constituted, the easiest and quickest way for a girl of this generation to obtain the best intellectual training and the most effective discipline is to go through a college course.

In the second place, the world in looking on should not expect colleges within their own walled orchards to display all fruits in a complete state of mellow ripeness. We should not deny every benefit of a college education because at times we see students graduated without certain important attributes. The college cannot (nor can any school) in four years make up for all possible deficiencies in inheritance, environment, or home training. Because some college graduates have uncultivated voices or walk awkwardly or dress badly or lack the gentlest manners or fail to respond quickly to all the canons of good taste, many people lose patience with the colleges and say that the education they offer is of no avail. But it is only the home or a large experience in the world (a sorry but possible substitute) which can give the training that results in perfect breeding. Some American girls, rich as often as poor, must rely upon experience rather than upon their homes. But such experience cannot be their full possession at twenty. To blame the colleges for the crudeness of their youth is an obvious injustice.

What a college can accomplish, although of commanding importance, may be put into three very simple paragraphs:

By its curriculum and its instruction, the college stores "young and ductile" minds with important and useful information, and also, which is far better, trains the reasoning power and gives to young girls the princely inheritance of rational and thinking beings. It furthermore quickens their imaginations, cultivates their æsthetic sense, and prepares them to be sensitive to the future influences of a wider and maturer culture.

Again, the college by its varied student life, with its athletic, dramatic, and musical interests, with its delicious pleasures and its finely serious quests, promotes health of body, gayety of spirit, and skill in the use of social powers. Girls with a background find new channels of desirable experience. Girls with none begin to paint in admirable foregrounds—inheritable as backgrounds for the next generation.

And, most important and inclusive of all, the college by the union of its many complex forces gives to young girls large interests and a comprehension of universal rather than personal standards. Whether they marry or not (and the reasons why certain women with and without college degrees do not marry, being the last stronghold of their reserve, are likely to remain impregnable against the beleaguering statistician or the

raging foe of "higher education"), whether they undertake definite occupations or not, they will become the kind of women who are interesting to their fellow human beings, skilful in meeting the multiform needs of a society staggering under its load of problems, generous and large in all their dealings. The misery of the world comes as much from the petty natures, the limited outlook, the misdirected wills of women as from the vice and selfishness of men. A woman whose centre of thought has been shifted from herself to the universe will probably command beneficent powers throughout her life and do her part toward saving the republic.

In a world where the new problem is still the old one of overcoming evil with good, it is essential that women, for their part, should be wise and self-controlled and charming and cheerful. It is because colleges can help to make them so that we may believe in college education. Such women do not endanger the domestic or the social life of America. Rather will they found admirable homes and purify social standards. In performing these two functions, however secondarily useful other occupations may be, college women do their college training the greatest honor.

In the face of such high possibilities it is extraordinary that some people believe that a college education is useful only as a professional training of women who are obliged to be wage-earners. But perhaps this should be treated as one of those sins of ignorance which, since they are to be winked at, prove such a strain on the charitable eye.

Where charity has no place is in our judgment of the colleges themselves, when they make the equally fatal, if different, mistake of losing sight of the ultimate issues and working toward particular ends. The principle is the same whether the college recognizes self-support as the particular end of some students, or the details of domestic life as the particular end of others. That technical education in separate institutions or in added years may be a desirable supplement to college training, we are not interested in denying. But that the four precious years of "liberal pursuits" should be intruded upon is an educational blunder of the first magnitude. Yet the intrusion is stealthily made. Sweetness and light are unmarketable commodities. Pedagogy, household economics, and other lo heres and lo theres, if we but heed them, will make us "practical." Poetry, they tell us, does not remove the microbes of the pantry, neither does philosophy ventilate a school room. Therefore let literature and metaphysics be abandoned, while good housekeepers and good teachers are evolved.

It is a significant fact that the separate colleges for women raise this cry less persistently than the women's colleges connected with men's universities, or than the coeducational universities. Among men the tendency toward an utilitarian conception of education is obvious. Perhaps they exercise a late revenge in offering the apple of "practical knowledge" to the Eves in their garden.

A more idealistic plea does not disregard the fact that many girls in this vast country will need later to apply their powers to self-support. Neither does it disregard the fact that society must be efficiently served or homes well managed by tho women who are to have no technical occupations, but are to be engaged in a work that is without money and without price. It rather seeks to cleave through the pedagogical fallacies that ideas should be applied coincidently with their acquisition, or that second-rate ideas can result in first-rate activities; and to urge the sacred truth that life in whatever form it is handled is greater than an easy matter of methods and of facts. The world itself, for all its clamor, unconsciously demands something better than mechanical equipment, for it gives its largest prizes, whether of position or of favor, to those who possess a personal power that is not the outcome of "practical courses." How much more clearly, then, should colleges see from the mountain peak what is only dimly surmised in the valley!

For women's colleges—the colleges proper as distinguished from the graduate schools—to resolve themselves into technical schools for the turning out of teachers or any other professionals; to become stages whereon in tinsel costume students go through a dress rehearsal of any salaried or unsalaried rôles they may play later in the economic or the domestic drama; to attempt to furnish anything but the "prepotent energy," the glorious impulse of movement toward the next conquest, is to lower themselves to the standards of the market place, and to talk the coarsened language of barter and exchange. The college is not a workshop for the fashioning of drills and derricks. It is rather a hostelry on the highroad where travellers are

Marching to fortune, not surprised by her.

There one has always found good food and inspiriting music, the encouragement of comrades, and imperishable defences against the difficulties of the widening road. May the colleges permit no alien intrusions, for they have in their keeping pearls of great price!

ANNE C. E. ALLINSON.

LITERARY NOTES FROM PARIS.

PARIS, January 29.

"Vanité," the new novel by the brothers Paul and Victor Margueritte, aims to be a human document from a society given over soul and body to money and the satisfactions which money procures. The brothers are not masters of style like Anatole France; that would interfere with the directness of their aim. Nor are they preachers, although they marshal their facts in moral battle array. They tell their story in a rough, swift, matter-of-fact way, sure to interest and impress you, if only you are open-minded. Pierre Brevier, founder and half-owner of the great "department store" of the Quatre Saisons, has a wife and two daughters variously adapted to the flow of his millions. The wife, penniless when he married her, fulfils the whole duty of the rich woman by spending as much money as possible in social ostentation. The elder daughter, Raymonde, owns a husband not too exacting. Alice Brevier, the highly marriageable daughter, is an attempt at realizing an ideal under difficulties. Left to herself as a woman and not a millionaire's daughter, she would marry Michel Lorin, poor relation and struggling doctor, with bar sinister. Pierre Brevier is carried off by angina pectoris after a great dinner, when his partner telephones that he has ruined them both and is committing suicide. This *Krach* of new fortunes is told with a realism due to recent Paris tragedies. Madame Brevier stoops to heritage-hunting from a cynical aunt, who rewards virtue by dying and leaving her new millions. Raymonde feathers her own nest anew by driving her husband to divorce and selling herself to another. Alice, a decided misfit in such a family, marries the poor Michel Lorin—and refuses all inheritance from the new millions left by her mother, who dies before enjoying them. This attitude toward tainted millions is made the occasion for a favorite contrast of these authors between Anglo-Saxon honesty and French honor. Miss Smolett, Alice's English friend, vainly points out what vast sums might be distributed in charity. Alice and Michel will not soil their hands and hearts with the "vanity" of such riches—which must therefore go to Raymonde!

The Société des Conférences, which furnished a hall for the lectures of Brunetière on the Encyclopedists, when the Government excluded him from university buildings, has taken Jules Lemaître this year. He continues—but with mental and moral difference—the general subject with a series of lectures on Jean Jacques Rousseau, documented, up to date in erudition, and full of the sunny philosophy and style of the lecturer. They are doubtless the forerunner of an approaching book of great value.

S. D.

Correspondence.

OPEN SHELVES.

TO THE EDITOR OF THE NATION:

SIR: I have read, with an ever-increasing desire to take part in it, the correspondence in your paper in regard to the open-shelf system in American libraries. I have hesitated to speak, as my library is in a town of but 25,000 inhabitants, and the circulation of books is but 140,000 a year. As it has, however, one of the largest open-shelf collections, our experience may prove that all American librarians have not yet so definitely owned the system a failure as you seem to think. I am very sorry that the *Nation* should take so pessimistic view of a system which is helping to make public libraries into more effective forces in our towns and cities. While we who have faced the difficulties of free access are trying to convince others that the system (with proper protective measures) is the only enlightened one for a library to adopt in this twentieth century, is it not a pity for you to make our task the harder by saying that we have already acknowledged it a failure?

Since 1899, this library has had its entire collection, which now numbers 65,000 volumes, on open shelves, and the public is so appreciative of its privileges that we should no more think of shutting the doors to them now, than of chaining each book to its place, after the fashion of still earlier days. So important a part of our system do the trustees consider open

shelves to be that in planning for a new building they have made a large book-room, with alcoves, the central feature of the whole library. With an annual circulation of about 140,000 volumes, we have lost an average of 79 books a year. This figure includes the losses from two deposit stations in stores, where the books are on the most unguarded of open shelves, as well as from the main library. During the year 1906 the total loss of books was 84, of which number 53 were lost from the children's department, 20 from the open shelves in the delivery room and from the deposit stations, and 11 from the main library. These figures would seem to indicate that careful supervision is desirable in children's rooms, but certainly not that the general public has abused the confidence placed in it, nor that the open-shelf system has yet proved itself a failure in this public library.

Mr. Wilson is certainly right in saying that the keenest opponents of the system are those that have not given it a trial. They are perhaps those who are more interested in being able to report at the end of the year "the loss of one volume, subsequently found" than in a measure of usefulness wholly impossible with the old fashion of shelves closed to the public, to whom, after all, the public library really does belong. LOUISA M. HOOPER.

Public Library, Brookline, Mass., February 11.

THE CASE FOR THE RAILWAYS.

TO THE EDITOR OF THE NATION:

SIR: Greed is the excess or perversion of the legitimate love of money or wealth. In every bargain there is a dollar which buyer and seller both want, and in general their desire for that dollar, whether legitimate or not, is essentially the same thing, both legally and morally. The all-powerful community of interest between buyer and seller to make the bargain awards fifty cents to each in the grand average of cases. Human freedom means not merely such personal liberty as the social state permits, but includes the inalienable right of free contract, as an essential feature of the institution of property. The greed of the people and their representatives is to-day a menace to our free institutions, which might become more alarming and dangerous than all the trusts in the country, including even the Standard Oil Trust, and the labor Trusts. The greed of the railroads might become as nothing to that of its passengers and shippers, or of the community through which it runs. Railroad service has been steadily improved and cheapened. The legitimate reward for this immense public service should be a great continuous and permanent enhancement in the capital value of the railroad, involving recognition of stockholders' rights to subscribe to new capital on advantageous terms, and the right to earn and pay dividends on the present values, and not upon obsolete par values. This policy would simply put railroads on a parity with other property, and with the country as a whole. The only alternative is the "dead line" of limited dividends and value of stock. If a railroad is strictly limited to 8 per cent. dividends, and is compelled to issue new stock at market value (say $200 per share, as a very high figure to-day), the "dead line" is established; all motive for further development is taken away; stockholders occupy the position of mere mortgagees and naturally seek a lease to guarantee what they have left. This has been the fruit of the unjust, unenlightened policy of Massachusetts. It has cost Massachusetts her backbone, the Boston and Albany Railroad, and $130,000,000 capital (the American Telephone and Telegraph Company) driven out of the State to New York, to say nothing of other losses, large and small.

The truth is that most of our railroads run through seas of watered farms. If every farmer were allowed to earn only 7 per cent. or 8 per cent. on the original or par value of his farm, there would indeed be a saving for the people. Yet it is the railroad which has made the farms worth ten, twenty, or fifty times their par value. If the railroads were destroyed, the country would be little more than a quivering jellyfish. Railroad rates will always be governed by the law of supply and demand, and they have declined thus far. Let us trust in this great natural law of trade, accord to the railroad the justice and freedom accorded to other property, and not stultify ourselves by an exhibition of greed that is worse than what we can accuse even the Standard Oil Company of, after it has reduced the price of oil, say 90 per cent. Let us regulate justly, but not paralyze and destroy.

ROBERT S. MINOT.

Boston, February 8.

Notes.

Messrs Scribner announce the following: Mrs. Wharton's "Madame de Treymes," with illustrations in color by Alonzo Kimball; "Poison Island," a novel by Quiller-Couch; "The Veiled Lady and Other Men and Women," by F. Hopkinson Smith; "Studies in Pictures," by John C. Van Dyke; "The Peter Pan Alphabet," by Oliver Herford; "Abelard and Héloise," a drama in blank verse by Ridgely Torrence; a new edition of Baedeker's Egypt, and the second and final volume of Dr. Briggs's "Critical and Exegetical Commentary on the Book of Psalms."

Next week the Macmillan Company publishes a story by Owen Wister called "How Doth the Simple Spelling Bee Impruv Each Shining Ower." The same firm announces for February 20 the first volume of the "Cyclopedia of American Agriculture," edited by Prof. L. H. Bailey.

Doubleday, Page & Co., who seem to be making a specialty of northern seas, mountains, and all strenuous out-of-door things, will publish this spring Dr. Frederick Cook's "To the Top of the Continent," an account of the scaling of Mt. McKinley.

Next month G. P. Putnam's Sons will publish A. C. Benson's "Beside Still Waters," the reflections and uneventful life of a young man who goes into the country to write.

We note the announcement of several English books which, we believe, are not yet on the list of any New York publisher: "A Literary History of the Arabs," by R. A. Nicholson; "The Story of Port Royal," by Mrs. Romanes, an attempt to show that the Port Royalists from 1601 to 1709 were loyal Catholics; "Life and Flowers," new essays of Maeterlinck translated by A. T. de Mattos; "England and America, 1764 to 1783," by Mrs. Alfred Marks; and "The House of Rest," a novel by the author of "Hazel of Hazeldean."

The Boston Athenæum is about to publish a volume commemorating the one hundredth anniversary of its foundation. It will contain sketches, historical and bibliographical, a complete list of proprietors and officers, and a valuable series of illustrations. From the librarian's annual report we learn that the number of volumes now in the library is 226,489. During the year significant additions have been made to the collection of manuscripts and early editions of the works of New England authors. During the present year a special effort will be made to secure works on Central and South America.

The Honorable Society of Cymmrodorion (64 Chancery Lane, London) asks for subscriptions to the "Lives of the British Saints," by the Rev. S. Baring-Gould and the Rev. John Fisher. This work, to be published in four volumes if sufficient subscribers are obtained, is the result of long study of MS. material in Welsh libraries and elsewhere.

"The Complete Automobile Instructor" (John Wiley & Sons), by Benjamin R. Tillson, is put in the form of six hundred and more questions and answers, covering the principles, the operation, and the care of gasolene automobiles.

The "Records of the Church of Christ at Cambridge in New England, 1632-1830," copied and edited by Stephen Paschall Sharples, will be serviceable to genealogical students. The volume is published by Eben Putnam of Boston.

The six volumes of the Tudor and Stuart Library already issued at the Clarendon Press promise a series of books of unusual value. The reprints are not only literal, but in types actually produced from matrices given to Oxford University by Bishop Fell in 1660. The paper, too, is old-fashioned in that it is made of pure linen rag. The covers, imitation vellum, have at least the virtue of keeping the price of the books at a reasonable figure (5s. net; $1.75 each). Several volumes of the series have already been noticed in these columns, but two new issues deserve special mention. One is Fulke Greville's "Life of Sir Philip Sidney," from the edition of 1652, edited by Nowell Smith; the other is Peacham's "Compleat Gentleman" (from the enlarged edition of 1634), with an Introduction by G. S. Gordon, one of the many works of courtesy published in those years, with, however, a certain originality in the combination of Cavalier and schoolmaster shown by the author. Greville's "Philip Sidney" has been twice before reprinted, once by Sir Egerton Brydges in 1816, and again by the indefatigable but not too careful Dr. A. B. Grosart. The accuracy of the present reprint can be gauged only by those who have at command the original edition of the MS. at Trinity College, but the work bears evidences of care both in the collation of the texts and in the annotations. Of the interest of the work itself, with its heroic picture of Sidney and its general reflections on government, nothing need be said.

Two useful reprints from the press of Henry Frowde are William Cobbett's "English Grammar" and "Advice to Young Men." The "Grammar," first published ninety years ago, and frequently reissued, remains the most interesting treatise we have on the subject. A few of the usages which Cobbett recommends are now obsolete or obsolescent, but the book as a whole is sound and still worth reading, even by those who regard themselves as experts in grammar. A brief introduction by H. L. Stephen, judge of the high court of Calcutta, supplies whatever is needful in the way of comment on Cobbett's career and on the book itself. The "Advice to Young Men" is still more entertaining. Such didactic works, from Solomon to Senator Beveridge, are as a rule platitudinous and arid. This criticism, however, cannot be passed upon Cobbett's production. The subtitle should be "Illustrated with Numerous Anecdotes of My Own Exemplary Behavior." He is frankly autobiographic, and he displays his colossal egotism with a naïveté that has few parallels in our literature. No one who wishes to understand Cobbett either as a man or a political agitator, can neglect this compendium of advice. Mr. Frowde will, we hope, follow these two books with Cobbett's "Life and Adventures of Peter Porcupine" and "Rural Rides."

From the Cambridge University Press (G. P. Putnam's Sons, American agents) come two beautiful reprints: Bacon's "Essays" and Milton's "Comus and Other Poems." The editions are limited to 250 copies each, of which only 225 are placed on sale in England and America. They are printed from "Cambridge type" — large, clear, and black—on hand-made paper, and the binding is blue boards and parchment back. The "Essays" follow the text of 1625, including spelling, italics, and capitals; and the fragment of an essay "Of Fame," first printed in Rawley's "Resuscitatio," 1657, is added. The poems of Milton are from the texts of 1645 and 1673, and the facsimile of the autograph manuscript of the minor poems. In both volumes the old titles are reproduced.

As an example of useful work in collecting materials for the study of comparative literature, we may mention a monograph on "The Influence of Solomon Gessner Upon English Literature," by Bertha Reed, published by the Americana Germanica Press. Extracts from English criticism of Gessner are given, and also parallel passages from Coleridge, Wordsworth, and Byron. It would appear that Coleridge at least did not hesitate now and then to borrow a line from the German idyllist.

"Some Irish Yesterdays," by E. Œ. Somerville and Martin Ross, illustrated by E. Œ. Somerville, is published in this country by Longmans, Green & Co. The authors of that classic piece of humor, "Some Experiences of an Irish R. M.," have not rested on their laurels. But they have never quite equalled those sketches. Over them one has seen those who know nothing of the life described laugh to the verge of tears, and the initiated follow with resentful admiration the tale of [illegible] that their eyes, too, had seen, yet [illegible] seen through. "Martin Ross" never [illegible]es in the exaggeration and caricature [illegible] alienate the Irish reader from Lev[illegible]vels. Lever, after all, was of the [illegible] and country life in Ireland can be understood and revealed only by those who are born and bred on the bog. The Anglo-Irish landowner, who knows it all, but finds more annoyance than amusement in the vagaries of the peasants whom he employs, must smile sometimes with alien lips at these clever portraits of him and his, which, though not quite satire, leave him a little absurd and out of place. Only the Irish can take Ireland with unfailing humor—the unbroken wet, "heavy showers and showers between," the dirt and squalor due to lack of sun, the incalculable that, on all sides, makes routine impossible in Irish life. "Martin Ross" can so depict life in a Galway lodging-house that one feels that not to have shared her experience is to have left one's knowledge of the cities and manners of men lamentably incomplete, and she can so describe a picnic consisting of two men and forty women that, man or woman, one might pine to have been there. This latest volume comes near in fidelity and freshness to the work that brought her fame. She has pushed her record of the west coast as far now as the Aran Islands, and she gives a vivid picture of that isolated community, where men and women alike never put anything on their feet except "pampooties"—slippers of raw cow-hide, with the hair outside—and take to the rocks in panic flight when the rare tourist tries to snatch a photograph or a sketch. For in Aran to be photographed is to die before the year is out. Miss Somerville's illustrations of her cousin's book are, as usual, excellent, full of humor and life, and of the pathos of those ragged coasts and low gray skies.

In "Italian Days and Ways," by Anne Hollingsworth Wharton (J. B. Lippincott Co.), we have another book on Italy written in the form of letters. It combines travel along beaten tracks, personal experience made entertaining by a redeeming, if not a saving, sense of humor, and a background of fiction too dim to distract the reader's attention, but with enough of Italian coloring to add to the general effect of the picture. The three women—one young, the others uncertainly older—who land at Genoa and travel through the highways of Italy *à la* American tourist, have many amusing experiences. They are too obviously *forestieri*, with note-book and Baedeker, not to become the tempting and easily duped prey of astute *vetturini* and unscrupulous boy venders of *grilli*. But the situations, all taken with a good grace and told with a light touch, make diverting reading. There is a tendency to enlarge upon trifling incidents, which produces the effect of padding; but the spirit of enthusiastic enjoyment gives a fresh view to old scenes. The letters from Rome during Easter week, and the description of the Gregorian ceremonial, are the most interesting of the volume.

In "Rome as Described by Great Writers," edited by Esther Singleton (Dodd, Mead & Co.), the preface avers that the purpose of the volume, as of others in the same serics, "is to give the traveller or stay-at-home reader a general and comprehensive view of the great cities of the world." Except for Gibbon, Dickens, Hawthorne, and Zola, and a few others who, like F. Marion Crawford, are at least popular, the writers who are laid under contribution cannot be called great. Dickens's spirited descriptions, especially of the Carnival as it was once but is no longer, were well worth quoting, and are by all odds the most interesting reading in the whole book. Nor will Mr. Crawford's competence to write a chapter on Roman Life and Character be questioned. But although no one will deny that Hawthorne was a great writer, it is only an enemy of his fame who will wittingly propagate the nonsense he wrote about Italian art. Unfortunately the text is carelessly handled and misstatements in the writers quoted are allowed to go uncorrected. At page 300, for example, Hawthorne and his wife are made to perform a remarkable feat. They started out at about nine o'clock in the evening to see Rome by moonlight, and after a description of the Colosseum and the Fountain of Trevi, the following paragraph proceeds: "We next ascended an amazing height of staircases, and walked along I don't know what extent of passages till we reached the picture gallery of the Vatican." Staircases and passages which should lead from the Trevi Fountain to the Vatican must needs be extensive, since they would have to traverse a good half of Rome. Consulting the "French and Italian Notebooks," we find that our editor has combined without asterisks two extracts from the article dated April 25, 1858, which are separated by three pages in the original text. At page 319 Dr. Reinhold Schoener transports the Villa Mattei from the Cælian to the slopes of the Pincian Hill; and a number of similar errors might be noted were there space for such corrections. The proofreading, too, is inexcusably careless. We cite three instances by way of illustration: Anio Vestus for Anio Vetus, p. 16; Rospighosi for Rospigliosi, p. 43; and S. Maria Vallicella for S. Maria della navicella, p. 320. The book is not a credit either to editor or publisher.

D. H. Macgregor's "Industrial Combination" (The Macmillan Co.) is probably the most careful scientific study which has yet been made in this field of investigation. Its most valuable part is the first four chapters, which deal with "the factors of competing strength." These factors, according to Mr. Macgregor, are productive efficiency, risk, bargaining strength, and resource. Avoiding all confusion between the phenomena of industrial concentration and those of large-scale production, he investigates the influence of combination upon the competing strength of "representative firms." Subsequent chapters deal with the conditions which occasion combination, the relation of aggregations of capital to aggregations of labor, the "national effects" of the combination movement, and the public policy which should be pursued with reference thereto. Mr. Macgregor's conclusions are generally as sane as his methods of procedure are correct. The chief, if not the only, ground for criticism is his disposition to take too seriously "official" material dealing with the Trust movement in the United States. Thus the preposterous answers concerning export prices which the Industrial Commission gathered from protected manufacturers are solemnly cited (p. 211) as scientific evidence that most of the Trusts

do not look with great favor upon the policy of selling to foreigners at lower prices than are charged domestic consumers. This is, however, a common failing with European students, who accept with childlike simplicity anything labelled "official," and have been victimized wholesale by the outgivings of the Industrial Commission.

"International Law, with Illustrative Cases" (F. H. Thomas Law Book Co.), by Prof. Edwin Maxey of the University of West Virginia, is a book of which we cannot imagine the use. Its chief merit is asserted to be that it combines a treatise with a collection of cases, but as the treatise and the collection are equally poor, their alliance profits nothing. The choicest specimen of the author's style is this comment on the Panama incident (p. 53):

> Viewed in the light of Colombia's past indifference towards the welfare of the Isthmian provinces, it seems entirely natural that . . . the people of the Isthmus should have done exactly what they did, viz., dissolve the political bond which kept them from rendering the service and reaping the benefit which God and nature intended they should. . . . Not to have manifested a determination that their great natural resources due to their situation be used to their own and the benefit of mankind, rather than senselessly wasted, would have been unmistakable evidence of an imperative need for the appointment of a commission of lunacy.

After this, nothing can surprise us, not even the entire omission—except in the case of the North Sea convention—of all controversies growing out of the Russo-Japanese war. On the whole, the work is inaccurate and ill-digested.

In "Roman Private Law" (The Macmillan Co.) R. W. Leage merely aims "to give as simply as possible the subject matter of the Institutes of Gaius and Justinian." This he does, not by translating or commenting on the original texts, but by describing clearly and concisely the substance of the law revealed to us by those texts. The historical point of view is omitted, except so far as it is necessarily involved in recording the fact (*c. g.*) that the forms of execution in use under the Antonines were different from those employed under Justinian. The work is admirably done, and should prove useful, not only to elementary students, but to any one who wishes to be saved the trouble of referring to the original Institutes. Why the Roman technical terms, which to our mind look best in italics, should be printed partly thus and partly in ordinary type, is a mystery that we have not solved.

"The Army in 1906: A Policy and a Vindication," by H. O. Arnold-Forster, M.P. (E P. Dutton & Co.), is avowedly a defence of his administration of the British War Office, which ended early in 1906 with the coming in of the Campbell-Bannerman Ministry, and he is happy to quote on the title-page of his book from a speech made by his successor, Mr. Haldane, in July, 1906:

> Never before this time have we had such good material in the Army. The morale both of officers and men is higher than it was. The Army is in a condition in which I do not think it has been before, both in point of quantity and quality.

But while ready to cite Mr. Haldane in his defence, Mr. Arnold-Forster is bent also on proving that Mr. Haldane's own policy is all wrong, since in Mr. Arnold-Forster's opinion it weakens the army, makes it less efficient, does not provide for its expansion in time of war, adds to the cost, and finally "destroys the good and retains the bad." Public opinion is not with Mr. Arnold-Forster; hence perhaps this excellently printed and well-got-up book, the value of which is further enhanced by the summaries of the points made, printed at the end of each chapter. There are not many Americans who have been able to follow the kaleidoscopic changes in the process of reforming the British Army which have taken place every six months or so since the Boer war. But those civilians and military men who are endeavoring to study the various schemes should not fail to add Mr. Arnold-Forster's book to their libraries—special pleading though it be for a régime and policy of the past.

"The Life of Sir George Williams," founder of the Young Men's Christian Association, by J. E. Hodder Williams (A. C. Armstrong & Son), is the story of a career which began in a lonely farmhouse in the Lorna Doone country and ended in St. Paul's Cathedral. Born in 1821, he came to London when twenty years old, and secured a position in a draper's shop at $4 a week. The condition of shopmen in those days was "little removed from that of a slave." During the busiest part of the year it was a common thing for these young men to be penned in the unhealthy atmosphere of the shop from six or seven in the morning until ten or eleven at night. Under the prevailing "living-in" system they were housed together, five or six in a single room. The moral and physical welfare of the young men was contemptuously ignored by employers. An overwhelming desire to help his associates was awakened in the country lad at the outset of his London life, and actuated him to its close, sixty-four years later. A little devotional gathering in his bedroom led to the formation of the Young Men's Christian Association; and to the untiring and eminently judicious labors of Sir George more than to those of any other man is due the fact that the original band of twelve drapers' assistants has grown into an international body of 7,773 associations, with 722,000 members, and owning buildings valued at $34,000,000. The larger part of the memoir is naturally devoted to an account of his work as a philanthropist. But his remarkable success in this direction was not "the crowning wonder" of his life, according to his biographer, and the readers of the life-story will agree with him. It was the fact that he was a thorough business man from the beginning, and was for many years at the head of a great establishment, "keeping in constant touch with every detail, watching every turn and trend of one of the most complicated and exacting of trades." He demonstrated the truth of his own conviction that "the men of God, other things—natural ability and education and knowledge—being equal, are the best men of business." It was to this unique combination of ardent love for evangelistic and philanthropic work with devotion to business that he owed the honors conferred upon him, knighthood, the freedom of the city, and a tomb in St. Paul's. The illustrations are ten portraits of Sir George and several of the original members of the Young Men's Christian Association, and pictures of places referred to in the memoir.

Mark Twain's "Christian Science, with Notes Containing Corrections to Date," just issued by Harper & Brothers, is distinctly disappointing. It contains a good picture of Mr. Clemens, taken last year, pictures of two Christian Science churches, and some passages of caustic humor, but as an exposition or exposure of Christian Science and its fallacies or of Mrs. Eddy's ecclesiastical polity, it does not get anywhere. It is perhaps most successful in laying bare the elaborate system by which Mrs. Eddy centres in her own hands all the powers of the organization. We do not labor under the delusion that people who are persuaded by Mrs. Eddy's style of writing will be in the least moved by an array of evidence or by logical inference. Webster himself could not construct an argument that would make the slightest impression on the average Christian Scientist. But, granting all this, we see no reason for putting on the market such a deal of skimble-skamble stuff as is here bundled together. The book is without beginning, middle, or end; it is extremely repetitious. It cannot be regarded as either a serious or a humorous contribution to the discussion.

Students of theology may remember the suggestive Ely lectures on "The Evidence of Christian Experience" delivered some fifteen years ago by Lewis French Stearns, then professor at Bangor Theological Seminary and since deceased. One is reminded of Professor Stearns's essay by the recently published "Realities of Christian Theology," by Clarence Augustine Beckwith, who was also professor at Bangor and is now connected with the Chicago Theological Seminary (Houghton, Mifflin & Co.). Professor Beckwith endeavors to reach the realities of religious doctrine through experience, and the sub-title of his work is "An Interpretation of Christian Experience." The method proposed is to proceed from the life recognized as Christian, which is assumed to be the same in all ages, to the truths to which the life bears witness. In the work itself, however, this method is often lost sight of, and the realities which come to view are not particularly substantial or veritable. The principal themes of the usual doctrinal systems appear in the discussion, but it can hardly be said that new light is thrown upon them.

The Theological Translation Library, which has done so much to extend the knowledge of the best German criticism among English readers, now reaches its twenty-second volume in a translation of the first part of Dr. Otto Pfleiderer's "Urchristentum" (Primitive Christianity: its Writings and Teachings in their Historical Connections. Translated by W. Montgomery. Vol. I. G. P. Putnam's Sons). It is strange that a work of such recognized value on the beginnings of Christianity should not have been made accessible in English more promptly. The scholarship and ability of the author have long been conceded, in England and America as well as on the Continent. His wide studies in the field of comparative religion give him peculiar advantage as a writer on the New Testament. The discussion of the writings and theology of Paul occupy the larger part of the present volume, and the completion of the translation may be awaited with interest.

An entirely new literary find, a work of Irenæus, who died in the last decade of the second century, has just been published under the care of Professor Adolf Harnack. Some months ago, it was reported that an Armenian translation of the Greek work of Irenæus, quoted by Eusebeus as εἰς ἐπίδειξιν τοῦ ἀποστολικοῦ κηρύγματος, and generally known as the "Apostolic Proclamation," had been discovered, and that an edition would be forthcoming. This now appears as Heft. I of the first volume of the third series of the "Texte und Untersuchungen," edited by A. Harnack and C. Schmidt (Leipzig: Hinrichs). The Armenian text was discovered, edited, and translated into German by the two Armenian scholars, Dr. Karapet Ter-Mekertishan and Lic. Dr. Erwand Ter-Minassiantz, the text and translation being revised by Dr. Franz Finck, a *privat-docent* of the Berlin University, while the Introduction and the Notes are the work of Harnack. The manuscript was found in the Mother of God Church in Eriwan, and dates from the second half of the thirteenth century. There seems to be no doubt that the work is genuine, especially as the author quotes in chapter 99 his famous work against heresies as a production of his own pen. The book, conveniently divided by Harnack into one hundred chapters, does not possess the sensational novelty of the Didache and the Apocryphal Gospel of Peter, but it is of exceptional value, as the editor declares, for study of the Church's faith at the time it was written. It is an exposition of the orthodox doctrine as expounded by the Bishop of Lyons, and is intended for a certain Marcian, who was evidently a layman. Its chief value will consist in the data it furnishes for the development of Christian doctrine at a time when the great theological and Christological controversies were in preparation.

At a sale held by Knight, Frank & Rutley of London, January 24, the 1481 edition of Dante's "Commedia," with Landino's commentary, brought £19; and Gower's "Confessio Amantis," 1632, £13.

Henry Francis Pelham, president of Trinity College, Oxford, England, since 1897, died on Tuesday at the age of sixty-one. He was educated at Harrow and Trinity; and soon after taking his degree he became a tutor in Exeter College. In 1889 he was appointed Camden professor of ancient history in the University of Oxford, and in 1892 curator of the Bodleian Library. Among his publications are "Outlines of Roman History," 1890; "The Imperial Domains and the Colonate," 1890; "The Roman Frontier System," 1895; and numerous articles in the "Encyclopædia Britannica" and Smith's "Dictionary of Antiquities."

Sir William Howard Russell, the noted war correspondent, died in London last Sunday. He was born near Dublin in 1821, studied at Trinity College, married a daughter of Peter Burrowes in 1846, and was called to the English bar from the Middle Temple in 1850. During O'Connell's agitation for the Repeal of the Union, the London *Times*, for which he had written occasionally, engaged him to describe the great mass-meetings, and this he did so effectively that soon afterward he was offered a permanent engagement on the staff. His first foreign service was in Schleswig-Holstein in 1850. In 1854 he was sent to Malta with the advance guard of the British Expedition to the East, on the declaration of war with Russia. From Malta he proceeded in due course to Bulgaria and the Crimea, where he remained till the evacuation of the Chersonese by the Allied Army in 1856. In 1857 he reported the campaign of the Indian mutiny. In 1858 he established the *Army and Navy Gazette*, of which thereafter he remained the chief proprietor and editor. On the outbreak of civil war in the United States, in 1861, he made a tour of the South. In course of time he joined McDowell's army, and described the battle of Bull Run in a spirit so hostile to the Northern army as to gain for himself much unenviable notoriety, and the title of "Bull Run Russell," which clung to him ever after. In 1866 he reported the war between Austria and Prussia; and he was again to the front during the Franco-Prussian war. When the Great Eastern laid the first Atlantic cable, in 1866, he was a member of the expedition, and he attended the opening of the Suez Canal in 1869. In 1875 he accompanied the then Prince of Wales to India, after which he was once more summoned to the field, this time with Lord Wolseley in the Zulu expedition. Later he accompanied the same general in the campaign which led to the occupation of Egypt and the reëstablishment of the Khedive at Cairo. He received his knighthood in 1895. As a writer he was master of a style which was at once fluent, forcible, and picturesque, and he generally manifested an astonishing grasp of all the vital details of his subject. Among his voluminous publications are "Letters from the Crimea," "Diary in India," "My Diary North and South," "Rifle Clubs and Volunteer Corps," "Canada: Its Defences," "My Diary in the East."

The Right Hon. George Joachim Goschen (Viscount Goschen) died February 7. He was born in 1831, and had a distinguished public career. He was chancellor of the exchequer in Lord Salisbury's second Administration, and afterwards was first lord of admiralty. He had been lord rector of Edinburgh and Aberdeen Universities, and had written much on economics and finance. Among his publications are: "The Theory of the Foreign Exchange," and "Essays and Addresses on Economic Questions."

BRUMMAGEM ECONOMICS.

The Wheel of Wealth, being a Reconstruction of the Science and Art of Political Economy on the Lines of Modern Evolution. By John Beattie Crozier. New York: Longmans, Green & Co. $4.60.

Some years ago Mr. Crozier discovered a "New Organon," by the aid of which he undertook to "reconstruct" the sum total of human knowledge. From the comprehensive, though modest, character of his enterprise it was evident from the very start that, unless some more ambitious project claimed his attention, he would sooner or later fall foul of political economy. The first volume of the "History of Intellectual Development," indeed, got no further than the reconstruction of the wit and wisdom of the Hindus, Hebrews, Greeks, Romans, and early Church Fathers; and it seemed that the "dismal science" was safe for a number of years to come. But when, leaping over the intervening time and space, the next volume reconstructed "the politics of England, France, and America for the twentieth century," it became clear that Mr. Crozier was about to close with the pretended science of Smith, Ricardo, and Mill—not to mention the other impostors.

The reconstruction of political economy has long been a favorite pastime with amateurs, but there is nothing amateurish about the "Wheel of Wealth." Its author is an experienced reconstructor, and from start to finish his policy is "Thorough." He reconstructs political economy more comprehensively and pitilessly than we should have considered humanly possible—reconstructs it, science and art, root and branch, body and soul; production, exchange, distribution, consumption, and public finance. When the task is completed, the most abject devotee of the accursed science would never recognize the object of his devotions. Moreover, the work is done expeditiously, and as a mere incident in the larger task of rewriting the whole circle of sciences dealing with human life, "Religion, Government, Philosophy, Psychology, Ethics, History," and the rest. All alike are pronounced unreliable because they have not yet found common support in a general science of civilization by which they would be "coördinated and reduced to harmony." Hegel, Comte, Buckle, and Spencer have, indeed, appreciated the need of such a comprehensive social philosophy; but their efforts to supply it failed because each of them emphasized unduly one or another of the factors in the problem. In his "Civilization and Progress" Mr. Crozier has already found the key to the riddle. The progressive development of higher moral codes and ideals is the fundamental principle needed to unify the sciences that deal with man; and political economy, like the others, stands condemned because it has not reconstructed itself upon "the lines of Modern Evolution."

A true system of political economy, according to Mr. Crozier, ought to be "first, a pure science; secondly, an art, or applied science, and, thirdly, a polity; the pure science being the inner core of the doctrine, as it were, while the art and the polity form the general material, political, and social framework in which it is embodied, and in and through which it has to work." The pure science of political economy should explain and interpret not merely the economics of modern capitalism, but also the economics of every other stage of industrial development; and our author maintains that the orthodox school, by narrowing its investigations to the stage of modern capitalism, has made the science "an illegitimate academic specialism."

Such a pure science Mr. Crozier develops in a single chapter which is all of six pages in length, the transformation being wrought by his miraculous Wheel of Wealth. All the factors involved in industrial processes are four in number: production, consumption, the powers of nature, and the powers of man. Production is constantly passing into consumption, and consumption, in turn, into production; so that any one can see that the two combined form a revolving Wheel, of which production constitutes one-half and consumption the other. This Wheel revolves "along the highway of time,"

through a medium "thick with powers of nature of all kinds," and with the "powers of man" ever hovering near to give the needed push. In a late chapter we learn that bankers and speculators, all the while, manage to stand on the "centre or axle," watching, like Helen's Babies, to see the Wheel go round. From this conception, Mr. Crozier passes to the two "fundamental propositions mathematically deducible" from it. In the first place, he shows that any check applied to one-half of the Wheel inevitably retards the progress of the other. He fails, however, to notice what the consequences of such a jolt must be to the bankers or speculators who have been endeavoring to preserve their balance upon the axle, and thereby loses an admirable opportunity to elaborate a new theory of commercial panics. The second fundamental proposition is that, "just as the distance covered by a running wheel in a given time is in proportion to the speed of its revolutions, so in the Wheel of wealth-production, the increase of wealth is also in proportion to the speed of its revolutions in a given time." If these discoveries do not make the "academic specialialists" betake themselves to the tall timber as speedily as possible, we shall know that the impostors are as devoid of shame as they are of scientific insight.

As many as eight chapters are needed to reconstruct the applied science of political economy, but the work is accomplished within the moderate compass of eighty pages. The chief discovery in this field is not thrown off by the Wheel of Wealth, but is borrowed almost bodily from Robertson's "Fallacy of Saving." It seems that of the two parts of the Wheel the motive power always comes from consumption, which at every point controls and limits production. The increase of production depends, then, upon consumption, not upon the growth of capital, as Mill and other miscreants affirmed; and "saving," by limiting consumption, tends, so far forth, to check production (p. 92). It is consumption, therefore, that makes the Wheel go; and rents, profits, and wages rise or fall together, according as the revolutions are accelerated or retarded.

Having constructed, or rather reconstructed, his pure and applied sciences, Mr. Crozier sets off in quest of his polity. As our readers may have begun to suspect, this is "Tariff Reform" of the Chamberlain variety. Foreign exchanges, to be beneficial, must be in "complementary," not in competing, goods; since the importation of the latter destroys domestic industries, and, if unrestrained, will strip weaker countries of their population and wealth. Such, he gravely informs his readers, has been the effect of free trade between the various States of the American Union; and such, he predicts, will be the fate of Great Britain if she does not throw herself into the arms of the Birmingham screw-maker. The classical doctrine of comparative cost arouses him to the highest pitch of frenzied verbosity, and the theory that gold exports tend automatically to regulate themselves he ridicules as a "perpetual-motion scheme." Protectionism, therefore, is the only polity for nations living in the twentieth century.

The reader may have begun to wonder why such a reconstruction of political economy should have been called reconstruction "on the lines of modern evolution." The Wheel of Wealth would seem to be a mechanical rather than a biological conception, and the reversion to protectionism suggests not evolution, but atavism. But two-thirds through his volume our author suddenly recalls that he is writing "from the standpoint of evolution," and undertakes to make performance square with profession. The matter is simple enough, after all:

> If there is one thing more certain than another in the general ground-plan on which the world is constructed, it is the determination that each race of creatures, as well as the different races of mankind, shall be protected in its own individuality by all the exclusive agencies in the armory of Nature—sexual selection, physiological selection, prepotency, mental, physical, and sentimental repulsion and affinities, national and racial self-centredness.

Social and economic evolution, therefore, must proceed upon the line of national exclusiveness; Chamberlainism is clearly seen to accord with fundamental cosmic law; and political economy cannot be reconstructed upon evolutionary principles until thoroughly imbued with the gospel of protectionism. From Manchester, then, we must turn to Birmingham if we would place our science upon a modern evolutionary basis; and the antediluvian doctrines of the Manchester school must be finally abandoned for up-to-date Brummagem economics.

In a work which reconstructs an entire science at a single stroke, it is an ungrateful task to call attention to such minor defects as errors of fact and inference; and in a single number of the *Nation* it would be impossible to chronicle more than a small part of Mr. Crozier's mistakes. His assertion that free trade between the States of the American Union has drained entire sections of their industries, population, and wealth, is a fair example of his regard for economic facts; and his allusion to Boehm-Bawerk as the "pupil" (p. 394) and "disciple" (p. 425) of Jevons—of Menger he seems never to have heard—is sufficiently indicative of his acquaintance with economic literature. But, after all, what would you have of your universal philosopher? Why not leave facts to the grovelling specialist, and allow your philosopher to philosophize—with facts, if possible, but without them when necessary? That, at any rate, is the opinion of the reviewer; and over Mr. Crozier's various mistakes he has no desire to make merry for the edification of the groundlings. In conclusion, it is only fair to say that the "Wheel of Wealth," like the author's preceding works, is entertainingly written, and is an interesting, if not successful, addition to the books that have undertaken to reform the unregenerate science of political economy.

STUDIES IN HISTORY.

Parties and Slavery, 1850-1859. By Theodore Clarke Smith. [The American Nation, Vol. XVIII.]. New York: Harper & Bros. $2 net.

With the present volume the "American Nation" enters the period already covered by the monumental work of James Ford Rhodes. Taken as a whole, Professor Smith's volume stands the comparison very well, notwithstanding some fundamental differences in method and spirit. Mr. Rhodes's work is preëminent for its breadth of view, its leisureliness, and its sympathetic appreciation of contemporary tone and feeling. Professor Smith, on the other hand, covering in one small volume a period to which Mr. Rhodes devotes parts of three large ones, moves rapidly, sketches his outlines with a few bold strokes, chooses only indispensable incidents, and eschews reflection. The material used by both writers is the same, though Professor Smith has made some independent use of newspapers, particularly those of the central west.

Since the facts presented are for the most part familiar, criticism must concern itself principally with the selection of topics and the general handling. As the title indicates, the volume has for its main subject the history of party politics and slavery in the decade following 1850. It is with the national aspect of both these topics that Professor Smith chiefly concerns himself, the course of State politics receiving only incidental notice. Such matters, for example, as the development of party machinery in the North and the lack of bosses in the South; the action of State nominating conventions and the results of State elections; the growth of cities in the North and West; the political attitude of the non-slaveholding class in the planter States; and the political sympathies of the new foreign population are elements of political growth of which Professor Smith does not, perhaps from lack of space, take much account. As a whole, his narrative leaves little to be desired, but the predominant attention to national affairs is, we think, a defect of some importance, especially as regards the South, where politics formed an appreciably larger part of life than in the North or West, and where State independence and personal leadership afforded a basis for national party allegiance somewhat different from that elsewhere. To deal intelligently, in moderate compass, with State politics is obviously difficult, and Professor Smith is not a sinner in this respect above his fellows; but the growth of political opinion within State lines needs more attention from the historian who would explain the why as well as the what of political action.

It is in Professor Smith's treatment of the Kansas episode, however, that we find most to complain of. So far as choice of incident goes, to be sure, as well as in the coördination of the subject with the general course of the period, there is admirable balance; but in sympathy, in fundamental appreciation of a social point of view, the narrative is weak where that of Mr. Rhodes is strong. One gets from Professor Smith's condensed pages hardly more than an interesting intimation of the actual influences at work in Kansas, of the attitude of leaders and factions, or of the intense and almost savage conviction with which the Free State men fought against their proslavery antagonists. John Brown and the Pottawatomie massacre are dismissed in ten lines, the struggle between Robinson and Lane in twenty. Here, again, attention to national interests has led to neglect of one of the most interesting political struggles in our history.

On the other hand, the chapter on "Social Ferment in the North," with its skilfully compressed story of social changes, philanthropic and reform movements, and literary development, is a welcome feature in a series which thus far has dealt but scantily with economic or social history. For the rest, we are given an adequate survey of the diplomatic events of the decade, and informing chapters on the growth of railroads and the panic of 1857. The readableness of Professor Smith's pages merits particular commendation.

Mémoires et documents publiés par la Société de l'École des Chartes. Vol. VI. Essai sur les Sources de l'Histoire des Antilles Françaises (1492-1664). Par Jacques de Dampierre. Paris: A. Picard et fils.

Bibliography, instead of being the servant at the portal to historical knowledge, has in many American institutions threatened to turn out of doors those who believe that their real quest is the meaning of events. It is so much easier to list old titles than to concoct a new one, to turn pages than to read what is on them, to summarize an author's views than to decide whether his opinions are right or wrong, that many an overworked pedagogue has inevitably drifted with his pupils into the doldrums of "bibliographical preparation." The search for other men's notions leads to many an interesting goal, but it is not history. The École des Chartes performed a service of great importance to all who concern themselves with methods of historical investigation, when it set one of its students to work on a subject of modern times. The danger of such an experiment was great, for it would have been natural if the results had exhibited the worst faults of the unintelligent desire for exhaustiveness. The unequalled traditions of the École des Chartes, with its close and detailed study of every scrap of available material, and with its long practice with the scanty remains of the period for the accurate understanding of whose events it may be necessary to consider deliberately the nature of an ink spot or the character of the surface of a sheet of parchment—this kind of research calls for thoroughness first of all; whereas those who are concerned with the altered conditions brought about by the printing press must be prepared to guess at the truth concealed in each parcel of partisan misstatements. Opposed as are the standards and the methods of the workers in these two fields, each has much to teach the other. To bring them together is the task upon which the École des Chartes has embarked.

M. Dampierre, to whom was assigned the initial experiment, chose for his subject the French Antilles from 1492 to 1664. His book is likely to be of much value to students of the West Indies, but its usefulness will be far greater as an object lesson in the proper method of approaching and handling the complex masses of material which confront the student of modern history. It makes no pretence of being a "guide," and it does not tell the investigator how to go to work. It even takes for granted on the part of the reader a certain amount of common sense, as well as of training. It is merely an illustration of how to deal with books and manuscripts, so as to get at their real contents, and sift out what is valuable or useful.

The thing that first impresses an American student in working with M. Dampierre's book is the inevitable difficulty which a student in one country has in finding out what his fellow-workers elsewhere have been doing. The volume is full of blunders and omissions which would mark a worker in an American library as the most careless of beginners. In the Bibliothèque Nationale, however, it is quite possible that the cataloguers have done little with the voyages of Thévenot since the days of Camus. The fathering of Goldsmid's bastard edition of Hakluyt's "Voyages" upon the Hakluyt Society, in the introductory pages, makes one skeptical almost to the point of refusing to go further with such a gossiping guide. In almost every section there are statements whose bibliographical inaccuracy could be proved in any one of a half-dozen American libraries. But he who undertook the proving would be very likely to miss the much more important fact that M. Dampierre, after doing the best he could with the material available at the Bibliothèque Nationale, looked into the books and manuscripts with which he was dealing. He established their position as sources for information regarding the French West Indies. He does not pretend to be an authority on the history of the Antilles, but he has been trained to get at what is in a book. He identifies the authors of anonymous accounts, locates the elements of prejudice or partisanship, and picks out the necessary precipitant to separate fact from imagination; he suggests the effect of literary style on truthfulness, he sifts out what has been appropriated from the residuum of personal information. The student who has made this sort of preliminary study, is ready to go on with the preparation of a contribution to real history.

CURRENT FICTION.

The Kinsman. By Mrs. Alfred Sidgwick. New York: The Macmillan Co.

This is an amusing and well-sustained bit of comedy, which we fancy might be easily convertible into a taking play. It is, to be sure, no more than another pleasant variation upon the ancient theme of the Two Dromios; this time the action turns upon the sudden meeting of two long-lost second cousins, and the confusion resulting from their temporary exchange of property, and from other circumstances. Their brother-grandsires were, we learn, of gentle birth, though both younger sons, and, therefore, compelled to shift for themselves. One goes to Australia, makes his fortune, marries property, and naturally has a gentleman for his grandson. The other becomes a London tradesman, marries an 'Arriet, prospers ill, and inevitably has an 'Arry for *his* grandson. Equally in the nature of things these two look exactly alike—or as much alike as a gentleman and a cad are permitted by the laws of fiction. It remains to bring them together in the wild spot where once stood their ancestral halls. How they come to change places, and what complications ensue, constitute the game, and we may not fairly spy upon the author's hand.

If some of the cards are marked, the fact is as evident to us as to her. Here, for example, appears that familiar fraud, the English country gentleman, whose only fault is a determination to sacrifice his beloved daughter in marriage to a cad who happens to be heir by the law of entail. Most useful of all laws to the novel-writing Briton, what parallel asset has the scribbling American to boast? Each high-bred incumbent is determined that his grandson at least shall inherit the broad acres. It is a daughter's duty, since she did not see fit to be a son, to wed whatever casual heir may be provided by fate and the English Constitution. There are, of course, the highest precedents for this kind of thing, and we do not mean to look too solemnly at our comedy-writer because she makes somewhat broad use of her privilege. It is an innocent game, by which nobody really loses anything. "The Kinsman" is just conventional enough, foolish enough, pleasant enough, to be an excellent thing of its kind.

The Lone Furrow. By W. A. Fraser. New York: D. Appleton & Co.

The writer, well known for his Indian tales, here presents a rather long-drawn-out sketch of life in a Scotch-Canadian village of Ontario. With its leisureliness, its element of mystery (in the vulgar sense), and its prevailing atmosphere of religious inquiry, it recalls some of the later stories of George Macdonald. It is not a story that irresistibly made itself. The people in it are rather types than persons, and it contains no really continuous action. Indeed, it is hardly more than a vigorous statement of an interesting situation, followed by a prolonged and rambling commentary upon that situation.

The "meenister" of the local church has passed his earliest years of endeavor in India. Of naturally frail physique, he has had recourse to opium at a moment of great stress. Later, he has removed to a Canadian parish, where his liberality of creed and strictness of principle have got him into difficulties with his hard-praying, hard-drinking parishioners. At the beginning of the story the minister has suddenly and inexplicably disappeared, leaving not only his parish, but his young wife, who is for the first time pregnant. There is suspicion of foul play, involving the village ne'er-do-weel, brother of the bereaved wife. This suspicion is falsified in the event: the scapegrace is reclaimed (after being nearly burned to death), the minister is found and brought home in time to hear the cry of his first-born. He has succumbed to his old enemy, and presently makes a permanent disappearance. Such a theme has possibilities enough, but it should not remain a theme. Nobody could pretend to prescribe an exact ratio of dialogue, narrative, and description, in treating such a topic; but here it is unfortunately clear that the talk's the thing. Consequently, the novelist fails to hold the attention which he has successfully engaged in the opening chapters. Even the Ancient Mariner proceeded to the point in time.

Pathological Aspects of Religions. By Joslah Moses. Worcester, Mass.: Clark University Press.

This volume (a doctor's dissertation) is the first of a series of monograph supplements to the *American Journal of Religious Psychology and Education,* to be issued by Clark University, contributions to the branch of psychological science to the study of which President G. Stanley Hall has given so decided an impetus. The author treats his subject under the three heads of the emotional element (love, hate, anger, fear, mysticism, symbolism, fetishism, interpretation); the intellectual element (opposition to science, skepticism); and the volitional element in religion (fanaticism, asceticism). Under each of these heads he cites numerous examples of abnormal experiences, beliefs, and procedures, and offers explanations of these phenomena. Love he regards as an "efflorescence of the sexual impulse" (p. 15, where the etymologies adopted were better omitted); mysticism he defines (pp. 125 ff.) as a kind of psychical rapture, in which the subject's self-consciousness melts into cosmic consciousness—an emotion akin to love, the love being sometimes Platonic, most frequently sensuous; abnormal beliefs, he holds, are largely irrational survivals of early crude views (ch. v.); adopting Prof. William James's analysis, he refers fanaticism to the instinct of self-preservation (p. 218), and asceticism (p. 233 ff.) to disgust with the world or fear of it. His collection of pathological phenomena is impressive, but his choice is not always discriminating. He gives great space to the crudities of Jewish and patristic Biblical interpretation, especially to the minute discussions and the vagaries of the Talmud. But a part of these discussions are simply legal—careful definitions of law such as are made every day in our courts of law; the absurd explanations of words are mostly academic devices for emphasizing principles; the allegorizing is partly an inheritance from the Greek critics of Alexandria, partly the result of the desire to bring out all the contents of an infallible text. To call such things pathological is to give a new sense to the term, to make it cover a history of errors of thought; it might include the author's opinion (with all due respect to him be it said) that Christianity very likely owes its birth to the degeneration of Judaism (p. 168).

For a proper estimate of crude beliefs and practices, Dr. Moses lays down the excellent canon (p. 66) that when they are congruous with the stage of development of a community they should not be called superstitions, and that they cannot be considered pathological unless they injure the mental, moral, and physical health of their adherents; only, this last clause must be interpreted cautiously, since anything wrong may be held to injure health, and not everything that injures health can be called pathological in the ordinary sense of that word. He seems, however, not to be faithful to his canon; in chapter two he treats as pathological Old Testament examples of human sacrifice, and certain late phallic observances, without perceiving that the practices in question are quite in accordance with the moral and intellectual plane of the communities in which they are found (p. 25 ff.). It is true that there were shameful practices in the religious customs of the civilized Greeks and Romans, but these, unfortunately, were far from being abnormal. Of certain savage licentious ceremonies Dr. Moses observes (p. 29) that they are engaged in by pure-minded men and women; that is, they are morally low, but the observance of them is based on reasoning that is normal and sane for the people concerned. The same thing is true of the rite of prelibation; this and some similar customs have come down from old tribal usages that were once a part of the civil organization and continue to be respected as ancient law. The cult of the phallus arose from the veneration felt for the mystery of generation—a bit of normal savage logic—and where it exists to-day it is ordinarily not connected with moral depravity in the worshippers.

The view, held by a number of recent writers, of the intimate relation between religion and love (that is, ultimately, the sexual instinct) is adopted by Dr. Moses; he rejects, however, the extreme position of certain writers, and holds (p. 19) that love is only one of the oldest sources of the religious sentiment. Such views of the origin of religion appear to rest on an ignoring of early history, and on a confusion of similarity with the relation of cause and effect. They go counter to the earliest known form of the religious sentiment (which is simply the desire to keep on good terms with preterhuman powers) and of religious usages; these latter have generally no sexual element, and, conversely, this element of social life is found without religious ceremonies. The similarities between the emotion of love and religious emotion are obvious (they have been well stated by Dr. Hall); both are strong nervous excitements, and one may pass over into the other, or rather one may be produced by the other. Love to the deity is a normal emotion, that, under favorable conditions, may become pathological. The examples of erotic emotion in religious persons are all taken from times of high culture; that they do not occur in early stages of civilization is evidence that such emotion is not related to religion as cause to effect.

The volume under consideration contains, besides its large mass of material, many excellent observations: its value is impaired by a number of misstatements of fact, and by the author's lack of training in historical research. The proof-reading, also, is very bad. As Dr. Moses's general points of view are good, we feel confident that he will be able to revise his book in such way as to bring out more clearly its fundamental idea.

The Nibelungenlied. Translated by John Storer Cobb. Boston: Small, Maynard & Co.

Ninety years have passed since Lachmann first gave to the world his memorable text of the Nibelungenlied, and since then a vast library of interpretation has arisen concerning the German epic. Most of the books have been scholarly commentaries and microscopical examinations of the tattered originals; while but a minority of the works are translations into modern tongues. Few as these are, however, they represent about equally German and English literary workmanship, the translations of Lettsom (1850), Foster-Barham (1887), Birch (1887), and Needler (1904) setting off the versions of Simrock (1827), Freytag, and Bartsch. The last valuable translation into English was made by a Canadian, and the one before us is the work of an American. The author, however, is dead, and he did not finally revise his manuscript. It is difficult to tell, therefore, whether the occasional roughness in the verse is due to this incompleteness or to the knotty style of the original, almost defying, at times, a satisfactory rendering into our modern speech. All in all, this effort seems praiseworthy; but a comparison of the average of the verse with the Lachmann text shows more than one radical departure from the sense of the original, departures that other versions seem not to have required.

The Nibelungen strophe, of the beginning of the thirteenth century, includes four long lines, the second rhyming with the first, and the fourth with the third. Each line is halved by a definite cæsura; there are three accented syllables in each half of the first three lines and the first half of the fourth line, and there are four accented syllables in the second half of the fourth line. A syllable with a secondary accent ends the first half of each line, producing thereby a "klingende" cæsura, and it is the fixed number of accented syllables that conditions the metrical character of the Nibelungen strophe. Most of the feet are lambic, because usually an unaccented syllable precedes an accented one, but the unaccented syllable may at times be wanting, or two or three of them may bunch together. Perhaps Mr. Cobb, who clearly is no bungler, but rather an over-careful elaborator, had these facts in mind in cases where he allows himself great liberty. A fair strophe to cite is the opening one, with its complete cæsural rhyme; and how near Mr. Cobb has approached the German, and how his work compares with that of Foster-Barham and Needler the reader may judge for himself:

Uns ist in alten maeren, wunders vil geseit.
von heiden lobebæren, von grôzer kuonheit.
von fröuden hôchgeziten, von weinen und von klagen,
von küener reckenstriten, muget ir nu wunder hœren sagen.

Foster-Barham:

Traditions of the olden time of marvels in abundance tell;
Of heroes worth our utmost praise, of gallantry unspeakable,
Of grand festivities and joy, of bitter plaint and scalding tear,
Of bold assaults of warriors; and now these wonders you may hear.

Needler:

Many a wondrous story have the tales of old,
Of feats of knightly glory, and of the heroes bold,
Of the delights of feasting, of weeping and of wail,
Of noble deeds of daring; you may list strange things in my tale.

Cobb:

To us in olden story are wonders many told
Of heroes rich in glory, of trials manifold:
Of joy and festive greeting, of weeping and of woe,
Of keenest warriors meeting, shall ye now many a wonder know.

Still another extract may be offered to show Mr. Cobb's rendering:

Ez wuohs in Burgonden ein schœne magedîn,
daz in allen landen niht schœners mohte sîn.

Kriemhilt was si geheizen und was ein schœne wip.
dar umbe muosen degene vil verliesen den lip

In Burgundy there once grew up so excellent and fair a maid,
That not in any land on earth could greater beauty be displayed.
Kriemhilda was the name she bore, and she attained such loveliness,
That many a swordsman had for her his life and name to sacrifice.

The volume is attractive in typography, illustration, and binding, being embellished with a portrait of the translator. There is also a fragmentary Introduction written on his death-bed.

Ancient Law. By Sir Henry Sumner Maine. With Introduction and Notes by Sir Frederick Pollock. Fourth American from the Tenth London Edition. New York: Henry Holt & Co. $1.75.

Maine's "Ancient Law" appeared in 1861. Darwin's "Origin of Species" preceded it by little more than a year. Like that other epoch-making book, "Ancient Law" introduced new modes of thought and of language, provoked controversy, and won disciples. Phrases devised by Maine have become mere commonplaces. Who has not heard that in progressive societies there "has hitherto been a movement from Status to Contract"? Because of the impetus given by Maine to the historical and comparative study of legal systems, it has become necessary to prepare an annotated edition of his chief book—not in order to correct the few errors of the explorer who blazed the way, but in order to give to the reader those illustrations and developments of Maine's doctrines which have been made by later investigators. This unambitious but learned task has been undertaken by Sir Frederick Pollock; and it has been performed modestly and adequately, in a spirit filial, but not servile.

Maine's "Ancient Law" touches upon so many topics—archæology, history, politics, ethics, and metaphysics—that it would have been practicable to write several volumes by way of commentary. Hence it would be easy to point out interesting subjects upon which nothing is said in Sir Frederick Pollock's twelve pages of introduction and sixty pages of notes. But since the commentator's studies are known to have covered almost the same varied ground as the author's, the commentator's choice of subjects has obviously been guided not by lack of knowledge or of industry, but by a theory as to the relative importance of the materials. May one venture to say that a few more words as to Hammurabi would have been appreciated, and that students can make use of more numerous references to treatises, periodicals, and the proceedings of learned societies? The notes, like the text, are interesting to any reader with scholarly taste, whether a lawyer or not. Surely, any one of scholarly taste will enjoy what Sir Frederick Pollock says (in notes E, G, H, K, P, R, and S) as to the law of nature, the modern law of nations, the patriarchal theory, the village communities of India, contract in early law, and archaic procedure. Indeed, the book appeals to a public so wide that the publishers might well have ventured to throw aside the plates from which earlier editions of the text have been printed, and also to extend the index in such manner as to include Sir Frederick Pollock's commentary; but these shortcomings are overbalanced by the result that this edition sells for half the price of its predecessor; for it is no small matter that this brilliant and inspiring classic is now brought within the reach of every student.

The Fair Hills of Ireland. By Stephen Gwynn. With illustrations by Hugh Thomson. New York: The Macmillan Co. $2.

Mr. Gwynn might have styled his book "The Praise of Ireland." It is an exultant hymn to her loveliness, especially to those beauties which the careless stranger has neglected. In other words, he leaves the beaten tourist track, and has nothing to say of Killarney or the Giant's Causeway. He describes places that have really a more general human interest, and that have associations covering a great range in the story of the Irish race. This is not to say that the scenery of those districts is not charming. Even if Mr. Gwynn's vivid pen did not convince the reader of the contrary, the delicate, fairy-like sketches of Mr. Thomson would be a revelation of the beauty of many spots in Donegal and the south and west. But, however picturesque such a country may be, the imagination must also people it with historical and legendary associations. Mr. Gwynn relates many heroic deeds and legends.

Though he tries to make us realize Ireland both as she is and as she was, his prepossessions are in favor of the period when Irish genius produced its most effective work in literature and art—the seven centuries before the Norman invasion. We have descriptions of the monuments of these early days, accompanied by fine pictures of such magnificent ruins as Cashel of the Kings, Clonmacnoise and Mellifont. But Ireland has no longer builders like those who raised the ancient structures, whose work, where it has escaped mutilation, mocks in his opinion the incompetence of to-day. Still, this might be said of the modern architecture of a good many other European lands. Cashel, because of its picturesque situation on a rock, over three hundred feet high, dropped in the Golden Vale, the most luxuriant pasture-land in the British Islands, and because of the fairly good condition of some of the buildings after the wear and tear of more than a thousand years, is perhaps the noblest monument of ancient Irish culture remaining. Mr. Gwynn's accurate and eloquent picture should tempt many a tourist to visit this acropolis of Munster. Mr. Gwynn shows that the Stone of Destiny, carried away from Scotland by Edward I., and now beneath the royal throne in Westminster, is a sham *Lia fail.* The real thing is still at Tara. He might have strengthened his argument by adducing the well-known fact that the stone emitted a roaring sound when an usurper took his stand upon it, while the fraudulent affair in London has always been silent. There is, however, one drawback to the legends told by Mr. Gwynn. The orthography of the names of the heroes, and even of the heroines, is repulsive, and will always be an obstacle to the wide acceptance of these historical, semi-historical, and mythical romances. The words are not so much cacophonous, as, if an epithet may be coined for the occasion, cacographous. For instance, Duhhthach looks atrocious; but, as pronounced, Duffa, it is innocent and euphonious enough.

The tourist will find the book invaluable as a guide, especially if he be a fisherman; for Mr. Gwynn is an enthusiastic angler, and seems to know every trout and salmon stream in the kingdom.

Russia: Travels and Studies. By Annette M. B. Meakin. Philadelphia: J. B. Lippincott Co. $4 net.

"The first thing that struck us on our arrival at Kursk was a triumphal arch bearing the date 1823, erected in honor of Alexander I. when he visited Kursk on his way to the Crimea. The second thing that struck us was the high price asked for stale eggs and the impossibility of obtaining fresh ones." The thing that strikes the reader of Miss Meakin's "Russia" is a certain inconsequence of matter and style, of which our citation is typical. This is unfortunate, because the author, who is a member of the British Anthropological Institute and a noted traveller, has packed into her pages a really vast amount of information which is generally exact, even if it is not always new and is never profound. The book is a Baedeker on Russia, which it traverses from north to south, ending with a trip through the Crimea and the Caucasus. Like all Baedekers, it can scarcely be said to overflow with human interest; and it contains little that would prove of value to the reader who may look for light on the present political situation in the Czar's dominions. On the other hand, the book was never intended to answer such a purpose.

Miss Meakin's interests are in the fields of archæology and ethnology. To the former, in particular, she devotes almost three-fourths of her work, and in its minute and careful description of Russian antiquities, supplemented by copious, perhaps too copious, references to early Russian history, lies the chief value of the volume. We know of no popular book in English that deals so fully with the treasures of the Russian monasteries and museums, both public and private. It is indicative of the character and purpose of the book that Moscow, which is not rich in antiquarian associations, receives 13 pages, while Novgorod (not Nizhni) has 26 pages, and Pskoff 27. There are excellent chapters on the position and influence of the German colonists in the interior of Russia, on the Setukese Ests of the north, and on the Little Russians. There is the inevitable visit to Tolstoi, marked by that master's inevitable shattering of an idol or two. But the best part of the book for the reader without archæological tastes is the account of a wonderful trip through the lotus land of the Crimea, the beautiful Golden Chersonesus of mountain and blue water.

There is a regrettable weakness in the matter of the names of the Russian governments: Peterhoff (p. 58) is given for St. Petershurg; Riga (p. 176) for Livonia, and Semenoff (p. 221) for we do not know what.

Science.

PHYSICS AT CAMBRIDGE, ENGLAND.

CAMBRIDGE, England, February 2.

This year there are about twenty research students in the Cavendish Laboratory, and room for little more than half as many. Fortunately the liberality of Lord Rayleigh, who gave his Nobel prize money for an extension of the laboratory, will remedy this congestion. The nucleus of this school is the knot of Cambridge men who stay on for research work after graduation; but the greater number are foreigners —picked men from the colonies, Canada, Australia, New Zealand, and Africa, who come up on exhibition scholarships, and men from Germany, Bohemia, France, America, Russia, and elsewhere. The head of the school is, of course, Prof. J. J. Thomson. He is not an experimental worker with his men, but rather the general who directs his army from his desk. For a parallel to this school of physics we have to go back to some of the mediæval schools where, about some noted scholar, students from distant places gathered. The same intensity in work and enthusiasm for the master, and perhaps also the same tendency to narrowness and lack of appreciation of the work of others, characterize both. But it should be remembered that while this limitation to a single subject, the nature of electricity, may not be the best training for the men who have grown up entirely in this atmosphere, yet it may be excellent for older men, especially those who have been educated in other universities. These come here to get first-hand knowledge of the corpuscular theories of matter and electricity. Instead of learning one or two problems, they are the sharers in the difficulties and triumphs of a score of similar ones.

The first impressions of the laboratory are not encouraging, as there seems to be a lack of appliances and apparatus. Later, however, we realize that there is a fairly good stock of apparatus for certain kinds of work, and that the laboratory has been adapted to meet a special end. About twelve years ago, following a hint given by Maxwell, that probably a study of the discharge of electricity through gases would be the best means of learning the mutual relations between matter and electricity, work was begun in this branch of physics. The problems encountered have absorbed the resources of the laboratory more and more, until to-day scarcely any other phenomena are investigated here. High potential cabinets, induction coils, and liquid-air machines are plentiful, while scarcely any appliances are to be found for work in sound, heat, light, etc. But the laboratory, if poor in apparatus, is extravagant in assistants and skilled artisans, to help in the vital matter of constructing new apparatus.

The terms of the university are, as all know, short; only about six months in the year being given to lectures. But the laboratories and libraries are open practically all the year, and research and honor men extend their work very considerably. Hours in the day, too, are not long for most of the men, and one notes a lack of the feverishness which seems to hang about American laboratories. Where at home should we find all quitting work at half-past four in order to have tea? Yet the chat and tea in Professor Thomson's office are refreshing, and tend wonderfully to draw the men closer together. Nor is it any sign of trifling, for turn to the journals and we shall find that the work done here is comparable in amount to that of all our great laboratories, taken together. And this more natural life prevents the mental dyspepsia which attacks our irritated and harried candidates for the Ph.D. There is no reason for these men to take two or three years to regain their elasticity of mind and to feel that an iron hand is not squeezing the intellectual blood out of the body.

In fact, it is a pity that more of our students do not choose England rather than Germany as a place for study. For the older men there is a chance to meet intimately the distinguished scholars of Cambridge, who show a hospitality quite unusual. Probably the principal reason why our men go elsewhere is because Cambridge cannot offer them the Ph.D. degree. But this drawback is more seeming than real. After two years of work, the foreign research student is eligible to the degree of bachelor of arts, and afterwards to those of master of arts and doctor of science, whether he remains in residence or not. And these degrees should carry as much weight as the ordinary Ph.D. of Germany, since they are given for the same kind of work. There is also another great advantage, in that an able man should obtain one of the numerous scholarships which are open to all. The authorities have not taken much pains to make the facilities of laboratories, libraries, and scholarships known to us, but it is quite evident that our coming is warmly welcomed. Those who avail themselves of the invitation will surely look back on their life here as one of the pleasantest of their experiences.

LOUIS TRENCHARD MORE.

In celebration of the bicentenary of the birth of Linnæus in this city on May 23, the American Museum of Natural History will place on exhibition specimens of the minerals and the American animals known to Linnæus; and the Botanical Garden will show trees and plants known to him. At the Garden the botanical writings and the portraits of Linnæus will also be exhibited. The Zoölogical Park, too, will have its share in showing animals; and in the Aquarium in Battery Park the features of marine life known to Linnæus will be set forth. At eleven in the morning, at the American Museum, Archer M. Huntington, president of the American Geographical Society, will deliver a lecture on "North American Geography in the Time of Linnæus"; and at 11:30 Dr. Joel A. Allen, curator of ornithology and mammology in the Museum, will speak on "Linnæus and American Zoölogy." At 2:45 Dr. Per Axel Rydberg, curator of the Garden Herbarium, will deliver at the Herbarium an address on "Linnæus and American Botany." This will be followed by an exhibition of lantern slides of flowers of North America. A bronze tablet commemorative of Linnæus, a gift to the city from the New York Academy of Sciences, will be unveiled, at 4:30, at the bridge over the Bronx River, in Pelham Parkway. On this occasion there will be several addresses. In the evening at the Brooklyn Institute there will also be addresses, including one by Prof. F. A. Lucas, on "Linnæus and American Natural History." The committee in charge of the celebration consists of Dr. N. L. Britton, director of the Botanical Garden; Dr. H. C. Bumpus, director of the American Museum; Prof. F. A. Lucas, director of the Museum of the Brooklyn Institute; William T. Hornaday, director of the Zoölogical Park; Charles H. Townsend, director of the Aquarium, and Prof. W. M. Wheeler, curator of invertebrate zoölogy in the American Museum.

The collection of *algæ* made during the last thirty years by E. M. Holmes, curator of the Pharmaceutical Society's Museum in Bloomsbury Square, London, has been acquired for the botanical department of the University of Birmingham. The collection includes about 13,000 specimens, and, apart from the national collections at the British Museum and Kew, is the best of its kind in Great Britain. The British portion includes three or four species which have been found but once.

The ninth international geographical congress will meet in Geneva from July 27 to August 6, with Prof. Arthur de Claparède of the Geneva Geographical Society as president. At the same time the semi-centennial of this latter association will be observed. More than fifty papers have already been announced.

Prof. William Clendenin Pickett, a well-known authority on nervous diseases, died in Philadelphia February 6. He was born in Meadville, Pa., in 1870, and was a graduate of Allegheny College. He studied medicine at the Jefferson Medical College, Philadelphia, and was graduated in 1895. He was professor of nervous and mental diseases at the Medico-Chirurgical College of Philadelphia, and was elected president of the Neurological Society in 1906. He was a contributor to the medical journals.

Drama.

"THE GOOD HOPE."

"The Good Hope," an English version by Christopher St. John from the Dutch of Heijermans, which was played in the Empire Theatre on Monday evening, by Ellen Terry and her company, is interesting as a specimen of national drama by an obvious imitator of Ibsen, but it furnishes indifferent entertainment. It shows how dull mere realism can be without the saving grace of imagination. In some respects it is a good piece of work. It is sincere and vigorous, it is not deficient in either passion or pathos, and it is often very close to nature; but its insistence upon harrowing, familiar, and rather sordid incidents, its spineless construction, and its lack of humorous relief and genuine invention make it more than a little dull. Like "The Pillars of Society" it deals with the murderous shipowners who make money by sending ignorant sailors to sea in rotten ships which have been highly insured. Clemens Bos, the smack owner, is but an exaggerated Consul Bernick. Of real dra-

matic action there is very little, but there are a number of effective episodes.

The central character is a widow with two sons; the elder has been dismissed from the navy and sent to prison for insubordination, the younger has been a soldier, but has a terror of the sea. The former ships on the Good Hope, a rotten old craft, after a fierce and plainspoken encounter with her owner; the other is carried on board by the police after attempting to desert. Both are drowned, and in the last act the bereaved mother is sent away with a bowl of soup for consolation, while the owner of the sea-coffin pockets a heavy insurance. This is practically the whole of the story, but the bare outlines are filled in with a mass of detail, illustrative of the human wreckage wrought by the system, and much of this is very lifelike, if less often dramatic. Thus there are studies of old pauper fishermen, of widows, and of bereaved maidens, who ought to have been wives, all in contrast with the flourishing boat proprietor whose gain is in their loss. There are eloquent passages of futile rage and hopeless despair, and, occasionally, a climax of genuine dramatic force. In the hands of actors skilled in the elemental emotions and possessed of genuine tragic power, these might be deeply impressive. But Miss Terry's company proved quite incapable of reproducing the Dutch atmosphere or of rightfully interpreting the situations, while she herself, though she filled the part with a strange pathos and a charm wholly foreign to it, was completely out of her proper element in the character of the unhappy old mother. In this experiment she does justice neither to Heijermans nor to herself.

Signor Ermeti Novelli, the eminent Italian actor, will appear in this city early in the spring, supported by Signora Jinninni. He expects to play in "Louis XI." by Casimir Delavigne, "Papa Lebonnard" by Marie Aycard, "The Merchant of Venice," "King Lear," "Othello," "Hamlet," "Kean," "La Morte Civile," and "Povera Gente." It will, therefore, be possible to compare his work with that of Salvini and Rossi. Signor Novelli's Shylock is said to be one of his finest impersonations.

It is good news that W. S. Gilbert is once again writing for the stage. He is working on a new comedy, in partnership with Mrs. Henry de la Pasture, but the nature of it has not yet been made public.

Music.

FOUR-HAND PIANO PIECES.

The world is full of pianists eager for fame and fortune, yet not a dozen of them have won sufficient fame to enable them to win a fortune. Piano recitals are practically "played out"; newspaper readers would be astonished if the reports of recitals by even prominent performers included a frank statement as to how few attend them, and how many of those who do attend are deadheads. The pianoforte manufacturer is still responsible for most of these concerts; he is willing to bear the loss for the advertising he gets incidentally—the chance he has to point out that so and so uses only his instruments.

Probably the main reason for the neglect of pianoforte recitals lies in the monotony of the programmes, which is truly astounding. One would think, to judge by these stereotyped lists, that the pianistic repertory includes only a hundred available pieces, whereas there are thousands. The pianists do not make sufficient use of their brains. Just at present, for instance, there is a great desire (as revealed by the demand in the music stores) to hear the pieces of the unfortunate Edward MacDowell; but only one or two of the concert pianists have availed themselves of this opportunity to enrich their ropertory and do good at the same time, while enlarging the circle of their listeners. Nor has it apparently occurred to any of them that the public likes new ideas in concert-giving, as in other things. A new idea would be the combination of two eminent pianists for the purpose of giving concerts of four-hand pieces.

Here there is a field which remains almost entirely unharvested, although some of the greatest masters have tilled it. Bach, Mozart, Beethoven, are to be named here, but above all, Schubert. In his admirable biography of the master, Richard Heuberger demonstrates how far Schubert went beyond his predecessors, including Beethoven, in divining the tonal splendors of the pianoforte of the future, and utilizing these possibilities in the shaping of his enchanting pieces. He dwells particularly on the fact that Schubert created a new art of writing four-hand pieces for the pianoforte, in which he utilized the varied tone colors of the modern pianoforte in an unprecedented, unique, infinitely enchanting manner. "Among the thousands of pieces for four hands written since Schubert's death," he goes on to say, "there is hardly one which even remotely reaches his works of this class in their genuine adaptation to the idiom of the pianoforte."

In the recent "Schubert Heft" of the Berlin periodical, *Die Musik*, another German scholar, Dr. Hermann Wetzel, sings the praises of these four-hand compositions, and voices his astonishment at their neglect by pianists, both public and private. In these pieces, he points out, we find at their very best all the qualities which have so endeared Schubert to music-lovers—his incessant flow of original melody, his new harmonies and ravishing modulations to remote keys, the novel tone colors he evokes from the instrument by the formation and distribution of his chords, his partial anticipation of the Lisztian art of producing orchestral effects with the pianoforte, yet without going beyond the limits of legitimate pianism. He makes no mention of some of the best of Schubert's four-hand pieces—the splendid marches—but dwells particularly on the "Divertissement à la Hongroise," and other more extended works, including the remarkably orchestral sonata in C, issued by Diabelli as "Grand Duo," concerning which Wetzel makes the very interesting suggestion that it may be an arrangement of the lost Schubert symphony, for which George Grove and others searched so persistently, but in vain.

Neither Heuberger nor Wetzel makes mention of the fact that there is a living master, Edvard Grieg, who has written four-hand pianoforte pieces which are as melodious and as idiomatic as Schubert's. Music-lovers who may be tempted by the foregoing remarks to explore this musical Klondike will find an excellent guide in Eschmann's "Wegweiser durch die Klavierliteratur," p. 259.

"Songs for Schools," compiled by Charles Hubert Farnsworth, with accompaniments written by Harvey Worthington Loomis and B. D. Allen (Macmillan Co.), is one of the best books of school music ever issued, and occupies a place of its own. It contains about a hundred numbers, Part I. being devoted to national, folk, and college songs; Part II. to sacred songs. The choice of songs was governed partly by the preferences of school children themselves—a somewhat risky policy which, however, has in this case led to no objectionable results. In the folk and college songs only the melody is given to the voices, to make the work of the singers more effective and avoid the many difficulties of part singing. The most admirable feature of this collection lies in the pianoforte parts written for the folk-songs by Mr. Loomis, who is not only one of the leading American composers, but who has shown unique skill in the art of emphasizing by his harmonies the national peculiarities inherent in the melodic and rhythmic features of folk-music. In "A Highland Lad" one would have welcomed a little more of the drone bass, but apart from this, it would be difficult to suggest a criticism.

Lovers of Hungarian folk music—of which Liszt gives specimens in his rhapsodies—will be interested in a collection of these tunes issued by Ladislaus Kun, who spent many years gathering them in villages and farmhouses. Three volumes have appeared so far, comprising 100 tunes each; the entire collection is to contain 1,000 numbers.

The Puccini cycle at the Metropolitan Opera House reached its climax on Monday evening when "Madama Butterfly" had its first performance there, with a cast including Mmes. Farrar and Homer, and Messrs. Caruso, Scotti, Reiss, and Mühlmann, and in presence of the composer, who had supervised the rehearsals. Many had hoped that he would conduct at least the first performance, but Mr. Puccini has no faith in himself as an orchestral leader. That he knows how to write for the orchestra, however, as eloquently as for the voice, is attested once more by this, his latest opera, which is on the whole his masterwork, even though his desire to make it fill out a whole evening led him to do violence to the pathetic and fascinating one-act play on which it is based. The great success achieved at the first performance, when there were countless recalls of the singers and the composer, makes it a matter of course that it will figure in the repertory in every city to be visited by the Conried company in April. It will doubtless add considerably to the fame of Puccini, as well as of Miss Farrar, whose Cho-Cho-San is perhaps her most notable achievement so far—an impersonation ranking with the best now to be seen on the operatic stage. It reveals the beauty of her voice in full, and gives her abundant opportunity to prove that of all opera singers Mme. Calvé is the only one who equals her in the art of sincerely and subtly expressing the whole gamut of emo-

tions, or at least as much of it as is comprised in the story of the Japanese maiden who is wooed and deserted by the American officer.

Carrying coals to Newcastle, the Pittsburgh Orchestra and the Mendelssohn Choir of Toronto came to town this week for two concerts in Carnegie Hall. The Pittsburgh Orchestra had been heard here before, in the days when Victor Herbert was its conductor. It need hardly be said that neither it, nor its present conductor, Emil Paur, rose, in the most important work performed by them—Beethoven's Choral Symphony—to our highest standard; for New York is exceptionally strong in orchestral music. But of the Toronto Choir quite a different story must be told. We are so little used to first-class choral singing that the performances of this Canadian club came like a revelation; not so much in the choral parts of the Beethoven Symphony, however, when Mr. Paur was at the helm, as in the Thirteenth Psalm of Liszt, the motet "By Babylon's Wave," by Gounod, and Tchaikovsky's "Cherubim Song," in which the Mendelssohn Choir's own conductor, A. S. Vogt, presided. He secured a precision, a balance of tone, a richness of nuance, to which we are unaccustomed, and the result was a sensational success. The Gounod motet and the Liszt psalm, in particular, were sung with a contagious enthusiasm

Two important works, one of which is entirely new to New York, will be played by the Boston Symphony Orchestra in its next concerts in Carnegie Hall. On Thursday evening, February 21, the symphony will be Sibelius's in E minor, No. 1. This work, when played in Boston was regarded as in every respect more important than the composer's second symphony in D major, which is better known. On Saturday afternoon, February 23, the first number on the programme will be Richard Strauss's "Sinfonia Domestica," which has been played in New York but once, three years ago. Mme. Samaroff will be the soloist on Thursday evening, playing Tchaikovsky's concerto for piano in B flat minor. Ossip Gabrilowitch will be the soloist on Saturday afternoon, playing Brahms's concerto in E flat major, No. 2.

The Richard Wagner and Mozart festival performance will take place again the coming season at Munich. The "Ring" will be performed three times, "Tristan and Isolde" four times, and the "Meistersinger" and "Tannhäuser" twice each. Of Mozart operas there will be two performances each of "Don Juan," "The Marriage of Figaro," and the "Abduction from the Seraglio."

Art.

EXHIBITION OF THE ARCHITECTURAL LEAGUE.

The twenty-second annual exhibition of the Architectural League of New York, now in progress in the galleries of the American Fine Arts building, is notable for the severe selection of exhibits. It is the smallest show for years, the catalogue including but 752 items. Even this means a considerable number of objects, but it also means that the overcrowded galleries which have long been characteristic of the League have for once become a thing of the past. Obviously this process of drastic rejection can be excused only by a corresponding gain in excellence. The exhibition can be readily seen, and this is a distinct improvement; but as a representative exhibit of the current work of our best architects—and the contributions are by no means limited to the members of the League—it manifestly falls far short of completeness. Of course, the busiest architects often have no time to prepare exhibition drawings; but the exhibitions of the League have so long aimed to include the best contemporary work that a change in policy must, again, be justified by the results.

The usual classification is still retained although considerably modified. The first gallery, as heretofore, is filled with color sketches and drawings; the little central gallery contains chiefly sculpture, mostly in small scale models; but the adjoining rooms are no longer limited to minor arts, and in their place are photographs and drawings of architectural objects, and some miscellaneous exhibits which only faintly recall the interesting decorative pieces of former years. The Vanderbilt Gallery is reserved for the architectural drawings, with which, however, are displayed some large pieces of sculpture and some color drawings. These, while undoubtedly enhancing the interest of the room make its contents more miscellaneous in character.

It is this gallery by which the exhibition, as an architectural display, may best be judged. Here presumably is the most important material. One notes with amazement, therefore, large areas of wall space given up to colored drawings of foreign buildings and designs by foreign architects. Vastly courteous this yielding up of the choicest spaces is, and the colored drawings of historical buildings in Europe are entertaining and delightful. But this plan hardly serves the traditional purpose of the League, to interest the public in architecture, especially that of this country.

It should immediately be added, however, that a survey of the gallery as a whole will strengthen one's respect for the ability and resources of our contemporary American architects. The average of the work shown is high, perhaps because there is so little of it. And this excellence is the more remarkable since there is absolutely no suggestion of unified progress, no movement in a single direction. But there is a firmer handling of ideas, a better use of precedents. This is particularly apparent in the Gothic designs—several churches and one or two commercial buildings—in which the mediæval forms have been studied afresh for modern use and translated into modern designs, which while frankly based on old *motifs* are genuinely alive.

In this respect, therefore, there is encouraging progress; but it is impossible to tell, from anything here shown, whether the buildings designed in 1906 are better than those produced earlier. In the matter of domestic architecture, indeed, the exhibition is positively discouraging. Here is the one point on which the exhibition ought to appeal successfully to the layman, and it is exactly here that it fails. Former shows have fallen short in this respect, but seldom have designs for private dwellings been so few as this year. The reason is not far to seek. Every American architect is consumed with an ambition to associate his name with the creation of a great public building, monumental in character. The private house is rarely so important that it can rank as a really notable structure. Yet a good private house, even of small size and low cost, is a most interesting structure; and while some of these are shown, the number is disappointing. The private house is the one building that particularly attracts the layman, since it is his own especial piece of architecture. Even when he has had it built for his own use by his own architect he cannot understand all the vagaries that are bound to enter into its construction. Here is an opportunity for public instruction which the Architectural League has long neglected, but which will afford limitless opportunities for all the energy it may command.

While the chief parts of the exhibition are confined to the main galleries, there are a few exhibits in the entrance corridor and a number of competition drawings in the League's own room upstairs. The hall of the National Sculpture Society contains students' drawings, entered in sundry competitions conducted by the Society of Beaux-Arts Architects. Most of these drawings are concerned with the intensely theoretical and impossible problems the followers of the French school delight in, and some of them, surely, are French enough in spirit and draftsmanship to afford unbounded delight to the admirers of this sort of thing.

BARR FERREE.

In spite of the prices his works fetch in the picture-market of to-day, it is hard for the student of art to take Sir Thomas Lawrence very seriously. He was the last survivor of a good school of painting at a time when painting had almost ceased to exist outside of England, and his prodigious success abroad as well as at home probably had a good deal to do with the direction taken by the romantic revival, although neither his influence nor that of Constable, of which we hear more, was as decisive as that of the exhibition in the Louvre of Napoleon's artistic plunder. Lawrence could draw better than either Reynolds or Gainsborough, but he did not choose to draw so well, and he sacrificed form to the fashion of the day as he sacrificed truth of color to glitter and brilliancy. He was jealous of Hoppner, who though a less able man, was a more sincere artist. Some of his earlier work convinces one that he might almost have been a great painter had he not preferred to be a fashionable one. His character, his accomplishments, and his good looks doubtless helped his success as much as his flashy and meretricious talent, and it is worth while to read George Soames Layard's book, called "Sir Thomas Lawrence's Letter-bag" (Longmans, Green & Co.), to get, in the letters written to and by him, a picture of the eternal type of the fashionable portrait-painter. It is a type with much of good in it, and one finds one's self liking the man and, on the whole, pitying him.

It is a very different personality that is brought before us in Camille Mauclair's little book, in the Duckworth-Dutton Pop-

ular Library of Art, on Watteau: the professedly frivolous painter of *Fêtes galantes* —the great, the sincere, the melancholy master. We have all felt the sadness and the sentiment that underlie the apparent gayety of Watteau, the longing of a sick soul for pleasures that the flesh could never enjoy, but no one before M. Mauclair has so definitely labelled it. He associates the art of Watteau with that of Mozart, of Schubert, of Chopin, and of Keats, and a great part of his book reads like a dissertation on the psychology of consumption. A greater than Watteau, and an artist whose profound sentiment is more analogous to Watteau's than any other we know in painting, was also a precocious genius and destined to an early death. Giorgione died at thirty-four; as it used to be said, of a broken-heart, as we now know, of the plague. One wonders if the painter of the Partie Champêtre was a consumptive like the painter of the Embarquement pour Cythère?

In 1905 Theodore M. Davis of this city discovered at Thebes the tomb of the Egyptian Queen Teye. He has now made a more important discovery in the tomb and mummy of the Queen herself. Teye was the wife of Amen-hotep III., of the Eighteenth Dynasty, who reigned in the fifteenth century B. C. Her son was the famous Heretic King who, under the inspiration of his mother, attempted to do away with the old religion for an exclusive worship of the sun. Teye's tomb, a square chamber cut in the solid rock, shows signs of priestly revenge. But these fanatics, who erased the name of the Heretic King from every article in the sepulchre, left the coffin of the Queen intact, with all the jewelry and sheets of solid gold buried with her. On her head was still found the imperial golden crown representing a vulture, with a signet ring in either talon. The mummy itself had been reduced to pulp by the water which had percolated through the rock. It fell to pieces when examined by several Egyptologists on January 26.

The Belgian archæologist Graindor has laid bare the Poseidon temple on the island of Tenos, and in connection with it a magnificent hall of columns, a "round seat," or *exedra*, of marble well preserved, a series of sculptural remains, such as two dolphins in relief form, as also a number of inscriptions. These nearly all were gifts dedicated to Poseidon and Amphitrite. Thus one stone states that it was dedicated by the Rhodian navy, and contains the names of several captains; other stones contain the names of artists of an early date otherwise unknown. An interesting specimen is a large block of marble on which a sundial has been cut, giving also the directions of the wind, the course of the sun, and the seasons of the year. Considerable of this has been preserved, as also the epigram on the stone, which states that this astronomical work was modelled after that of Andronicus Kyrrhestes. Every visitor in Athens remembers the Tower of the Winds, one of the best preserved monuments of ancient Athens, concerning which Varro and Vitruvius have written. We now learn from this epigram that Andronicus was not a native of the Kyrrhos in Syria, as has been believed all along, but from the place of this name in Macedonia; also, that he was an interpreter of the astronomical poems of Aratus of Soloi, and that he studied the courses of the stars, predicting also the eclipses of the sun and of the moon. For the first time, then, we now have satisfactory information in reference to this man, famous in the history of astronomy. The paper of Graindor is found in the last issue of the report of the *Musée Belge*.

The International Archæological Congress will meet in Egypt April 10 to 21 under the presidency of Prof. G. C. C. Maspero. There will be sessions at Cairo, Alexandria and Thebes.

The exhibition of arts and crafts at Copley Hall, Boston, began last week Tuesday, and will remain open until February 26.

The seventh international exhibition of fine arts of Venice will be open from April 22 to October 31.

Paintings by Mr. and Mrs. Colin Campbell Cooper will be on exhibition till February 16 at Powell's gallery in this city. The most interesting of them are scenes on the New York streets. The same date will mark the close of an exhibition of work by Claude Monet at Durand-Ruel's gallery; of the Woman's Art Club at Clausen's; of landscapes by Paul Doherty at Macbeth's; of paintings by Miss Content Johnson at Fishel, Adler, and Schwartz's; and of portraits of children by Elliott Bouton Torrey at C. Klackner's. Till February 23 there will be a show of prints by old and modern masters at Wunderlich & Co.'s; and of landscapes by Charles Melville Dewey at Louis Katz's. Frederick Keppel & Co. exhibit till March 9 engravings by early German masters. Work is shown by Martin Schongauer, Israel van Meckenen, Lucas Cranach, Lucas Krug, Jacob Binck, Dirk van Staaren, Albrecht Dürer, Lucas of Leyden, Albrecht Altdorfer, Barthel and Hans Sebald Beham, Georg Pencz, Heinrich Aldegrever, and Daniel Hopfer.

The foreign mails bring news of the death of three well-known European painters. The first is Théodore Verstraete, a Belgian landscape artist, who was born at Ghent in 1850. He entered the Académie des Beaux-Arts at Antwerp, in 1867; and for many years his pictures of Flemish and Dutch landscapes were very popular. He was one of the founders of the Association des XX. A few years ago he broke down mentally. The second death is that of Félix Barrias, a French historical painter, prominent in the Second Empire. He was eighty-four years of age. Among his pictures are Cincinnatus recevant les Députés du Sénat, Les Exiles de Tibère, Dante à Ravenne, and Débarquement de l'Armée Française à Oldport. He illustrated the Firmin-Didot editions of Horace and Virgil. Wilhelm Amandus Beer, who died in his seventieth year, at Frankfort, was for many years professor at the Städelsche Kunstinstitut in that city. His scenes of Bavarian peasant life were popular, but his pictures of Russia are more widely known: The Fair in the Province of Smolensk, The Horse Fair, and the First Turkish Prisoners in a Russian Town.

Rudolphe Julian, founder of the school of painting in Paris bearing his name, died Tuesday, at the age of sixty-six. He was born at Paiud, in the Department of Vaucluse, came to Paris and studied at the Beaux-Arts School. He devoted several years to portrait painting, and finally opened a studio for pupils, many of whom were Americans.

Finance.

THE QUESTION OF HIGHER FREIGHT RATES.

Railroad managers have lately been discussing an advance in rates on freight to compensate for the larger outlay for wages in 1907. Apparently the intention is to put out "feelers" to test public opinion; the movement has not yet gone very far beyond this point.

It is estimated that the railroad companies will this year pay out for labor at least $100,000,000 more than in 1906. Now the railroad companies will in 1907 haul not less than 200,000,000,000 of tons of freight one mile. Consequently, if they could manage to secure only one-half of a mill per ton per mile increase in rates, that increase would amount to $100,000,000, or the increase in the wages bill. Half a mill per ton per mile is only one cent per ton carried twenty miles; and as the average distance that each ton is carried is less than 140 miles, this increase would be only seven cents per ton of freight handled by the railroads. It looks very little indeed when stated in this way. But when it is remembered that (apart from dividends, which are rentals because guaranteed by lessee companies on the stocks of lessor companies) the total dividends paid on railroad stocks in the United States are only about $200,000,000, and that the surplus over these dividends is less than $150,000,000, and that a reduction of two mills per ton-mile in freight rates would sweep away the entire surplus and dividend fund and leave the railroads in default on their lease rentals and bonded interest—when all this is borne in mind, mills and half-mills per ton-mile assume a very decided importance, microscopic as they may seem from the ordinary point of view. The railroads will have to demonstrate the essential justice of this additional charge in no uncertain way—otherwise public opinion will not support them, and without the support of public opinion they cannot exact it.

No more difficult question has ever come up for popular discussion in this country. In the first place, there is no possibility of measuring the price of a certain kind of transportation sold to the public, as against the cost of furnishing it, with any degree of constant accuracy, so as to determine in advance the ratio of profit. In the equation of cost there are always so many factors which are uncertain that a definite result cannot be obtained. In the second place, the return on capital invested involves a question of what is "capital," and raises the question of "water" in stock—also the question of what is a fair return. In the third place, a railroad once laid and started must continue to do business; it cannot shut down, as does a foundry or a factory. In 1893 the mills could shut down, but the railroads were operated by receivers, and necessarily so, regardless of the return on capital originally invested. In the fourth place, the existing rate sched-

ules constitute a kind of spider's web covering the whole country, each part of which is closely interrelated with the other parts and helps to hold the entire web in equilibrium. A change of tension in one place throws the fabric out of equilibrium; and in the rate-web every change of rate is a change of tension at that particular place, the effect of which is to alter the strategic position of a particular region with reference to another region competing with it in some business, such as coal or grain.

The chief principle on which railroad managers make rates is: *the largest rate that will move the freight with due reference to competing railroads or regions.* It is seldom that railroads have refused to take freight because the rate was too low to pay. (The Norfolk and Western once did so when the rate on export grain from Chicago to the seaboard fell to something like two mills per ton-mile in the late nineties, but the case is almost unique.) A railroad is by virtue of its nature a monopoly so far as its own local business goes. In competition with other railroads there must in the long run be similar rates on competitive traffic. Thus the principle of "what the traffic will bear" and the principle of "non-competition in rates" govern in the making of railroad tariffs.

Several years ago the Eastern trunk lines, by agreement, contrived to advance rates on freight. This was done by what was euphemistically called a "reclassification" of commodities, the effect of which was to place on several hundred commodities a higher rate. At the same time rates on bituminous coal were advanced materially, but it is fair to note that these latter had previously been cut to a very low figure. From the discussion now proceeding it appears that something can be done towards securing a better ton-mile revenue by insisting upon a larger load for "car-load lots." This plan would have the double result of compelling better loading of cars, and of bringing under the higher rate-tariff for "less than car-load lots" a good deal of business now paying "car-load" rates. Against this method no possible objection could be raised on grounds of public policy, and it might accomplish much good from the point of view of the railway. A new "classification" is also talked of, but this would assuredly arouse strenuous opposition. Since the discussion of the rate bill was initiated the railways have, by eliminating rebates and concessions of various kinds, already succeeded in raising the average ton-mile revenue.

It is always asserted on behalf of the railroads in the United States that their rates on freight are the lowest in the world. This is probably true if the average ton-mile revenue be taken as a measure, but it must not be argued from this that these rates are too low. Ten years ago the average freight-train-mile revenue—*i. e.*, the sum of money received from the running of a freight train one mile—was $1.55 or thereabouts. Last year it was not less than $2.55, or one dollar more for each freight-train-mile run. The ton-mile revenue in 1897 was 0.797 cent—last year it was about 0.775 cent. The additional dollar was obtained by loading 145 tons more freight into the train. Obviously the cost of hauling 340 tons per train in 1906 was much less per ton than the cost per ton of hauling 195 tons per train in 1897; while the revenue per ton per mile in 1906 was only 3 per cent. less than in 1897. In other words, the profit per ton-mile hauled in 1906 was undoubtedly much more than the profit per ton-mile hauled in 1897. Moreover, if we assume the average ton-mile revenue as a sufficiently accurate measure of average railroad rates, we find that rates are appreciably higher now than they were a few years ago. In 1899, for example, the average revenue per ton-mile on United States railroads was 0.726 cent. In 1905 it was 0.784 cent, or almost six-tenths of a mill higher than in 1899. If the railroads in 1905 had hauled their freight at the same average revenue per ton-mile as in 1899 they would have earned about $108,000,000 less than they actually did earn—or, to put it in another way, the railroads in 1905 earned $108,000,000 more than they would have earned at the average ton-mile revenue of 1899 had that average "rate" of 1899 been applied to 1905 business. Curiously enough this is just about the amount of the increased wages bill which the companies are thinking of asking the public to pay by yet a further increase in rates.

On the whole, it is safe to say that if the question of railroad rates becomes a matter of public discussion there will be room for as many opinions as there are disputants. The differences of experts which developed in connection with the mail-pay question a few years ago are a sample of what may be expected if the whole question of rates is opened up. Meanwhile, it would seem that with an unbroken array of increased dividends confronting us in 1906 the burden of proof will be upon the railways.

"The Investments of Life Insurance Companies," by Lester W. Zartman (Henry Holt & Co.), is a valuable study in life-insurance finance. The author, who is instructor at Yale University, undertook this investigation in 1903, so that the volume is not a hasty product of the recent insurance scandals. He considers the character of the investments of life companies, the investment earnings, the cost of the investments, failures, legal regulation, the control of insurance assets, taxation, and the social effects of the accumulation of capital for insurance purposes. His method is rigorously scientific, and the result is a most useful contribution to the subject. In general he is opposed to State control of investments, though he favors thoroughgoing publicity which will enable policyholders and others to know what insurance managers are doing with the funds entrusted to their control. He appreciates the difficulty, even in mutual companies, of securing responsible management; but hopes that a reform of the "proxy" system and improvement in the methods of voting by mail will make it possible to solve the problem. The importance of this matter is fully realized by Mr. Zartman, who makes it clear that the recent disclosures may fail, just as previous ones have failed, to secure permanent reform in the large companies. He says:

> The old managements have been revealed in their misdeeds and forced out of the companies, new officials have been put in with many proclamations of future good service. With all due regard for the character of these particular individuals, it should be said that the same dangers are likely to arise again. There are still stock companies in which the policyholders have no control whatever; it remains to be seen whether under revised laws the policyholders are going to exercise any real control over their companies, and whether any system can be devised that will change the apathetic attitude which the insuring public has always taken towards insurance management, save at the time of some great agitation. Periodical investigations and temporary reforms will be the rule so long as policyholders do not exercise an active control in company affairs.

"The most thorough and comprehensive book that has yet appeared on the Panama Canal."—*The Nation.*

Johnson's Four Centuries of the Panama Canal

With 16 illustrations and 6 colored maps. $3.00 net; by mail $3.25.

HENRY HOLT & CO 29 W 23d St NEW YORK

The Nation.

NEW YORK, THURSDAY, FEBRUARY 21, 1907.

The Week.

If this country were to intrust the making of its tariffs to the Massachusetts Legislature, the Dingley law would have to go at once. The Governor, the presiding officers of both houses, and 222 out of the 280 members of the Legislature, only 75 of whom are Democrats, signed the tariff revision petition which was forwarded last week to the President. From the high protectionist point of view this is the basest of ingratitude. Massachusetts lies near the centre of that fortunate dumb-bell-shaped region which was pictured on the cover of the Republican campaign text-book in 1904, the "Manufacturing Section of U. S." Only two States, her immediate neighbors, Rhode Island and Connecticut, are more dependent on manufactures. She sells every year $360 worth of manufactured goods per capita, as against $290 for New York. Yet, instead of being grateful for a fiscal system designed solely to foster manufactures, Massachusetts is taking the lead in trying to destroy it. The policy of giving American manufacturers whatever they want has many advocates. Are there any of a policy which forces on them "aid" which they no longer desire?

Except as regards the Japanese, the immigration bill, as finally agreed upon, has become little more than a bundle of minor changes in details of the law. Instead of building a new wall, the Congressional carpenters are merely tinkering the old one. Of the new provisions, one, the increased requirement of air-space for steerage passengers, is in the interest of the immigrant, and should have been adopted long ago. Two—the provision for a Congressional commission to collect data, and the authorization of a conference to regulate immigration by international agreement—do not involve directly the general question of restriction. Fines are provided for the steamship companies bringing consumptives, idiots, or epileptics to this country. Since these persons are not allowed to land in any case, this fine may operate to save hardship and disappointment to some unfortunates. Prostitutes are added to the list of excluded classes. Aliens leaving our insular possessions for the United States must register, and the Panama Canal Zone is declared foreign territory for immigration purposes. Finally, $50,000 is appropriated for the enforcement of the contract labor laws; and the head-tax on immigrants is increased from $2 to $4. This last provision is hard to defend on logical grounds. If the immigrant is not wanted, he should be turned back; if he is wanted, he should not be taxed for entrance. It will exclude some immigrants, but not those whose entrance is least desirable. The head-tax will not exclude so many aliens as the educational qualification advocated by the Senate would have done, or the "low vitality" provision desired by Commissioner-General Sargent. Yet it will stand in the way of some thousands, and in that fact the restrictionists will find some comfort. They have tried harder during the present Congress than at any time within recent years to impose new and severe restrictions, but our historic policy of liberality has been practically unaltered. The sentiment against our present immigration is not wholly fictitious, though selfish interests are reported to have helped manufacture it. If the attempt to settle the problem by intelligent distribution of aliens fails to show results, the demand for arbitrary restriction is certain to arise again.

Though the currency bill reported from the Senate Finance Committee last week lacks spectacular features, its passage would be a considerable step toward an intelligent and consistent system. It illustrates, incidentally, the quiet and simple ways in which reforms like this can be made. Last year the House passed a bill providing for ten-dollar gold certificates (twenty had been the lowest denomination heretofore); and for one and two-dollar bills in place of the ten-dollar silver certificates. The Senate Committee has added the really significant amendment which abolishes the old and meaningless distinction between customs and other revenues, makes all national banks depositories of public moneys, and increases from $3,000,000 to $9,000,000 the aggregate of national bank notes that may be withdrawn in any one month. Senator N. W. Aldrich promises to press this bill to early consideration, and he professes hope of securing its passage; but it must be confessed that the chances of success are none too bright.

Congressman Theodore E. Burton of Ohio again proved his value as a public servant by his protest last Friday against the voting of two more battleships, to cost twenty millions of dollars —two-thirds the amount of John D. Rockefeller's recent magnificent gift to the General Education Board. Mr. Rockefeller's money will do a useful work for centuries to come. The twenty millions for battleships will probably have disappeared twenty years hence, together with several other millions for repairs and alterations. Mr. Burton also declined to be silent about what he regards as the real needs of the navy—the improvement of the personnel and its efficiency. But best of all is Mr. Burton's courage in opposing a policy he deems unwise even though it be that of the Administration. He spoke for common sense and humanity. The soundness of his position is emphasized by the utterance of the Berlin *Tageblatt*, which regards the present desire of the United States to maintain a huge navy as one of the chief difficulties in the way of a general agreement for disarmament at the approaching Hague Conference.

The President's message on the public land laws, taken in connection with his previous declarations on the same large topic, covers a system of radical reform which deserves the attention of the whole country. Owning originally tracts of mineral lands, timber lands, and grazing lands, our government began by virtually giving away whatever was asked for—neither insuring that each should be used for the greatest public benefit, nor that the possessor should always have a chance honestly to develop his legal holdings. For a long time no other system was considered; and the liberal policy undoubtedly acted as a powerful incentive to the development of new tracts. The President now lends his aid to those who believe that the time for this policy has passed. Instead of giving private interests the title outright to coal lands, our government should lease them. It should likewise lease the cattle ranges. It should sell standing timber, without losing control of the land. In short, it should eliminate, so far as possible, the speculative element in the use of public lands, and adopt a far-sighted business policy. How much of this programme can be secured at once is problematical. But some legislation along these lines must be ultimately adopted, if the natural resources still in the hands of the government are to be conserved for the use of future generations.

They are startled at Washington to find that we have a $2,000,000,000 Congress, but for a decade past it has been evident to the most casual observer that public charges were multiplying with great rapidity in the United States. By the latest instalment of the finance statistics of the Twelfth Census we are now able to measure the precise strength of the tendency which common observation had shown to exist. The data gathered by the Census are for the year 1902,

and admit of general comparison with the figures which the Eleventh Census compiled for 1890. The general movement of Federal, State, and local expenditures during this period of twelve years is shown by the following condensed table:

	1890.	1902.
Federal expenditures	$352,218,600	$617,530,100
State and local expenditures	563,735,400	1,156,429,200
Total	$915,954,000	$1,773 959,300

Here is an increase of about 94 per cent. in the total outlay in little more than a decade. Translated into per capita figures, the results are equally impressive:

	1890.	1902.
Federal expenditures	$5 62	$7 81
State and local expenditures	9 00	14 64
Total	$14 62	$22 45

It is customary to dismiss such matters with the complacent remark that this is a big country, and that its wealth is growing as fast as its expenditures. It happens, however, that the census figures of the total wealth of the United States do not show anything of the sort. From 1890 to 1904, according to the official guesses which pass current as statistics, the wealth of the country has advanced as follows:

1890	$65,037,000,000
1900	88,517,000,000
1904	107,104,000,000

From 1890 to 1904 the total wealth of the United States increased about 65 per cent.; but against this we can now set advances of 75 per cent. in Federal expenditures, 105 per cent. in State and local outlays, and 94 per cent. in the aggregate cost of government. Clearly, then, we can safely call the attention of our readers to the portentous growth of public expenses in the United States. Much more than the usual infusion of imagination and emotion will be needed to make the recent census figures yield the "satisfactory showing" which the popular statisticians usually extract from them.

Students of social and educational questions seem to agree that a Federal Bureau should be established for the collection of statistics as to the physical welfare of school children, truancy, mortality, child labor, etc. Opinions differ, however, as to whether the new bureau should be under the Commissioner of Education or be a new division of the Interior Department. Senator Crane of Massachusetts has introduced a bill making a separate bureau. This, to our minds, is the wrong way. These frequent additions to the machinery of our Federal Government are bad enough in themselves, but if we must have them, they should be dovetailed into existing departments wherever possible, if only for reasons of economy. And when, as in this case, there is a long-established force at work on similar problems, the argument for giving this undertaking to the Commissioner of Education seems irresistible. The proposed children's bureau, with its small budget of only $30,000, could do only a small part of the work it should cover. Moreover, if the Bureau of Education were made responsible for the statistics, it could at once enlist in this campaign an army of about half a million teachers. The new Commissioner, E. E. Brown, is vouched for as a man of executive ability; he would probably welcome the chance to show what he could do in this new and important field with a slight enlargement of his present force.

Otto Kelsey, New York State Superintendent of Insurance, now knows that he made the mistake of his life in not resigning quietly when Gov. Hughes first asked him. With a fatuity which is itself sufficient proof of his incapacity, Kelsey chose to resist and rally his friends for a fight. The first blow struck by Hughes reveals Kelsey as pathetically incompetent. By his own confession, extorted in Gov. Hughes's severe cross-examination, Kelsey is ignorant of the details of the insurance investigation, is ignorant of the abuses that flourished under his present subordinates, is ignorant of the shortcomings of these men, and has made no effort to reorganize his department and conduct it on a business basis. Kelsey's own words convict him of being a complete failure. The press is practically unanimous in demanding his dismissal. No disinterested man can offer the slightest excuse for retaining him in a position which he is obviously unfit to occupy. In the eyes of the people of this State, the incident has strengthened rather than weakened Gov. Hughes by affording him opportunity for the display of power and courage hardly matched in the history of New York politics.

The abolition of the South Carolina State dispensary, after an existence of thirteen years, does not restore the saloon to the State. The private liquor dealer cannot conduct his business legally there without a Constitutional amendment for his benefit. The local option now provided gives to every county the choice between prohibition and a dispensary of its own, conducted by responsible local officials. There was a way, even under the old law, of keeping the dispensary out of a county, and, though the process was cumbersome and difficult, as many as fourteen counties, we believe, had taken this action. It is conceded that the first result of the State dispensary repeal will be a large increase in the "dry" territory. Of Senator Tillman's pet institution, the Charleston *News and Courier*, not, perhaps, an unbiassed critic, writes by way of obituary that "for thirteen years it has been the controlling influence in South Carolina, and brought only shame and disgrace to the State." Pervasive scandals were disclosed by the official investigations of last year, such as to discredit hopelessly this remarkable experiment in dealing with the liquor traffic. If the State must go into trade, it meets difficulties enough without meddling with a business which is of bad repute to begin with.

A. B. Stickney of the Chicago Great Western Railway has long had the reputation of being a sort of *enfant terrible* among railway presidents, and his frank defence of stock-watering last week, at the investigation by the Minnesota Legislature, was wholly in character. Like another Luther at Worms, he took his stand upon the proposition that railways are entitled to "all the interest and dividends they can get, provided reasonable rates are charged." Yes, but the reasonableness of rates depends upon the return they yield on capital actually invested. If profit on one-half water is reasonable, why not upon nine-tenths? Besides, since the Trans-Missouri decision by the Supreme Court, the unreasonableness of an act of Congress directed against railroads can no longer be pleaded as sufficient ground for setting it aside. So if it comes down to the assertion of stark power, without regard to fairness or sound public policy, the railroads will find themselves in an unequal contest. Even Mr. Stickney's fiat would not have quite the force of a law of the land.

The opinion has been recently expressed that the American picture market is suffering from stagnation induced by the excessive prices which painters demand. How great the overcharge has been cannot, of course, be given with mathematical precision, but from the scale of reductions suggested it would appear that our artists have indeed been killing the golden millionaire that buys landscapes and *genre* studies for his reception hall or the museum of his native city. But as a matter of fact is it true that the artist's services are exempt from the workings of the law of supply and demand, which is generally accepted as determining price in the economic exchange of commodities and services? We find a reply to this question in a paper in the *Revue des Deux Mondes* by the Vicomte Georges d'Avenel, dealing historically with the remuneration of painters and sculptors for the last seven hundred years. He holds that art, no less than industry, is subject to the iron law which declares that the price that is, is right, and that a successful paint-

er is entitled to what he can get. His argument runs thus:

> This last fact [the very large income enjoyed by successful painters] has nothing to do with the intrinsic merits of their work—they surely will not claim superiority to Titian, Velasquez, or Rembrandt—any more than the high fees exacted by our physicians and surgeons are based on their superiority to their predecessors. It depends on the number of the rich, who by their competing demands augment the cost of rare works of rare talents. The surgeon who is a lover of art and who receives five or ten thousand francs for an operation will not hesitate to give that sum for a design by Albrecht Dürer sold in 1521 for 24 francs, which was just the fee the artist paid, in turn, to his physician for a single visit to his sick wife.

The wealth acquired by an artist's labor depends, therefore, on the existing demand for his works, which depends in part on the general wealth of the community, in part on his vogue in the market, and in part on his rate of production. If paintings by Winslow Homer or John S. Sargent are eagerly sought by persons of unlimited wealth, and if these artists turn out but few pictures each year, their work, like a cornered railway stock, will command a correspondingly higher price. They can practically charge what they please.

Far more significant than vague mutterings against the House of Lords, is the clear announcement in the House of Commons that the Government will bring in a bill for Irish Home Rule. The new Secretary for Ireland, Augustine Birrell, explicitly stated that the Ministry believed that nothing would give satisfaction to the majority of the people in Ireland, but "what is generally called a home rule Parliament," and that the Prime Minister would "never make himself responsible for any measure which might obstruct the fulfilment of those hopes." The full text of the bill will be eagerly awaited. It is bound to propose a great enlargement of Irish control over purely Irish affairs. The Tories themselves have gone many steps that way since Gladstone's time. Having conceded a degree of local government in Irish counties, it is difficult to see how they can logically combat an extension of that power to the counties united. Nor can they allege that Sir Henry Campbell-Bannerman is forced to placate the Irish in order to sustain himself in office. He has a clear and large majority without them. Hence it is not political expediency which is moving him, but loyalty to pledges and to the Liberal tradition, with the desire to see all the people throughout the British Empire governed by their own consent.

The situation in France is reassuring, but anomalous. Peace between the Government and the bishops seems almost certain, but within the Government all is not harmony, in spite of the formal reconciliation between Premier Clemenceau and his ambitious Minister of Public Instruction. Like many a family scandal which is hushed up from the outer world for the sake of "the children," the French Cabinet has adopted a domestic *modus vivendi* in order to assure some sort of a future to the favorite child of the Republican *bloc*—Separation of Church and State. Clemenceau may disagree with Briand as to the advantageous nature of the arrangement, but that is a matter to be disposed of *en famille*. As to the outcome, the chances distinctly favor Briand. Clemenceau is too easy-going, too many-sided, too fond of a good joke, even when it is against himself, to carry on a policy of inflexible resolution. He has the *élan* that will gain him a brilliant cavalry victory, but will stand him in little stead against the slow sapping and mining tactics of M. Briand.

The fact that the Constitutional Democrats have made a clean sweep in the Moscow elections for the second Duma, will not please the extreme radicals, who would have preferred a victory for the Socialist Revolutionaries, or their nearest allies, the Social Democrats; but with such an event removed from the realm of the possible by the Government's rigorous watch over the polls, it is satisfactory to see the reactionary element overthrown. The signs seem to point to coöperation in the Duma between the Left and the Cadets on the basis of a more conciliatory policy than that adopted by the Opposition last year. Alexei Alyadin, peasant leader in the first Duma, and now a visitor to this country, was by far the most violent member in his denunciation of the Government. We must, therefore, find a certain significance in the following extract from an article he wrote for the London *Times* on the eve of the present elections:

> And last, but not least, the Hotspurs. They, too, have learnt by bitter experience that the glory of a direct charge does not always lead to victory; a flank movement, aye, and slower methods still, may bring surer profit in the end, without such sacrifice of their best and bravest. Their enthusiasm is not damped; but the last months have brought harmony into their working—a fact which may prove of some moment in the coming struggle.

If we do not err in our interpretation of Hotspur Alyadin's words, the chances for progress this year are not discouraging.

The comparatively full summary of Gen. Kuropatkin's "History of the Russo-Japanese War," supplied by the Associated Press, raises the desire for more details. Nothing but the complete story of the man who knows most about the Russian *débâcle*, and who is apparently honest enough to tell all he knows, will enable us fully to grasp the nature of an epic struggle between inert matter and alert spirit, between chaos and ordered mind, which seems to carry us back to the gray days of the heroes of sun myth. It is easy enough to be wise after the event, but in the light of Kuropatkin's revelations, what chance did the Russians ever stand at any moment of the struggle? Preponderance of fighting force, incomparably better preparation for action in a mountainous country, more youthful vigor, lighter equipment, plentiful mountain artillery and pack trains, extreme patriotic spirit, energetic and capable officers—all these were ranged against unpreparedness, "insufficient warlike spirit of our own troops in consequence of the obscurity surrounding the objects and causes of the war," and officers whose inability was tragic in its results. No wonder that Luck, too, cast her lot with the Japanese. One can see how Gen. Kuropatkin's three volumes can be turned into an incomparable argument for peace—by emphasizing the horrible fact that the lives of tens of thousands are the price that is being paid, not for a leader's error, which is conceivably pardonable, but for a leader's inexcusable neglect and incapacity.

The suspension of the Berlin *Nation*, conducted for twenty-four years by Dr. Theodor Barth, will be regretted far beyond the bounds of the German Empire. Avowedly modelled after the New York *Nation*, it has contended for many of the same causes. Free trade, free speech, and individual freedom have been its ideals; and its discussions of home and foreign affairs have been the soundest that have appeared in all Germany. For international peace Dr. Barth has striven day in and day out; and when the German journalists went on their peace mission to London last summer, he was naturally spokesman for the delegation. That he has not found men to whom he can turn over the burden he has so long carried, is an ominous sign for German Liberalism. Indeed, the suspension of the paper immediately after the last election shows that whatever encouragement the balloting has brought to the Emperor and the Chancellor, it has put but little heart into the Liberals, who stand for progress along democratic lines, as opposed to advances in the direction of Socialism. By the reactionaries, the Clericals, and especially by the Agrarians and the Prussian *Junker*, the death of the *Nation* will be regarded as a blessing. But it goes down with a record of long and unswerving devotion to high principles,

FROM CITIZENSHIP TO EXCLUSION.

If Japan, on the one hand, and the second great Power involved, the San Francisco Board of Education, on the other, assent to the "solution" of the question of Japanese immigration devised at Washington, an end of the controversy is reached for the time being. Pleased as we must be to have allayed, even momentarily, international irritation, we are not bound to approve the makeshift legislation by which Congress dodges responsihility and leaves everything to the President. When he "shall be satisfied" that the coming of the Japanese is to the "detriment of labor conditions," then he may exclude them. But it is only our "continental territory" that is to be saved. To the Hawaiian Islands and the Philippines, to Porto Rico and the Canal Zone, the contaminating Japanese are to be allowed to go freely. In those negligible possessions of the United States there are no "labor conditions" to be safeguarded — which, being interpreted, means that they have no labor vote with which to terrify politicians. And, of course, the President will have the right to exclude also the thousands of Portuguese in the Hawaiian Islands, the Spaniards at Panama, or Italians in any of our non-continental territory. This is a tremendous power to lodge in any President. If we should ever get one who was not absolutely wise, just, and infallible, he might use his authority, for example, to make himself popular on the Pacific Coast, or to curry favor with demagogues.

Our doubts about the method of settlement are strengthened by the puzzling course of the President himself in this affair. In his message of last December he held the Japanese up to admiration as among the finest people on earth. So desirable was their company in the United States, that Mr. Roosevelt said: "I recommend to the Congress that an act be passed specifically providing for the naturalization of Japanese." Nor can it be said that, when the President wrote his message, he had in mind only Japanese artists and university men. He spoke of the "unworthy feeling" that had been shown against Japanese in San Francisco, and the "mutterings against them in one or two other places," "because of their efficiency as workers." That could have meant only the laboring classes among the Japanese immigrants, whose efficiency obviously made them a valuable element in our population. The President's emphatic words about the folly and wickedness of race prejudices and hatreds were cabled round the world as a new and impressive chapter in international morality. He demanded fair treatment for the Japanese—classing them, by name, with Germans, Englishmen, Frenchmen, Russians, and Italians. Nor was this limited to the higher classes of Japan:

> We must treat with justice and good will all *immigrants* who come here under the law. . . . Whether they come from England or Germany, Russia, Japan or Italy, matters nothing.

He even spoke of his determination to employ the entire naval and military forces of the United States, if necessary, in order to compel San Francisco to be just to the Japanese. No assertion of principle could be loftier or more sweeping. Yet within two months the President has turned his back upon it, dropped his test cases to establish the treaty rights of the Japanese in this country, and is doing everything in his power to satisfy the demand of the Pacific Coast that the Japanese not only be denied naturalization, but be entirely excluded.

The exclusion policy may conceivably be justified, but it is hard to justify the President for being both against it and for it. Having warmly praised his former attitude, we cannot also praise his right-about-face. Nor can we believe that his round affirmations regarding the true rules of international courtesy and fair dealing were inconsiderately made. We have no doubt that his heart was in them—at the time. Why the great change? Why has this majestic nation, conscious of right and dignity, and determined to observe high-minded justice in all international relations, no matter how some disaffected locality might cry out—why has it fallen to dickering with an indicted mayor, and given in to that "hostility towards the Japanese in this country" which the President said in December was "most discreditable to us as a people," and might be "fraught with the gravest consequences"? We know of no satisfactory explanation. The President declared the anti-Japanese agitation to be "limited to a very few places." He has found that it infects a large part of the Pacific Coast. From Puget Sound to the Mexican border he has been denounced. The press has been outspoken against him; Legislatures have passed resolutions attacking him. We dislike to think that the President has shrunk from unpopularity in standing for a principle, but we wish some one would tell us his real reason for running away from it.

The position of the President is rendered still more humiliating, the "solution" of the difficulty still less defensible, by the long statement given out on Monday by Mayor Schmitz of San Francisco. His words read like a studied insult to the President. Mr. Roosevelt's contention that the action of the San Francisco authorities was in violation of our treaty with Japan, Mayor Schmitz puts aside scornfully:

> We have not conceded and do not concede or intend to concede that our action was in violation of any of the stipulations of the treaty.

Moreover, the Mayor of San Francisco states that he made it "a condition" with the President of the United States that the suits brought to determine the scope of the treaty "be dismissed forthwith." Finally, the triumphant Mayor says that the agreement he has consented to is only "temporary," and that "President Roosevelt has given us direct and positive assurances that he will at once begin negotiations with Japan for a treaty that will exclude Japanese laborers, skilled and unskilled." We should have expected Mr. Roosevelt to resent such an utterance with his customary vigor and wrath. Instead, we get this from the White House:

> A copy of Mayor Schmitz's statement was submitted to President Roosevelt and Secretary Root, and is entirely satisfactory to them.

SALVATION BY LECTURES.

William Hurrell Mallock's series of lectures in this city on Socialism promise to make a pleasant book. His literary reputation had, of course, preceded him to this country, and he was certain to receive a welcome and to find good audiences. It may be doubted, however, if even his acute analysis of the old problems will let him deeper into their heart than previous probers have gone; and it may especially be doubted if any very profound impression on the public mind can be made by his lectures on the fallacies of Socialism —or, for that matter, by anybody's.

Those who invited Mr. Mallock to speak here are understood to have entertained a hope that he might help us raise a bulwark against the inrushing socialistic flood. With all sorts of theories and illusions in our air, it was apparently felt that a clear-headed Englishman, with an attractive style, might bear valuable testimony, and persuade some among us from the evil of their ways. In this attitude there was a simple faith that is not a little touching. It is like the feeling of many good people that if only the discontented classes could be got to sit out a sermon every Sunday night, their discontent would vanish. Of course, such a belief as that in the power of hortatory address is a frequent manifestation of the oratorical instinct. Gladstone had it in a marked degree. As Bagehot pointed out, he always was sincerely convinced that, if he could get at his most dogged opponent, and thunder and lighten at him for two or three hours, he could surely convert him. Such zeal and hope may animate the breasts of some lecturers. It would be cruel to dash their ardors; yet in the case of large social and political movements, where the passions of

men are enlisted more than their reason, it is well for all of us to look at the exact ways in which public opinion is formed, and to observe how small a part lecturing plays in the business. On the eve of the Civil War, Edward Everett went about the country delivering his lecture on the virtues of Washington. It is not recorded, however, that the rose-water put out the conflagration.

A study of the way in which Socialism steals upon a people would, we think, yield the best hints as to the means by which it will be likely to go away. Emphatically, it cometh not by observation. No single great book, no forceful agitator or individual prophet, can be pointed to as the efficient cause of what is, after all, a subtle mental attitude of great masses of people. Suddenly the day comes when it is said, "We are all Socialists now." That cynical remark of Sir William Harcourt's did not mean that the whole world was going in for a community of goods. It implied, simply, that a great change had quietly made its way; that people found themselves, they did not know how or why, looking differently at a large range of social questions—taxation, the condition of the working classes, the rewards of capital, the humane functions of government, and so on. Nobody had converted these men. They had merely been caught up in a silent but irresistible tendency of their times.

Godlike reason, looking before and after, has less to do with these alterations of the general point of view than we like to imagine. There is no proof, for example, that English cities went into their socialistic experiments, or even their schemes of municipal trading, in any spirit of cool calculation. Rather, they drifted in. The good old Anglo-Saxon rule of thumb had its way. It was not logic, but experiment; and there are many signs to-day that the experiment is turning out badly. If it does, and if the old Sphinx-question, "Who will pay the bills of Socialism?" remains unanswered even by the great increase in the rates, then we may look for a serious reaction in the movement. Englishmen will begin to say, "That thing has been overdone." But here, again, it will not be so much a reasoned conviction, wrought by any book or newspaper, any orator or lecturer, as a sort of subconscious change, which is the result of forces too secret and elusive to be grasped with the hand.

This is what is called being "in for" this or the other movement. We in the United States are undoubtedly in for a great many things that have been known as socialistic. Citizens are calling upon their governments to do more for them in the way of providing added comforts and conveniences. That infallibly means higher taxes, but by such a consideration the people are not, as yet, checked. They look at corporations in a wholly new light. Like a thief in the night, an entirely different way of regarding great accumulations of capital has stolen upon them. They think about the working classes as they never did before. Now, this is not the direct result of socialistic preaching or organization. As H. G. Wells, himself the most thorough-going of Socialists, has said, "all the socialist societies and leagues and federations seem to me no more than the rustling hem of the garment of advancing Socialism." He adds:

> To make a fairly complete intimation of the nature of socialism to an average, decent, middle-aged, middle-class person would be to arouse emotions of unspeakable terror, if the whole project didn't also naturally clothe itself in a quality of incredibility.

Yet these same middle-class people are going, in their honest, floundering fashion, into various socialistic ventures, and all the warning lectures under heaven will not stop them.

Yet they may, any day, pull up sharply, and go in the other direction. There are clear indications in England that a lurch away from Socialism is imminent. It may show itself in this country at any time. Somehow, a drift asserts itself in such matters. Incalculable but coöperating elements go to establish it. All you can say is that the popular mind has completely changed. You may see Socialism coming in like a flood, and may say bitterly with Herbert Spencer at Biarritz, pointing to the advancing waves, that it is impossible to resist it by argument; yet you may be sure that, if you keep your head and live long enough, you will see it go out again as fated as the tide.

THE EXPOSURE OF VICE.

Widely diverse opinions about the reporting of the Thaw trial are evidently held. In several distant cities women's organizations have protested against publication of the details. Federal officials have moved to exclude from the mails evidence given that is grossly indecent. On the other hand, a Ministers' Association in Providence, after a debate last week, unanimously approved the printing of every feature of the testimony, on the ground that the trial is furnishing the "greatest moral lesson of the age." Thus the matter is plainly one for careful discrimination.

We thoroughly agree that the recurring demonstration of the wages of sin, in the persons of the deliberately and defiantly immoral, is wholesome. It is a part of the continuing moral education of mankind. People will not so seriously consider or so implicitly accept the truth about the inexorable working of the moral law, when it is a question of maxims in a book, as they will when it is a living example. To show that God is not mocked to-day, any more than in Bible times, and that whatsoever a man soweth that shall he also reap, is a part of the justification of criminal trials, and of the uncovering by legal process of the foul lives of fair-seeming men. So far we are ready to go with those who see in the revelations of the Thaw trial a means of quickening the moral impulses that keep the world from falling into the pit. Not John Knox or Savonarola or St. Paul himself could preach a more powerful sermon on those things the end whereof is death, than has been this disclosure of the secret ways and the sure and dread punishment of vice cloaked by wealth.

When it comes, however, to the form in which the great moral is conveyed, another class of considerations must be brought in. Shall we, in striking at corruption, ourselves corrupt? In exposing indecency, shall we be indecent? These questions suggest the real objection to printing all the "disgusting details" of the Thaw trial. It is not that they run perilously close to the statute prohibiting the distribution of obscene publications through the mails, or offering them for sale. The danger lies deeper. It is lest, in attempting to create horror at iniquity, you provoke a morbid curiosity about it; excite prurient imaginations; sow seeds of evil in innocent minds; and find yourself in the position, not of a stern moral teacher, but of a purveyor of salacious and demoralizing minutiæ of vice. From the newspaper point of view—and it is that which is mainly at issue—there is no need of going into all the unspeakable details. As an English journalist has said, it is perfectly possible to give a just impression of the total effect of the evidence in the Thaw trial, without touching upon matters which decent people agree not to mention. That should be the newspaper rule. The facts in such a case as this notorious murder trial ought to be given to the public. They are of immense interest, psychologic and moral and criminal. But as regards the nauseating form in which they are told by witnesses, that, surely, is a place at which the scrupulous editor would wish to draw the line. He would feel, with the Apostle, that "it is a shame even to speak of those things which are done of them in secret."

It must be remembered that the warning and preventive value of such a public trial, and public reporting of it, apply, after all, to but a limited class. Most of the innocent, the well-taught, the guarded, the wholesomely occupied, are scarcely affected. They simply shudder and pass by. As for the ignorant or credulous, the dabblers in evil, many of them, it is to be hoped, will be shocked into a realization of what they are about, and will be under a new restraint. But those far down the path of dalliance

are not so to be checked. It is an appalling thought, but it is doubtless true, that hundreds of men in this city are going, in their fashion, the course of the man who was shot in the Madison Square Roof Garden last June, and that they will not be in the least deterred by his fate. "Oh," they will say, "*he* was too reckless, too imprudent. *He* took too many chances. It was certain that could not go on. But *we* will observe every precaution; will be astute where he was careless; and no one shall ever know the hidden life of pleasure we lead." Such delusions are of the very essence of the power of immorality over its victims, and are not to be dissipated by any amount of published evidence of kindred folly. And when the day comes for the next man to find his pleasant vices twisted into a thong to scourge him, he, too, will be astonished to discover that the moral law is no respecter of persons, and has a way of piercing through the most elaborate disguises.

It is, indeed, an awful reflection that men whom one meets in office or street or club, may yet be hiding another life of unspeakable corruption. But let no one think that such men go unpunished, even if unexposed. In assenting to the public importance of exposure, we must not forget the automatic recording of the punishment of vice, in the heart and soul of the vicious man, which goes on remorselessly even when there is no exposure. One form of this punishment is a fearful sense of satiety. It seems to have eaten into both the men prominent in the Thaw trial. After having resorted to every expedient that money or ingenuity could supply to flog jaded sensibilities to a new thrill, they yet wore the air of men walking benighted under the midday sun, themselves their own dungeons. When all is said about the "greatest moral lesson of the age" in the unflinching exposure of vice, it is just as well to bear in mind that the moral order of the universe, and the stuff of which human nature is made, remain sterner and more infallible messengers of justice than any which man can devise.

ENGLISH RULE IN EGYPT.

So many flattering pictures of the British administration of Egypt have appeared of late years that it is rather startling to run across a pamphlet by an Englishman, called "Atrocities of Justice Under British Rule in Egypt." This is the title of Wilfrid Scawen Blunt's monograph, and he has, it must be admitted, produced facts that make the whole record seem radically different from that glowingly described by Viscount Milner, whose standard "England in Egypt" has just reached its eleventh edition. Yet what Milner, and a later writer, Sir Auckland Colvin, say about the material development of Egypt is not exaggerated. Lord Cromer has accomplished wonders, besides abolishing enforced labor and the lash; and, all in all, Egypt may still be cited as the most successful example of the government of a "backward" people by Anglo-Saxons or Teutons.

But just because British rule has achieved so many material reforms, we have the right to inquire whether it has also made the natives contented and happy; whether it stands for absolute justice; and, finally, whether the natives are being allowed to come into their own as rapidly as possible. For if the plan were to keep the Egyptians permanently in tutelage, it would be idle to ask whether the people are happy and content. There was a strong national feeling in 1882, when the British defeated the nationalist movement under Arabi Pasha; and the party whose cry is "Egypt for the Egyptians" was markedly strengthened by the wave of hostility to the British which swept over the country from 1893 to 1898. That there have recently been signs of a recrudescence of this desire to be free from a foreign yoke is well known; the fear of a religious crusade against Christians has filled pages in the English and Continental press. The Denshawai incident itself has been frequently mentioned as proof that the Egyptians are on the verge of open hostility against their rulers.

What this "incident" really was, Mr. Blunt explains at length, and revolting reading the story makes. The judgment as printed in the official Blue Book, he declares "one of the most disgraceful documents ever issued, as their deliberate summing up of a case and sentence by civilized judges. It is self-contradictory, slovenly, and its language truculent and absurd." This accusation is hardly too strong, for in one paragraph the court says the crime was "committed against officers who had surrendered their arms and were defenceless," and in the next it says, "the officers could have shot the aggressors as they did the pigeons." While the judgment did not ascribe murder to the natives, it yet sentenced four villagers to death, two to life imprisonment, and bestowed minor punishments upon fifteen others, of whom eight received fifty lashes apiece. These sentences were barbarously executed. The French newspaper, the *Journal du Caire*, said of the horrors perpetrated in the name of justice:

> Here we see the Middle Age punishments as the order of the day—gallows, pillory, iron collar, judge, executioner, torturer—nothing wanting but the wheel and the stake for burning.

It is impossible to read the details without being satisfied that this affair must always be a stain upon Lord Cromer's reputation. He plainly lost his head, and in order to overawe his subjects permitted ferocities recalling those of the Mahdi in the Sudan.

This is the worst of the atrocities which Mr. Blunt, himself a resident of Cairo, reports; but the effect of it has been heightened by other inexcusable miscarriages of justice. Apparently, the theory is that he who touches the hair of an Englishman's head dies like a dog. And then, the British public is amazed because the Egyptian does not adore every red-coat from Alexandria to Khartum, and express on every corner his appreciation of the invader's beneficence.

As a matter of fact, the Egyptian has also grounds for complaint in the slowness with which he is permitted to share in his government. Even a writer in the *Edinburgh Review*, who treats of the Egyptian problem at length in the January issue from a distinctly pro-British point of view, admits this cause of discontent, and urges that there be a further development of self-governing municipalities in which the Egyptian may learn to direct his own affairs. As for further political powers, it would be "folly," in his opinion, to bestow these until the Egyptians have learned to exercise "with discretion and intelligence those they already possess." Discretion and intelligence are words which must sound charming to the Egyptians as they think of the gibbets and lashes of Denshawai.

The value of a government which so plainly rests on bayonets must ever be questioned. Its success is not to be judged by an increase in per capita wealth or by the placing of fellaheen and pasha on the same footing in the courts. Should the English withdraw, their customs and reforms would be objects of suspicion and dislike merely by reason of the hate they have engendered. Final judgment, too, cannot be passed for decades, perhaps centuries, to come. Meanwhile the cant of the conqueror as to "discretion and intelligence," or the denunciation of the Young Egyptians as crude, shallow, and dangerous agitators, helps not at all. Even the writer in the *Edinburgh Review* admits there is a new stirring in Egypt, a new problem before Lord Cromer, and that discontent is bound to grow as the Egyptians become better educated. This very fact is proof enough that overlordship by Anglo-Saxons is at best a fleeting thing, and at worst a tyranny that is more deeply resented as the intelligence of the people increases.

IMPROVING THE PIANO.

About 300,000 new pianos were, according to the official figures, made last year by American manufacturers. Obviously, nothing could have been more futile than the fears that this industry would be damaged by the automo-

bile mania or the great output of musical phonographs. No doubt these had their effect; but it was more than counterbalanced by the vast number of instruments needed to go with the mechanical "piano players," the demand for which is now being supplied by more than seventy rival makers. There are many thousands of persons who would never have thought of buying a piano had not the application of the perforated-roll principle enabled them, after an hour's experience, to play pieces which, by the old method, would have required years of daily drudgery.

It is with some degree of amusement that we read the complaint of Ernst Fauer, written a quarter of a century ago, that the escape-movement and other improvements in the mechanism of the keyboard had lessened the earnest study on the part of the player which was formerly necessary for the production of tone and for securing a smooth execution. He would have been doubtless scandalized at the present-day "piano player," which relieves the performer of all finger work, leaving his hands and his mind free to attend to the expression alone. He would have good ground for contending that heretofore the mechanical players have left much to be desired in the production of tone and in the matter of accenting the melody. The tone problem still remains, no real substitute for the touch of the fingers having been found as yet; but recent ingenious inventions make it possible to emphasize the melody in a way which places such instruments on a much higher artistic level. The touch problem seems invincible; yet it is unsafe to prophesy, in view of the marvels already achieved. There are "players" which enable the performer to reproduce minutely all the details of phrasing and shading in the interpretations of masterworks by great pianists; others, which require no retracing performer at all, but give reproductions of the style of the great pianists as exact as the camera's copies of their faces. The very latest of the marvels is the promised conveyance, by electric wire, of a musician's performance to hundreds of homes, hundreds of miles apart, thus filling the "long-felt want" of having music on tap, like gas or water.

The popularization of the pianoforte (forty years ago the annual output was only about 25,000) has had as an inevitable result the cheapening of the instruments in quality as well as in price. The best pianos in the world are undoubtedly made in the United States, but only a very few firms can claim the credit. The average American piano is not equal to the average English, French, or German instrument; very often, indeed, it is so flimsy in construction as to be a fraud on the purchaser at any price. Fortunately, not only is a vigorous war being waged against the "stencil" piano, but a large number of firms are at this very moment raising their prices again, to avoid further lowering in quality, or to keep pace with the increased cost of production. It is only by a resolute move in this direction that American firms can hope ever to compete with the Germans in supplying satisfactory instruments for export to South America, Africa, Australia, India, and other countries with tropical climates. The German makers are credited with an income of several million dollars a year from such export sales.

So far as tone is concerned, the best American piano is a noble work of art, equal in its way to the violins of the old Italian makers. But the best piano, when we look at it from other points of view, is far from perfection. Compared with the clavichords and the harpsichords of the time of Bach and Handel, with their thin, brief, small tone, incapable of variation in loudness, the modern pianoforte is indeed a marvel of progress. Even Beethoven and Schubert had no premonition of the luscious beauty of tone, and the power of sustaining it which we enjoy. But in one respect the pianoforte is still far inferior to the voice, the violin, and the wind instruments: it lacks the power of increasing or decreasing the loudness of a tone or a chord after it has been struck, which is one of the most powerful media of musical emotion. Some judges hold that the individuality of the pianoforte would be marred if this defect and the comparative evanescence of its tone were overcome; yet it is difficult to see why this should be so. Its distinctive qualities would remain, but there would be added new aids to expression. A number of inventors have been at work on the problem of securing a crescendo and decrescendo for the pianoforte tone; and it is asserted that in one electric piano remarkable tone results have been achieved.

In one respect the makers of modern pianofortes are surprisingly and exasperatingly conservative. There can be no doubt that the keyboard of the instrument is capable of improvements which would make it much easier to overcome the technical difficulties of performance. As long ago as 1882 an Hungarian musician named Janko invented a new keyboard—or rather a set of keyboards—on which a single player can perform pieces that, on the ordinary keyboard, require two performers. It stands to that keyboard in the relation of the typewriter to the pen; yet it has been strangely neglected by builders and players alike, although there can be no doubt that it —or something similar—will have to be adopted by the virtuoso if he is to keep up with the mechanical "players" in the matter of technical brilliancy.

THE CENTENARY OF LONGFELLOW.

This is not the time, when the celebration of Longfellow's birth is taking on the form of a national *agapë*, to dwell heavily on his poetic shortcomings; if, indeed, it were ever time to deal so with the most beloved poet of our age. Let us grant what criticism has found to censure. We may rightly feel incensed at such churlish ignorance as that of Francis Gribble in *Putnam's* and the *Fortnightly*, to whom Longfellow was merely a "prig," who "had no characteristic" habit except that of "decorating his person," a "poet of the obvious and the humdrum," a man "equally devoid of humor and of passion," whose "intellectual outfit consists of a 'store suit' from a theological emporium." We have a right to be incensed at any magazine for printing so uncritical a diatribe. But, waiving this foolishness of conceit, we may still allow that Longfellow glozed the more intricate problems of life, and that his self-restraint in the face of passion was of a kind almost to argue some lack of depth in his emotional nature. Let us admit that his poetry was largely derivative. I do not mean that he was guilty of bald plagiarism, as Poe and some others have tried to show—for, as a matter of fact, greater poets than he have taken their own where they found it with a more royally predatory hand—but that kind of suggestiveness in his lines which continually recalls the same image or rhetorical device used by some earlier writer to other and better effect. Thus, we read in Longfellow:

> God sent his singers upon earth
> With songs of sadness and of mirth,
> That they might touch the hearts of men,
> And bring them back to heaven again—

and immediately we remember Keats:

> Bards of Passion and of Mirth,
> Ye have left your souls on earth!
> Have ye souls in heaven too,
> Double-lived in regions new?

It is too certainly true that an envious critic might fill columns of the *Nation* with parallels of this kind, where the similarity is just sufficient to draw attention to the comparative commonplace that runs through so much of Longfellow's writing. And yet withal he retains his hold in the affection of readers, cultivated and uncultivated alike. In fact one might even say that the failure to love and esteem his muse is a sign of that vitiated taste which cannot distinguish between the vulgar and the common, between what is flat and what is graciously simple.

For there is a gracious sweetness in Longfellow, which has rightly endeared him to the world. The quality is not equally present in all his work; its power increases for the most part in direct proportion to the difficulty of the rhythmical form he adopts. The weakness in his genius, as in that of the New England school generally to which he belonged, was an absence of resistance. There is a significant entry in Longfellow's Diary, under the date March 22, 1848: "He [Lowell] says he means never to write any more poetry—at least for many years; he 'cannot write slowly enough.'" One feels this lack of the inward check in much of Longfellow; the lines flow from him too smoothly and fluently; they have not been held back long enough to be steeped in the deeper and more obstinate emotions of the breast. When the proper

resistance came to him, it was commonly the result of some check imposed by the difficulties of form, rather than of his own artistic inhibition. Thus of all his poems, the dramas in blank verse are probably the flattest, and as a rule his power increases with the intricacy of the rhymes employed. The rule is, of course, not without exceptions. To some readers the easy flow of the trochees in "Hiawatha" have the charm of a singing brook that bubbles over its pebbles all a summer's day. And occasionally in those free quatrains, whose secret he learned from Heine, and which seem so easy, but are really so difficult, he strikes a note that is rare enough in English. So, one sleepless night, he jots down in his Diary: "Nahant, September 8, 1880, four o'clock in the morning," and then turns the words into verse:

Four by the clock! and yet not day;
But the great world rolls and wheels away,
With its cities on land, and its ships at sea,
Into the dawn that is to be!

Only the lamp in the anchored bark
Sends its glimmer across the dark,
And the heavy breathing of the sea
Is the only sound that comes to me.

When reading these lines, it is easy to understand why Kipling reckoned Longfellow among the few poets who really knew the sea. No one who has spent much of his time on our Atlantic Coast can fail to be struck by the magic evocation of that second stanza—the night-bound shore, the single light low on the water, the sleepy wash of the waves. And it is in such evocations as these that we discover Longfellow's true part in the Teutonizing and romanticizing—if the word may be passed—of New England culture. From sources of German metaphysics, whether directly or indirectly from Fichte and Schelling and Schleiermacher, Emerson brought in his transcendental philosophy; from the same romantic school came the impulse that strengthened Hawthorne in his love of the weird and the strange, as also his peculiar isolation in the world; there Thoreau got his mystic nature cult—always, it need not be added, with differences caused by other surroundings and traditions. Longfellow brought from Germany the ideal of a world literature which should absorb the best of all lands; but more than that he imported into Cambridge the sentimental note that runs through German literature. He gave to our literature the romantic *Empfindsamkeit*, refined and qualified indeed by the purity and sweetness and strength of his own nature.

Such triumphs Longfellow wins now and then in the least resistant of metres, but his greater work, that on which his artistic fame will depend, is in the more elaborate forms, particularly the sonnet. Prof. C. E. Norton, who speaks of Longfellow with the authority of a friend and a critic, has prepared a sketch of Longfellow's life, with a selection of his autobiographic poems.* It is an excellent book for the occasion, but one could wish that he had, instead, brought together all the sonnets, with a study of Longfellow as an artist. For ripeness of style and imagery such a volume would stand easily at the head of American poetry; it would place Longfellow as a peer among the great sonnet writers of England. It would make but a slender volume—there are in all only seventy-seven sonnets, all, by the way, in the Italian form—but of what richness and variety of scope! Here would be those six magnificent sonnets prefixed to the translation of Dante, together with those on Shakespeare and Chaucer and Milton. For personal emotion we should have his single love-poem, the sonnet to "My morning and my evening star of love"; and that on "The Cross of Snow," written eighteen years after the burning of his wife and discovered in his portfolio after his death. Here, in the sonnets to Agassiz and Felton and Sumner, the long friendships of his life would find expression. His tender solicitude for children speaks in "A Shadow"; nature and the sea inspire others; his reserved, yet earnest, part in the abolition movement and the war gives pathetic dignity to "A Nameless Grave," which Howells has signalized for its perfect grace and ease; his reminiscences of European travel give color to "Venice," "The River Rhone," and half-a-dozen others; the sad fortitude of his old age finds utterance in this last sonnet he was to write, his farewell inscribed to "My Books":

Sadly, as some old mediæval knight
Gazed at the arms he could no longer wield,
The sword two-handed and the shining shield
Suspended in the hall, and full in sight,
While secret longings for the lost delight
Of tourney or adventure in the field
Came over him, and tears but half-concealed
Trembled and fell upon his beard of white,
So I behold these books upon their shelf,
My ornaments and arms of other days;
Not wholly useless, though no longer used,
For they remind me of my former self,
Younger and stronger, and the pleasant ways
In which I walked, now clouded and confused.

These are but glimpses of the riches in little room that a book of Longfellow's sonnets would offer. They would set forth to unbelievers an artist of rare tact and power, and they would be the best commemoration of the sweetest character that ever revealed itself in rhymes.

P. E. M.

*Henry Wadsworth Longfellow. A Sketch of his Life. By Charles Eliot Norton. Together with Longfellow's Chief Autobiographical Poems. Boston: Houghton, Mifflin & Co.

GIOSUÈ CARDUCCI.

I.

Giosuè Carducci died at Bologna on February 15, after an illness of several years, which had latterly almost completely darkened his many-sided and brilliant genius. Since the death of Tennyson he had been the most eminent lyric poet in Europe—a poet still unduly neglected outside of his own country, too robust to be made the idol of a fashionable cult, too disdainful and too exacting to be contented with troops of pliant disciples.

Carducci was born July 27, 1836, at Valdicastello, Tuscany, his father being a country physician, his mother a Florentine who could trace her ancestry back to a gonfaloniere in the days of the republic. The boy passed his early years in the Maremma, and then removed with his parents to Florence, where he studied in the College of the Scolopian Brothers. He seems also to have attended the University at Pisa for a while, after which he undertook to support himself by teaching and by editing the Italian classics for Barbèra. He soon attracted notice, and Mamiani, minister of education, being impressed by his ability, appointed him, in 1860, professor of Italian literature in the University of Bologna. That post he held for over forty years, until, owing to failing health, he reluctantly accepted a special pension from the Government. Of such a career the real events are the intellectual campaigns and the books, the ideas sown in the minds of receptive pupils, the slowly broadening influence, and the ultimate triumph.

Never was there a professor less pedantic than Carducci, never one better fitted to be the interpreter of literature. He was a scholar of the best German type; one who pored over texts and codices; who was familiar with all the apparatus of the philologian; a tireless ransacker for the last fact, the elusive final link, to complete a chain of evidence; an insatiable reader; a stickler for perfection in line and word and comma. Yet all this was but the beginning. His pupils in the classroom met a critic of sure taste and contagious enthusiasm, a poet whose genius etherealized his stores of information, and who dreaded lest mere erudition become "a funeral shroud." Since Schiller taught at Jena no such poet had sat in a professor's chair; but Carducci was, what Schiller was not, a profound and careful scholar as well as a great poet.

In person, Carducci was short, and in later years stout; but he had a massive, shapely head, large enough for a man of heroic size, very impressive with its wealth of hair and beard, and most noticeable for the eyes, which fastened on the person or object before them as if they would literally grasp and penetrate and absorb. Carducci had an astonishing capacity for work—he could toil eight or ten hours at a stretch; could even take recreation in reading proofs for an hour, and then go back to his main task. He cultivated his naturally strong memory, so that he knew almost all of Virgil and Horace, Tibullus and Catullus, by heart, not to speak of Dante, Petrarch, and the later Italian poets. He had a thorough acquaintance with French literature, and a sympathetic knowledge of German, although over the alcove containing his German books he put the sign, "I Barbari." English, also, he read fluently, and he was an enthusiastic admirer of Shelley, on whom he wrote a brief but penetrating critique. He had a very responsive nature—witness that story of his bursting into tears after Pescarella read him some sonnets on Rome. He was quick and sometimes petulant, but forgiving and ready to ask forgiveness. And in spite of the immense respect he enjoyed in his last years, he seems to have kept himself unspoiled by either fame or flattery.

II.

In his professorship Carducci set himself several important tasks. First, he insisted on scholarship; surface impressions of books, dilettante likes and dislikes, would not do for him. Next, he laid stress on taste, the cultivation of the critical faculty through acquaintance with the abiding elements in literature. Finally, he never ceased to apply literature to life, to show that its usefulness and its glory depend upon its power to represent life; that it shall not merely reproduce, after the fashion of the photographic camera, the facts visible to the outward eye, but embody the passions and hopes, the consecration and the poet's dream.

The most scrupulous of artists himself, he scorned the formula "Art for art's sake," behind which lurk now the vacuous and the conventional, and now the lubricious, the shameless, and the obscene. He applauded Manzoni for having by "truth" renewed the literary and civic conscience of Italy. "And since *truth*," he said, "conceived under all its aspects by a great and serene intellect, by a lofty and pure nature, becomes of itself *ideality*, I applaud the art of Alessandro Manzoni in its wholeness"—a single sentence which sums up an entire creed.

Carducci as a professor became popular, but not through condescension or the shallow, genial arts by which teachers sometimes try to win the favor of their classes. He was brusque: he tolerated no slackness in work, no slipshod behavior. "This is very bad," was often his remark in handing back a thesis: but then he would go on to soften the effect of his condemnation by pointing out the better way; and he never failed to discern real merit or to give it generous encouragement. So the flower of Italian youth went to sit under him, and to hear not only what was for Italy a new and compelling gospel of literature and criticism, but fiery outpourings on manhood and patriotism and life. "Let not the weak, the anemic, the skeptical, come to provoke us," he exclaimed in an address to the students of Padua; "let them not come to deprive us of the Ideal, to deprive us of God. Recreants! The Ideal was so stored up in our fathers' souls and in ours that, merely in freeing itself and confounding the false prophets, it revealed a people to itself, renewed a nation, determined the fate of an historic epoch. The God of love and of sacrifice, the God of life and of the future, the God of the people, and of humanity, is in us, with us, and for us."

At another time he uttered this solemn appeal:

> Young men of Italy, your fathers and your brothers gave their soul and their blood to their country: you give your talents. A melancholy rumor is abroad—and even among us lips but not hearts repeat it—that tells of the decline and eclipse of the Latin races. Oh, we desire neither to be quenched nor to rot! Rally in your hearts, O youth, the constancy and the glory of the mighty sires who made the revolution of the Communes and the Renaissance, who discovered new continents for human industry, new fields for art, new methods for science. Love art and science, love them with a true love: love them for themselves, much more than for the gains they may bear you, much more than for the praise they may procure you: love them as the exercise and the manifestation in which the nobility of man is most apparent, in which the worth of the nations perpetuates itself forever. Be good and have faith: have faith in love, in virtue, in justice: have faith in the high destinies of the human race, which mounts, glorious, along the ways of its ideal transformation. And it shall surely come to pass that science shall fortify you, that art shall comfort you, that your country shall bless you.

This was a message which the youth of Italy needed to hear even more than literary criticism. No wonder that Carducci became their leader and prophet; the greater wonder is, seeing how seldom the miracle is performed in academic experience, that his preaching in nowise interfered with his scholarly exactions. He dared to rhapsodize without harboring the ignoble fear that some pedantic colleague would whisper against him the damning epithet "popular." In the large sense he was not and is not popular; but like Matthew Arnold he diffused his ideas through a body of sympathetic pupils, who in turn have distributed them far and wide. During the last twenty years of his life he had the satisfaction of knowing that no line of poetry and no page of criticism worthy of attention was written in Italy that did not bear the trace of his influence. Other schools, other movements, other fashions have come forward, but they all acknowledge his presence, by what they reject, if not by what they adopt.

III.

Carducci's prose, which fills ten or twelve volumes, consists first of formal studies in literary criticism—such, for instance, are his work on "The Evolution of National Literature," the study of the Ode, and the remarkable survey of the literature of the Risorgimento; next, there are essays, half-critical, half-biographical, on great literary figures—Dante, Muratori, Metastasio, Manzoni; then there are commemorative addresses; and, finally, what we may call personal confessions on politics, art, criticism, and conduct, called forth by inquiry or by attack. On any scale, Carducci will rank among the few master critics of the age. He has insight as well as knowledge, taste as well as comprehensiveness. He understands not only the historic position, but the intrinsic value of the makers of literature, and so he infallibly reaches the human residue in every author and in every book. Critics who stop short of that, palm off on us easy formulas of heredity and environment to explain the mysteries of genius.

In nothing does Carducci's generous nature display itself more attractively than in his commemorative eulogies. He has the courage of his enthusiasms, and his pages glow with admiration and affection for Aurelio Saffi and Goffredo Mameli, for Garibaldi and Manzoni and Victor Hugo, for Leopardi and Shelley, for Alberto Mario and Maria Gozzadini. His rhapsody on Garibaldi—a gem of Romanticism—written at a sitting, has become classic in Italy, and may stand as a model of that sort of eloquence. In English, our growing distrust of rhetoric has put such flights out of vogue. Shelley in his "Defence of Poetry" is perhaps the last Englishman whose sustained achievement cannot be questioned, although Ruskin, still later, soared sunward in many a magnificent passage; but too often the rhetorical flyers have only the wings of Icarus, and meet his fate. Carducci, however, just because he was a poet and an Italian, to whom it was natural to give expression to burning emotions in burning phrase, made even his prose dithyrambs genuine.

His personal confessions, though frequently of vital importance on the autobiographic side, have the least permanent literary interest. He indulged in sarcasm that was too subtle, and in allusions or parallels that were too remote. More than once—as when, in 1868, he hurled scorn at those who wished to banish him from the university for political reasons, or when, in 1881, he replied to the critics of his "Levia Gravia"—he missed the opportunity of matching Shelley's rejoinder to Lord Ellenborough or Mazzini's crushing invective against De Tocqueville and Falloux. On such occasions the literary artificer in him seemed to get the upper hand: indeed, although he had a strong man's capacity for indignation and scorn, he spoke most naturally and most victoriously when love, friendship, and ideals moved him.

IV.

But great as he is as prose writer, critic, and leader, it is as poet that he holds the supreme place in modern Italy; it is as poet that his fame will endure, and that he will become more than a name outside of Italy. He began to write verse at the age of eleven, and during his boyhood he printed fugitive pieces. He grew up in the fifties in the heyday of Romanticism. The struggle for Italian independence, borne forward on the great wave of Liberalism, found its true spokesman among the Romanticists. But although Carducci was fired by patriotism, his intellectual and æsthetic elements recoiled from Romanticism. He devoured the masters of Latin literature, studied Latin religion and history, and revelled in the Renaissance with its apparent reproduction of Paganism. In 1858 he edited, together with other young enthusiasts, a journal which they called *Il Poliziano*—after the typical Humanist—and which they made the vehicle of a recall to Classicism. Its chief result was Carducci himself. His poems, inspired more and more by Pagan or Humanistic ideals, made their way slowly. Not until 1865, when he published the "Hymn to Satan," did he reach the general public. The "Hymn" created a scandal, was hotly denounced, and generally misunderstood; for the Satan glorified by Carducci is not the Principle of Evil, but a latter-day Prometheus, the implacable adversary of sullen and joyless creeds, of worn-out deities and corrupt ecclesiasticism. In 1871 Carducci issued his "Levia Gravia," which marks another stage in his progress towards the complete repudiation of Romanticist form and Christian substance. Finally, in 1878, he brought out the first series of "Odi Barbare," in which he attempted to revolutionize Italian prosody. Abandoning rhyme and the traditional metres of his country, he imitated the verse-forms of Horace, taking care that his themes should be treated from the classic point of view. A storm of criticism burst upon him. It was easy to point out that the Latin, with its more solid word-units, its quantity, and its inflections, is a very different metrical instrument from the Italian, with its more plastic word-units, its accent, and its looser construction. The battle raged for many years, and was renewed when Carducci flung a second and third series of "Odi Barbare" into the arena. It can hardly be said that the question has been settled yet. Few foreigners, certainly, find pleasure in the metrical intricacies of the "Odi," and no Italians, although they have been trying for a quarter of a century to imitate them, have succeeded in equalling Carducci. If we may hazard a temporary verdict, we may say that a remarkable genius, with extraordinary finesse as a metricist, achieved a success which proved his genius, but not his theory. The poems themselves are often very beautiful, and are among the most precious poetic treasures of the age; but like the best poems of Wordsworth's "Lyrical Ballads," the world accepts them because they are genuine poetry, and not

because they illustrate a new doctrine in prosody.

As to the content of Carducci's poetry, its Humanism, Paganism, Hellenism—for it has each of these qualities—we cannot speak at length here. It is a fine theme, awaiting the properly equipped critic. Classicism, or "the classic spirit," is one of the most abused terms in literary criticism. It is applied alike to Keats's "Endymion," to Landor's "Hellenics," and to Swinburne's mongrel Greek dramas. In the case of Carducci we should ask not only, Has he fumigated his mind of all Christian-Romanticist instincts and prepossessions? but also, Has he really attained the Pagan outlook? Can a man of the nineteenth century, by whatever conscious effort or unconscious affinity, be able to see life as Horace or Catullus saw it—no more, no less—unalloyed by the least hint of the tremendous experience which eighteen hundred years have graven into the memory of the race?

To understand modern Italy one must remember the four historical layers which underlie it. First, there is the Italic, or Pagan; next, the Mediæval Christian, of which Dante is the consummate representative; third, the Renaissance; and, last, the National-Patriotic. You can usually classify Italians according as one or another of these strains predominates. The singular fact about Carducci is, that, although he voluntarily planted himself in the first, he could not exile himself from the others. Few men have ever felt more powerfully Dante's spell; few critics have ever written more illuminatingly about the "Divine Comedy" and the "Canzoniere" than the Humanist who rejected the religion in which Dante found final truth. Patriotism was for Carducci almost a religion, and it is doubtless the many patriotic poems, some of them magnificent in form and message, which have endeared him to masses of his countrymen who cared little about technical disputes over his "Odi Barbare." A fervent disciple of Mazzini, Carducci clung to his early republican ideals until long after the unification of Italy; then he accepted the monarchy, and consented to be appointed a Senator, not because he had fallen a victim, as some irreconcilables gossiped, to court blandishments, but because he set the union and independence of Italy above partisan claims, and saw that, for the present at least, it is the monarchy and not the republic which can best serve Italy's needs.

Carducci never flattered any one; least of all would he have flattered those in power. He spared no criticism of politics or education or literature or social standards. He scourged the "Byzantinism" of his countrymen, who seemed to settle back, after their splendid achievement of unity, into a self-complacent, materialistic existence. He held ever before them the ideal Italy, for which they must strive. And they ended by admiring him. He brought to them the example of vigor, the shining gifts of genius, the daily stimulus of character. As professor he had been neglected, as critic derided, as poet attacked—yet he kept on his way unshaken: little by little he saw the tide turn, and he lived to be honored by an entire nation. The Italians, obeying a wise intuition, would place him beside Cavour and Mazzini, Garibaldi and Victor Emmanuel: first, the heroes who do, then the poet, who immortalizes the heroic deeds. Whatever estimate posterity may set on Carducci's works, there can be no dispute as to his life; in him genius and character were perfectly blended.

William Roscoe Thayer.

NEWS FOR BIBLIOPHILES.

To celebrate the removal of the Royal Library at Copenhagen to its new quarters, its chief librarian, H. O. Lange, has issued a volume of bibliographical essays entitled "Analecta Bibliographica," in which he traces the steps of some of the earliest printers in Denmark. The art was introduced into that kingdom by Johan Snell, a North German if Lange's conjecture is right, a Hollander if we follow Chr. Brunn and G. E. Klemming. The only book that is known to bear his name in a Danish imprint is Caorsin's "Obsidio Rhodiana," which he printed in Odense in 1482. The type with which it is printed is found to be one of the two used in the "Breviarium Othinense," of which only an incomplete copy is known; the other "Breviarium" type is identical with that used in some other books and broadsides, all in Latin, and printed during the years 1480 to 1482. The "Breviarium" has hitherto been ascribed to an unknown printer in Lübeck; most of the other books have been unknown, until Lange discovered them. He shows conclusively that all these must be ascribed to Snell, and that, while he printed the others somewhere in North Germany, presumably in Lübeck, the "Breviarium Othinense" undoubtedly was printed in Odense. Another printer treated in the volume before us is Govaerts van Ghemen, who printed in Holland from 1486 to 1488, and in Copenhagen between 1490 and 1510.

The Merwin-Clayton Sales Company will hold its most important auction so far this season on February 26, 27, and 28. The catalogue, made up of rarities from various sources, includes the library of Dr. H. S. Fuller of Hartford, Conn. The one book which stands preëminent is a thin little volume with the interesting title: "Des Sauvages, ou, Voyage de Samuel Champlain du Brovage, fait en la France nouvelle," without date on title, but with "privilege" dated November 15, 1603. This, the first issue of Champlain's first printed work, is one of the rarest of books. Robert Hoe owns a copy, and there are copies in the John Carter Brown and Lenox libraries and in the British Museum, but no copy seems ever before to have been offered at public sale. There is a second issue, made up apparently from the same sheets, but differing slightly in the preliminary leaves. The title-page of that second issue bears the date 1604. A dated copy which brought $400 in the Ives sale in 1891 is now owned by J. Pierpont Morgan. Among items of Americana of less importance may be noted Peters's "General History of Connecticut," 1781, the first edition; Pownall's "Topographical Description of North America," 1776, with the large map; Sprengel's little "Historisches Taschenbuch" for 1784, containing an account of the Revolutionary war in America, and illustrated with a series of eighteen little engravings by Chodowiecki, as well as several colored plates. The four editions of Ptolemy's Geography are notable. The Ulm edition of 1482 contains the earliest engraved map showing the configuration of Greenland. Murphy's copy brought $85 in 1884, and a copy at Sotheby's in 1901 brought £68. The edition of 1511 has a large general map (printed separately and not found in all copies) which shows "Terra Laboratorus" as a large island, and shows also Hispaniola, Cuba, and part of South America. Murphy's copy sold in 1884 for $95, and Barlow's in 1890 for $115. The edition of 1513 is also important, as the "Tabula Terre Nove" which it contains is one of the earliest printed maps devoted entirely to the New World. Murphy's copy brought $110 in 1884, and Barlow's $150 in 1890. The fourth Ptolemy is a late edition, Basle, 1552, and of less interest. The sale includes a long series of old English quarto plays, mostly of the Restoration period, no less than 140 lots. In the list are works by Beaumont and Fletcher, Thomas Carew, Sir William Davenant, John Dennis, Dryden, Tom Durfey, Sir George Etherege, Nathaniel Lee, Marlowe, Massinger, Otway, Shadwell, Vanbrugh, Wycherley, and others. Among early English books, not dramatic, are Allot's "England's Parnassus, or the Choysest Flowers of our Modern Poets," 1600; Gower's "Confessione Amantis," Berthelet's edition, 1554; Chalkhill's "Thealma and Clearchus," 1683; Bancroft's "Two Books of Epigrammes," 1639; Suckling's "Fragmenta Aurea," two editions, 1648 and 1658; "All the Works of John Taylor, the Water Poet," 1630, with the rare engraved title by T. Cockson. Among the more modern books are Keats's "Endymion," 1818, and "Lamia, Isabella and the Eve of St. Agnes," 1820; Lamb's "Elia," 1823, second issue, but in immaculate condition, in original boards, uncut, and, except for one signature, unopened; a set of the four numbers of that famous Pre-Raphaelite periodical, the *Germ*, a presentation copy from W. M. Rossetti; a nearly complete set of the publications of the Grolier Club, publications of the Bibliophile Society, and sets of the works of various standard authors on large paper.

Stan. V. Henkels of Philadelphia will offer at auction on February 22 and 23 a collection of autograph letters and historical documents. The catalogue enumerates diaries, letters, and documents of Washington; letters of Revolutionary officers, of Presidents and their Cabinets, signers of the Declaration of Independence, members of the Old Congress, American and British authors, crowned heads, and prominent men of Colonial times. There is also an interesting lot of papers relating to Wyoming.

The date for the Van Antwerp sale at Sotheby's has been fixed as March 22 and 23. Catalogues will be in the hands of American bidders in a day or two.

Correspondence.

OPEN SHELVES AGAIN.

To the Editor of The Nation:

Sir: In the *Nation* for February 7, N. D. C. Hodges of the Public Library of Cincinnati expresses surprise at what you said January 10, to the effect that the "open shelves" hobby of a few years ago was fall-

ing into disrepute in American libraries; that is, the larger libraries. I, in turn, am surprised at Mr. Hodges.

Does he take an annual inventory? Business men do, a library should. I find no mention of such inventory in his latest received report, although he speaks casually of 105 books lost. If that is all a thorough inventory would show, he is certainly very fortunate, for the Providence, R. I., Public Library, with open shelves, reports, "with lamentations and loud moans," 1,796 volumes stolen in two years—forty-five volumes stolen in three months from one small department, the Industrial Library, alone; and "it has been impossible to discover the thief or check the thieving." (See Report for December 31, 1905.) The Boston Public Library, in its annual report for 1905, gives 1,200 volumes stolen in that year, and, like the Providence library, is at a loss to know what to do. These are but two cases; there are others in plenty—a growing number.

In the case of small libraries where all books are under the immediate supervision of the assistants, the open shelf system will, no doubt, continue to be followed as it always has been.

I venture to inclose my views on the subject—in a paper read before the Illinois State Library Association at East St. Louis, February 22, 1900—when the hurrah for open shelves first broke out with violence; and later experience confirms what I then said.

E. S. Willcox.

Public Library, Peoria, Ill., February 9.

Notes.

The following books are on the list of E. P. Dutton & Co. for immediate publication: "The Life of Isabella Bird (Mrs. Bishop)," "A Vision of India," by Sidney Low; "The Old Country," by Henry Newbolt; "The Return to the Land," by Senator Jules Méline, with preface by Justin McCarthy; "Studies in Seven Arts," by Arthur Symons; "Richard III.: His Life and Character in the Light of Recent Research," by Sir Clements R. Markham; "The Rise and Decline of the Netherlands: A Political and Economic History and a Study in Practical Statesmanship," by J. Ellis Barker; "Heidelberg: Its Princes and Its Palaces," by Elizabeth Godfrey.

L. C. Page & Co. announce the following books for this spring: "The Italian Lakes," by W. D. McCrackan; "Prisoners of Fortune," by R. P. Smith; "The Rome Express," by Major Arthur Griffiths; "The Morning Glory Club," by G. A. Kyle; "Hunters of the Silences," by C. G. D. Roberts; "Mystery Island," by Harry Hurst; "The Flying Cloud," by Morley Roberts; "The Lady of the Blue Motor," by Sidney Paternoster, and "Tenants of the Trees," by Clarence Hawkes.

The biography of Frederick A. Douglass, by Booker T. Washington, will be published this month by George W. Jacobs & Co.

About the end of the month, Henry Holt & Co. will have ready a biography of Julie de Lespinasse, by the Marquis de Ségur, who has just been elected a member of the French Academy. The book is said to give a good deal of new information in regard to that heroine of passion, and to refute many of the calumnies that have clung to her name.

A fourth edition (Paul Elder & Co.) of Edward Robeson Taylor's "Sonnets from the Trophies of José-Maria de Heredia" proves both the interest of Heredia for English readers and the vitality of Mr. Taylor's translation.

Crabbe's Poems, edited by A. W. Ward, are now completed by a third volume in the Cambridge English Classics (Putnams), which contains nearly a hundred pages in small type of verse hitherto unpublished. Dr. Ward has had access not only to the five MS. books now in the possession of the Cambridge University Press, but to other material of the same nature. Hence these new poems, mostly fragmentary and unfinished, and, to be honest, of no particular value, but tempting to all lovers of the poet, whose reputation, we suspect, is steadily rising to-day, despite Professor Woodberry's patronizing "We have done with Crabbe"—or words to that effect published long ago in the *Atlantic*. For those, if any such there be, who wish to study Crabbe minutely, Dr. Ward's carefully collated text, bibliography, and fresh material will be indispensable. And to the general reader, also, who does not own the eight-volume edition of 1834, or one of the other early editions issued by John Murray, the present publication offers Crabbe in the most comfortable form.

The army of Omar versions still grows, and the last, by George Roe, has a fairer claim than most to consideration. ("Rubaiyat of Omar Khayyam"; A. C. McClurg & Co.). For one thing, it is honest. His one hundred and fourteen quatrains are really made from Persian texts and are conscientious renderings. An elaborate array of marginal references gives all the texts in which each is found and the translators who have previously rendered each. The foot-notes are not the usual banalities of Omarians, but give various readings, double meanings, and Oriental comments. The "differentia" of the translation is an attempt neither to sacrifice good sense to literality nor the meaning of the Persian to picturesqueness. It is really successful; but the question may rise whether the real Omar has not vanished under it—not the Omar who died at Nishapur A. D., 1123, but the mystical Omar, forever reborn in the hearts of men, whose form is illusion and whose substance mutability. To the philosophical astronomer all this would only give thoughts on the mystery of personality and identity, and perhaps some quips on the eccentricity of the sphere. But if any wish to hold the temporary in the eternal, he will find help in Mr. Roe's workmanlike little book.

"Reminiscences of a Sportsman," by J. Parker Whitney, is published by the Forest and Stream Publishing Co., New York. Just why either author or publisher should allow nearly five hundred pages of exceedingly interesting reminiscences to go forth without any division into chapters, any table of contents, any index, or even any topical headlines over the single pages, is a problem of which we can imagine no solution. To this external defect must be added unusually careless proofreading, and a tendency in the author to a needless lawlessness in choice (or, rather, creation) of words and forms of expression. The reader soon forgets these defects, however, in his interest in the intensely active and varied life which Mr. Whitney has led. Mr. Whitney's own career nicely illustrates the ethical development of sportsmanship during the past half-century. In his early life he could take several hundred trout in one day with no qualms of conscience, but he finds it impossible to relate the story of those days now without frequent apologies and assertions of his adherence to the higher standards which thoughtful sportsmen are trying to establish. His early adventures gave him a taste of pioneer life in California, Colorado, and New Mexico. His interest in the mineral development of Colorado led to his appointment as Commissioner for Colorado to the Paris Exposition of 1867. His visits to New Mexico brought him into frequent contact with Tucker, the famous sheriff of Grant County, who was a whole vigilance committee in himself during the period of transition from unmitigated border outlawry to conditions which would admit of the safe development of the Territory's resources. In New Mexico Mr. Whitney made the acquaintance of Gen. Grant and Lew Wallace. Indeed, one of the most interesting features of his reminiscences is the wide range of personal acquaintances and friendships which it came in his way to form, not only in this country, but across the water as well. As a sportsman, the rod is his choice rather than the gun, and he has little to say of other game fishes in comparison with the brook trout and the salmon. He is an old devotee of the Rangeley lake region, claiming for the Rangeley trout a decided superiority over all competitors. In salmon angling he is credited with the original introduction of sportsmanlike methods of taking the Pacific salmon in the sea, with light rod and fine line, performing a service somewhat similar to that of C. F. Holder in the capture of the leaping tuna.

The second volume of the "Records of the Virginia Company of London" (Library of Congress) is issued, and brings the story down to the practical confiscation of the records by the King. The colonizing venture had not proved very successful, and the money returns were not sufficient to quiet the shareholders, some of whom organized an opposition and provoked the King's interference. The text now appears in full for the first time, and all the excellences noted in the first volume are continued in the second. The index is, unfortunately, entirely inadequate, and it is difficult to see on what plan it was prepared.

The sixth volume of Gaillard Hunt's "Writings of James Madison" (G. P. Putnam's Sons) covers the years 1790 to 1802. Madison becomes the partisan, breaking from his Federalist connections and falling under the absolute sway of Jefferson. In the early years he is active in criticising and opposing Hamilton's plans, and in 1801 he accepts the office of Secretary of State in Jefferson's Administration. As a critic he was not strong, and his controversial writings are somewhat dull reading; but his letters and essays throw much light upon the course of national politics, and mark his progress in republicanism. Mr. Hunt has been obliged to omit much of

Madison's correspondence, and thus the Rives edition is still necessary to the student. But, in compensation, Mr. Hunt has given a more accurate text, has placed the newspaper writings in their proper locations, and, best of all, has drawn largely upon Madison's official papers while Secretary of State, a field almost wholly neglected by previous editors. The printing of so many speeches is of doubtful utility, as the reporting of that day was notoriously defective, and these summaries can only be comprehended from their context in the "Annals." The space thus occupied could have been better employed by including more of the correspondence, and especially the letters to Jefferson. The notes of the editor are judicious and accurate. He borrows from Conway the erroneous statement that Paine was urged for a "Cabinet" position. The postmaster-general was not then a Cabinet officer.

It is a pleasure to welcome a tenth edition of Professor Holland's classic work, "The Elements of Jurisprudence." The ninth edition was but a reprint of that of 1896, but the author has now had time to revise the work with care, and to add, especially in the notes, much new material. For instance, he often refers to the German Empire's "Bürgerliches Gesetzbuch" and to Edward Jenks's "Digest of English Civil Law," of which the first book came out in 1905. Fortunate is the *magnum opus* which can be revised and brought up to date by the hand which produced it twenty-seven years ago!

"Land Reform" (Longmans, Green & Co.), by Jesse Collings, M. P., the well-known supporter of Mr. Chamberlain and president of the Rural Laborers' League, is a book of which certain parts are extremely interesting, though they appear in somewhat confused array. The work was finished in 1905, and, as its publication was delayed for a year, some of its statements are already slightly out of date. It opens with a discussion of the principles of the Purchase of Land bill, introduced into the House of Commons by the author two years ago. Next follow seven excellent chapters containing a fairly full history of the origin and growth of the present English land system, and particularly of the gradual disappearance of peasant proprietorship. Lastly, a third division of nine chapters sets forth the arguments for and against the various proposals which have been made for the revival of British agriculture and the encouragement of small holdings. The question of "fiscal reform," *i. e.*, protection, is dealt with in two chapters. A special interest is given to the writer's views by the fact, often referred to in the notes, that he is himself the son of an English peasant. Notwithstanding his somewhat pessimistic opinions, it is remarkable how much, even in the case of women workers, England has already done to bring the population back to the land. The present Government may safely be counted upon to encourage that movement.

John Reichert, for over twenty years clerk of the vestry of St. George's Church, New York, and secretary of the former rector, the Rev. Dr. W. S. Rainsford, has made a complete compilation, with the cooperation of Dean George Hodges of Cambridge, of the methods of administration of the manifold activities of St. George's parish ("The Administration of an Institutional Church." Harper & Bros.). Everything connected with the work of the church—the buildings, system of records, services and societies for different classes of parishioners, charitable activities, financial methods—is carefully described and well illustrated.

A critic of theological books has often to inquire with astonishment what principles or sentiments have governed churches in the selection of their heretics. Not infrequently one runs across a treatise, orthodox to the point of dulness, which bears on its title the name of some divine who has been disciplined for wrong opinion. For example, the Rev. Joseph Agar Beet, who fell under the ban of the English Methodists some years ago, issues "A Manual of Theology" (A. C. Armstrong & Son), which is wearisome with proof texts and which would certainly seem to defend enough of accepted doctrine to entitle its author to full rights and privileges in the company of conservative theologians. One discerns on every page the gentle spirit of a man truly devout and open-minded, but it is none the less evident that the author is altogether in the bonds of outgrown theological method. In view of this general attitude Dr. Beet's slight aberrations in the matter of an intermediate state after death, which come to light again in this volume, appear almost negligible. The range of subjects is somewhat larger than in most manuals of doctrinal theology, and topics connected with the future life are treated with special fulness.

Prof. Carl Hilty has a peculiar position among German writers as a preacher of what may be called religious culture—a culture, that is, which should be based first on knowledge of the classics as the best discipline for the young, and after that on Christianity as the best guide for the mature. His "Happiness" has already been presented to English readers, and now a second volume of essays on "The Steps of Life" has been translated by Melvin Brandow and published, with an introduction by Prof. F. G. Peabody of Harvard, by the Macmillan Company.

Prof. Luigi Fontana-Russo's "Trattato di Politica Commerciale" (Milan: U. Hoepli) is a well-considered treatise which combines, as Italian economic writing not infrequently does, German thoroughness with French appreciation of form. The first book treats excellently the theory of international trade, the second deals with the theory of commercial policy, and the third considers the technique of commercial regulation. A long review would be needed to do justice to the skill with which the author has executed his task. In his theoretical chapters the treatment of the doctrine of comparative cost is particularly noteworthy, and the discussion of the practical question of free trade versus protection is marked by fairness and sound judgment. The work is decidedly solid, abounding in helpful information skilfully combined with theoretical discussion; and it will be indispensable to the careful student of the subject.

The writers of Italy, on January 21 last, presented an inscribed shield of gold to the veteran novelist, journalist, and poet, Anton Giulio Barrili. His own city of Genoa has paid him the distinguished honor of a two days' fête. Honorary citizenships have been showered upon him by many municipalities. Perhaps no author of our times has been more sympathetic to the entire Italian people. Of an admirable simplicity, whether as soldier, journalist, or man of letters, Barrili has written very frankly to amuse himself and others. The eighty volumes which he has produced almost without artistic preoccupation, are not of the sort that make for permanent fame. They constitute, however, a winning record of much that is best in modern Italian life. To paralliel so sturdy and valuable a chronicle of the middle class of a nation, one must go back to Trollope. To a foreign reader Barrili's books differ singularly little from each other in glory. All give a faithful if slightly sentimentalized picture of the little world, all present the grace, curiously rare in contemporary Italian letters, of a rich and abundant humor. Patriotism has been implicit in all his work, and he is giving his later years to the assembling and rewriting of such history and legend as he feels best express the soul of his race. In all he is an eminently genial and Italian figure—a wholesome contrast to the rather depressing cosmopolitanism that prevails below the Alps.

Through the death of Graziadio Isaia Ascoli, at Milan, January 22, Italy loses her most famous philologist. He was born in Gorizia, Friuli—whose dialect he assiduously studied—July 16, 1829. From 1861 until a few years ago he had taught the comparative philology of the classic and neo-Latin tongues, at the Accademia Scientifico-Litterario, Milan, occupying the first chair of the science of language established in Italy. Like most scholars in his branch, his success in viva-voce instruction was small. His impressive personality and his proverbial severity repelled all except the most serious students. Through his writings, however, and his own review, *Archivio Glottologico*, founded in 1873, he exercised a potent influence upon linguistic study in Italy, turning it towards phonetics. In 1854, under the title *Studii Orientali e Linguistici*, he attempted to start a philological review. It stopped, to be sure, at the second issue, but enough had appeared to give him recognition beyond the Alps. On assuming his chair in 1861, he put forth the first volume of "Studii Critici," the second following in 1877. In 1870 he collected many of his academic lectures under the caption "Corsi di Glottologia." The sub-title, "Fonologia Comparata del Sanscrito, del Greco, e del Latino," gives a better idea of the scope of his most important work. In it he attacked and upset the consecrated theory of Pott that the Indo-European language had a very limited scale of vowels and consonants. Pott's view, based on the overappreciation of Sanscrit, has, it is needless to say, been long abandoned. In the early volumes of the *Archivio* were printed those specimens of Italian dialects, "Saggi Ladini," which forecast the modern tendency to emphasize the philological value of the popular dialects, as throwing light upon the history and processes of development of a language. Ascoli's anticipation of the course of philology for the generation just passed must be reckoned among those notable examples of in-

tuition in which Italian scholarship has always abounded. Its weakness is discursiveness and inaccuracy, defects from which Ascoli was by no means free. He spent much time on such unfruitful researches as the relations of the Semitic and Indo-European language. He was a Celticist and burrowed in the shifting sands of Romany. Scholars of German training would probably regard him as much of a dilettante in spite of his prodigious learning and indubitable insight. This would be doing him scant justice, for his insight, considering his isolated position, amounted to genius. Until his old age he lacked the stimulus of association with his equals and the support of a compact corps of disciples. His death, at the ripe age of seventy-seven, removes one of the most venerated figures in the academic life of Italy.

The death last Thursday of Dr. Franz J. von Rottenburg, at Bonn, Germany, removes another statesman of Prince Bismarck's generation. Dr. von Rottenburg was born at Danzig, Prussia, in 1845, and studied at Heidelberg. After holding various offices, he became in 1881 chief of the Imperial Chancery, and, as confidential adviser to Prince Bismarck, he exerted a powerful influence upon German politics for nearly ten years. In 1896, on account of ill-health, he resigned from the service of the state and became curator of the University of Bonn, an office which he occupied until his death. He was the author of a study on "The Theory of the State," published in 1877, and of essays on the French Ultramontane Movement, and the French Revolution, which were printed anonymously. Eight years ago he came to this country to receive the degree of LL.D. from Yale.

Last Thursday the French Academy elected two new immortals: Maurice Donnay and the Marquis de Ségur in place of Albert Sorel and Edmond Rousse, deceased. Donnay is a dramatic writer who has long been a favorite with the public, and represents the wit and sentiment of the Boulevards. Ségur is an historian of distinction, whose latest work will be found announced elsewhere in the *Nation* to-day.

MODERN ENGLAND.

A History of Modern England. By Herbert Paul. Volume V. New York: The Macmillan Co. $2.50 net.

With this fifth volume Mr. Paul brings to an end his history of England in our own time. We have already, in reviewing the earlier volumes, sufficiently described the character of his historical method and his literary execution. That execution has some evident merits. The writing is always bright, keen, often epigrammatic. The narrative moves briskly along. The judgments are delivered clearly and with a positiveness which leaves the reader in no doubt about the author's view. Though Mr. Paul has decided opinions, he tries to be impartial—as impartial as a man can well be who is discussing events and persons which still excite feeling, things over which we have rejoiced or sorrowed at the moment of their happening, persons whom we have praised or blamed as we watched their behavior.

As regards method, the book deals more with the outward aspect than with the underlying significance and permanent import of events. True, no doubt, it is that the difficulty of dealing with such principles and results becomes doubly great when one writes about one's own time. Much of what has befallen England during the last forty years cannot yet be fairly judged, not merely because many of the necessary materials are still unpublished, but also because events have not yet fallen into their true perspective. Thus much at least, however, it is already possible to assert—that the last forty years have been for England a period of entrancing interest, full of dramatic situations and of changes fateful for the fortunes both of the English people and of their empire in the world. We cannot here attempt to discuss more than a few of the many remarkable features of that period, but upon three of them a few words may be said.

Mr. Gladstone was from 1865, when Lord Palmerston died, till 1894, when he himself retired from Parliament, by far the most conspicuous and striking figure in British public life. Disraeli was his chief antagonist down till 1881, as Lord Salisbury was thereafter. But neither Disraeli nor Lord Salisbury approached him either in popularity, or in force, or in personal charm. Disraeli's influence was chiefly due to the curiosity he excited, and to the wonder everybody felt that a man weighted with the drawbacks of Jewish birth, of a foreign name, and of a whole string of youthful eccentricities and affectations, all singularly un-English, should have come to be the leader of the English landed aristocracy and the official defender of the Established Church. Disraeli never had any real hold on the masses, and before he disappeared he had ceased to be a really potent factor. The glamour that surrounded him was largely the creation of the literary and journalistic class, who were in a way proud of him as one of themselves, and who, being somewhat cynically minded, disliked the effusive earnestness of Mr. Gladstone and sought to disparage the latter by their praises of his rival.

Lord Salisbury was a man of a type different from both. No life of him has yet appeared, and so few of his letters have been published, so little of his intimate relations with his colleagues has leaked out, that it is not safe to speak positively about him. Few prominent English statesmen seem to have been so imperfectly known to their contemporaries. People were not even aware who his friends were, or indeed whether he had any friends outside his own family. He was a powerful speaker, heavy and even monotonous in manner, but with a remarkable command of English—nobody knew better how to find the exactly right word—and with a no less remarkable clearness and precision in his ideas. Whether the vigor of his language and the exactness of his thought found corresponding expression in his conduct was much disputed. Some thought him weak, and the way in which he submitted to Disraeli, after having for a time resisted him, lent color to this view. A German diplomatist was reported to have called him "a lath painted to look like iron." Yet there were moments at which he did show firmness; nor did he waver in the general lines of his policy as Prime Minister during three terms of office, any more than is inevitable when a minister has to take account of the varying currents of opinion. No one advertised himself less, no one showed a haughtier indifference to the comments of the press. But he never touched either the popular imagination or the popular heart. He seemed to take little interest in any good cause or any great cause, and effected nothing for any cause whatever. His intellect was eminently critical, his mental attitude usually cynical and never sympathetic. Such tastes as he showed outside politics lay in the direction not of letters but of natural science. But he could handle the pen with incisive power, and in his earlier days wrote much and well for weekly and quarterly organs. Though he was Foreign Secretary of State for twelve years, succeeded in keeping his country out of any European war, and made himself respected by the other Powers, he would hardly seem to have won either in Europe or at home the fame of a great foreign minister, a fame which, to be sure, is rarely won by any one.

That both Disraeli and Salisbury were overtopped by Mr. Gladstone, goes without saying. The same might be affirmed of all English statesmen since William Pitt and Charles James Fox. So far as the interest of the last forty years is a personal interest, it centres in that of Mr. Gladstone's extraordinary personality. About him much remains to be said, although much has been said already. The period included in the volume that lies before us contains the narrative of the last phase of his public life—the effort he made to create a separate legislature in and for Ireland. It was the last great enterprise of his life, and in many ways the most remarkable, for in it he showed even more than his wonted courage and far less than his usual skill. He launched it so suddenly as to startle all and alienate many of his oldest friends and comrades. He pressed it forward with a haste and impatience which went far to injure its chances of success, because the English people did not like to be hurried and hustled. He threw himself into it with a passion which hardly recked of obstacles, and which made it hard for him to appreciate the honest objections which some of his opponents felt. Though he had passed seventy-five years of age, he fought for it on platforms and in the Parliament with the energy of a man of thirty. For nine years (December, 1885, till March, 1894), his mind was full of Ireland, to the almost total exclusion of other topics. His efforts failed, for the first Home Rule bill (1886) was defeated in the House of Commons and the second (1893) thrown out by the House of Lords. Yet this last phase of his career was in a sense the most brilliant. If it was a failure, it was also a triumph. Never did he display so splendid a courage as when he took up the unpopular cause of Irish nationality and urged it upon the reluctant English. Never did his amazing intellectual resource shine out more brightly than in planning and defending his scheme. Never was he more plainly actuated by the highest sense of duty and the most conscientious convictions. Had victory depended on himself alone, it seems possible that he might have won the battle, and carried his second bill. But the fall of Parnell and the revul-

sion of popular feeling which that fall caused in England, made the attempt hopeless.

It was just before he ventured out into this stormy Irish sea that Mr. Gladstone made his second great contribution to what has been the most momentous constitutional change in modern England, viz., that extension of the suffrage which has turned the government of the country into a democracy. His first act as leader of the House of Commons after Lord Palmerston's death was to bring in a bill for lowering the electoral franchise in boroughs. The bill did not pass, but it led to the passing in the following year (1867) of a measure which lowered that franchise still further, and admitted to voting rights nearly the whole of the working class. The same principles were applied by him to the counties in 1884—in England the qualifications for voting in boroughs and in counties had from time immemorial been different—and in 1885 a redistribution of seats, also carried by his Ministry, took away members from many small towns to bestow them on large cities and populous county districts. Thus, since 1885 voting power has completely passed from the richer to the poorer classes. The former retain, of course, such influence as belongs to wealth and education; but the workingmen are, by the immense numerical preponderance of their votes, masters of the situation in nearly every electoral district, whether of town or country.

Three remarkable characteristics of this constitutional revolution deserve to be noted. The first is that it was a peaceful revolution. The really less important change effected by the Reform Act of 1832 was passionately demanded, and was resisted with an obstinacy that brought England to the verge of civil war. But the extensions of the suffrage carried in 1867 and 1884 were neither eagerly called for by the working class nor fiercely opposed by the richer class. That of 1867 was actually carried through by a Tory Ministry. That of 1884 was passed by a compromise between the two parties.

The second feature was that the consequences of the change were at first scarcely perceptible. Very few working men entered Parliament from 1867 till 1885; few even after 1885 down till 1905. The character of legislation did begin to become more favorable to the poorer sections of the people, but the rights of property were not (except to some extent in Ireland) seriously infringed upon. The masses had not learned their power, and were still content to follow the lead of the classes, to whom the direction of the state had theretofore belonged. Thus the alarms with which persons of a conservative turn of mind had regarded the extension of the suffrage in 1867 had in 1884 almost disappeared, and men of property failed to realize how unstable their control had become.

The third feature was the coincidence with the passing of the act of 1884 of a great movement of opinion towards what is roughly and vaguely called Socialism. The principles of Socialism were already old in Continental Europe, and the principles of Anarchism also had raised their grisly head there. These principles had terrified France in 1848-1849, and had laid hold of Germany long before 1880. Anarchism is still practically unknown among native Englishmen. But the doctrines of Collectivism (as it is now called) sprang up in England about 1884, and advanced rapidly during the following twenty years. Their growth there was almost exactly contemporaneous with their diffusion in America, though in America it was chiefly among new immigrants from Europe that they spread, while in England they were more of a home product, and took the form, partly of so-called Municipal Socialism, partly of demands for legislation in favor of trades' unions, and of the interests of labor generally. This movement of opinion, strongest among the workingmen, though not confined to them, supplied the motive power to the machinery which the extensions of the suffrage had placed at the disposal of the masses. More workingmen began to be elected to the House of Commons—there are now at least forty—and the demand for drastic legislation increased in vehemence and in scope. It seems now more likely to have its way in England than in America. There is already a Labor party in the British Parliament which keeps itself aloof from the old legitimate Whigs and Tories, and aims at holding the balance between them. It has grown fast and may grow further. The English seem, as the result of these extensions of the suffrage which both parties approved, to be entering on a difficult piece of political navigation, in which they must often wish they could have the experience and skill of an old pilot like Mr. Gladstone, in whom, Liberal though he was, there had remained a great deal of the cautious conservatism he learned from Sir Robert Peel.

GREAT BRITAIN IN AFRICA.

Great Britain in Modern Africa. By Edgar Sanderson. With Portraits. Imported by Chas. Scribner's Sons, New York. $1.75 net.

A volume which gathers into easy compass the history and geography of all the present divisions and governments of Africa ought certainly to find a place for itself. Such a work is Mr. Sanderson's "Great Britain in Modern Africa." He might almost have named it "Modern Africa"; for he treats of Germany, France, Portugal, and Italy in Africa, as well as of Great Britain. The only parts left untouched are the western countries on the Mediterranean—Morocco, Algeria, Tunis, and Tripoli. The Congo Free State is mentioned, but little of its story is given. With these exceptions Mr. Sanderson's volume is a handbook of information concerning Africa, including statistics of imports and exports, revenue, population, and other matters usually found in such works as "The Statesman's Year Book" or "Whitaker's Almanac."

Mr. Sanderson's history—largely accounts of campaigns and battles, often slaughters of ill-armed but gallant natives—is told with vivacity and exact detail. The material has apparently been gathered from the best of the war correspondence in newspapers, fortified by thorough knowledge of topography and climate. The heroism of early explorers and of leaders of small expeditions into savage fastnesses is duly set forth. Confidence in the work, however, is somewhat shaken by the ultra-Imperialistic tone. Not all readers will agree with his verdict concerning the last stages of the Boer war—the concentration camps and the system of blockhouses—that "the whole history of war contains in this class nothing finer or more effective"; or that Lord Milner, by his constructive work after the war, won "the highest reputation as a statesman in the opinion of the majority of his countrymen." The same ultra-British feeling also affects Mr. Sanderson's attitude towards other European nations who dared to rival Great Britain in taking slices of the Dark Continent. English explorers are always heroes; but when Dr. Karl Peters followed the British example, he was a "very pushing personage"; and the native chiefs making treaties with him were "deluded into putting their marks on documents of whose contents they knew little or nothing." The pro-British tone is as evident in what is omitted as in what is said. In the story of the Sudan one looks in vain for any hint of the killing of the wounded in the battle of Omdurman, or of the desecration of the Mahdi's tomb at Khartum.

Making due allowance for Mr. Sanderson's Tory Imperialism, high praise can be given to the story of Great Britain in Egypt, which reads like a romance; and to the narrative of British conquest in the barbarous and pestilential regions of West Africa. These portions of the book are less open to objection than the accounts of the Boer war and the South African colonies. The portraits of Kitchener, Earl Cromer, Gordon, and Rhodes are excellent; but for use as a handbook the index is altogether insufficient.

The First Annexation of the Transvaal. By W. J. Leyds. New York: A. Wessels & Co. $6.30.

A work on the relations of the English and Dutch in South Africa by the late Secretary of State of the Transvaal almost inevitably exhibits some bias. Mr. Leyds, while not a native of the South African Republic, was notable during the war of 1899-1902 and the negotiations at its close for his irreconcilable attitude. After the annexation of the Transvaal he retired to Holland, where he is preparing his version of history in South Africa, of which the present volume is the first instalment. Unfortunately it is easy to make out a case against the policy pursued by the English in South Africa since Cape Colony definitely became part of the British Empire in 1814. Writers by no means unfavorable to British rule have frankly acknowledged the evils that have arisen from the vacillation and the ignorance of the Home Government; the readiness of Ministers and Parliament to listen to prejudiced statements unfavorable to the Boers, and their unwillingness to be guided by the advice of men on the spot, who understood the needs of the colonies and the character of their Boer neighbors. In his early history Mr. Leyds adds little to what has been told in a much calmer and more dispassionate manner by Theal, who shows warm sympathy with the Boer point of view. Indeed even so prejudiced an Imperialist as the most recent historian of Great Britain in Modern Africa, Edgar Sanderson, whose book is published almost simultaneously with that of Dr. Leyds, is scarcely more favorable in his judgment of British policy than Dr. Leyds himself. The first half of

Dr. Leyds's book is therefore occupied with "flogging a dead horse."

There is more to be said for the later chapters. By careful study of blue books and reports, Dr. Leyds is able to strengthen to some degree the case for the Boers at the time of the first annexation of the Transvaal in 1877; and he endeavors to repel some accusations against the Boers, which have shown undeserved vitality. The tone of the book is, however, so bitter that he damages rather than strengthens his cause. His readers are asked to believe that, while the Boer farmers were all models of patience, honesty, kindliness, hospitality, and truthfulness, the British displayed only perfidy, incapacity, and an insane prejudice against their irreproachable neighbors. Even for the quiescence of the English from 1852 to 1870 Dr. Leyds must find a sinister motive. Instead of studying the trend of English political thought during these years when the pendulum was swinging away from the conception and burden of Empire, Dr. Leyds paints the English as desiring to encroach on the South African Republic, but as restrained by fear—fear of Louis Napoleon, fear of Russia, fear of the United States, fear of Irish Fenians.

From the point of view of those who from first to last consistently opposed the Boer War, the publication of this book can be nothing but a matter of regret. The future of South Africa is now to be sought, not in stirring up strife between the two white races, but in hearty coöperation in the working of the new Constitution. This instrument, though not granting full liberty, gives a large instalment of self-government to the white inhabitants of the Transvaal and opens up to the Boers the opportunity of showing their patience and statesmanship by building up a country which their tenacity, combined with British progressiveness, may make the dominant State of the South African Federation.

Ralph Waldo Emerson. By George Edward Woodberry. [English Men of Letters.] New York: The Macmillan Co. 75 cents.

In our opinion this is the best of the American volumes that have so far appeared in the series, and it is about the best work of its author. Professor Woodberry is a lover of rhythmical phrases, and there are those who think that the cadence of a sentence is sometimes as important to him as its meaning. Such was the impression produced by his monograph on Swinburne, and by some of his earlier work; but in the present case he seems to us to have grappled more closely than usual with his subject, and to have been less carried away by the fury of sound. His rhetoric has subsided into style.

Naturally in dealing with such an author as Emerson the critical chapters rather overbalance the narrative, but by no means the least satisfactory portion of Professor Woodberry's book is that which deals with the boyhood of Emerson and his life in Concord. More particularly the analysis of the influences that surrounded the child and youth is better than anything else of the sort we recall in the lives of our New England geniuses. From this to the analysis of Emerson's own character is but a step, and here again Professor Woodberry has in the main been notably successful. He dwells a good deal, and effectively, we think, on a certain sluggishness in Emerson's nature, which was at once a safeguard against the early nervous exhaustion that threatened the family and a temperamental limitation in his writing. "The slowness of his temperament," runs the text, "was a primary fact in his life; he was slow in all ways: in his motions, in his speech, in his mental process and maturing; and his incapacity to mix with the company, to give himself in friendship, to enter actively into practical affairs except under protest." And this sluggishness was a part of his practical philosophy: "he exercised, so to speak, a constant inhibition of the particular part of life with the aim thereby to reconcentrate force in the unconfined soul which is the source and master of all life." To preach this act of self-concentration, of withdrawal from the particular act of energy for more complete absorption in the central springs of energy, was his particular business in the world; and this method he followed steadily to the end. The gradual fading out of personality in his character, the pathetic shadow of his end, is only another phase of this temperamental withdrawal.

Contrary to expectation, the criticism of Emerson's philosophy is rather better than the chapter on the Poems, in which Professor Woodberry does not seem to us to have shown an entirely discriminating taste. As a little thing, for example, he fails to bring into relief the perfect lucidity and Hellenic beauty of "Days," whereas he finds extraordinary "refinement and sublimation" in the lines from "Monadnock":

> And that these gray crags
> Not on crags are hung,
> But beads are of a rosary
> On prayer and music strung.

This is merely to fall into the ditch that ever yawns before the ultra-romantic. In philosophic criticism, on the contrary—always, that is, with the limits of his knowledge—he moves much more surely. The analysis of the master ideas that underlie the fluctuating thought of the essays is singularly clear and sound. It makes for a wiser and profounder understanding of Emerson.

But if the book as a whole deserves high praise, there are still grave reservations to be made. There is altogether too much repetition; certain ideas, such as Emerson's relation to the clergy and the pulpit, come up with needless frequency. And again, there are a few apparent contradictions that call for reconciliation, such as the varying portraiture of Emerson now as practical and now as unpractical. Graver than these are the lapses in scholarship. Fortunately, no law exists, compelling a critic to read German metaphysics; but neither is a critic compelled to write on New England transcendentalism, which, without some knowledge of the sources, is an inexplicable phantom of the air. Professor Woodberry more than once alludes to the kinship of Emerson to the early Greek philosophers, and the comparison is pretty, if not very helpful; but this only emphasizes his silence on the more important matter. Thus, he dwells at length on the function of Nature in unfolding the soul. "It does this by virtue of the perfect correspondence of Nature to the soul," etc., etc. All this, according to Professor Woodberry, "astonishes and perplexes the mind," although one may find "copious illustrations" of the theory "in mystical writers." Has Professor Woodberry ever heard of Schelling? This surprise at Emerson's nature-philosophy, and this magnificent allusion to "mystical writers," with apparently not the least acquaintance with the *Identitätsphilosophie*, is not creditable to American scholarship. Nor are other lapses, though of less seriousness, wanting. Thus: "He [Emerson] knew as little of Persian as he knew of Buddhism; but his half-knowledge gave to literature 'Saadi' in one case and 'Bramah' in the other," where the error is double. Emerson knew through translations a good deal more of Oriental literature than is to be inferred from such a statement—enough, at least, to save him from saying that a poem on *Brahma* could be written from knowledge of *Buddhism*.

Der Yankee Heiland. Ein Beitrag zur modernen Religions-geschichte. Von Eduard Bertz. Dresden: Carl Reissner.

One of the latest contributions to Whitman literature in Germany is entitled "The Yankee Messiah." It is curious that a renunciation of allegiance so frequently turns into a denunciation of its object. The case of Nietzsche vs. Wagner is recalled on reading this presentation of the case of Bertz vs. Whitman. In 1889 Dr. Bertz began an article in the *Deutsche Presse* with the statement:

> As the greatest gain during my sojourn in America, and indeed as one of the happiest incidents of my life, I prize my acquaintance with the writings of the most individual and profound of American poets.

This same man now offers a revised opinion of Whitman, which makes the latter appear a charlatan. Dr. Bertz wishes his change to be regarded essentially as a protest against the exaggerated enthusiasm with which Johannes Schlaf and other German writers have acclaimed Whitman the protagonist of our time. Though much in the attitude of the inner circle of Whitman disciples might justify that protest, the denunciations of Dr. Bertz are even less justifiable. They can be best explained by a view which taints all criticism coming from a certain German school. Since Dr. Bertz first came across "Leaves of Grass," a group of scholars has arisen, who, taking their cue from Krafft-Ebing, Nordau, and Lombroso, trace pedigrees, pry into private lives, and publish half-truths in a year-book devoted to speculations and investigations of hereditary taint, psychopathic conditions, and perverse instincts. This book, unfortunately not restricted to the medical profession, but circulated freely among the mature and the immature, not long ago contained a study of Whitman by Dr. Bertz, which called forth a scathing reply from Johannes Schlaf.

Dr. Bertz sets out with the theory that Whitman regarded himself as the Messiah of a new humanity, renascent in America, and by cunning, prevarication, and persistent self-advertisement, actually made himself the idol of a sect. The author dwells at length upon the physical decadence of the male members of the Whitman family, denies that the poet was at any time as healthy and as muscular as he liked to describe himself, and doubts that

his invalidism in old age was the result of strenuous hospital service. He does not even forget to mention that Whitman's hair turned gray at thirty, which "science considers a symptom of degeneracy." He refers to Nordau and Lombroso as authorities for his belief that Whitman's mind was unbalanced, as evidenced by his frequent change of occupation. Whitman was, moreover, "kin of soul to his compatriot Barnum." The climax of this characterization is reached at the end of the chapter, when Dr. Bertz classes Whitman with the "demagogical geniuses" of the world. The part of the book entitled "The Christ Myth" begins with the bold announcement that O'Connor's comparison of Whitman with the Nazarene was inspired by Whitman himself. Dr. Bertz quotes O'Connor, Bucke, Binns, Le Gallienne, Julian Hawthorne, Triggs, Traubel, Federn, Schlaf, and Dr. O. E. Lessing to prove that they regarded Whitman as a prophet bringing fulfilment, a Messiah. A whole chapter is devoted to Whitman apostates, particularly to Swinburne and Gosse.

The most violent opposition is likely to be aroused by the chapter which accuses Whitman of secretly indulging in a pessimism quite irreconcilable with his public teaching. Dr. Bertz disputes Prof. William James's assertion, that the joy of life pulsated through the veins of Whitman to the exclusion of every other feeling, and laboriously quotes passage upon passage to show that his much-applauded optimism was only a pose. Not satisfied with denying Whitman's sincerity on this most essential point, he proceeds to deny the originality of his gospel of democracy, while the ideal of comradeship is reduced to pathological tendencies. In summing up his grievances against the fanatics who exaggerate the importance of Whitman, he declares that he by no means intended to contradict the "peculiar prophet," but merely to protest against the preposterous claim to infallibility with which that "curious Yankee gospel" is propounded by its apostles. He credits Whitman with being the greatest master of *Stimmung* of all ages, and admits that the "over-force" of his language acts with a powerful suggestiveness upon susceptible souls. In this very charm lies the danger of Whitman's art, which is, according to Dr. Bertz, that of a demagogue and hypnotist.

Silanus the Christian. By Edwin A. Abbott. New York: The Macmillan Co. $2.60 net.

The avowed purpose of this interesting little book is to show that belief in Jesus Christ and disbelief in miracles are not incompatible. The method employed is characteristic of the author. It is a far cry from Thomas à Becket to Gospel criticism, but in his fascinating work on the great archbishop and martyr he made a contribution of first-rate importance to an understanding of the growth of legend in connection with Christ's life. Similar ingenuity is displayed in the present book, which contains an elaborate discussion of questions of New Testament scholarship, in the form of a story of a young Roman of the time of Hadrian. Silanus, the hero of the tale, is an attendant upon the lectures of Epictetus, and, happening to fall in with the writings of Paul and the Evangelists, is finally converted to Christianity. The account of the process by which he is led to become a Christian disciple gives the author an opportunity to take up all sorts of questions, such as the institution of the Lord's Supper, the relation of the genealogies in Matthew and Luke, Jesus's supernatural birth and resurrection, the relative value of the Synoptic Gospels, and their relation to John's Gospel. Innumerable matters of this kind are discussed, nearly always in an illuminating way, and often fresh suggestions are offered of considerable value. In fact, to consider the New Testament writings exclusively in the light of the thought of that age, as the author attempts everywhere to do, is an important step in the right direction.

The most interesting part of the book is the comparison of Epictetus and Christ. The principles and methods of Epictetus are delineated with vividness, and full justice is done to the noble teaching of the Stoic; but the human needs which he failed to meet, and the way in which Christianity came to the rescue, are effectively shown through the experience of the hero himself, and one of his friends. The author even goes so far as to make the Gospel of John an answer to Epictetus at more than one point. The author's discussion of this gospel is particularly useful, and in spite of much that is unsatisfactory in his treatment, for instance, the allegorical interpretation of certain parts, his general view of it is commendably sane, while he appreciates to the full, its spiritual value. A passage toward the close of the discussion is perhaps worth quoting. One of the characters is represented as saying:

> I can forgive John almost all his faults—ambiguities, artificialities, statements of non-fact as fact, I can condone them all as Orientalisms or Alexandrian Judaisms—for the sake of this one truth, that we cannot know the greatest of the departed great, save through a human being that has loved him and has been loved by him.

The great majority of the questions raised in the book may seem to have little to do with the purpose stated in the preface and referred to above, but the net result of the discussion must be to promote the conviction that the miraculous element in the life of Jesus, for which tradition stands, is not of the essence of the matter, and that its repudiation need not in the least affect the grip of his personality upon the hearts and lives of men. Anything which serves to make that clear is well worth while.

The Syllogistic Philosophy or Prolegomena to Science. By Francis Ellingwood Abbott. 2 vols. Boston: Little, Brown & Co. $5 net.

"At the opening of the twentieth century I conceive it to be the supreme need of the human spirit to understand that the mechanical philosophy of mere evolution—the evolution without involution, which is the half-truth more dangerous than a lie—is but a step towards the organic philosophy of evolution through involution, as itself but a step towards the spiritual philosophy of the identity in difference of evolution and involution as the continuity of Being in the Absolute Ethical I." This philosophy is to be grounded in the absolute nature of the syllogism, and is, therefore, called "syllogistic philosophy." The author hopes that this book will "help the world, taught at last to be heedful and not heedless, to tread the path of the only possible salvation from its own follies and sins—the path of self-moralization in the Absolute Ethical I." These things we learn from the preface. After reading the book we must admit that we cannot share the author's hope. We confess that we have found in his work little to clarify the problems of philosophy, and nothing besides his own earnestness and enthusiasm which we can call uplifting. In no way does the book appear to us to be a prolegomena to science or an important contribution to philosophy. It appears rather to be an assertion, at times expressed in a very eccentric manner, of the author's conviction that the universe is essentially a unity of many differences, and that this "identity in difference" has moral and religious significance.

A student of the varieties of human intellect would doubtless find the book illustrative of an interesting type. The reviewer recalls the great satisfaction a friend of his received from the proposition, "The evidence of the Creator is the thing created." It solved the universe for him. This it did, not by leading him to understand the world in which he lived or to order its events after any coherent manner, but by giving him a phrase admirably adapted to inhibit further thinking. It invited him to dwell content in the aptness and see all creatures triumphantly giving evidence of their creator. Now some minds appear to be peculiarly susceptible to the action of apt phrases. Mr. Abbott frequently tells us: "Whatever is evolved as consequent must be involved as antecedent." Under the spell of such an apt and evident proposition he accepts the universe. The phrase becomes a form in which events may be cast. Children are evolved from parents, and therefore parents involve children. This is obvious. Thought is evolved from being, and therefore being involves thought. This is profound. So on page 288 of the second volume we read:

> Expressed in terms of human thinking, the Absolute Syllogism of the World as the Living God may be thus set down:
> i. WE ARE in I AM.
> ii. I AM in WE ARE.
> iii. Therefore, I AM in I AM.

In all seriousness we may say that this is undoubtedly true, but it is not a solution of problems. The world wherever Mr. Abbott has turned has simply waked in his mind repeated variations of the phrase, Whatever is evolved as consequent must be involved as antecedent. And genuine thinking has been inhibited.

The Hibeh Papyri. Part I. Edited by B. P. Grenfell and A. S. Hunt. London: Egypt Exploration Fund (Græco-Roman Branch).

This single volume, not much larger than some of its annual predecessors, covers the two years 1904-06. It contains the text of papyri from mummy-cartonnage discovered by the editors in their excavations of the Ptolemaic necropolis of El-Hibeh in the spring of 1902. With these are included certain other papyri of the same provenience, bought by them from a

dealer while they were excavating in the Fayûm. Indeed, it was this fortunate purchase that directed their attention to the new site. Already, in 1895-6, an Arab trader from the Pyramids had dug over the large necropolis for scarabs, ushabtis, statuettes, vases, and the like, and had thrown away as useless large quantities of the papyrus-cartonnage from the mummies. The presence of many literary fragments indicates that the papyri used for the cartonnage of a number of the mummies came from a library of classical literature, probably belonging to some Greek settler at Oxyrhyncus, the town a few miles farther up the river, where Messrs. Grenfell and Hunt have conducted their most successful excavations.

The eighteen new classical fragments, or groups of fragments, here published contain several cruelly mutilated bits from what Prof. F. W. Blass suggested must be the "Tyro" of Sophocles. They would not be so comminuted had not the breastplece of the cartonnage from which they came been decorated by cutting into it an open-work pattern. Certain small fragments from an Attic comedy are identified by an interesting process of reasoning as probably written by Philemon, and as forming part of the play on which the "Aulularia" of Plautus was based. The first point is established chiefly by comparing a fragment consisting of only a few letters at the beginning of some half-a-dozen consecutive lines, with the quotation by Eustathius, in his commentary on Homer, of a single line from Philemon, Κροίσῳ λαλῶ σοι καὶ Μίδᾳ καὶ Ταντάλῳ (Kock. *fr.* 189). This is the only place in Attic comedy where Crœsus is known to be mentioned. But the first line of the fragment referred to above also begins κροισ . . .; and, furthermore, the other fragments tell various machinations of a slave Strobilus, and also harmonize well with the "Aulularia" in other respects. (It should be noted that so eminent an authority as Fr. Les, in *Hermes* 41, p. 629, vigorously demurs.) Bits of a manuscript of "Choice Selections" include the beginnings of four iambic verses, of which the last is evidently the "Evil communications corrupt good manners," quoted by St. Paul (1 Cor. xv. 33)—ascribed to both Euripides and Menander, and perhaps occurring in both authors. A fragment of thirty-four nearly perfect lines gives apparently the opening of a discourse on music. Blass thinks it may be from the pen of the sophist Hippias, a contemporary of Socrates. In subject it is not untimely; for it combats the theory held, among others, by Plato, that different sorts of music produce different moral effects in the listeners. It also ridicules the pretensions of the musicians, who profess to picture in their strains the qualitles ot natural objects.

Among the fragments of extant classical authors found at El-Hibeh are a number from Homer's "Iliad," which show the now familiar divergence of text from the vulgate, and one fragment from the "Odyssey" (xx. 41-68), in which similar divergence occurs. This is the first early Ptolemaic fragment of the "Odyssey" to be discovered. The editors take occasion to uphold at some length, in view of this new evidence, and in face of recent attack (chiefly by A. Ludwich), their earlier theory that the vulgate text of Homer did not indeed originate with the Alexandrians, but certainly was not the prevalent text in Egypt until some time between 150 and 30 B. C. Its final acceptance, they think, must have been due in some measure to the influence of the museum scholars. A sentence deserves quotation in full:

> A comparison of the papyri of extant Greek authors with the corresponding portions of the mediæval MSS. shows that the early texts hardly ever favor in a marked degree any one of the later MSS. or families of MSS., while in the case of some authors, *e. g.*, Xenophon, the papyri show that modern critics have often gone too far in preferring one family of MSS. to another, and prove clearly, what is apt to be sometimes forgotten, that the proper guiding principle in the reconstruction of the text of any ancient author is a judicious eclecticism.

That last clause is sufficiently sweeping. We fancy it will be challenged by many of the scholars who hold no brief for the papyri.

A few fragments of the "Iphigenia in Tauris" of Euripides are interesting because the date of the writing (c. 280-240 B. C.) carries them well back toward the life of the poet. The text agrees with two conjectures of Reiske and Bothe (vv. 252 and 618), and almost with another of Maehly (v. 621), and furnishes a new reading in v. 587 that was not anticipated.

Among the non-literary fragments are found, as in the other volumes, many that throw new light upon the life and administration of the region under the Ptolemies. Among them may be noted here four bail-bonds that are by far the oldest examples of such formulas thus far known (263—c. 250 B. C.); and particularly an account of a royal post office, wherein note is made of the day and hour of the arrival of each messenger, of his name and the name of the clerk who received his packets from him, of the number of the packets and the addresses upon them, and of the names of the messengers to whom they were entrusted for further conveyance.

Three appendices of importance follow the texts. One is on the relation between the Macedonian and Egyptian calendars, the second on the systems of dating by the years of the king, and the third on the eponymous priesthoods from 301—221 B. C. The usual good indices and ten excellent plates of facsimiles close the volume.

Science.

A History of Chemistry. By Ernest von Meyer. Translated by George McGovern. New York: The Macmillan Co. $4.25 net.

This is a third edition; but great pains and no little ability have been used in bringing it to date. It is decidedly the most useful history of chemistry, though Ladenburg's smaller book carries more weight as an authority. The author has undertaken little more research than that of a faithful compiler, guided by good sense. He intends to give very brief, but generally fair, notices of the most interesting controversies, whether chemical or personal; and has aimed to narrate the whole history of chemistry so far as one volume could include it, without wasting one line upon any facts extraneous to the science, merely for the sake of holding a reader's interest. Three quarters of the volume are devoted, as was proper, to the modern period, when every theory has been subjected to quantitative tests. It is divided into two chapters, the one a survey of the advances toward an understanding of chemical combinations generally; the other, somewhat longer, going into particulars, with separate sections on analytical, inorganic, organic, physical, mineralogical, physiological, technical, and pedagogical chemistry.

The book begins with a short history of the chemistry of the ancients. Many excellent special works on this subject, some of which are named, absolved the author from a longer account of it. We note that the word "bronze," from βροντήσιον, may he of Persian origin. The name "Nubia" is thought to be from the Egyptian word for gold, "nub"; and we read that the gold mines of that country yielded, under Ramses II., no less than £125,000,000 annually. The remainder of the first quarter of the hook is composed of three chapters, on alchemy, on the chemistry of Paracelsus, Van Helmont, George Agricola, and their contemporaries, and on the chemistry of the age of phlogiston from Boyle to Black and Priestley. The services of Western alchemists are exaggerated, as they usually have been. Science is enriched by those whose nature is to aspire after truth, not by those who are goaded on by naught but gold-greed.

The section of the work that deals with organic chemistry should be the best, not merely because it is the field in which chemical research proper, as distinguished from chemical physics, has met with its greatest, perhaps its only signal, successes, but also because we read on the title-page, "Being also an Introduction to the Study of the Science." Now in organic chemistry every group of bodies has presented a prohlem, the problem of the constitution of those bodies; and in every case, as the science now stands, this problem either has already been worked out, or is approaching that end, by the thorny, but interesting and instructive, path of alternate reflection and experimentation. What we find is that, at the bottom of each page, Professor Von Meyer has cited, on the average, four or five memoirs. The dates are seldom given; merely the authors' names, the titles of the journals (of which there are forty or more), numbers of the volumes, which run up into the hundreds, and the numbers of the pages. If, however, the young student does not read those memoirs, there is nothing in Von Meyer's pages to give him any clear idea of the course of chemical thought, unless in its very first essays. All he will find is only a very general iudication of what each memoir contains, expressed in technical terms, with vague comments about each, such as a chemist whose memory was rather hazy concerning a memoir might make in conversation with a hrother chemist. Take, for example, one of the most important and long puzzling matters, upon which a vast deal of reasoning and laboratory work was spent by a dozen leading chemists, as well as by many others. We refer to what is called Perkin's Reaction. On this subject Von Meyer begins with this vague remark:

> The beautiful synthesis, by W. H. Perkin, sr., of unsaturated acids from the aldehydes and the salts of the fatty acids, has made these compounds more easy to

come hy, and therefore to investigate, and has thus helped to elucidate their constitution.

He goes on for a dozen lines of such matter, which, even if a beginner could understand it, would give him no idea of the thought that has been expended upon the phenomenon. Not one word is vouchsafed in regard to the successive intensely interesting researches which were believed to throw light upon the rationale of the reaction. The memoirs cited at the foot of the page may refer to them. He does say that "the systematic researches of Fittig and his pupils have contributed to round off and deepen our knowledge of this class of compounds"; but is not that a bit vague? We find no mention in text or notes of the names of Bertagnini, Genther, and Hühners, who before Perkin had severally published pertinent facts; or of the paper of Conrad and Bischoff, which corrected an error in Perkin's formula.

In short, the work is convenient, because there is no better one (except Ladenburg's, which is too small), and in spite of its numerous inconveniences. Among these is its avoidance of dates, for which the word "recent," in a highly elastic sense, and relative to the first, second, or third edition, is made to do duty far too often. As to the book's serving as an "Introduction" to chemistry, we do not understand in what sense it can have been so regarded. A volume far more explanatory, from the same publishing house, Lachman's "Spirit of Organic Chemistry," begins, "This book is intended primarily as a supplement to text-books of organic chemistry." Even that book could not be understood by a beginner in the subject, though it might introduce a more advanced student to the practice of reading the memoirs. Nobody can be a scientific man of any kind who has not that habit. Chemists of this continent, quite unintentionally no doubt, have received signally less than justice at Von Meyer's hands, except Mallet, Sterry Hunt, and one or two others.

The next volume in the New Knowledge Series, edited by Prof. Robert Kennedy Duncan and published by A. S. Barnes & Co., will be "The Nature and Origin of Life," by Prof. Felix le Dantec of the Faculty of Sciences at the Sorbonne.

"Birds and Flowers About Concord, New Hampshire," is a little book of some one hundred and twenty pages, by Miss Frances M. Abbott. She presents a short list of nature books, twelve short essays embracing notes upon the two hundred and one species of birds observed by herself and others in the township, and similar essays on the five hundred and forty species of flowers. Every city and larger town should have an inexpensive hand-book such as this, but with clearer descriptions and a comprehensive index. It would have a ready sale in the schools and houses of the vicinity, and would be of great value to the ubiquitous summer boarder. If such books were printed with interleaved blank pages local students would be encouraged to increase the lists and thereby make the work ultimately of considerable scientific value.

In the Proceedings of the Zoölogical Society of London for 1906, R. Shelford presents a significant discovery relating to flying snakes in Borneo. Two of these belong to the genus *Chrysopelea*, while the third is *Dendrophis pictus*. The reptile crawls out along some horizontal branch, and, gaining impetus, launches itself into the air. Instead of falling in writhing coils straight to earth, it becomes rigid as a stick, and glides downward in an oblique line, landing lightly either in the water or upon the bare ground. Mr. Shelford discovered the peculiar structure which made this feat possible. The reptile has the power, by a forcible muscular contraction, of changing the shape of its body (considered as a section view) from almost a circle to a deep concave below. Mr. Shelford compares this to two pieces of bamboo, one of which is entire, and therefore circular in outline, while the other is bisected so that it is a hemicircle in section. When dropped from a height the former will fall like a stone, while the split piece will glide obliquely downwards, and even describe a slightly upward swoop just before it reaches the ground. It was found that the snakes fell helplessly if merely thrown out into the air. They had to have somewhat of a flying start to assume properly the convexity and rigidity of their parachute pose.

Teachers of astronomy in secondary schools and small colleges who have felt unable to buy the costly but magnificent photographs of the moon taken at the Paris observatory, may be glad to know that the set, full-size and well-printed, is appearing in the *Bulletin* of the Société Belge d'Astronomie, accompanied with extended descriptive notes by Loewy and Puiseux. Plate 46 appeared in the November number. The *Bulletin* is sent free to all members of the society, and the dues are very low.

The January number of the *Bulletin of the American Geographical Society*, in an article on the "Topographic Surveys in the United States," by H. M. Wilson, summarizes the work of the topographic branch of the United States Geological Survey for the year 1906, and briefly reviews the past activities of this branch of service. From this review it would appear that for several years the average annual rate of completed topographic survey has been 35,000 square miles, or an area nearly equal to that of the State of Indiana. Despite this progress the total surveyed area of the United States is at this time hardly one-third (1,025,000 square miles) of its full area. The mapping of the States of Connecticut, Massachusetts, New Jersey, Rhode Island, and the Indian Territory is now completed, and that of West Virginia will be completed, it is confidently expected, by the close of this year.

The American Alpine Club, an association organized for the study of the high mountain regions of the Western Hemisphere and of other tracts having Alpine characteristics, has just issued in a small folio of 16 pages Number 1 of *Alpina Americana*. The number contains a single article, "The High Sierra of California," by Prof. Joseph N. Le Conte, of the University of California. The paper deals with the geographical, geological, zoölogical, and botanical features of the more imposing sections of the Sierra Nevada Mountains. Considerable space is devoted to a description of the King's River basin, of which the King's River Cañon is the most conspicuous scenic feature. Prof. Le Conte enumerates fifty-nine summits of the Sierra Nevada which exceed 13,000 feet in elevation, and of these twelve surpass 14,000 feet, the loftiest being Mount Whitney, with an altitude of 14,499 feet. It will be of interest to mountain climbers to know that this peak, but little inferior in height to the Matterhorn, has now a horse-trail to the summit. The initial number of *Alpina Americana* is attractively illustrated, and its value is further enhanced by the addition of a large folded map.

Drama.

SOME THEATRICAL CONDITIONS.

The dramatic season has now advanced to a point where it is possible to review it as a whole, summarize its accomplishment, and speculate on the outcome of existing theatrical conditions. The prospect cannot be called brilliant, but, on the other hand, it is by no means discouraging. There are signs of an impending change in the general direction of theatrical affairs, but they are scarcely definite enough as yet to warrant predictions. The power of the original theatrical trust, though still predominant, has been weakened by opposition and may be expected to diminish—by the natural growth of a competition now successfully started—whether the legal attack upon its methods be defeated or not. This is one of the most hopeful features of the situation. Not that the so-called independent movement is in itself altogether a good thing. The organizers of it, in a large degree at all events, have adopted the mischievous policy of their opponents. They too are building up a system of stars revolving around a perpetual circuit, in almost endless runs, on principles which are primarily commercial. The claim that they fight under the banner of art alone rests upon the flimsiest of foundations. But they have demonstrated the possibility of competition and by partly upsetting a monopoly have begun a process of disintegration out of which something like free trade in drama may ultimately come.

Although most of the season's plays have been trivial and foolish, there can be no doubt that the average quality of the winter's entertainment has been raised considerably above that of recent years by an uncommon number of really meritorious productions. Some of these were distinguished by both literary and dramatic excellence, others by serious purpose, ingenious fancy, or sparkling humor. In the first category may be placed Stephen Phillips's "Paolo and Francesca" and Percy Mackaye's "Jeanne d'Arc," both of high quality. The plays with a solid purpose include George Broadhurst's "The Man of the Hour," Charles Klein's "The Lion and the Mouse" (now more than a year old), and Henry Arthur Jones's "The Hypocrites," a remarkably well-made piece. William Vaughn Moody's "The Great Divide," with its vividly contrasted types and its conflict of characters, stands in a class by itself in its indisputable if rather crude dramatic power. A. W. Pinero's "His House in Order," with all its artificiality and trickiness, is a model of artistic con-

struction. "The Shulamite" again, by Messrs. Knoblauch and Askew, though an unpleasant, is a very strong play in spite of its feeble ending. "The Road to Yesterday," of Beulah Marie Dix and Greenleaf Sutherland, is full of a spirited and satirical fancy; nor must the witty "Cæsar and Cleopatra" of George Bernard Shaw be forgotten. In addition to all these must be noted the creditable Shakespeare revivals of E. H. Sothern (to whom we are indebted also for "Joan of Arc"), and Henry Miller's presentation of "Pippa Passes." Next week Richard Mansfield is to give us "Peer Gynt." This is a notable list.

It seems then that in Mr. Mackaye, Mr. Moody, Mr. Klein, Mr. Knoblauch, Miss Dix, Mrs. Sutherland, and the rest we have the advance guard of the new dramatists for whom we have been waiting so long; and that the doors of both syndicate and independent theatres are open to them. Unfortunately, there are no signs as yet of the appearance of a new crop of good actors. The only new star of the first brilliancy is Alla Nazimova, and her dimensions cannot be determined exactly, until she has appeared in some characters of nobler mould than those of Ibsen's heroines. It is this dearth of first-rate actors, both male and female, which is one of the most ominous of theatrical symptoms. More than one promising play has failed lately because of inadequate interpretation. And the state of affairs is likely to be worse before it is better. There are no longer any good schools in which young players can learn their business. The notion that valuable instruction can be obtained in the so-called stock companies, which give two performances a day, and a fresh play every week is utterly fallacious. Most of these organizations are on the same artistic plane as the vaudeville shows with which they are more or less affiliated.

The connection, indeed, between the regular stage and the vaudeville houses appears to be growing closer every day. In England the theatrical managers have succeeded pretty well in preventing the music halls from giving dramatic performances, but in this country regular plays and variety "specialties" often form part of the same programme. Superannuated or incompetent players become dramatic stars in the halls. Sometimes they drift back to the regular stage to exhibit their vaudeville antics in what is called musical comedy, but is only another form of what is practically "continuous variety." Thus the two institutions are gradually undergoing a process of merger. In London the music hall proprietors argued that if they were permitted to give short plays, a highly specialized type of character actors like those to be found in some of the minor Paris theatres would be developed, but nothing of this sort has happened in practice. Nothing is more certain than that humor, to be popular in the music halls, must degenerate into buffoonery and pathos into maudlin sentimentality, and the same rule applies almost equally to the cheap stock company houses in which thousands of actors are daily acquiring irremediably bad habits.

From many points of view, it is desirable that the music hall and the theatre should be kept apart, and it is disquieting therefore to hear that some of the theatrical syndicate managers are about to extend their operations to the vaudeville field. Their motive is sufficiently plain. They see that enormous profits are to be made by providing cheap, nonsensical, and often coarse entertainment for the million, and mean to have their share of the harvest. This conviction, almost inevitably, will exert influence upon the management of the regular theatres which they control, and the misnamed comic operas will, we fear, be more abundant, and more like the variety shows than ever.

But a reduction in the number of first-class theatres devoted to the regular drama might, in the long run, prove rather beneficial than otherwise to the cause of theatrical art. The line between the houses in which rational or irrational entertainment is to be sought would be more strictly marked then than it is at present. In the course of a few years we might again have one or more theatres with a reputation such as Wallack's had twenty-five years ago. Many signs, as has been said, point to a coming reorganization in the theatrical world. Already some permanent companies are in existence (there is no allusion here, of course, to the pseudo-stock companies previously spoken of), and one or two more are promised for next season. There are now two hostile syndicates. By and by there will be more and thus the monopolistic system will crumble. Out of the ruins the new, free, competitive, artistic theatre will have a chance to arise.

Dr. Furness is now seeing through the press of the J. B. Lippincott Co., the fifteenth volume of his Variorum Shakespeare, which will contain "Antony and Cleopatra."

On February 25, Richard Mansfield begins his annual engagement in this city at the New Amsterdam Theatre. He will present Ibsen's "Peer Gynt," in which he has had great success in other cities.

Harrison Grey Fiske has signed a contract with Percy Mackaye for a new play which is intended for the use of Bertha Kalich. The work is to be a poetic tragedy, differing in form, however, from Mr. Mackaye's "Jeanne d'Arc," which E. H. Sothern and Miss Marlowe are presenting this season. According to the agreement the manuscript is to be completed by May 1.

There are several societies in England whose object is the popularization of the better sort of drama. One of these, the English Drama Society, has just begun a series of Shakespearean performances in some of the poorest and most densely populated districts in London. Their representations are given in the so-called Elizabethan fashion—that is to say, without scenery, but with rich costumes. Their stage is provided only with hangings, and is easily erected in any large hall. Their prices are fifty cents for the most aristocratic seats, twenty-five cents for the next best, and six cents for all the others. William Archer, who witnessed a representation of "The Merchant of Venice," describes it as a very creditable achievement.

The two-hundredth anniversary of the birth of Carlo Goldoni, the reformer of the Italian stage, which occurs in the present year, is to be marked by exceptional honors to his memory. All his works are to be republished in an edition of twenty-four volumes, limited to 500 copies. In Paris, where he spent the last years of his life, a monument will be erected to him.

Music.

The Indebtedness of Handel to Works of Other Composers. By Sedley Taylor. New York: G. P. Putnam's Sons. $4.

In 1808 the eminent English organ-player Samuel Wesley wrote a letter to a friend in which he made the following startling remarks about the musical idol of the English people:

Salomon [a celebrated German violinist] has said truly and shrewdly enough, that the English know very little of the Works of the German Masters, Handel excepted, who (as he observes) came over hither when there was a great dearth of good Musick, and here he remained (these are his words) establishing a Reputation wholly constituted *upon the spoils of the Continent.* This would nettle the Handelians desperately, however it is the strict truth, for we all know how he has pilfered from all manner of Authors whence he could filch anything like a thought worth embodying.

Twenty-three years later Professor William Crotch of Oxford published a list of twenty-nine composers whose works he asserted had been laid under contribution by Handel; and since that time Handel's borrowing propensities have been made the subject of frequent comment. Dr. Friedrich Chrysander, the erudite biographer and worshipper of Handel, did not try to dodge or minimize this point; on the contrary, he brought out five volumes of supplements to his biography, in which he embodied compositions to which Handel was principally indebted. Other German and English scholars, particularly Dr. Max Seiffert and Prof. Ebenezer Prout, supplied evidence from year to year, but there was still room for a monograph devoted to this whole question, which interests moralists as well as musicians. Such a volume has now been prepared by Sedley Taylor, formerly fellow of Trinity College, Cambridge.

Mr. Taylor not only brings together between two covers the opinions of the scholars who have written on this subject, but also the pages of music which demonstrate to the eye Handel's method of pilfering. About three-fourths of the book are given over to these examples in musical type, illustrating borrowings from nine composers—Clari, Graun, Habermann, Keiser, Kerl, Lotti, Muffat, Stradella, and Urio—and also some of those cases where Handel took music which he had previously written to extremely secular words and reset it to words of a strongly sacred character. To this latter procedure there could be no serious objection in view of the circumstances. Music is in itself neither secular nor religious; both may be solemn or jubilant, and it is usually the association with words that makes a composition seem either sacred or secular. Very few of Handel's works were in print before he died, and it was therefore natural that, writing in haste, he should now and then secure a fresh hearing for an old melody by means

of a new text. Even Bach did this; but he never robbed other composers, as his colleague did by wholesale.

Handel's mental attitude regarding this procedure has heretofore been a good deal of a mystery, which Mr. Taylor has not quite succeeded in solving. If he had simply taken other men's ideas and Handelized them, transforming them into new products of genius, he would have been in a class with Shakespeare and Molière; but he did much more than that, copying, bar by bar and page by page, whole tracts of other composers' music. He did this, too, with magnificent audacity, borrowing from well-known contemporaries as well as from forgotten predecessors. There can be no doubt that such pilfering was considered dishonorable in England at that time, for Buononcini, for a single flagrant offence, was practically compelled to leave the country. Handel had not a few bitter enemies, who, one may presume, would have made a great outcry had they detected him. Probably it was a mere accident, and the scarcity of printed music for comparison, that prevented the "Grand Old Thief," as Professor Prout has called him, from being found out.

Dr. Chrysander holds that Handel's practice of employing as models and material existing pieces of his own or others, was in him not an affair of accident, but of principle, and that it pervades all his writings. Dr. Chrysander excuses this on the ground that Handel was guided by an artistic impulse to save from destruction valuable musical ideas doomed to oblivion. Another apologist, the Right Hon. A. J. Balfour, declares in regard to the composers Handel honored with his attentions that he "has not cheated them *out of* their due meed of fame, he has cheated them *into* it." But, as Mr. Taylor suggests, this remark loses some of its force if we remember that these appropriations were invariably made without acknowledgment. In the minds of those who read the articles on Handel's pilferings, the names of his victims are brought up, but the audiences give Handel credit for everything they hear.

Mr. Taylor neglects his opportunity for saying that all this pother might have been avoided if there had been in music something analogous to quotation marks in literature. But would Handel have used them? The facts seem to indicate he would not. For all that, he remains one of the great masters—how great one realizes anew on reading our author's long chapter on "Israel in Egypt," which is a glimpse of the workshop of genius, illustrating Handel's "quite astonishing power of seizing on older music, his own or that of others, raising it to a far higher level, and transfusing it with a nobler life."

The Metropolitan Opera Company will begin its tour on March 25 at Baltimore. The other cities to be visited are Washington, Boston, Chicago, Cincinnati, Kansas City, Omaha, St. Paul, Minneapolis, Milwaukee, Pittsburgh, and probably St. Louis, the number of performances to be given in these cities being forty-four. The company will include all of the leading singers except Sembrich and Rousselière, and the list of operas to be sung includes "Madame Butterfly," "Aïda," "Tosca," "La Bohême," "Faust," "L'Africaine," "I Pagliacci," "Haensel and Gretel," "Salome," and four of Wagner's operas, including "Tristan."

A new edition of "The Yale Song Book" has been brought out by G. Schirmer. There are eighty-nine songs, compiled from "Yale Songs," "Yale Glees," and "Yale Melodies." The selections are judicious, but one misses what university students surely would be interested in—a few pages of notes telling the source and origin of the songs, which touch on the domain of Italian opera, German student life, the Southern plantation, and many other fields. Editors are apt to forget that some time in life everybody has to learn what everybody is supposed to know. It seems rather odd that the first song in the book, entitled "Dear Old Yale," should prove to be nothing else than "The Watch on the Rhine."

Art.

ARTS AND CRAFTS IN BOSTON.

BOSTON, February 18.

"Invicta Roma," in every department of American art. Perhaps the most vivid impression made by the exhibition in Boston, February 5-26, in celebration of the tenth anniversary of the founding of the Society of Arts and Crafts, is one of the triumphant Gallic and classic influence in a movement that was originally romantic, Gothic, and reactionary; and one that is still so, in the main, in the land of its origin.

For such a condition in the rejuvenated handicrafts of this country the Parisian art schools are, without doubt, responsible. We dream of a new artisanship that shall restore something of the glory of mediæval workmanship, of the days when unknown stone-cutters, toiling on the fronts of Chartres or Notre Dame, were artists scarcely inferior in intellect and technical equipment to those who assisted Phidias in his work of beautifying the Acropolis; and we speculate how such a consummation may be brought about. In the meantime our architects, painters, and sculptors —practical and sometimes commercialized men, with almost limitless opportunities to advise wealthy clients as to ways of spending money effectively rather than extravagantly—are creating a little revival of artisanship of their own by hiring, under favorable working conditions—as favorable, at least, as the labor unions will permit—wood-carvers, silversmiths, leather workers, potters, and tile-makers, glass window designers, and all the others of the army of allied service. This employment, however, is for the most part under men who learned their *métier* in France or in American schools where the French influence is dominant. We have, to be sure, our picturesque "Gothic camp" among the architects, our little handful of painters and sculptors who follow, *non æquis passibus*, it must be confessed, the romanticists and reactionaries of Europe. Yet in nine cases out of ten the handicraftsman who to-day secures professional work of consequence discovers quickly that he is responsible to a man who was trained at the Beaux-Arts or at Julian's, and in so far as he is able he adapts his manner, even if he was trained in another school, to suit his employer's requirements.

Accordingly, throughout the range of handicrafts in the Boston exhibition, which is thoroughly national in scope, the Romanizing forces are very apparent. In the printing art the best current practice, though starting from William Morris, and with full acknowledgment of its indebtedness to him, has, nevertheless, arrived at results which Morris would almost certainly have deprecated. The progression has been entirely in the direction of the typography of the Italian Renaissance, and even more markedly in the direction of the better commercial practice of to-day. The black-faced pages produced by heavy northern type, which a decade ago were more popular than readable, have been succeeded by light pages with type and decorative designs derived from the very sources which most of the "art" printers until recently repudiated. The result, if one prizes avoidance of eccentricity over effort to be original, has been a happy one. The archaic look of book pages, believed by their makers to be beautiful beyond the generality of printed pages, is disappearing. The intention of securing harmony between type and decoration, of considering with half-closed eyes the balance of gray spots on the white and deckle-edged pages of the open book—this has remained; but the mannerisms, the eccentricities, are being dropped. The printing art, even as practised for its own sake by enthusiasts, is in process of normalization. It would rather be right than bizarre. It no longer aims to differ from its own kind, but rather to be the best of its kind.

In practically every other of the handicrafts, the same tendency is observable, particularly if any considerable number of its practitioners are employed professionally. The woodworking arts furnish a striking illustration. Wood-carvers in the United States are mostly foreigners, immigrants from countries where the Gothic traditions are most persistent, as from Germany, Switzerland, and Scandinavia. Upon this body of workers, whose craft has been inherited from the great carvers of Freiburg and Nuremberg, the taste of American artists who are throwing them each year an increasing number of commissions for fine workmanship, have just as certainly become a great compelling force, making for restraint, sobriety, logic, style; making away from realistic representation in very high relief of flowers and fruit forms, of portrait heads. Whenever, furthermore, a specialized branch of sculpture in wood is developed here—as in the now-popular individual treatment of the picture frame and the mirror frame—the artist's resort for inspiration and example is generally to the works of the Italian and Spanish frame-makers of the fifteenth and sixteenth centuries, and hardly at all to the carvings of the Germans and Flemings. In the art, again, of glass-blowing, which, outside of its ordinary commercial applications, is still pursued by a few men of distinct artistic feeling, the present ideal is one of simplicity, with consequent freedom from profuse ornamentation, and with a severity of line, which is even more Florentine than Venetian, more Hellenic than Hellenistic. Potters are being steadily turned in Italianate direc-

tions; the vogue of pottery suitable for landscape gardening is one of several factors helping that tendency along. Silversmiths are more and more looking for models to Renaissance, and, curiously enough, to American colonial work —often to Paul Revere and his contemporaries, whose design reflected the classicism popular in the eighteenth century. Even such an art as the decoration of china, justly perhaps fallen into disrepute through a perversion of the Gothic principle of free adaptation of natural forms, has been somewhat restored to dignity and standing by ceramic workers who depend for their success on color and surface, together with sparing use of a little formal design, usually of classic derivation.

How is this modern classicism to be explained? There is something so distinctly usable about nearly all the art-forms which antiquity developed that a busy age may easily be pardoned for basing its handicraft upon them. The classic orders and elements of design are not properly a substitute for thinking—although often improperly so used—but they are in any case a great help to thinking. The modern finds his work partly done. A little skilful adapting and readapting, and, presto! you have a State capitol, a great public library, a neatly bound little volume, a picture painted in accordance with a definite scheme of composition and values, a simple pot upon which the same sort of care may be lavished which created the hopelessly perfect lines of the best amphoræ and lekethi. Upon a platform of catholicity of the kind with which the Roman of the early empire regarded the derived artistic forms which his architects and engineers employed in the erection of vast public and private works, the dominant Americanism of to-day has come to stand as regards all the arts, including those which, in an age of narrow parochialism, were unhappily labelled the "minor arts." The handicraft movement is, therefore, rapidly detaching itself from its original impetus. Operated upon by national forces, its present trend is in the direction of classicism, which the trinity of the fine arts has already taken.

The "Hokusai" of Edward F. Strange, in the Langham Art Monographs (Charles Scribner's Sons), gives a clear enough picture of the place of that artist in the art of Japan, but it is difficult to accept altogether the judgment which ranks him with "the masters of the world's art." Mr. Strange compares Hokusai, felicitously enough, with Daumier; but until we are ready to place Daumier above Raphael and Titian we should hardly presume to reverse the judgment of the Japanese themselves, who are rather contemptuous of our Western laudation of one who is to them relatively inconsiderable—a clever maker of popular prints, but far from a great classic master. Of course there are those who would so rank Daumier, and even those who would not may admire his genius. But what should we think of a judgment of Western art based on an almost exclusive knowledge of Daumier? That is the position that most of us are in with regard to Japanese art. Even Whistler, the refined, the aristocratic, the dainty epicure of line and color, knew no other name but that of Hokusai, and uses it as synonymous with the art of Japan.

The presence in the same series of "Oxford," by H. J. L. J. Massé, is hard to understand, for there is a little about everything but art in the volume. It is as unreadable as a guide-book, and more like one than anything else, yet we imagine it would be an inefficient guide. For those who love desiccated information it may have its place, but its place is not in a series of Art Monographs.

Last autumn Corrado Ricci, chairman of the new Commissione Centrale per le antichità e le belle arti, proposed to the Ministry of Public Instruction a monthly review to continue and replace the more imposing series Gallerie Nazionali Italiane. The intention was to publish promptly all matters relating to the national collections, news of discoveries, restorations, etc., as well as the proceedings of the newly formed Commissione Centrale. This project is handsomely realized in the first number of the *Bollettino d'Arte* del Ministero della P. Istruzione. The leading article is a discussion and reconstruction of the Discobolus unearthed last year at Castel Porziano, and given by the King to the National Museum at Rome. Professor Giulio Emmanuele Rizzo effects the restoration of this splendid marble, by using the Discobolus head of the Louvre, and the fragmentary right arm of the Casa Buonarotti. Naturally these additions have been made, not to the marble itself, but to a cast. The result is highly pleasing and credible enough. The ministerial committee on the Last Supper of Leonardo da Vinci at Milan reports the painting as rapidly peeling from the wall, owing to the disparate materials—including oils, tempera, and even encaustic—with which the original work and the restorations have been executed; and as well to the exudation of nitre from the damp wall. The report contains a complete account of the restorations and inquests of which this ill-fated masterpiece has been the subject for nearly two centuries. It is recommended that the work be committed to the famous restorer Cavenaghi, whose plan, already tested for several years on a portion of the painting, is, after careful cleaning, to fix the fragments to the wall with resinous gums impervious to water. We can only note in passing that there are many other items of interest. This periodical will be most useful to serious students of Itallan art. The illustrations are of good quality, but one must regret that the only photogravure was given, not to the original marble, but to the plaster reconstruction of the new Discobolus. The price of the *Bollettino* is 2.5 francs for Italy, 3 for other countries; the annual subscription similarly 25 and 30 francs. The publisher is E. Calzone, Corso Umberto I., No. 307, Rome.

The site of Grecian Herculaneum is discussed by Prof. dall' Osso of the Naples Museum in the *Tribuna* (Rome) for January 29. He believes that it was a Hippodamean city, square upon a side of not more than 400 metres. Its three avenues ran parallel from the southeast to northwest, cutting the intramural precinct into ranges of four building blocks from side to side. The entire city would thus consist of possibly twenty such blocks, each something less than a hundred metres by sixty. Of these blocks six have been superficially excavated, enough to prove the orientation and length of the main porticoed street and the existence of its western parallel avenue. Recent excavations on the land of the Marchese del Bisogno have uncovered a bit of the pavement of the eastern avenue, proving to Prof. dall' Osso's satisfaction that the city was square, and much smaller than has been supposed. He recalls pertinently that Petronius Arbiter regarded it as an *oppidulum*. If the excavations under the Waldstein project were to be confined to the Greek town, the area involved would be relatively small. But there remains the probability that the finest objects of art are not within the walls, but in the Roman villas outside. It was one such villa, that of the Papyri, which yielded the splendid bronzes now at Naples. It seems that, however the digging is conducted, a large element of chance must enter into the work. Such a restriction of the scheme as is hinted at in Prof. dall' Osso's theory may at least save unpromising reconnaissances beyond the probable limits of either the urban or villa sections.

Boston's development and improvement is the subject of an interesting report of a committee of architects, published at the joint expense of eight business organizations of the city. In its preparation careful study has been made of what has been done in this direction in other cities in this country and in Europe, especially in Hamburg. The suggestions include the construction of two encircling boulevards to render communication easier, and an island in the Charles River. From a purely business point of view the concluding section is the most important, with its suggestions for the improvement of the railroad and dock facilities. The report is in quarto form, and is profusely illustrated with plans and pictures of suggested improvements in New York, Washington,

Cleveland, and St. Louis, as well as striking scenes in several European cities.

The Metropolitan Museum of Fine Arts has secured six pictures, with money given by George A. Hearn of this city. These hang in Gallery 13, devoted to the American school. They are: George de Forest Brush, In the Garden; Frank W. Benson, Portrait of a Lady; W. M. Chase, Seventeenth Century Lady; William Sergeant Rendall, The Seer; Douglas Volk, The Young Pioneer, and Frederick Ballard Williams, L'Allegro. From the income of the Rogers Fund the Museum has purchased a Nativity, by Fiorenzo di Lorenzo (about 1440, died after 1521). His paintings may be found in Berlin, Madrid, and Perugia. The acquisition of our Museum is a not very large canvas, the Virgin and Joseph adoring the infant Christ. An ox and ass are in the cave behind, while above are worshipping angels. To the right is a shepherd piping to a flock. A section of a city on the heights is in this part of the picture; to the left is an angel in the sky and another shepherd with his flock. An Umbrian landscape is clear in the background. The composition has the naïveté of its times. The Museum has also received from J. Pierpont Morgan five Burgundian tapestries of the fourteenth century. According to the annual report of the trustees the attendance for the year was 761,476.

The Munich art exhibition of 1907 will, as heretofore, open June 1, closing at the end of October. There will be a number of collective exhibitions from various art societies.

A collection of twenty water-colors and seventy-four oils, the property of A. Augustus Healy of Brooklyn, was offered at auction by the American Art Galleries in this city last Friday night. The collection sold for $75,975. The highest price paid for a water-color was $2,600 for Jacob Maris's View of Dordrecht. Among the prices for the oils were the following: Jacob Maris, Holland Landscape, $1,000; Henri Harpignies, The Birches, $2,100; A Summer Day, $2,000; Charles François Daubigny, Banks of the Marne, $7,900; A Showery Day in Spring, $6,000; Springtime, $1,100; Josef Israëls, Waiting for His Master, $1,700; A Dutch Interior, $2,600; Théodore Rousseau, The Plain of Barbizon at Twilight, $1,225; Jean Charles Cazin, Le Dernier Quartier, $4,500; T. H. de Bock, Autumn, $1,150; Jacob Simon Hendrik Kever, Playmates, $1,350; François Pieter Ter Meulen, A Shepherd and His Flock—Winter, $1,000; Constant Troyon, The Ferry, $1,050; Willem Maris, Under the Willows, $5,100.

At an auction at Christie's, London, on February 2, the sum of £210 was paid for Sir Peter Lely's Portrait of a Lady, in red dress and brown scarf. At the Christie sale of February 5, the following prices were paid for engravings: After Romney: Nature (Lady Hamilton), by H. Meyer, first state, before any letters, £462; another copy, printed in colors, £210; after Reynolds: The Snake in the Grass, by W. Ward, £252; after W. Hamilton: The Months, by Bartolozzi and Gardiner, set of twelve, £220; after Morland: The Story of Letitia, by J. R. Smith, £210; after Lawrence: Master Lambton, by S. Cousins, first state, £162; Countess of Derby, by Bartolozzi, £178.

A collection of paintings belonging to Eugène Fischhof of Paris and New York will be sold at auction in the ball-room of the Waldorf-Astoria, on the nights of February 22 and 23. The paintings, now on exhibition at the Fifth Avenue Art Galleries, comprise works by old and new masters.

The death is announced of Henry Cros, the sculptor. Born in Narbonne in 1840, he studied under Jouffroy, Étex, and the painter Valadon; and for many years he exhibited at the Salon. Among his better known works are busts of Mlle. Jeannine Dumas and Adolphe Guérouet, and bas reliefs Ascagne endormi and Les Druidesses. He made many experiments in *polychromie* and *cire colorée*. He collaborated with Charles Henry in a technical book entitled, "L'Encaustique et les autres procédés de peinture chez les Anciens."

Finance.

STERLING EXCHANGE.

Two or three weeks ago "investment" in "long sterling" was noted as a feature of the exchange and money markets of this city. "Long sterling" is the name given to drafts on London that have sixty to ninety days to run before maturity. This investment movement was the first instance of the kind in several years. It was the direct result of the fact that the London discount rate was at the moment higher and therefore more attractive to borrowers than the money rate in New York.

It is generally true that commercial exports from the United States are financed originally by the issue of bills of exchange of "usance" other than "sight" or eight days. The commonest form of usances is for sixty and ninety days. Inasmuch as the shipper as a rule needs his money when he ships his goods or shortly thereafter, and the buyer naturally does not pay for them until he has received them—and usually not for some time thereafter—somebody must find the money to pay the shipper, and whoever does so must await repayment until the buyer is ready to pay. This interval is covered by the sixty and ninety-day bills of exchange, which have to be sold by the shippers at such a discount, as compared with a "sight" draft, as will give the buyer interest on his money at the local rate for the term of maturity of the bill.

London is the great market for acceptances of this kind, and London by discounting these "long bills," furnishes the money necessary to transport produce from original shipper to ultimate buyer. The London discount rate fixes the discount on "long" sterling as against "sight" sterling. It is precisely the performance of functions of this kind that characterizes a "world's money centre." Ordinarily, there is a continuous stream of bills of exchange at sixty or ninety days from New York to London for acceptance and discount. In other words, the bills do not, as a rule, rest in the portfolios of New York bankers, but go forward as fast as they are made. London "finances" the crop movement of which these bills are the result. Several years ago, however, it so happened that New York was suffering from a plethora of money at a time when exchange was tending strongly against London; that is, when New York claims against London exceeded in amount the claims of London against New York. New York bankers were able to buy "long" sterling on terms which gave a minimum return on their investment larger than they could obtain in any other safe way in the New York money market. Consequently, New York bankers started to do their own "discounting" of these "long" bills, and, instead of discounting them in London, simply held them until they became "sight" drafts, when they were presented for payment. It was estimated that there was thus "in storage" at one time in New York something like twenty million pounds sterling of "long" bills, and the estimate is not so unreasonable as it looks.

With "sight" sterling at about $4.84½ for the pound, an investor risks nothing in buying "long bills" so far as exchange movements are concerned; for with normal monetary conditions—that is, with the movement of gold not impeded, and the interest on money not prohibitive—remittances from London to New York can be made as cheaply in gold as in bills of exchange. Under ordinary circumstances, as described above, the investor in "long bills" cannot lose. Exchange can rise from this level, and he can make a profit thereby, but loss is virtually out of the question, because he can always take his gold at maturity of the bill and close his transaction.

It is hardly likely that there will be

Financial.

VALUABLE BOOKLET

1907 Edition (pocket size)

STATISTICAL TABLES

Copies mailed to investors free of cost, in accordance with our custom for the past 25 years.

The current edition comprises 76 pages, and gives capitalization, earnings, fixed charges, dividends, etc., of Railroad, Street Railway and Miscellaneous Companies, including information on Preferred Stocks (whether cumulative or non-cumulative), high and low prices for bonds and stocks during 1906, last recorded sale, approximate income yield, etc., etc.

much "investment" in sterling exchange by our bankers under present conditions. While it is true that our "finance bill" position has been cleared up by sales of railroad notes and that we are not in debit on strictly "current account" at present, it seems improbable that our time money rates will recede very far from the present level in the near future, whereas the cream of the "long" bill as an investment has disappeared with the reduction of the London discount rate by one per cent. Certainly nothing like the accumulation of several years ago is to be expected, unless, indeed, we were to have so sudden and violent a contraction in business as to produce an immediate and large decline in rates for money.

Nevertheless, that our bankers should be "investing" at all in sterling exchange in February, 1907, after having caused Europe to shudder for months over our "finance bill" borrowings in 1906, is surely as good an example of the extraordinary power of the United States to "about-face" as any one could wish to see.

Hobhouse's Morals in Evolution

By L. T. Hobhouse, author of The Labor Movement; The Theory of Knowledge; Mind in Evolution, and Democracy and Reaction. 2 vols. $5.00 net, by mail $5.30.

The wonder of these volumes to the lay reader is that they should be so intensely readable. It is impossible to suggest the multitude of quaint reflections evoked by a perusal of the work and the general widening of one's mental horizon. One cannot but enjoy the curious side lights thrown on our own beliefs and superstitions. Most entertaining. . . . Replete with data for the student and material of unique interest for the less informed layman. . . . Fascinating sections devoted to tracing religion in India."—*New York Times Review.*

LONGMANS, GREEN, & CO., New York

PRIZES FOR ECONOMIC ESSAYS

FOURTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate an examination of the value of college training for business men, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, Chairman;
Professor J. B. Clark, Columbia University;
Professor Henry C. Adams, University of Michigan;
Horace White, Esq., New York City, and
Hon. Carroll D. White, Clark College,

have been enabled, through the generosity of Messrs. Hart, Schaffner and Marx, of Chicago, to offer again in 1908 four prizes for the best studies on any one of the following subjects:

1. An Examination into the Economic Causes of Large Fortunes in this Country.
2. The History of One Selected Railway System in the United States.
3. The Untouched Agricultural Resources of North America.
4. Resumption of Specie Payments in 1879.
5. Industrial Combinations and the Financial Collapse of 1903.
6. The Case against Socialism.*
7. Causes of the Rise of Prices since 1898.
8. Should Inequalities of Wealth Be Regulated by a Progressive Income Tax?
9. The Effect of the Industrial Awakening of Asia upon the Economic Development of the West.
10. The Causes of the Recent Rise in the Price of Silver.
11. The Relation of an Elastic Bank Currency to Bank Credits in an Emergency.
12. A Just and Practicable Method of Taxing Railway Property.

*Other phases of Socialism were suggested in previous years

A First Prize of One Thousand, and
A Second Prize of Five Hundred Dollars, in Cash

are offered for the best studies presented by Class A, composed exclusively of all persons who have received the bachelor's degree from an American college in 1896, or thereafter; and

A First Prize of Three Hundred Dollars, and a Second Prize of One Hundred and Fifty Dollars, in Cash

are offered for the best studies presented by Class B, composed of persons who, at the time the papers are sent in, are undergraduates of any American College. No one in Class A may compete in Class B; but any one in Class B may compete in Class A. The committee reserves to itself the right to award the two prizes of $1,000 and $500 to undergraduates, if the merits of the papers demand it.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and, although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name and whether in class A, or class B, the year when the bachelor's degree was, or is likely to be received, and accompanied by a sealed envelope giving the real name and address of the competitor, and the institution which conferred the degree, or in which he is studying. The papers should be sent on or before June 1, 1908, to

J. Laurence Laughlin, Esq.,

Box 145, Faculty Exchange Chicago, Illinois

The Nation.

NEW YORK, THURSDAY, FEBRUARY 28, 1907.

The Week.

Into his formal speech presenting his letter of credence as British Ambassador, Mr. Bryce injected a characterization of the American people. He is, of course, aware that he is as truly an Ambassador to them as to our Government. Speaking as if directly to them, he said that he had learned to appreciate their "devotion to the cause of moral and social progress," and their "passionate desire to make the lives of the people worthy of the material blessings which Providence has bestowed upon them with so bountiful a hand." This was not intended as empty compliment. Mr. Bryce would not stoop to that. It is to be taken, rather, as the deliberate estimate of a calm observer who has had the advantage, in studying America, of both intimate acquaintance and a distant perspective. He had satisfied himself as to the evidence upon which his judgment was based. For our part, we believe that Mr. Bryce has accurately hit off the motive and aim, as distinguished from actual achievement, of the political and social agitation of the day in this country. They sweep up into themselves much that is unworthy, much that is blind and false and selfish; but on the whole, they do witness to a dominant desire for betterment in all humane ways. Whatever of compliment there may be in Mr. Bryce's remarks, it is directed to our purpose and the goal of our striving, and so should fill us, not so much with complacency, as with fresh resolve.

Comparison of the Dominican treaty, ratified by the Senate on Monday, with the corresponding treaty upon which President Roosevelt told the Senate, on February 15, 1905, that there was "urgent need of prompt action," shows that the two documents are radically different. What Mr. Roosevelt proposed two years ago was, practically, a protectorate over Santo Domingo; now the United States is simply to name a "General Receiver of Dominican Customs." In the treaty of 1905, it was set forth: "The United States Government agrees to attempt the adjustment of all the obligations of the Dominican Government, foreign as well as domestic." The treaty of to-day starts out by reciting that "the Dominican Government has now effected a conditional adjustment and settlement of said debts and claims." The ambitious plan of Mr. Roosevelt two years ago was to "grant" to the Dominican Government "such other assistance as the former [*i. e.*, the Government of the United States] may deem proper to restore the credit, preserve the order, increase the efficiency of the civil administration, and advance the material progress and welfare of the Dominican Republic." All that perilous stuff has now been stricken out. So much for intelligent discussion.

If anything were needed further to discredit the ship-subsidy bill in Congress, it would be this trick of holding it back until the very last days of the session. Evidently, there is to be an effort to whip it through at the final moment, with all sorts of dubious agreements and hidden jobs coming out of the conference between the two houses, and struggling for acceptance in the clamor and confusion of the dying hours of Congress. There is large and weighty Republican opposition to the bill, which bids fair to be able to strike out some of its inexcusable features, if not to defeat it entirely, when the vote comes on Friday. We hope the stoutest kind of fight will be made, in both House and Senate. The bill is pushed under the most suspicious patronage—may be described, in a word, as the last despairing effort of the subsidy-jobbers, headed by Gen. Grosvenor, with less than a week of official life before him. If ever there was a measure which sober and honest Republicans, with an eye to the future of their party, should oppose uncompromisingly, it is this proposal to pay a subsidy of $700,000 a year to J. J. Hill and E. H. Harriman.

Our happy-go-lucky way of making up the national budget was illustrated last Thursday, when Chairman Tawney implored the House to be "patriotic" and not swell the appropriations so enormously. He forgot that the real patriotism is to go in for the old flag and an appropriation. He is, however, justifiably alarmed by the totals already in sight. On his own showing, Congress will have appropriated upwards of $1,000,000,000 for the fiscal year 1907-08. And Mr. Tawney warned the House that the revenues must not only remain at their present abnormally high level, but must actually rise higher, if there is not to be a deficit. He said that the chances were in favor of a deficit of $100,000,000 by the close of the fiscal year 1908. That would fall just after the Presidential nominations had been made, and could scarcely be thought a good Republican campaign argument. But the appeals of the chairman of the Committee on Appropriations fall upon deaf ears, so long as he has no real power to enforce them. With one set of men to raise the revenue, and quite another to spend it, coördination between our national income and outgo is not to be expected. We have floundered along for years with this Micawber system, which has not yet brought us to bankruptcy; but some day we shall have to follow the practice of other nations and have an actual budget—revenue carefully provided and expense regulated to fit it by a single authority.

There were twenty-eight Senators who voted to unseat Senator Smoot in spite of the fact that he was not a polygamist or an apologist for polygamy, and ten of them belonged to his own party. That was really more than the proponents of so weak a case had a right to expect. The simple fact was that an application of the reasoning on which the anti-Smoot agitation was based, to matters other than religious, would have created havoc in the Senate membership. If a man is disqualified for Senatorial honors by serving on a church governing board with polygamists, what was to be said of Senators who sit on boards of directors along with reputed corruptionists and financial pirates, or others who have taken orders from irresponsible bosses? The Mormon Senator has nearly completed the fourth year of his term, but the decision of last week quiets any anxiety as to the remaining two.

Prof. Hannis Taylor, in an address, "The Relation of the South to Pending Problems," delivered at Johns Hopkins on Washington's Birthday, made a notable plea for the bestowal of suffrage upon colored men as they become qualified by education or property, or both. Many other well-wishers of the negro in the Southern States advocate this plan. Only in a very few communities, however, is the educated and property-owning negro welcomed at the polls. Many of the leaders of the race do not dare to go to the booths for fear lest something happen to them or their property. Yet, as Professor Taylor says, intelligent and responsible minorities could never menace the political superiority of the white race. He speaks of the whites as being "endowed with a genius for domination." When demagogues like Hoke Smith insist upon the necessity of total disfranchisement, many people feel that the white race in the South has no confidence in its genius for domination. But whether the whites fear the latent possibilities of the negro or not, it is refreshing when an intellectual Southerner like Hannis Taylor calls for the suffrage for the qualified, and urges "an earnest effort to advance through

public education." Just now in the far South there is a fixed determination on the part of the States to do nothing more for the schools of the colored—even if, as in Atlanta to-day, one in every three colored children must roam the streets for lack of school sittings.

Our announced policy of excluding the Japanese seems based on the assumption that the American intellect has become Dingleyized. What we mean may be seen by comparing Japan's way of fronting the modern world, and our own. The marvellous story of Japanese progress during the past fifty years is essentially that of a nation stripping to meet the competition of all comers. Japan sent her sons abroad to suck the learning and the science of foreign nations. From Germany and France and England and the United States they brought back the best they could anywhere find. And at home they threw their doors wide to foreigners. Any stranger who could show them any new thing, or do for them any useful work, was welcome—were it building railroads, or setting up a postal system, or introducing modern methods into their universities. Her old theory of a shut-in and jealously guarded national existence once abandoned, Japan turned with amazing energy and success to the task of beating "civilized" nations with their own weapons. To the Japanese mind, the way to win is to be more efficient, more painstaking, more resourceful, more enduring than your rivals. The idea of asking odds, or demanding a handicap, in the shape of legislation discriminating against foreigners, is to the intellect of a modern Japanese equivalent to giving up the contest in advance, admitting that the struggle is too hard for your feeble thews. Contrast with this the strengthening tendency of our politicians and legislators to cry out at everything foreign, to feel or feign alarm at the thought of Americans having to stand up and match their brains with the best that the world can show. For that is what all these schemes of "protection" amount to—an admission that we cannot hold our own, that we are too dull or lazy or selfish to bestir ourselves and make our products as good and cheap as any that can be made anywhere. The labor unions would build a wall of exclusion about themselves, to prevent their efficiency from heing tested by that of free labor, and would club or kill any workingman who tries to climb over it. This is the unworthy and shrinking spirit which comes to the front in all this outcry, artificially worked up, for Japanese exclusion. We crave an unfair advantage in the struggle. If anybody is too "efficient" for us, we propose to shut him out.

In a speech at the Harvard Union last Saturday President Roosevelt heartily defended rough sports in general and football in particular. The topic was a delicate one to handle because the Harvard Overseers now have under consideration the whole question of intercollegiate contests. Moreover, President Eliot's objection to football and to other games in which there is a strong temptation to be brutal or tricky is well known. President Roosevelt declares that he does not want to see Harvard "turn out mollycoddles." The proposal to abolish football he curtly characterizes as "simple nonsense, a mere confession of weakness." He adds:

> We cannot afford to turn out of college men who shrink from physical effort or from a little physical pain. In any republic courage is a prime necessity for the average citizen if he is to be a good citizen, and he needs physical courage no less than moral courage, the courage that dares as well as the courage that endures, the courage that will fight valiantly alike against the foes of the soul and the foes of the body. Athletics are good, especially in their rougher forms, because they tend to develop such courage.

We may remind President Roosevelt, however, that physical valor antedates football. It is easier to face an enemy in the heat and exaltation of battle than to face the knife of the surgeon. Yet every year thousands of women who have had no experience of brutality or even roughness walk unflinchingly into the Valley of the Shadow. It is not practice in throttling and kicking that nerves their tender souls for the ordeal. And does President Roosevelt remember the solemn inscriptions on the walls of Memorial Hall? There is the muster-roll of hundreds of Harvard youth, who, when their country called, gladly laid down their lives on Southern battlefield, in hospital, and in prison. It was the heroism of these very men of Harvard which first brought home to Carlyle the ideals for which the North poured out its blood. And does any one suppose that in such a crisis men's hearts were of the pitiful stuff that needs to be steeled by the roughness of a boy's game? Every name on those marble tablets is a protest against that superficial view.

President Roosevelt's recommendation that the Lee Centennial should be marked by the establishment of a memorial to Lee at some representative Southern institution of learning, has, of course, been received with enthusiasm throughout the South. The spectacle of a Northern President urging a memorial to the "Traitor Lee" of 1861 is by itself sufficiently remarkable. But Southern writers are to-day realizing that Lee was even greater after the war than during it, and have come to recognize the immense service he rendered when he mounted Traveller, his old war-horse, and rode over the hills to the struggling little Washington College. That growing and vigorous institution, distinguished for freedom of thought and speech, is now Washington and Lee University. Naturally, this place—the scene of Lee's labors and his death—is specially appropriate for the proposed memorial.

The statistics of this country's material output are the commonplaces of our patriotism. We are expected to know our balance of trade at any given moment, as we know the readings of our thermometers. But we are not so well informed as to America's intellectual product. There exists only a general impression that each person who is not illiterate produces something like a book annually. As a matter of fact the last report of the Librarian of Congress in conjunction with the Statistical Abstract, shows that even our output of crude steel has not increased faster than that of copyrighted works of literature and art. The report of the register of copyrights reveals a steady increase in the number of entries of title from 92,978 in 1901-2 to 117,704 in 1905-6, or a growth in five years of 26 per cent. We regret that a short-sighted Government has failed to provide for the proper subdivision of these totals. It ought to be made possible to plot the curve of the historical romance, watch the rise and fall of the nature book, and record the sudden, almost volcanic, eruption and subsidence of the books called "The Something of Somebody," which threatened a few years ago to drive all other titles out of the market. In the year after the last census was taken, one out of every 6,000 persons who could read and write copyrighted a book or pamphlet. Since that time the population may have increased 15 per cent.; the number of books copyrighted has increased 90 per cent. The old reproach that this is not a musical and artistic nation must have been based upon some theorist's notions about quality. We hold up in the face of Paris and Barbizon and Vienna and Bayreuth and all the rest these two triumphant facts: There were more musical compositions copyrighted by Americans last year than works of any other class whatever, while the largest increases in five years—excepting only books—were in the classes of "engravings, cuts, and prints" and "chromos and lithographs" respectively. Many of these increases, of course, merely indicate that new classes of producers, who have been at work without interruption, have found protection in the copyright laws. In other cases—books, for instance—the figures on their face ought to be trustworthy. Their real significance is in the demonstration that so

much miscellaneous work has been found worth protecting.

In one of his whimsical stories, Stockton described the sensations of the members of a fashionable archery club, trained in all the conventions of their elegant sport, when their annual tournament was won by a competitor who shot with his bow held horizontally opposite his waist-line. That sort of thing happens more frequently in literature than in sport. Writers who pay no attention to the rules of the game persist in hitting the bull's eye of popularity. Just twenty years ago appeared "Mr. Barnes of New York," the first of the "Gunter books." It violated more than literary canons. It did not really have even a publisher, but was printed at the author's expense and circulated through a news company. The meanest critic might riddle every page of it. Yet the book and the play made from it have lived. A million copies have been sold; and it is safe to say that no other American book two decades old can today be bought at any well-regulated railway news-stand. The reasons are not far to seek. Archibald Clavering Gunter, who died last Saturday, gave to the world thirty-nine novels and a half-dozen plays. No man who wrote for a public above that of the dime novel ever insisted more strongly than Mr. Gunter on movement and incident at any cost. Except on the lips of his characters, there is not a past tense between the covers of "Mr. Barnes." Everything *is* happening, and it was the novelist's avowed rule to make something new happen in every five hundred words. Conforming to these principles, a tale might be faulty in a hundred ways, but it could never drag. Of course, it took a man of exceptional gifts to live up to these ideals. Mr. Gunter's ingenuity was astonishing, but it was spent chiefly on plot and incident. Every emotion, passion, and motive is plain as a pikestaff. The heroines are without exception ineffably lovely, the heroes brave and masterful; the comic characters go straight to fun-making. The whole illusion, of which the uninterrupted present tense is the symbol, consists in the conviction that the author himself does not know what is coming. His report seems to be written "page by page," as the events themselves are happening, and before the final outcome is guessed. It has been said that the best description of the bombardment of Alexandria is contained in the opening chapters of "Mr. Potter of Texas." If that be true, it is because the pages read, for all their crudeness, as if the author felt that a stray bombshell might make every sentence his last.

The recent report of the British Royal Commission appointed to investigate the relations of bovine to human tuberculosis confirms the conclusions arrived at earlier by the United States Department of Agriculture. The new experiments show that tubercle bacilli from human beings may give rise, in inoculated cattle, to a condition which appears identical with common bovine tuberculosis. Further, the milk of tuberculous cows causes tuberculosis in apes, and the Commission infers that it might easily do so in children. Thus the investigators, both in the United States and Great Britain, reject the theory advanced by Koch a few years ago, that human and bovine tuberculosis are two distinct diseases, and that neither is transmissible from one species to the other. This subject is of especial interest at present in New York, in view of the projects that are under consideration to insure a pure milk supply. Only two plans have been proposed: One is the inspection of the dairies, and prohibition of the sale of any milk produced in unhygienic surroundings. This plan would confine the milk supply to so-called "model farms." The other proposal is to pasteurize all the milk destined for the city's consumption. This process kills any harmful bacteria present, but does not otherwise correct deficiencies in the quality of the milk. It is evident that while either method is desirable in itself, either would pretty surely result in increasing the price of milk. The burden will be most felt by the poor. Any one acquainted with the ignorance and misery of the tenements will understand the consequences of an increase in the price of milk, Infants will be fed on bread and tea or bread and beer—no uncommon diet for such children—if milk is beyond the means of the parents.

Judged by the cabled summary, Secretary Haldane's plan for the betterment of the British army is by all odds the best of the dozen or so schemes which have been formulated since the Boer war revealed the necessity of a thoroughgoing reorganization. Primarily, he provides the field force of regulars long desired for immediate striking purposes, but in larger numbers than had been hoped—160,000. To this body he would add in war time 80,000 men as a special contingent from the territorial forces. These men are to perform the semi-civilian and detached duties which so greatly weaken an army by drawing from its strength for running ammunition trains, doing railway work, recruiting, etc. Even more striking is the War Minister's proposal to unite all the present auxiliary forces, volunteers, yeomanry, and militia, into one homogeneous body, trained according to regular models and reinforced by regular artillery. Many Secretaries for War and military men have dreamed of something like this; Mr. Haldane is the first to submit a really comprehensive plan. Indubitably, the Secretary will meet with much opposition, perhaps even from the leaders of the volunteers and yeomanry. But now that the taxpayer knows that the principle of voluntary enlistments will be adhered to, and that Mr. Haldane proposes a saving of $10,000,000 in the cost of the regulars, together with greatly increased efficiency, the most influential classes will be on his side.

Orientally benighted Persia persists in showing the way to occidental Russia in the matter of working a new legislative system. From occasional dispatches we learn that there is a good deal of quarrelling and manœuvring at Teheran, but on the whole no more than is to be expected from a healthy young Parliament which must make a trial of its strength. The Shah seems to be acting in good faith. His conduct, indeed, presents a marked contrast to the futile waverings and hesitations of his royal brother, Nicholas II. It is customary to excuse the latter on the ground that the sovereign is helpless when surrounded by a camarilla of self-seeking politicians. Yet the same difficulties confronted the new Shah, who met them with manly resolution. Would not a firm stand by Russia's ruler do away at once with the reactionary camarilla? The first real working Constitution which Islam has known embodies the classic features of every liberal parliamentary system. The Constitution recognizes the sovereign power as vested in the dynasty of the Khajars. The rulers must govern, however, in coöperation with the representatives of the nation, and in conformity with its laws. The executive power is exercised by the Shah through his ministers. Whether the latter are to hold office at the pleasure of the Parliament, is one of the mooted questions. The legislative power is vested in a popular Chamber, elected for two years and comprising at present 162 members, a number which may be increased to 200; and a Senate of 60 members, of whom half are elected and half nominated. Laws may be originated by Parliament or by the Administration, and after being passed by both houses receive the royal sanction. This would appear to be a formality, since the right of veto is not conceded. Financial bills may originate only in the Chamber. The Shah may dissolve the lower house in case of conflict with the Senate, but the consent of two-thirds of the latter body is necessary to such action, and it may be exercised only once in two years. New elections must follow within a month, and the Chamber assembles immediately after the close of the elections, irrespective of the absence of members from the more distant provinces. Freedom of the press is guaranteed.

THE UNION PACIFIC INQUIRY.

The preliminary inquiry of the Interstate Commerce Commission, seven weeks ago, into the Union Pacific Railway's financial operations gave ground for expecting important developments when the investigation was resumed Monday morning with E. H. Harriman on the stand. It was established last month that, between June 30, 1906, and the end of the year, the Union Pacific had purchased upwards of $100,000,000, par value, in the shares of other railways. In one of these purchases the stock was bought from members of the Union Pacific directorate. It was well known in financial circles, though last month's inquiry did not take up the question, that the credit of Union Pacific had been used, some two years ago, to purchase stock of the Chicago and Alton Railroad. In this transaction the sellers were, in several instances, financiers identified with the Union Pacific management, who had already, through recapitalization of the Alton and a very peculiar operation in its bonds, extracted an abnormally large profit from the "deal." These facts pointed out clearly enough the direction which the inquiry when resumed would have to follow. The Alton operation would necessarily be unearthed. The nature of the Union Pacific's position, in that and other purchases, would be inquired into. Finally, the personal relations of the Union Pacific's directors to these purchases would inevitably be a matter for investigation.

Monday's examination of Mr. Harriman abundantly justified the Commission in entering on this inquiry. The witness frankly admitted, first, that in 1901 the Union Pacific shareholders were induced to authorize its directors to issue $100,000,000 convertible bonds, the proceeds of which the directors were to use for such purposes as they saw fit; next, that the management sold in its discretion stocks bought with that and other similar funds, and reinvested in other stocks, within six months, the $131,000,000 resultant capital; next, that directors of Union Pacific were engaged in the "Alton deal," whereby 3 per cent. bonds, issued to "insiders" at the price of 65, were in large part resold, a few months later, to the friendly New York Life Insurance Company at 96, Union Pacific taking a good slice of the stock. It was when this part of the inquiry was reached, involving the personality of the sellers, that the witness's recollection first became vague, then failed entirely. Finally, he refused to answer, by advice of counsel.

This refusal, and the arguments of Mr. Harriman's counsel, John G Milburn, that inquiry into the personal transactions of railway directors, under this or other circumstances, was beyond the powers of the Commission, went to the root of the present situation. Mr. Milburn's contention in objecting to the question whether Harriman personally owned any of the Alton stock sold to the Union Pacific, was that such an inquiry did not concern interstate commerce, and hence was not within the scope of permissible investigation. The answer of the opposing counsel was, in brief, that reasonableness of railway rates is largely based on reasonableness of capitalization; that this in turn depends on the reasonableness of the price paid by the company for its investments; and that the question whether or not the person who had power to fix that price acted both as seller and buyer, was highly material to the question of reasonable charges.

Whatever the decision of the courts upon this point, we certainly do not see how Mr. Harriman's attitude can fail to prejudice his position in the eyes of the interested public. The point of the whole present inquiry is the personal relation of railway directors to these extraordinary railway "deals." C. A. Severance, counsel for the Commission, forcibly pointed out that these inquiries, novel in an Interstate Commerce Commission hearing, had become essential because the situation presented was novel. Railway companies, to use the Wall Street expression, have been going into the banking and investment business. For that purpose they have been using the credit based on their position and earnings as railroads, and disaster incurred in the investment undertaking would inevitably injure or jeopardize the railroad enterprise itself. Under such circumstances, the public generally will support the Commission's efforts to settle this question of the personal relation of railway directors to the financial management of their companies. If the right of inquiry were denied to the Interstate Commission, we may rest assured that Congress or the States or the courts will find other means of exacting the information.

There is, in our judgment, nothing unreasonable or inquisitorial in the inquiries. The time has come when the facts regarding this free-and-easy handling of hundred-million-dollar investment funds by a single group of financiers must be made absolutely clear. If the relations of these financiers to the operations in question have been proper and disinterested, it is they who should welcome publicity on the very lines adopted by the Commission. If their performances cannot bear the light, it is high time the public should be made aware of the truth. People will remember that similar indignant protests against "inquisitorial methods" were made in the early stages of the life insurance inquiry. They were not heard after Mr. Hughes's cross-examination had shown how the companies' surpluses were being used. When a railway reports, as the Union Pacific did at the close of the fiscal year 1906, a larger amount of ready cash on hand than was held by any of the great life companies three years ago, and when it is admitted that these enormous sums are used in buying or selling stocks which are active in Wall Street speculation, it is a reasonable demand that Union Pacific shareholders, with the general public, shall learn in what manner the new and extraordinary powers are being employed.

PREVENTION OF RAILWAY DISASTERS.

What can be done to prevent these appalling railway disasters? No question is, we believe, more frequently asked by the public to-day. Americans are not inclined to worry over little risks, but when the number of accidents steadily grows; when the Interstate Commerce Commission records an increased deathroll during the last period for which it has compiled statistics, there is undeniable cause for amazement, indignation, and anxiety. Have all the able men gone into the financial side of railroading to the detriment of the operating branch? Are the labor unions responsible for the slackness of discipline on certain lines? Is the congestion of traffic the real reason for so many disatsers? Have the more than questionable financial methods of our railroad managers affected their subordinates? These are some of the questions heard on every side.

According to an obviously incomplete record, 173 persons have been killed and 413 injured since January first—two months—in wrecks large and small. Seven accidents on five railways—the New York Central, the Pennsylvania, the "Big Four," the Rock Island, and the Boston and Maine—account for 123 killed and 313 injured. Just before the beginning of the new year we had the accident on the Southern, in which President Spencer lost his life, and the frightful disaster at Terra Cotta, just outside of Washington. According to the latest bulletin of the Interstate Commerce Commission for July, August, and September, 1906, 123 more employees and passengers were killed in 1906 than in the same three months of the previous year. Of 44 prominent accidents during this period of 1906, 32 were collisions, in which 66 persons were killed and 226 injured, entailing damages to rolling stock and roadway of $256,559. Twelve were derailments, killing 25 people and injuring 240. Nearly all of these collisions were due to the errors or carelessness of employees or the failure of the signals to work. A confusion in orders and heedlessness in a block-tower were responsible for two of the worst calamities.

It will be said at once that no legis-

lation and no amount of executive ability can eliminate the human factor; that so long as men are what they are, some blunders are bound to occur. In this explanation there is a modicum of truth, but the greater the efficiency and the better the discipline of a road, the nearer will the irreducible minimum of accidents be approached. If firemen and engineers do about as they please without fear of more than a rebuke, accidents are inevitable. Or if, as in one case reported by the Interstate Commerce Commission, the signalman sets both signals at a crossing at clear, and then goes off for a social evening, a collision may also be expected in the natural order of things. Moreover, it is not surprising that when an engineer, twenty-one years of age, is on duty 39 hours and 25 minutes at a stretch, he should wind-up by failing to read an order and by running into the train ahead. "Extraordinary carelessness in running a heavy freight train down a steep grade, relying only on hand-brakes," is another kind of recklessness for which operating officers may properly be held accountable. For such accidents and many like them, the best cure is their characterization as crimes, and the rigid punishment of all who are responsible, directly or indirectly. Unfortunately, it is impossible for the Interstate Commerce Commission to tell what punishments are awarded or how many guilty men get off scot free. We New Yorkers, however, know by experience with the New York Central that in general nobody is ever punished; not even in such clear cases as that of the brakeman who permitted the Hastings collision in 1891, through criminal negligence.

The Interstate Commerce Commission has another remedy to suggest: the enforced use of the block system. To this end a bill drawn by the Commission was submitted to Congress in 1904. But even the passage of such a law will not touch one grave evil. According to James J. Hill of the Great Northern, the block signals are regularly disregarded the country over, so that he wonders every time he steps on a train whether it will be the last time or not. Now, if he and other railroad presidents are unable to make their engineers obey signals, the time is ripe for a law punishing every engineman who runs into a closed block, whether an accident occurs or not. Some railroad men of experience have advocated such a measure as necessary, unless the block system is to be rendered useless.

Another excellent suggestion of the Commission is a law authorizing an official investigation of train accidents by competent men, as in England and on the Continent. The current issue of the *Railroad Gazette* also calls for an accident investigation bureau in the following language:

> News of a killing railroad disaster comes by telephone and telegraph to five authorities—the railroad staff; the coroner; the district attorney; the State Railroad Commission, and the newspapers. While the railroad officers and men are caring for the hurt and dead, clearing the wreck, rebuilding the line, and searching for the cause, the four higher authorities are competing in independent investigations. The evidence is not collated, it is separated. . . . The establishment by Congressional action of a bureau for investigating and making public the causes of important train accidents seems to be inevitable, and, if it is wisely planned and officered, should be not only inevitable but beneficent.

In this suggestion we heartily concur; but the conclusions of such a board will be of slight value if there is never to be any punishment of the guilty, whether track-walkers, brakemen, engineers, superintendents, or directors.

THE LIBERAL REVIVAL IN EUROPE.

In his inaugural address before the French Academy, Cardinal Mathieu, who took his seat in that body a few days ago as the successor of Cardinal Perraud, naturally made allusion to the present controversy between the Government and the Church. The manner in which the essentials of the Catholic argument were suggested—it was nothing more than a deft suggestion—was certainly what his compatriots would call *spirituel*. He told the story about the Duc de Bourgogne, grandson of Louis XIV., and about his tutors, Fénelon and the Duc de Villeroy. The former succeeded in "putting the fear of God" into the heart of the passionate lad whose outbursts of fury were often those of a madman, and taught him that kings were responsible to a higher Power for the due performance of their trust. Villeroy, on the other hand, like an accomplished courtier, fed his pupil's vanity by dwelling on the absolute authority that inhered in princes as against all rights on the part of their subjects. "We have a dauphin now in France," Cardinal Mathieu went on to say. "He attains his majority at twenty-one, he numbers many millions, and he, too, persuaded by interested politicians of his absolute power, needs a Fénelon to put the fear of a higher Power into his heart. The voice of the people is only sometimes the voice of God."

Here we have an unmistakable expression of the distrust in democracy which constitutes the great weakness of the Church in France. The Cardinal practically asserted that principle of ecclesiastical supremacy which we are accustomed to regard as an obsolete, mediæval doctrine. This is an extreme position, and it is inevitably opposed by an equally extreme anti-clerical and partly anti-religious movement. There is no escaping the conclusion that a large fraction of the Government support in the French Chamber of Deputies entertains anti-Christian sentiments, and that to a certain extent the Vatican is right in describing the Extreme Left as waging war, not on the Catholic Church, but on religion. Against democratic and socialistic free-thinkers and materialists the Church has asserted, therefore, the principle of authority as embodied in its hierarchy. M. Combes has declared frankly that, in view of its historic mission, the Church could not have acted otherwise, and he drew the conclusion that the battle must be fought out till one principle or the other had succumbed.

This assertion by M. Combes seems likely to be nullified, however, by a settlement of the Separation question on the basis of a compromise by which neither of the extreme parties shall win. Separation has been effected, but persecution of the Church is out of the question. The political influence of the clergy has been diminished, but henceforth they should be free to pursue their ends in the open, and without exposing themselves to unjust suspicion. In other words, France is entering on a condition of freedom, of secular politics and education, of liberty of thought for Catholic and Materialist alike—all principles which we are used to associate with Liberalism. Last week's overwhelming majority in the Chamber for M. Briand's conciliatory Church measure may be taken as a good index to the temper of the nation. The Blacks had things largely their own way up to 1899, when Waldeck-Rousseau took charge of affairs. The Reds have had their innings since then. We are apparently reaching now a state of Liberal equilibrium.

In Germany, the tide seems to be setting in the same direction. There we may take as the two extremist forces Conservative-Agrarian junkerdom, stimulated by Imperial support on the one hand, and the Social Democracy on the other. Up to the last election, the National Liberals, and the various radical parties to a less extent, were regarded as moribund. Progress by degrees, constitutionalism, the encouragement of secular education, the democratization of the army, the reform of the ballot—these were all the vague dreams of namby-pamby theorists. The spirit of the times seemed to favor the militant, the man who stood for all or nothing. It was either reaction, with its battle-cry of God, Emperor, army, country, *and* a high tariff, or Social Democracy with a gospel of complete social reconstruction. The last election, therefore, was highly significant, in that it showed a Liberal and Radical gain actually and proportionately far higher than that of any other party. Socialism has received a setback. The Conservative forces, in spite of an appreciable increase in their numbers, can hardly be said to

PUBLIC LIB

have gained in influence when we think of the prestige that has fallen to Colonial Director Dernburg, hated of bureaucrats and Junkers. The Emperor often speaks vehemently, but there is ground for believing that, in spite of threats about riding down his enemies, he will be forced to recognize the presence of more than 100 Liberals and Radicals in the Reichstag.

Great Britain, of course, shows the triumph of Liberal principles in full form. The Campbell-Bannerman Ministry came only after fifteen years, practically, of Conservative ascendency. It has been a little over a year in power, and we seem to be breathing an atmosphere totally different from the days when Balfour was consul. Substantial self-government for Ireland, self-government for the Transvaal, rumors of the beginnings of self-government for India, the partial or complete secularization of public instruction, the reduction of naval expenditure, and, finally—the ultimate achievement—the reconstruction of the House of Lords on a more representative basis—Liberalism has marshalled here quite enough of principle and project to lend it character and keep it busy for years to come. Nor has the party of Gladstone come into its own as against the Conservatives solely. It was threatened for a time, as some thought, by Socialism as embodied in the powerful Labor party; but late events have shown that radical Socialism has reached its culminating point in England, no less than in France and Germany. Undoubtedly, the Liberal party has taken on a more radical tinge as a result of its Labor affiliations; but it stands, nevertheless, as the party of progress that is peaceful and measured.

THE SCIENCE OF LITERATURE.

Not long ago an American student made a long and elaborate comparison between—let us say—Vanbrugh's "Confederacy" and Dancourt's "Les Bourgeoises à la mode," which Vanbrugh followed very closely. The parallelisms were conveniently presented in a table, French in one column, English in another. Sometimes Vanbrugh appropriated a word, sometimes a sentence, sometimes more; but everything, to the minutest detail, was painstakingly set down according to the most approved fashion of what our stimulating teachers of literature call "source-study." The man who had done all this hard work innocently supposed that the facts were worth getting at, that they signified something, threw some light on Vanbrugh's intellectual constitution and habits of composition. He purposed, therefore, to embody in an introduction to his endless and tedious tables a series of deductions embodied in a readable essay. But a friend, trained after the most straitest sect of German researchers, protested: "That would not be scientific. You have the precious facts. Let them stand as their own explanation and justification."

Against this theory of literary research and its results we have more than once protested; but at the risk of wearying our readers we return to the topic. The immediate provocation is a solid volume of nearly six hundred pages, "Tennyson's Sprache und Stil," by Dr. Phil. Roman Dyboski, Band 25 of Wiener Beiträge zur englischen Philologie. Tennyson's diction and style are worth studying, in Vienna as well as in New York and London; but Dr. Dyboski's book seems to us a monument to misguided industry. His labors have been enormous; the mere task of reading his proofs would appall the stoutest heart; but after all is said and done, after the poems of Tennyson have been raked with a fine-toothed comb, after vast masses of words and constructions have been classified and sub-classified, we seem to reach the conclusion—Dr. Dyboski himself carefully abstains from drawing it—that Tennyson employed many familiar English idioms, and that he was also fond of words and turns of speech that are more characteristic of poetry than of prose.

Dr. Dyboski begins with thirty pages outlining Tennyson's life and enumerating his works. He then plunges into *Syntaktisches*, and considers the two ways of joining clauses—by subordination and coördination. He discovers that Tennyson uses "and," "or," "nor," and "but" where other connectives might, in Dr. Dyboski's opinion, be more precise. In order to show how a scientist can make of Tennyson a *corpus vile* for dissection, we quote a few of Dr. Dyboski's citations from the poems:

> Or else we loved the man, and prized his work (=or else we prized the work only because we loved the man).
>
> She was happy enough and shook it off (für: To shake it off).
>
> Ida stood nor spoke (=without speaking).
>
> Airing a snowy hand and signet gem (= with . . . on it).

After enough examples of this kind, we proceed to Tennyson's use of participles:

> Balin the stillness of a minute broke, saying (d. h.: Balin was still for a minute, then said).

Then we have the myriad uses of adjectives meticulously set down:

> A happy change=change to happiness.
>
> Brake into woman tears (=womanly).

And so on—more than five hundred pages packed with little examples, with now and then a few sentences of explanation from Dr. Dyboski.

We are aware that the intending teacher of English literature—especially if he looks for a college position—must have a doctor's degree. The letters are proof at least of his attempt at preparation; they also look well after his name in the annual catalogue—so well that many college presidents virtually hang out a sign, "None but doctors of philosophy need apply." Now, in order to get an inexhaustible supply of these doctors, the requirements for the degree must be calculated for the man of average intelligence—or less. To this end of putting the degree within reach of mediocrity, the plan of a machine-made thesis, followed by Dr. Dyboski, is perfectly adapted. It enables the dullest person, provided he will only keep at it, to kill the prescribed two or three years of time, and to make, in the form of a bulky book, an "original contribution to the sum of human knowledge." It is well to choose Tennyson, Browning, and Milton as the subjects for research, for these names on the title of the thesis suggest an acquaintance with literature; but for the purpose of acquiring literary culture, the *Gelehrte* might almost as well give his days and nights to putting into new and meaningless tables the material of the "Statistical Abstract" issued by the Department of Commerce and Labor.

The Ph.D. is now so firmly established a staple in the academic market, the factories for producing it are now so well equipped, that we cannot hope to check the industry for at least a decade to come. We are hoping, however, that within a generation there may be a reaction in favor of men who have been better employed than in puttering over such doctors' theses as we have been discussing—men who have read widely and reflected on their reading, men who have ideas or who at least might recognize an idea if they saw it. Prof. Irving Babbitt of Harvard has twice within a year urged in our columns a new degree that should lay stress on this very discipline that makes for culture, because, as he justly says, the acceptance of our present Ph.D. as proof of fitness for a chair of literature "is doing more than any one thing to dehumanize literary study and fix in our colleges a philological despotism."

The new degree for which Professor Babbitt contends might help us somewhat. The letters of it would bulk as large in the eye of college administrators and the public, and very properly; for they would be a testimonial of arduous and well-directed study. But degrees alone cannot save us. We must go back of the degree to the conception of scholarship, of which the degree is the mere outward visible sign. When we have overturned that false conception, the degree will take care of itself. The first step on the road to salvation is to persuade a large group of men who pose as scholars to abandon the notion that all facts are of equal value, and that skill in juggling disconnected words is æsthetic appreciation of literature.

LITERARY NEWS FROM PARIS.

PARIS, February 12.

With holiday books out of the way the flow of new literature begins again. Perhaps the most important book should be classed as history with a tendency—"Rome et Napoléon III.," by Émile Bourgeois and E. Clermont, prefaced by the veteran Protestant historian Gabriel Monod. It is a book of *normalicns*, as the preciseness of style and order and the sureness of method would show without the authors' names. M. Monod says that it establishes "the duplicity and brutality of French policy with regard to the Roman Republic in 1849, its blindness and incoherence in 1869 and 1870, when it launched forth into a fearful war without allies." The thesis is known: If France had handed over Rome to United Italy, Victor Emanuel and Austria would have stood in the way of Germany's vanquishing and mutilating France.

An announcement of prime importance is an initial volume of "Mémoires et Souvenirs sur la Révolution et l'Empire," with its unpublished documents, edited by that incomparable master of localities and personalities who signs himself G. Lenôtre. This first book deals with the Massacres of September, from the account of Weber, foster-brother of Marie Antoinette, down to the minutes of the Exhumation in 1867, with the official *dossier des massacreurs*. Lovers of Saint-Denis and its perplexing tombs of the kings will be glad to have Max Billard's "Les Tombeaux des Rois sous la Terreur." Professor Esmein of the Paris Faculty of Law has translated and edited with great care and valuable original notes and appreciations the memoirs of Gouverneur Morris as published by the family in English—"Un Témoin Américain de la Révolution Française." Ed. Bonnal has found in the Archives of the French War Ministry the material of two volumes of history not without pungency in the present battle of "Vive-l'Armée" at one extreme and Anti-Militarism at the other. "Les Royalistes contre l'Armée" shows how the Restoration punished Napoleon's army and his marshals.

In the "Nouvelle Collection de Mémoires Historiques," M. Vitrac of the Bibliothèque Nationale and M. Galopin profess to give a complete examination of the still vexed question of the fate of Louis XVII.; their bibliographic indications are of great interest and they conclude that the poor Dauphin certainly died in his prison.

George Picot, the Conservative member of the Académie des Sciences Morales et Politiques, publishes two volumes of those full, grave, philosophic historical notices consecrated by that learned body to past glories. Among the most interesting papers are those concerning Jules Simon, Barthélemy Saint-Hilaire, Léon Say, Paul Janet, and Gladstone.

An extremely readable and even moving book of campaign and prison experiences is "1870—Feuilles de Route," by Paul Déroulède, the Quixotic nephew of Émile Augier. Victor Bérard, who shone out as a specialist for the Algeciras Conference, has a serious volume, "La France et Guillaume II."

Professor Strowski of the faculty of Bordeaux pursues his studies in the history of religious sentiment in France in the seventeenth century by the first part of a noteworthy work on "Pascal et son Temps"; the present instalment reaches from Montaigne to Pascal. Perhaps the author, like Prof. William James, is too much inclined to regard Pascal's religious experience as a common phase of Catholic spirituality, instead of being peculiar to an *intellectuel*. A new writer, too enthusiastic but painstaking, Jean Baruzi, studies the origin and character of the religious convictions of a philosopher who has perhaps influenced humanity more and more healthily than Pascal himself—"Leibniz et l'Organisation Religieuse de la Terre." Maurice Masson, professor at the Catholic University of Fribourg, Switzerland—an institution which, in spite of the ban of German universities on the score of inevitable lack of intellectual freedom, has produced already several notable historians—gives an authentic edition of unpublished letters of Fénelon to Madame Guyon (1688-1699), precisely those which were found so unexplainably in the possession of a Protestant pastor in the eighteenth century. The Vicomte G. d'Avenel adds another to his many half-statistical volumes on the social organization of France through the ages in "Prêtres, Soldats et Juges sous Richelieu"; it has a chapter on the organization of early French Protestantism.

In lighter nineteenth-century themes, Henri Maréchal gives his personal "Souvenirs d'un Musicien" from the fifties to 1870, about Léo Delibes, Victor Massé, Auber, Bizet, Berlioz, and others; and the veteran Ernest Reyer, in a preface, writes gayly his reminiscences of Liszt at Rome. Prof. Albert Cassagne, in his "Théorie de l'Art pour l'Art," goes into the history of the last Romantics and first Realists. Maurice Wilmotte of the University of Liège treats of "Trois Semeurs d'Idées," of whom two—Agénor de Gasparin and Émile de Laveleye—were once well known to American readers, while the third—the very living Émile Faguet—deserves to have his ideas known. M. Faguet, of the Sorbonne and French Academy, is out with yet another scholarly, popular book of controversy, "Le Socialisme en 1907."

The second volume of the works of Bakunin contains pamphlets of this prophet of anarchy which had become all but lost, in spite of their influence on his notable disciples of the time. The preface, biography, and notes by James Guillaume, an intimate friend of Bakunin, are singularly enlightening concerning the intellectual origins of the movement.

In that literary field, so peculiarly French, which is cultivated by university professors when they present a finished and polished book for their doctor's thesis, we have "Un Poète Réaliste Anglais: George Crabbe (1754-1832)," by Prof. R. Huchon of Nancy; and by François Benoit, "Blake le Visionnaire," an attempt at a complete study of William Blake, man, *intellectuel*, artist.

René Schneider, already favorably known for his book on Umbria, has now "Rome, complexité et harmonie"—the impressions of a humanist who is on terms of intimacy with sites and scenes, buildings and art monuments of antiquity, Christianity and the Renaissance. Of a man more of the modern world, one who knows his history even in its anecdotes, are the "Promenades dans Paris" of Georges Cain, curator of the City of Paris Museum. The erudite Gustave Schlumberger pursues his historical studies in that half-Byzantine, half-Crusading age of which all readers of Gibbon like to know: "Campagnes du Roi Amaury Ier de Jérusalem" in Egypt of the twelfth century.

An exotic book, not in Loti's style, but flashing with color, is Maurice Maindron's "Dans l'Inde du Sud," a part of India which even Englishmen have not brought much into literature. The Marquis de la Mazelière, who has done good work for the history of India, now publishes three volumes on "Japon: Histoire et Civilisation," covering the ancient and feudal ages and the Tokugawa. Considering the place Japan is taking in human thought, the book is a valuable in spite of its length.

The death of Victor Henry, professor of Sanskrit at the Sorbonne for nearly twenty years, should not pass unnoticed. Born in 1850, he obtained his doctor's degree in 1883 with a thesis, "Étude sur l'analogie en général et les formations analogiques de la langue grècque." Besides the immense mass of writings known to scholars the world over, he published ideal manuals of the literature of India and the Parsees, readable by all the intelligent; and his students have carried everywhere his learning and his tolerance.

Madame Blanc also is dead, at the age of sixty-six—the lady who under the pseudonym of Th. Bentzon had made the French public best acquainted with American women as they are. She was born and lived in France, although connected with New Orleans. She contributed frequently to the *Revue Politique et Littéraire* and the *Revue des Deux Mondes*. Her first novel, "Le Roman d'un Muet," appeared in 1868, and she had written many other stories. In her last days Government recognized her lifetime of literature, from her girlhood's friendship with George Sand, by the Legion of Honor.

S. D.

A FLORENTINE BOOKSELLER.

FLORENCE, February 10.

Probably few bookish persons have passed through Florence in the last forty years without making some acquaintance with Pietro Franceschini, whom death has removed in his seventieth year. He was a bookseller of the tribe of Dodsley, more a friend of the learned than a tradesman, and more an author in his own right than either. Those who know their Florence will not fail to recall his most famous shop on the Borgo dei Greci. It was a spacious place, literally heaped with books. There were rarely catalogues to aid the visitor, and to a casual customer Franceschini paid no more attention than civility required. One might have spent a day there without a hint to buy or a request to move on. Franceschini himself sat behind a small rampart of books busily engaged in reading or writing. His ruddy countenance, framed between a flowing white beard and silver hair that rarely knew the indignity of the shears, was crowned by a black sombrero. His whole breezy, portly effect, to an American visitor would evoke incongruously the sheriff in a comedy of frontier life. And indeed

he illustrated throughout a long and distinguished career a sort of magisterial simplicity and probity. For years he had been moderator of the best debating society in the Tuscan capital, though, withal, an informal one. Carducci, Fanfani, and a dozen less known to international fame, had followed him from his out-of-door stand in the Uffizi colonnade to the little shop in the Borgo Santi Apostoli, and thence to the Borgo dei Greci. If any uninitiated person had wandered into that shop in the late evening, he would have perceived his error and retreated in good order. Franceschini would have been seen surrounded by the best of Florence, arbitrating literary issues, reconciling political differences, until, as eight o'clock struck, with much jangling of the great keys, and gradual extinguishing of the gas jets, he saw them all out with a handshake. That was his life for a matter of thirty years, until death and circumstances began to disperse his academy.

Such a man naturally let the business take care of itself, and it did well enough so. If a purchaser disturbed his Olympian calm by asking the price of a book, there was only one answer, "Half the marked price." That was the rule for the New England schoolma'am, tremulously buying her first Aldine, and for Mr. Gladstone, who walked in one day, rather pompously presenting himself as the friend of the Padrone's friends. It would have gone hard with any one foolish enough to bargain over the price, but presumably that seldom happened. Franceschini was one of those men who readily make themselves believed. In fact there was little of the merchant about him. He willingly lent such books as his friends could not buy; he made valuable gifts of manuscripts to the National Library, to which also he gave a precious collection of books annotated by celebrities. He marked his transfer to the splendid quarters still occupied by his business in the Palazzo Borghese, Via Ghibellina, by a redoubled and costly devotion to his favorite pursuit, the investigation of the art and archæology of Florence. In the defence of the antiquities of Florence, and in rescuing her art and artists from neglect and oblivion he was ever a *preux chevalier*, so much so that when King Humbert made him a Knight of the Crown he did but confirm the choice of Nature.

So sympathetic a figure has naturally not disappeared without deep regrets and fitting commemoration. Mario Foresi, for example, has collected welcome memorials in the *Rassegna Nazionale* for January 1, from which storehouse these few biographical data are selected. Unhappily, the autoblography which Franceschini was frequently urged to undertake and actually began remains a slight fragment. Pietro Franceschini was born in Florence in 1836 of a Pistoiese father and a Savoyard mother, a woman of rare cultivation. Deserted by her husband and reduced to poverty, she attempted to support her child by keeping a hotel at Leghorn. The inn failed and the mother died, leaving Pietro an orphan at fifteen. At his repentant father's bidding Pietro gave up a dear project of going to sea, and came to Florence to study with the portrait painter Castellini. After some hard vicissitudes, he saved up twenty francs, invested them in prints, and associated himself with a friendly bookstall keeper. During the two weeks of the Fair of the Annunciation, in 1852, the partners sold and reinvested so well that Pietro's share of the transaction came to two hundred francs. With this capital he set up his cart in the colonnade of the Uffizi, beneath the statue of Guido Aretino. There he spent eleven happy and prosperous years, reading prodigiously, "sampling" all literature, as he writes himself, and gradually drawing customers and friends of the stamp of Carducci, Fanfani, and the Foresi. The magistrates and officials of Tuscany visited him as they passed in and out of the government offices, the collegians came in force on holidays. Already the daily group beneath the statue of Aretino was called the Penthouse Academy (*Accademia della tettoia*), and its membership was eagerly sought.

It was, indeed, the desire of this coterie to have a more private academe that chiefly induced Franceschini in 1863 to give up his barrow in favor of a shop. It was this move that at once brought about his greatest adversity and proved the value of the friendships he had gained. With his new shop filled with a large stock just bought on credit from the Milanese bookseller Silvestri, there came the famous overflow of the Arno that practically wiped out his savings of eleven years. Friends rallied to his aid, among them his English client, Giovanni Temple Leader; rivals lent him books, and within a few years he had not merely recouped his losses and repaid his debts to the soldo, but was established in the Borgo dei Greci (whither the growing academy had faithfully followed him), in an enviable position of ease with dignity. Comparetti, Villari, and Chiappelli, with others, had joined these *conversazioni* in compensation for the removal of Carducci to Bologna.

Mario Foresi tells several stories of this period that illustrate Franceschini's attitude towards business. Sometimes, when asked the price of a book, he would say, "I can't tell you now; I'm too busy. Put it aside." Of course, such a book immediately disappeared in the shifting mass, the contents of which nobody knew, least of all the proprietor. On one occasion Foresi, then a schoolboy, saw a stranger conveying a quantity of books from the shelves to the capacious pockets of a great ulster and told Franceschini. "Let him alone," was the answer; "he usually does that; so much the worse for him."

The recent move to the finer quarters in the Palazzo Borghese marked a decline in the fortunes of the academy and of the business. Franceschini was too much concerned in his archæological polemics to pay much heed to the two hundred thousand volumes he moved over from the Borgo dei Greci. Death surprised him at these labors, many of which are unpublished, and he spent the few weeks of his final illness absorbed in the works of his predecessors, Vasari and Baldinucci. Perhaps the best tribute to the life of this *gran galantuomo* may be found in the words of his friend Ferdinando Martini announcing the conferring of knighthood upon Franceschini:

> I have wished that the Government should mark in you a noble example of an honest, modest, and laborious life; of a culture acquired without official aid through a sense of personal dignity and a love of the excellent; that it should in you do honor to the common people of Florence who have done so many fine and useful and sturdy things; to that populace whence you come and of which you are now one of the few remaining legitimate heirs.

This is not the place to speak of Franceschini's archæological studies, many of which were intentionally given to the popular newspapers of Florence. Suffice it to say that from 1865, when his "Appunti di Fiorentino Argomento" was printed, until his death he was in constant production. The façade of the Duomo, the restoration of the Pazzi Chapel at Santa Croce, the ascertaining of artists' tombs, and the placing of memorial inscriptions, all occupied his pen at one time or another. His most important work is probably the study of Or San Michele, "L'Oratorio di San Michele in Orto," 1898. Franceschini had not merely taste, but, what is rare among archæologists anywhere and rarest perhaps among the charming dilettanti of Italy, initiative. It was due to his agitation that the beautiful North Colonnade of Santa Croce was cleared of disfiguring shops; in fact, no fine relic could be threatened or dishonored without enlisting his valiant pen. In such causes he was not without his quixotisms, as when in 1885 he started the archæological journal *Il Nuovo Osservatore Fiorentino*, which soon perished for want of contributors and subscribers, but not before its editor's important studies on the Basilica of San Lorenzo had seen the light. For an appreciation of this side of Franceschini's activity, the reader is referred to Signor Foresi's sympathetic memoir. I have wished merely that so notable an example of the bookish bookseller—in a manner a disappearing type—should be presented to readers of the *Nation*, many of whom must at least recall Franceschini's wholesome presence, as he dominated his world of books from the little bastion beyond which his grave, white head bent either in reading or in the sorer task of polemical composition. M.

Correspondence.

THE NAVIGATION LAWS.

To the Editor of The Nation:

Sir: The present discussion of ship subsidies brings up the merits of the clause in the Navigation Act of 1799, which withholds from foreign-built ships American registration and the right to fly the American flag. As far as this prohibition applies to the coastwise trade, which is open only to ships enrolled as American and flying the United States flag, this rule is only a part of the protective system; it protects the shipbuilder, and through him the maker of materials used in shiphuilding, from the competition of foreign shipyards. But as far as the prohibition applies to ships sailing and carrying goods in international trade, either from foreign to American ports, or from the latter to the former, the exclusion of the foreign-built ship from receiving American papers and from the right to hoist the American flag does not give any protection to the American shipbuild-

er; for the foreign-built ship under the foreign flag has the same business rights as the American ship. The difference is purely sentimental, and experience has shown that the great American millionaires who buy up whole fleets of British and German ships are not plagued by any sentimental patriotism, and are quite willing to sail those ships under any Christian, and if need be under any heathen or Moslem flag.

What, then, is the use of a protection which does not protect, and does not even try to protect? LEWIS N. DEMBITZ.

Louisville, Ky., February 17.

WHEN CARDUCCI WAS BORN.

TO THE EDITOR OF THE NATION:

SIR: In the article on Carducci published in your issue of February 21, the date of the poet's birth is given as 1836. The year recorded in the register of birth published by Chiarini in "Memorie della Vita di Giosuè Carducci" (p. 400) is 1835, the passage reading:

Naque nel dì ventisette Luglio Milleottocentotrentacinque, alle ore undici di sera, e fu battezzato nel dì 29 detto nella Chiesa del nominato popolo.

LEWIS F. MOTT.

New York, February 22.

[The date given in our article is that of the last edition (1905) of Gubernatis's "Dictionnaire international des écrivains du monde latin."—ED. NATION.]

Notes.

Putnams announce the following works from the Cambridge Press: "Kinship Organizations and Group Marriage in Australia," by N. W. Thomas; "National Life and Character in the Mirror of Early English Literature," by Edmund Dale; "Sir Thomas Smith's "De Republica Anglorum," with a Preface by the late Prof. F. W. Maitland; and "The Origin of the English Nation," by H. Munro Chadwick. The April *Putnam's* will contain the first chapters of a new romance by Maurice Hewlett, entitled "The Countess Picpus."

The next volume of the Oxford Library of Prose and Poetry (Henry Frowde) will be "Selections from Dr. Johnson's 'Rambler,'" edited, with preface and notes, by W. Hale White. Another volume of Jowett's Essays—dissertations turning principally on his method of interpreting Scripture—with an introduction by Prof. Lewis Campbell, is also about to be issued in the same series. The essays selected include those on the interpretation of Scripture (published in "Essays and Reviews"), the abstract ideas of the New Testament, the Old Testament, and contrasts of prophecy, and the sermon on Richard Baxter is appended.

Duffield & Co. will soon publish "Success in Life," by Emil Reich; "The Spirit of Labor," by Hutchins Hapgood; and "Business and Education," by Frank A. Vanderlip.

In March the C. M. Clark Publishing Co. will bring out "The Lieutenant, the Girl, and the Viceroy," by Marshall Putnam Thompson; "Fires of Desire," by Lawrence R. Mansfield, and a translation of Emilia Pardo Bazan's "Midsummer Madness," by Amparo Loring.

E. P. Dutton & Co. are publishing a two-volume edition of "Dampier's Voyages," edited by John Masefield.

Baker & Taylor announce for publication in April "The Early Life and Journal of Daniel O'Connell," edited by Arthur Houston. The material is said to be new and interesting. The same firm will bring out in the autumn the autobiography of Gen. O. O. Howard.

A new edition of Sir Robert Anderson's "Sidelights on the Home Rule Movement," with "a new introduction in answer to critics," is to be issued by John Murray.

The London *Speaker* is to be merged into a new weekly journal, the *Nation*, edited by H. W. Massingham.

Scribner's Magazine for March contains some interesting letters of the late E. L. Godkin—a selection from the forthcoming two volumes of the "Life and Letters," edited by Rollo Ogden and published by the Macmillan Company. In the same issue of *Scribner's* is the first of a series of papers, "Impressions of Contemporary France," by Prof. Barrett Wendell. This instalment deals with the universities, with which Professor Wendell had unusual opportunities to become acquainted in the course of his "academic mission" to France in 1904-1905. He lectured not only in Paris, but at the provincial universities. His descriptions and comments are entertaining as well as acute and suggestive.

As its contribution to the centenary of Longfellow's birth, Bowdoin College published yesterday the "Origin and Growth of the Languages of Southern Europe and of Their Literature," an address delivered by the poet on September 2, 1830, at his inauguration as professor of modern languages in Bowdoin. This was one year, as a matter of fact, after Longfellow's actual installation. The volume, a neat specimen of the bookmaker's art, contains a prefatory note of 13 pages by George T. Little, librarian of Bowdoin; 113 pages of text, and 9 pages of notes by Longfellow. They seem to indicate, in one or two places, that he may have accompanied his paper with poetical or other citations that have not come down to us. After his death his biographer, Samuel Longfellow, gave the autograph manuscript to Bowdoin College Library. Parts of the address have already been published in the "Life of Henry Wadsworth Longfellow" (1891), volume i., pp. 184-7; and the passages which are now first made accessible are of interest rather as a study of Longfellow's mind than as a contribution to knowledge of either Romance language or literature, in the light of present-day philology and criticism. It is worth observing that while Longfellow was professor of German, as well as of French, Italian, and Spanish, there is scarcely a reference to German literature or language in the address, a fact to be accounted for in part by the circumstance that after he had spent from the middle of June, 1826, to the end of December, 1828, in France, Spain, and Italy, he was called back suddenly to Maine in June, 1829, after less than six months' acquaintance with Germany and German life and thought. It was not until 1835-36, when Harvard waited a year and a half for Longfellow to repair to northern Europe, that he had a chance to get really acquainted with the literature that in time most affected him as a poet.

We have received from T. Fisher Unwin of London Wilfrid Scawen Blunt's pamphlet, "Atrocities of Justice under British Rule in Egypt." This we have already mentioned editorially. It is a pamphlet which should be read by every one who seeks to form a just opinion of English rule in Egypt.

E. P. Dutton & Co. have published Charles Jarrott's valuable "Ten Years of Motors and Motor-Racing," profusely illustrated and full of interest for all who believe in automobile contests. To some of Mr. Jarrott's views we have already referred editorially. He has been very successful in portraying the excitement of racing, together with its accidents, of some of which he presents striking pictures.

"A Dialect of Donegal," by E. C. Quiggin (Cambridge University Press), is described as "the first serious attempt at a scientific description of a dialect of Northern Irish." The author is impressed by the rapidity of phonetic decay in the Gaelic-speaking area, and by the need of using some other means of explaining the mysteries of Old and Middle Irish orthography than the language of the younger people, spoiled in many cases by a more or less lengthy sojourn in Scotland or America. The speech of this volume—the speech of Meenawannia in the parish of Glenties—is given as used by persons born before the famine. The phonological chapters relate to the vowel system, to the consonants, to synthesis, to vowel-shortening, metathesis, etc. The remaining portion includes word-lists in Old and Middle Irish, Modern Irish, and Scotch and Manx Gaelic, and texts. The work is of the same order as Rhys's "Manx Phonology" and Pedersen's "Aspirationen i Irsk"; and it will prove of real assistance to the ever-increasing band of Celtic scholars.

Another book on things Irish, of a kind more likely to appeal to the ordinary reader, is the smaller edition of J. W. Joyce's "Social History of Ancient Ireland" (Longmans, Green & Co). Owing to the loss of national independence and the almost total eclipse of the Irish at home during the eighteenth century, their forebears have never received their full measure of credit for their striking advance in the arts of civilization during the sixth and succeeding centuries. Like the work from which it is abridged, this is intended to place them in their proper rank among the peoples of antiquity, and in so doing to correct exaggerated notions as to their savagery and degradation, or, for that matter, as to their greatness and splendor during the Pre-Norman period. It consists mainly of simple exposition, the authorities, references, and quotations given in the larger book being omitted here. Its subject-matter includes the government, military system, and law of the ancient Irish, their religion, learning, and art; their trades, industries and commerce, and their manners, customs and domestic life. As might be expected, it is a valuable composition, accurate and full of sound learning.

The paper on "Primitive Culture in Japan," with its abundant illustrations and a map in colors, showing the distribution per 100 square *ri* of the stone age sites in Japan, by N. Gordon Monro, occupies 212 pages of vol. xxxiv., part ii., of the Transactions of the Asiatic Society of Japan. This skilled archæologist, after many years of excavation and research, finds two great areas of prehistoric activity, Yamato and Ainu. The former occupied the region west of Lake Biwa, in the narrowest part of the main island. The Ainu (now known to speak an Aryan language) occupied the east and north. Mr. Monro sums up his conclusions thus:

The Yamato leaders, if we may judge by the terra-cotta figures which have been left, were not pure Mongolians. Many of these figures exhibit a distinctly Caucasian appearance, and the aristocratic type of Japanese preserves these features to this day. The *beau idéal* of the artists and poets of Japan indicates a prototype of Iranian or other Semitic affinity. . . . The Mongolian element in Japan was an imported, and not an original stock.

With this conclusion of a cautious archæologist may be compared the paper of Dr. David Thompson, a scholar for forty years in Semitics and Japanese, showing the tri-literality of old pre-Mongol Japanese (Hirata's list), and the identity in sound, form, and meaning of over thirty of the verbs in both tongues. Mr. Monro believes that the leaven of Ainu in the Japanese composite "is present in a greater degree than is apparent." In a word, excavation confirms the proofs of language that the basis stock of the Nipponese is Ainu, and Mr. Monro's labors confirm those of Chamberlain and Batchelor in showing the lateness and thinness of Mongolian blood infusion and culture in Japan. Part iii. of vol. xxxiv., pp. 90, contains a Summarized Catalogue of the postage stamps of Japan, by A. M. Tracey Woodward, richly illustrated, and exhaustive in content.

Three years ago Prof. Giuseppe Bellucci of the University of Perugia published the first of a series of volumes dealing with the *Tradizioni popolari italiane* under the title of "La grandine nell' Umbria." He has now given us a second and somewhat larger work on "Il Feticismo primitivo in Italia e le sue forme di adattamento" (Perugia: Unione Tipografica Coöperativa). That fetichism is not yet dead and that nineteen centuries of Christianity have done but little towards eradicating paganism in Italy, seems to be indisputable. Not only are the same stones and shells and teeth and tusks which are discovered in prehistoric tombs still believed to possess occult virtues and used as preservatives against witchcraft and the evil eye, but the Christian symbols themselves are all too often converted to superstitious uses. The argument of the author is reinforced and illustrated by numerous photographs from his unique collection of charms and amulets, and the subject is one upon which few men living can write with equal authority. The series when completed will contain two other volumes, namely: "Una pagina di psicologia popolare; gli Amuleti" and "Il fulmine nelle tradizioni popolari antiche e moderne."

In almost every Italian town there is a group of painstaking, intelligent scholars who devote their lives to the study of its records and monuments. The result of their labors is generally published in some local periodical which is practically unknown beyond the walls of the city which gave it birth. It is for this reason that we desire to call attention to *Perusia Augusta, Rivista di Topografia, Arte e Costume dell' Umbria* (Perugia: Unione Tipografica Coöperative), which has just finished the first and, perhaps, the only year of its life, since its continuance is imperilled owing to the departure of its editor for Rome. Among the many valuable articles which it contains are several dealing with Jacopone da Todi, whose sixth centenary was, it will be remembered, celebrated last Christmas. Not the least valuable feature of the periodical is its illustrations.

During the Archæological Congress in Athens in 1905 there was considerable discussion as to the way in which the immense mass of inscriptions found in the "Corpus Inscriptionum" could be made accessible to the average student. The proposal to publish a cheap edition of the Greek inscriptions has not as yet been carried out. In the meanwhile the French savants have at least partially solved the problem in their "Inscriptiones Græcæ ad Res Romanas Pertinentes," begun in 1901 by the Paris Academy of Inscriptions, and edited by R. Cagnat, the well-known authority on Roman epigraphy. Nine good-sized volumes are now on hand, in lexicon form, containing the Latin inscriptions pertaining to Italy, the northern half of the Balkan peninsula, Africa, with the exception of Egypt, as also Asia Minor, exclusive of Ionia, Phrygia, and Caria, and further Syria and Arabia.

A Cornell University archæological expedition, under the direction of Prof. John R. S. Sterrett, will start on March 9 for Asia Minor. Professor Sterrett has previously spent several years in exploration and excavation in the East. He will be accompanied by B. B. Charles, instructor in Semitics; A. T. Olmstead, formerly fellow in the American School at Jerusalem and now at Athens; C. O. Harris, formerly instructor in Latin, now in the American School at Athens; and J. E. Wrench, former fellow at the University of Wisconsin. They hope by the study of inscriptions and by accurate surveys to determine some important historical sites, and get other information by which to correct current maps. They may remain abroad two years.

The biennial report of the California State Library, just issued, illustrates the increased interest in library matters on the Pacific Coast. Since assuming the functions of a State Library Commission about two years ago, the trustees have sought to make the State Library the centre of an expanding system that should reach all sections of the State. As a first step, the old rules of the library, limiting the use of its books to members of the State government, or to citizens dwelling in the capital, were rescinded, and the rule adopted that any resident of the State may borrow books by making application through a local library, a State travelling library, a registered study club, or a judge of the Superior Court; or, where none of these means is available, on identification by an agent of an express company. Moreover, information on any subject desired is now furnished by the staff to any citizen of the State on application by mail. A Library Extension Department has been established, which operates through four divisions, known as the Public Libraries Division, the Travelling Libraries Division, the Study Club Division, and the Books for the Blind Division. In the Public Libraries Division two library organizers are improving libraries already in existence, and starting new ones. During the last year libraries were organized in sixteen towns as the direct result of the work of these organizers. In the Travelling Libraries Division, the number of libraries in use has increased in two years from 85 to 225, and the number of volumes from 4,250 to 11,250. For the purpose of receiving and circulating these libraries, 291 temporary library associations have been formed, many of which, it is expected, will develop into permanent organizations. In the Study Club Division work is modelled closely on the plan in force in New York State. Every encouragement is given to the formation of these clubs, subjects of study are suggested, programmes and syllabuses furnished, and select lists of books supplied. The Division of Books for the Blind, which has just begun its work, reports that it has a collection of 550 volumes, and has registered 169 readers, scattered in all parts of the State. As a stimulus to all these activities, the library maintains a quarterly publication, the largest of its kind in the country, called *News Notes of California Libraries*.

The Oregon Library Commission, at the completion of its first year, reports the following work accomplished, with an appropriation of $2,000: (1) It has supplied forty-five rural communities and small cities with travelling libraries. (2) It has selected and published a list of books for school libraries and secured such low contract prices from the publishers as to save to the schools of the State $3,000 on the volumes purchased. (3) It has published and circulated literature in the interest of library improvement and expansion as a preliminary to a more active library propaganda. (4) It has maintained a bureau for the study of comparative legislation as an aid to the law-making body of the State.

Harry Pratt Judson, who has been acting president of the University of Chicago since the death of William R. Harper, has been elected president. He was born in Jamestown, N. Y., in 1849; he was graduated from Williams in 1870, and he has received various honorary degrees. In the year of his graduation he became a teacher in the High School of Troy, and he also served as prineipal of that institution. In 1885 he was called to be professor of history in the University of Minnesota, and in 1892 he was appointed head professor of political science and dean of the faculties of arts, literature, and science in the University of Chicago. He is author and editor of a number of school text-books, as well as works of more general interest. Among his writings we may mention "Europe in the Nineteenth Century," 1894; "The Growth of the American Nation," 1895; "The Higher Education as a Training for Business," 1896; "The Government of Illinois," 1900; and "The Essentials of a Written Constitution" (decennial publications of the University of Chicago).

The death is announced of Dr. David Pryde, for twenty years principal of the Edinburgh Ladies' College, and for twenty-three years a lecturer in English literature in what is now the Heriot-Watt College. Born in 1834, he was graduated at St. Andrew's. For some time he was employed on the staff of the "Encyclopædia Britannica," chiefly as a compiler of biographical articles. Among his books are "Biographical Outlincs of English Literature." "Highways of Literature," "Great Men of European History," and an autobiography, "Pleasant Memories of a Busy Life."

From Athens comes news of the death of the poet and philologist, Dimitrios Vernardakis, in his seventy-third year. After study at Munich and Berlin, he was appointed professor of history and philosophy at the University of Athens; but in 1883 he resigned and retired to Mitylene in order to give his time to poetry and science. A number of his plays were successful on the Athenian stage. He also wrote a well-known "Grammar of the Greek Language."

RECENT VERSE.

It chances that there are at present upon our table four slender volumes of verse by youthful poets that present an uncommonly suggestive unity in variety. John Erskine's "Actæon and Other Poems" (The John Lane Co.), Louis Ledoux's "The Soul's Progress and Other Poems" (The John Lane Co.), Justin Sterns's "The Song of the Boy" (The Ariel Press, Westwood, Mass.), and William Ellery Leonard's "Sonnets and Poems" (privately printed), are alike in a certain attractive zest of generous youth, but they differ singularly and significantly in tone and background.

Mr. Erskine's chief poetic masters have been Milton, Landor, and Keats, and, if we may judge by the token of a certain admirable sonnet, George Edward Woodberry; but he has absorbed from them the tone rather than the intellectual outlook of the modern classic poetic mood. His work is more notable for form than for substance; the most vital note in it is its fine sense of the apostolic tradition in poetry, its sentiment of poetic scholarship. Yet this in itself is a thing to be grateful for. We do not remember to have lately seen a first book of verse showing so delicate a sense of poetic propriety. The distinction of Mr. Erskine's blank verse may be sampled from the opening lines of his "Actæon":

Fair bloomed the happy world, fair bloomed the May,
But over Lethe came no bloom nor change,
Only the ancient languor; soft and smooth,
Save where a slumbrous poppy, nodding low,
Trailed into ripples, Lethe slipped away;
And there the dead, fresh from the bright world, came,
And drank forgetfulness—one cup for all,
Whether their crown of life were flower or thorn,
Their draught of life proved sweet or bitter wine.
There statesmen, soldiers, leaders of their times,
Heart-worn with blazing out new paths for truth,
Drank with their meanest followers, side by side;
Two lovers there, one with the passionate kiss
Of sweet lips clinging, one in patient love
Of those same lips, which never might be his,
Together drank and equally forgot;
Thither came joy and sorrow ceaselessly,
And straight passed over, levelled unto peace.

His lyric gift and poetic sensibility are seen at their best in "Parting":

Not in thine absence, nor when face
To face, thy love means most to me,
But in the short-lived parting-space,
The cadence of felicity.

So music's meaning first is known,
Not while the bird sings all day long,
But when the last faint-falling tone
Divides the silence from the song.

Mr. Ledoux follows many of the same masters as Mr. Erskine, but with something less of distinction of form, something more of spiritual ardor. The titular piece in his volume is a lyric sequence of some forty pages—the old poetic wayfaring of "the soul" through the dubious experiences of life to the "higher optimism." It must be confessed that Mr. Ledoux seems still to abide on the level of naïve and doctrinaire optimism—that of Browning's "Pauline," for example. His experience of doubt and despair seems chiefly to have come to him from the perusal of "The City of Dreadful Night." Yet there is an engaging fervor in the spirit of his work. Embodied as it is in clear and fluent verse, with an unusual melody of vowel-sound, it makes a gently insistent appeal, not unlike that to be felt in certain pieces of Longfellow's. Mr. Ledoux's quality adequately appears in the Epilogue to the "Progress of the Soul":

Though human hearts with grief and anguish
Must still be darkened day by day,
Though youth must pass and beauty languish,
Though joy must yield to sorrow's sway,

Though hope grows dim and faith uncertain,
Though reaching thought forever fails
To see, beyond death's dusky curtain,
The mystery no search unveils,

Shall I not heed what gleams of Beauty
Through Man and Nature surely shine?
Shall I neglect the certain duty
Of bringing joy to them that pine? . . .

So let me live, all Beauty seeing,
To lighten life where'er I can,
And mark the soul's immortal being
Impearled within the mortal man.

In Mr. Sterns's "The Song of the Boy" we have a more athletic note:

Oh! The joy of being alive!
To be sound of body and brain,
With pulses that leap to strive,
And muscles that crave the difficult feat.
To battle with wind and rain,
To struggle with snow and sleet,
In the tumbling surf to meet
That strongest foe of man, the sea.
To feel her tug at the feet,
And buffet the face with a heavy hand;
And measure strength with her brainless strength,
And in spite of her might, to stand
Or leap or swim at the will's command.
Oh! Life is sweet!

So it begins, and in the course of the first section in which the boy speaks we have a vivid glorification of the joys of healthy youth. Wrestling, skating, diving, rowing, climbing, running, jumping, the subtler joys of the senses, the pleasures of the fresh fancy and imagination, of young sympathy and friendship—each is made in turn the subject of a joyous stanza turned off with a fine musical freedom. Then other voices are heard. Death, the World, the Flesh, the Devil, address themselves to the boy, suggesting the pleasantness of the Primrose Path and the wisdom of plucking roses while one may. Finally Love speaks in the crucial strophe of the poem:

Keep me my throne, O Boy!
Great is the joy
Of the supple body's strength and the senses' thrill,
They are right and sweet in their day,
But I am greater than they.
They shall straight give way when I claim my empty throne.
Lo, I am the Master Joy,
You shall presently own my sway.
O Boy! you have waited me long,
But I may not come at the summons of man.
I must bide my time.
You are right to live your jubilant song
Of joy in being alive,
But know that each of these lesser joys
You shall desire to sacrifice
In the service of Love. O Boy! Be wise!
Even the joy of the indrawn breath
You shall be willing to yield to Death.
Yea! So the Beloved be blest thereby
You shall gladly die.
Then is it more
Than the Flesh will endure
That you keep your Soul clean?
It has served you well, of a truth,
This Joy of Life and Youth,
Has kept you sane and fine and strong,
Fit to love with the Love that Abides.
The Prelude,—and then the Song!
Behold! I shall come!
What will it matter then that you waited me long?

To this last voice the boy listens, and the poem ends. The piece has its faults; it would have gained by some revision and excision, by an occasional refining of phrase, but as a whole it is a telling expression of the perennially pagan spirit of youth and of an admirable promise.

In the "Sonnets and Poems" of William Ellery Leonard we have again a background of scholarship—of a scholarship sometimes imperfectly fused in the heat of the poetic mood, sometimes, as in a quantity, a little inaccurate. There is, however, in Mr. Leonard's verse an intellectual vigor, and a corresponding resonance of line that carries one safely over the occasional crudities and awkwardnesses. At his best, Mr. Leonard can be large without inflation, as in "New York in Sunset":

The island city of dominion stands,
Crowned with all turrets, o'er the waters' crest,
Throned, like the bright Cybele of the West,
And hailed with cymbals in a million hands
Around her; yet serenely she commands
The inland vision and the ocean quest,
The new-born mistress of the world's unrest,
The beauty and the terror of the lands.

She sees the fields of harvest sown for her,
She sees the fortress set beside her gate,
Her hosts, her ships, she sees thro' storm and fire;
And hers all gifts of gold and spice and myrrh,
And hers all hopes, all hills and shores of fate,
And hers the fame of Babylon and Tyre.

"In the Song of the City" (Oak Leaves Press), Anna Louise Strong has found in Chicago something of the same inspiration that Mr. Leonard has drawn from his New York. The verse is undistinguished, but it is not seldom visited by something of the poetic sense of life; witness this on the "Tenement Back Yards":

Close by the elevated the worst of the back-yards lie,
Barren, desolate spaces under an ashen sky,
Bottles and boxes and papers and pieces of glass and tin,
And rotted hoards of fencing that shut the scrap-heap in.

Hopeless, dreary ash-piles—and yet there is laughter here;
And hearts bowed down with labor still trace the round of the year,
When the rays of first spring sunshine strike through the dingy pane,
And the broken rag-stuffed windows are stripped of their rags again.

For over the dust and ashes roll surges of conquering life,
Life and the glory of living, the joy and the pain and the strife,

Love and the faith of loving, and wan hope's fitful gleams;
Ay, even the lost are haunted by the pallid beauty of dreams.

A curious contrast to the above is presented in Douglas Malloch's "In Forest Land" (The American Lumberman), the poetic recreations, if one may guess, of a forester. Here, again, the verse is undistinguished, but of an outdoor wholesomeness that is refreshing. There is a pleasant macaronic flavor in "The Love of a Botanist":

I long for the land of the pinus palustris
Where the liriodendron is bursting to bloom,
Where taxodium distichum faithful, industr'ous,
Is waving in sadness o'er Clementine's tomb.

'Twas under the spreading hicoria pecan
We pledged our fond love by the light of the stars;
"If any be faithful," we whispered, "then we can."
While leaning at eve o'er the fraxinus bars.

A flower from the sweet asimina triloba
She pinned on my coat as I bade her farewell;
But her love grew as cold as the far Manitoba
And my hopes like the frost-bitten autumn leaves fell.

They planted catalpa, the fair speciosa,
They planted the bush and the tree and the vine,
They planted a sprig of robinia viscosa,
And, underneath these, planted poor Clementine.

The reader of Charles Gibson's stout and expensive volume of verse, "The Spirit of Love and Other Poems" (Boston: Published by the author), will rub his eyes. It is as if the mellifluous Waller lived again and published numerous verse at his lower level. The following lines from Mr. Gibson's "Hero and Leander," which he advises us to compare with Fawkes's version of Musæus, are a fair specimen of his languid but indefatigable poetic impulse:

Trembling with love, he plunges to the deep,
His form submerged, the billows round him leap.
The distant shore a gentle light extends,
As thus to Love encouragement it lends.
O fair Leander, plow these treacherous waves!
Leap through the ocean to the shore it laves!
There, wandering near the beach, her duties o'er,
Steps Hero loved; now lingering no more.
Her eyes with dewy spray lie half-encased,
Her heart no mortal sultor has defaced;
While from the tower is reared a burning torch,
That guides Leander to the temple's porch.
Awake, O Eros, and defend this youth
Who braves the sea, to seek thy fane, forsooth!

Mr. Gibson announces a volume of "Love Sonnets" for 1907, one of "Odes and Elegies" for 1908, and one of "Dialogues and Satires" for 1909. That is a weighty observation that Alceste makes to Oronte in the first act of the "Misanthrope":

Par la chaleur de montrer ses ouvrages,
Ou s'expose à jouer de mauvais personnages.

Under the same rubric with Mr. Gibson's work, we may list "Poems," by E. L. Noble (Richard G. Badger), "Songs and Sonnets," by Helena Coleman (Toronto: William Briggs), "Driftwood," by Russell Whitcomb (Badger), "Easter Song," by Clinton Scollard (G. W. Browning), "The Rose Jar," by Thomas S. Jones (Browning), and "The Silent Land," by William Blane (Elliot Stock).

A seventeenth-century flavor of another sort is to be savored in Edward Gilchrist's "Tiles from a Porcelain Tower" (privately printed at the Riverside Press). Mr. Gilchrist has plainly done a good deal of rather virile thinking, and as he has made his ingeniously plotted verse the vehicle rather for his notions than for his moods, his work has much of the peculiar pithiness that marked the work of the concettists in their less fantastic vein. Not the least interesting of the pieces are those more expressly from the Porcelain Tower, "the pride and symbol of Cathay," wherein the decaying splendors of the East are expressed with both imagination and humor. Take for example these sonnets from a sequence entitled "In a Mountain Lamasery:

Gilt Buddha, with the heavy-lidded eyes,
Whose glances seem hypnotically jail'd
By walls of an unconscious paradise,
Tell me, how many moons have glow'd and paled
Since in thy Mongol face at length was lost
All trace of Prince Siddartha's lineaments?
How long, O placid mystic, since thou wast
Carved in thy convert's image, and the scents
Of Ind upon thine altar were replaced
With sandal-powder, mill'd beside the brooks
That else adown the Lu Shan rush to waste?
Thou wilt not answer, but the ancient rooks
That nest upon the cedar at thy gate
Are cursing me as unregenerate!

Alas, I fear thy bent and wheezy bonze
Is not a ritualist; he offered me
For copper coin the candlesticks of bronze
And curtain from thy shrine of filagree,
Nay, dare I whisper it?—but thou shouldst know—
He hinted that he might replace thyself
For thirty silver shoes! Quoth I: "Not so;
They who have barter'd Gods for petty pelf
Did never prosper!" Then he smote the gong
That hung beside us and so summon'd thee
To hear his orisons and even-song.
The sacred birds still scolded from their tree,
As through the quaint and lonely temple's gloom
Ebb'd into silence that deep, brazen boom.

John Daniel Logan begins his "Preludes" (Toronto: William Briggs) with "An Epistle in Criticism," in which he lays down the interesting dictum that the cause of the failure of "Keltic" poetry in Canada is "the disfranchisement of Love, the decay of natural piety." Mr. Logan's own work does not seem of quite sufficient calibre to assist very largely in the rehabilitation of Canadian piety and love. He is often wordy and ineffective, but at times, as in this sonnet to E. A. MacDowell, he exhibits a fineness and fervor of feeling that has its charm:

Dreamer in tones, whose mellifluous music wrought,
As Ossian's Harp in Keltic days of yore,
With captive spell, must we hark nevermore
The melody thy wistful spirit caught
From land and sea and sky and every spot
Of Beauty ineluctable, before
The dumb, obscure, appalling Night closed o'er
Thy senses' pearly ports and left thee naught
Save vacant visitings? Ah, Dreamer, though
The gods have veiled thine effluent phantasy,
We are thy homagers, forever thrall
To thy sweet song and music magical
Of winsome Woodland voices, and the low,
Sad poignant pulsings of the far-off opal Sea!

Mr. Logan closes his volume with a prose discourse in which, with apparent sincerity, he upholds "The rhythmical dummy," *e. g.*:

The dumble-doo and the dilly doss,
The umpty umpty oo;
While the livelong hours of the do-dad day
Did tra-tra la la la-loo——

as "the best means of securing, not, perhaps, beauty of idea, or nicety of poetic form, but fundamental music and the breath and life of poetry."

John Davidson, on the contrary, closes his "Holiday and Other Poems" (E. P. Dutton & Co.) with an uncommonly interesting bit of poet's prose decrying rhyme as a mark of decadence and urging English blank verse as the great "ascendant" poetic form of the world. Paradoxically, the volume itself is a collection of experiments in repeated and shaded rhyme of unusual technical interest. The somewhat hard, but vigorously imaginative and sharply individual quality that has made many of Mr. Davidson's other volumes memorable is less pervasive here; yet he is near his best in these stanzas from a curious dramatic "Eclogue" entitled "New Year's Eve":

There is a dish to hold the sea,
A brazier to contain the sun,
A compass for the galaxy,
A voice to wake the dead and done!

That minister of ministers,
Imagination, gathers up
The undiscovered universe,
Like jewels in a jasper cup.

Its flame can mingle north and south;
Its accent with the thunder strive;
The ruddy sentence of its mouth
Can make the ancient dead alive.

"A Book of Masks," by Wilbur Underwood (Elkin Matthews), has other marks of decadence than rhyme. Pierrot is Mr. Underwood's chief poetic symbol, and a faint perfume of *fleurs du mal* lingers in his page. Yet there is a sincere and wistful fantasticality in the little book, a slim energy of line, that make more than a momentary impression. The book has for its motto this from the "Journal of the Black Death": "And was played before the Kinge's Most Excellent Majestie a Masque of Shadowes." After a score of shadowy sarabandes in verse, the series concludes with:

THE END.

The hour has struck; with sudden grace
The mask is slipped from each worn face,
And desolate eyes meet desolate eyes
In glances of a lone surmise
That searching deeply only see
The veils of utter mystery;
The lights are flickering in the lamps,
The air grown sharp with earthy damps,
O little ghosts of sad delight
Pass wearily into the night.

A little while and over all
The faded leaves shall drift and fall,
The rain and wind from outer space
Walk desolate about the place,
And whisper through the grasses wet:
Adieu, Pierrot; good-night, Ninette.

"Love Songs and Bugle Calls," by Virginia Frazer Boyle (A. S. Barnes & Co.), is a collection showing a considerable measure of the poetic temperament and an unusual fluency in varied rhyme. The rather too easy pathos that colors many of the pieces is not likely to prove a hindrance to popular appreciation. Unfortunately Mrs. Boyle's poetic energy is too diffuse to admit of effective quotation.

The impermanence of personal charm as a poetic asset is rather mournfully shown in the volume of "Selections from Charles Swain," compiled "by his third daughter" (London: Fifield). Swain was a poet of rather exceptional popularity in the forties and fifties, and no less a man of letters than Robert Southey said of him: "If ever man was born to be a poet, Swain was." Yet, read at this hour, his quality is that of a rhyming Tupper and little more. The following characteristic stanza affords a rather instructive comparison with Mr. Davidson's fine stanzas on the same theme quoted above:

In Science as in Literature, the same
Creative spirit elevates the tone;
Philosopher and bard must mount to fame
Each by imagination's power alone;
The first conception Dalton's mind made known

Of the Atomic Theory was *then*
A vision beautiful as Fancy's own!
A fine poetic thought, worth Milton's pen!
Waiting a mind to grasp and give its form to men.

"The Humor of Love," an anthology edited by Tom Masson (Moffat, Yard & Co.), is done from a full knowledge of the lighter erotic literature in English and with an excellent *flair* for the things that are at once graceful and amusing. Read consecutively, the effect is considerably more humorous than amorous.

An anthology of unique interest is the book of "Sea Songs and Ballads" selected by Christopher Stone, with an Introduction by Admiral Sir Cyprian Bridge (Henry Frowde). The literary ballad is represented as sparingly as possible, the authentic "chanty" and "forebitter" as fully. The result is a corpus of salty folks-poesie that is as instructive as entertaining. The following stanzas are from a song that Admiral Bridge assures us has been sung for two hundred years by actual sailormen on actual ships:

Farewell, and adieu to you, (gay) Spanish ladies,
Farewell, and adieu to you, ladies of Spain!
For we've received orders for to sail for old England,
But we hope in a short time to see you again.

We'll rant and we'll roar like true British heroes,
We'll rant and we'll roar across the salt seas,
Until we strike soundings in the channel of old England;
From Ushant to Scilly is thirty-five leagues.

Then we hove our ship to, with the wind at sou'west, boys,
We hove our ship to, for to strike soundings clear;
We got soundings in ninety-five fathom, and boldly
Up the channel of old England our course we did steer. . . .

So let every man toss off a full bumper,
Let every man toss off his full bowls;
We'll drink and be jolly, and drown melancholy:
So here's a good health to all true-hearted souls.

RECENT FICTION.

The Woman's Victory. By Maarten Maartens. New York: D. Appleton & Co.

The short stories of Maarten Maartens are always worth looking into, but they leave no firm impression. They have the air of a series of clever tricks in which, as it were, less is said than meets the eye. They are experiments in fiction, studies in various manners from Maupassant to, say, F. Hopkinson Smith. Short-story writers are lucky enough not to have "messages" expected of them, but it is in reason that they should be looked to for some sort of consistent method. As a matter of fact, the tales in the present collection display in form a factitious versatility; in substance they are rather monotonous. Four or five among the most striking of them are variations on one theme. Some crucial moment is seized in the common life of a man and a woman, under the stress of which convention is thrown aside, and the truth revealed as to their mutual relation, or their common relation to the world, or both. Disillusion is the note. The author says some very "cynical" things, in quite the sweeping manner of the undergraduate who wishes to conceal the softness of his heart. Whenever he takes a step aside from his narrative for purposes of comment or generalization, he is sure to be either uncompromisingly sentimental or uncompromisingly bitter. He apparently cannot trust himself to strike a delicate balance of probabilities. It is distinctly more natural for him to be rhetorical and romantic than sardonic and pithy; and two-thirds of the tales in the present volume are undisguisedly in the former vein. One is irritated to find him at intervals bringing himself up to time with the customary smart little fling at Life or Love; as if a mess of rhetorical sentiment could not be quite wholesome without a pinch of bitterness. "He was a great banker. He was a great blackguard. It would not be necessary to say the same thing twice, but that the world is so slow to understand." This is the kind of puerility to which he is often reduced. There is much to be said for the old-fashioned open fire of sentiment, which had a way of baking one side of us so comfortably that we hardly noticed how chilly the other was.

The White Darkness. By Lawrence Mott. New York: The Outing Publishing Company.

This is a series of vigorous but rather conventional tales of the Canadian wilderness. Prof. C. G. D. Roberts and Jack London have done this kind of thing better. Perhaps the comparison is hardly in point, for the method here is openly melodramatic. The Northwestern mounted police, the Hudson Bay trapper, and the peripatetic Indian are the principal figures involved in the execution of the rulings of poetic justice, which are interfered with only by elevations of snow or depressions of temperature. There is naturally much of the Kanuck jargon, the phonetic representation of which is unusually successful. In short, these stories are all of the type known as "magazinable"; which means that the chances are against their proving (to invent a similar verbal horror) really "bookable."

Friday, the 13th. By Thomas W. Lawson. New York: Doubleday, Page & Co.

Modest Mr. Lawson, the author of "Frenzied Finance" and of many entertaining newspaper advertisements, has written a fervent novel called "Friday, the 13th." Here we have all the familiar stage setting of Wall Street, painted in garish splotches; gigantic stock deals, frightful panics, tickers, and tapes spinning out quotations a mile a minute, the usual seething mobs on the Stock Exchange, and all the "System's" hell-hounds let loose, chapter after chapter. There is a heart-throb on every page. We ache with sympathy for the proud, old ex-governor of Virginia, who has lost in unwise speculation several million dollars of trust funds; we yearn to look into the fathomless eyes of his virtuous daughter who, to retrieve her father's fortune and good name, persuades the hero to help her play the stock market, and prays the Lord to bless their operations; we shudder when the aforesaid hero, taking the "long" instead of the "short" side of Sugar, loses his first two million dollars. And of course we cannot but exult when, money-mad as he is, the hero turns the table on the System's cohorts and cleans up a cool billion of dollars; and on the last page we are very close to tears at the death of both the chief personages—of that beautiful daughter of Virginia, endowed with eyes of "spirituality and passion," and with a singular gift for stock-gambling, and of the superb hero, Rob, the picture of whom rises before us as he stood in the thick of his last panic—"his perfect-fitting, heavy black Melton cutaway coat thrown back from the chest, and a low, turned-down white collar, the setting for a throat and head that reminded one of a forest monarch at bay on the mountain crag awaiting the coming of the hounds and hunters."

As a matter of fact, as the advance notice says, "the fever of money madness and the curse of speculation run throughout the story," and what Mr. Lawson attempts to do is to show the degrading effect of speculation upon character. But the delineation of character requires more literary art than Mr. Lawson, with all his red-hot, hyphenated adjectives, can show, and as for his plot, it steadily thins instead of thickens. Of course, everybody that has ever been within a mile of Trinity Church knows that the book, as a picture of Wall Street life and methods, is absurd.

Sampson Rock of Wall Street. By Edwin Lefèvre. New York: Harper & Bros.

"Sampson Rock of Wall Street" is a highly successful operator who rears up a son to call his father "Dad," and to circumvent the old man in the great Virginia Central Railroad deal. The story, which is entirely readable, is filled with the technique of speculation, and all the detail of a big New York stock-brokerage office is laid bare. In fact, to the diligent reader the story can almost be recommended as a hand-book and ready reference guide to speculation. Talk of the market and of financial coups is thick and fast, and even when the author philosophizes, as he frequently does through the four hundred printed pages, money is his text. It would, however, be unfair to criticise Mr. Lefèvre for writing in terms of money, when that is frankly what he sets out to do, both in his many short stories which have appeared, as well as in this present book. But he doubtless realizes, as certainly as do his readers, that the history of a hundred Sampson Rocks, even though written with spirit and in faultless Wall Street terminology, will never constitute the great and vital business novel of the present generation.

NEWS FOR BIBLIOPHILES.

An Oneida County Printer: A Bibliography of the Press at Utica, N. Y., from 1803 to 1838. By John C. Williams; with an Introduction by Ellis H. Roberts. Illustrated. New York: Charles Scribner's Sons. $12.50.

This volume is an important accession to the list of American local bibliographies. More than a bibliography of Utica imprints from 1803 to 1838, it is also an account of the life and work of William Williams, whose enterprise made Utica an important publishing centre for more than a quarter of a century. The author, John Camp Williams of Morristown, N. J., is a descendant of this Oneida County printer, and has therefore enjoyed unusual facilities for securing material. The book has been printed in sumptuous style at the Gillis Press.

Nowadays, though there are important book-printing establishments at Albany, Binghamton, and other smaller cities of the State, practically no books are published in the State outside of New York city. Before this city had gained such a preponderance, the printers of many of the interior towns such as Peekskill, Poughkeepsie, Albany, Hudson, Utica, Bath, Cooperstown, etc., were publishers. The first press at Utica was established in July, 1798, by William McLean, who was proprietor of a newspaper, the *Whitestown Gazette and Cato's Patrol*. In August, 1799, another printer, Thomas Walker, came from Rome, near by, and set up a rival paper, the *Columbian Gazette*. While it is likely that, besides these weekly papers, various pamphlets, if not more pretentious books, appeared from these two printing offices before 1803, a quarto of twenty-three pages by Jonas Platt, "To the People of Oneida County," dated at the end, October 1, 1800, seems to be all that has survived. The Lenox Library possesses a copy. The earliest dated pamphlet with a title-page, printed in Utica, which Mr. Williams has been able to trace, was issued in 1803, by Thomas Walker: "A Viudication of the Measures of the Present Administration," by Algernon Sydney.

In 1800 William McLean received as an apprentice his brother-in-law, William Williams. The young man worked in the shop in various capacities as printer, book-binder, engraver on wood, and editor. Meanwhile the business frequently changed hands until in 1807 the style of the firm became Seward & Williams. In 1808, Williams started to manufacture the paper upon which some of his books, as well as the bills of the Utica bank, were printed. From this date onward for thirty years the issues of his press were numerous. While most of them were school books, some were of a more pretentious character. "The Utica Directory," containing 466 names of persons and firms, was published in 1817. In 1829, four editions of Elder David Bernard's "Light of Masonry," a volume of over 500 pages, were published.

The book contains a mezzotint portrait of William Williams, etched by S. Arlent-Edwards, a colored photogravure portrait of William Morgan of anti-Masonic fame, and numerous reproductions of title-pages. It is unfortunate that a volume of this character should be without an index.

The Washington manuscripts and letters sold well at Stan. V. Henkels's in Philadelphia, on February 22 and 23. The two little interleaved almanacs used as diaries by Washington, brought $4,300. The first of these, a copy of "The American Repository of Useful Information, containing a Calendar of the present Year," 1795, contained memoranda by Washington on fourteen of the interleaved pages, besides various notes on the printed pages. These manuscript notes by Washington are in large part merely remarks on the weather, but he also jotted down the itinerary of various journeys during the year. The other, and more interesting diary is a copy of "Briggs's Virginia and Maryland Almanac," 1798. It contains forty-five closely-written pages by Washington, telling his whereabouts, what he did, where he dined, etc., for almost every day throughout the year. The record of the weather is also very full, except for a few weeks in July where this entry occurs:

No acc't kept of the Weather and etc. from hence to the end of the Month on acc't of my Sickness which commenced with a fever on the nineteenth and lasted until the 24th, which left me debilitated.

These two almanacs were presented, one to Robert Adams, the other to Mrs. Margaret Adams, in July, 1827, by Judge Bushrod Washington.

On March 1 the Merwin-Clayton Sales Company of this city will offer at auction the autograph collection of Major William B. Wetmore of Alleuhurst, N. J. Some choice items are included, among them a one-page A. L. S. of Washington, Cambridge, January 20, 1776; two autographs of telegrams by Gen. Grant, one from City Point, Va., December 9, 1864, to Major-Gen. Thomas, the other from Prospect Station, Va., April 10, 1865, to Secretary of War Stanton; an A. L. S., two pages, 4to, dated 1758, of Samuel Richardson; letters of Henry Clay, Farragut, Sherman, J. A. Symonds, Victor Hugo, Tennyson, Thackeray, Edward FitzGerald, and others; a sheet of manuscript by Darwin; documents signed by Napoleon Bonaparte, Frederick the Great, the four Georges, Charles II., and James II. On March 4, the same company offers a miscellaneous collection, including a number of desirable, although not especially rare pieces of Americana. About seventy items are catalogued under Indian Narratives and Memoirs. These include the "Life of Black Hawk," Boston, 1834; Morse's "Report on Indian Affairs," New Haven, 1822; Seaver's "Narrative of the Captivity of Mary Jemison," Howden, 1826; Zadock Steele's account of his own captivity and sufferings, Montpelier, 1818, and the Rev. John Williams's "Redeemed Captive Returning to Zion," New Haven, 1802. Among first editions are books by Thoreau, Burroughs, Lang, John Hay, Irving, and T. W. Parsons. On Tuesday, March 5, the same firm sells the library of the Rev. S. L. Bowman of Newark, made up of miscellaneous books with some items of Americana, including nine lots relating to Nantucket and Stiles's "History of Ancient Windsor, Connecticut."

On March 6 and 7, C. F. Libbie & Co., of Boston, sell the library of Thomas Rodney Reynolds of Providence. Sets of the first octavo edition of Audubon's "Birds of America," 1840-1844, 7 vols., and his "Quadrupeds of America," 1846-1854, 3 vols., are the most notable lots. There are also a few first editions of Hawthorne, Irving, Mark Twain, and other American authors, some early printed books, including a Virgil, Venice, 1475, and books from the Kelmscott, Essex House, Vale, and Elston presses.

At an auction to be held by Sotheby, Wilkinson & Hodge, London, on March 16, a manuscript of Burns's "Scots Wha Hae wi' Wallace Bled" will be offered; also an exquisitely illuminated manuscript missal executed for Claude de France, daughter of Queen Anne of Brittany and Louis XII., on the occasion of her marriage to Francis I. It is written on 103 leaves of vellum, and contains sixteen full-page miniatures and other paintings.

Causes of the Civil War, 1859-1861. By Rear-Admiral French E. Chadwick. [The American Nation, vol. xix.] New York: Harper & Brothers. $2 net.

Admiral Chadwick's volume is only in part devoted to "causes," the larger portion of the book being occupied with a detailed account of the events, best classed as occasions, which prepared the way for hostilities. The first four chapters, in which the author reviews the political and economic situation in the South between 1850 and 1860, with particular reference to the nature and spread of those ideas, largely derived from Calhoun, on which the theory and practice of secession were based, traverse a part of the ground already gone over in Prof. T. C. Smith's "Parties and Slavery"; but the summing up, permitted here on a larger scale than in any previous volume of this series, skilfully avoids the appearance of repetition, and makes the volume more nearly a unit.

The chronological course of the narrative begins with chapter five, on John Brown's raid. It is an interesting illustration of the newness of our history that writers still think it necessary to dissect, with more or less minuteness, the intellectual and moral powers of Brown, and to apportion the judicial share of excuse or blame upon his associates and sponsors. Admiral Chadwick tells the familiar story effectively and fairly, though hardly, we think, with due appreciation of the chivalrous spirit of Brown and his prominent supporters. Then follow detailed chapters on the rising tide of opposition to the North and the Federal Government in Congress, the long-considered and carefully wrought plans for separation, and the Presidential election of 1860. Only on this last topic does the narrative, with its carefully marshalled wealth of facts, leave something to be desired. The minor political influences and shrewd political management which made Lincoln's nomination possible; the reliance of the Republicans upon the tariff issue, rather than upon slavery, in such States as Pennsylvania; the efforts to defeat Lincoln by fusion in several States; and the bearing of the election returns upon the question of disunion, are matters which, though touched upon, might well have been developed a bit more fully.

The most distinctive contribution of Admiral Chadwick's book, however, is its thorough-going examination of the military and naval situation on the eve of hostilities. The status of the Southern forts in the last months of 1860, for example, is excellently set forth, as are the state of Fort Sumter, the episode of the Star of the West, and the situation at Fort Pickens. Here, obviously, the writer speaks with authority, yet with a breadth of view, a careful regard for balance and perspective, and a subordination of technical detail worthy of hearty commendation. Yet the author does not hesitate to put censure where he thinks it belongs; he condemns Anderson, for example, for failing to help the Star of the West, points out Lincoln's impropriety in issuing orders over the heads of his department chiefs, and censures Scott for the general inefficiency of the army as well as for toying with rebellion on the eve of war. Equally well done, though in more familiar

fields, are the accounts of Buchanan's vacillating course, of Lincoln's Cabinet trials during the first month of his administration, and of the double policy of negotiation and preparation which the South successfully pursued. Admiral Chadwick does not spare the South or its leaders, though for the most part he lets the simple record of events carry their own condemnation.

The bibliographical chapter, as usual, notes the most important printed authorities. Of manuscript material, the most valuable are the Pickett papers in the Treasury Department at Washington, containing the correspondence of the Confederate commissioners. The map illustrating the John Brown raid, and the chart of Charleston harbor, should be particularly noted as helpful aids.

Letters from Port Royal: Written at the Time of the Civil War. Edited by Elizabeth Ware Pearson. Boston: W. B. Clarke & Co.

When Commodore Dupont on November 7, 1861, captured the forts at Hilton Head and Bay Point, South Carolina, the Sea Island region fell into the hands of the Federals. The planters and their families fled precipitately, and thus left to the conquerors all their possessions, including their human chattels. It was a curious situation in which the Washington Government found itself. It needed the cotton for the Northern market, but what was it to do with the hundreds of slaves which speedily became thousands? Free them it could not, at that time. Yet so improvident and childlike were they, that they were likely to starve if not taken in hand at once and made to work. In brief, it was as difficult a problem as if the Government had suddenly been compelled to take over a slice of Africa, and to assume overnight the moral and material care of a tribe of natives.

Cotton agents were at once dispatched to collect and send to the North the cotton crop on hand, which happened to be the largest ever raised there. But what next? Fortunately, the Treasury Department found in Edward L. Pierce of Milton, Mass., later well known as the biographer of Sumner, a man who had ideas and the ability to carry them out. He had been in charge of the contrabands at Fortress Monroe and had shown his ability there. About him he speedily gathered a notable band of enthusiasts, men and women, from New England, New York, and Pennsylvania, who arrived in Port Royal in March, 1862, to undertake as best they could the work of preparing the slaves for whatever status in life the future held in store for them, and of raising the cotton crop of 1862 on the various plantations.

Few if any of this band knew the colored man or the South. Still fewer were practical farmers. Some speedily proved inadequate to the task; that any succeeded is really cause for wonder, except that these young college men and brave and patient women were as highly inspired as any of our youth who laid down their lives on the battlefields of which the Port Royal pilgrims heard so infrequently. Missionaries they were in the best sense, but without the lessons of older missionaries or the teachings of martyrs to guide them. Yet the zeal for the downtrodden, to whose aid they had hastened, sustained them in the hours of discouragement. How they blundered and struggled on to very considerable success, and how their military superiors seemed in league to ruin their whole undertaking, because of poor judgment, or jealousy, or intrigue, is set forth in the volume before us in their own simple, unaffected words—missives written only for their family circles.

It is a record of unselfish, patriotic endeavor, of which every American can read with pride. For it tells of an undertaking of notable value. This "Port Royal experiment," as it was called, answered forever the question whether the freedman would work without the lash, and would work more economically than the slave, just as the Port Royal regiment raised by Col. Thomas Wentworth Higginson ended forever speculations as to whether the freedman would fight on the battlefield and fight well. The "Letters" necessarily end before the negro had proved himself worthy of freedom; indeed, the dominant note at the close is one of disappointment and regret. But as the editor, Mrs. Pearson, points out, the very sign of the working of the ferment of freedom was in the freed man, "as a matter of course, unreasonableness, insubordination, untrustworthiness." It is to the everlasting honor of the black race that nothing more serious could be alleged against it in that overwhelmingly sudden transition from the ignorance, degradation, and sloth of slavery to ignorant liberty; and it must not be forgotten that in the isolation of the Sea Islands the negro was probably at his lowest, or more nearly a primitive African than elsewhere in Dixie.

This volume would have been justified if it had merely given us the picture of the blacks of 1862 and portrayed the spirit of those whom one of the blacks called "de fust gang white people been here." It has a special value beyond that. At this time, when the growing acuteness of the negro problem makes it all the more necessary to keep in mind the historical background of that problem, a study like this becomes of special value as an index of the progress the black race has made. As an historically accurate picture of slavery as it really was, it is a most valuable antidote to much misleading gush written by men like Thomas Nelson Page, according to which the unknowing reader might readily believe that the condition of the favored household slave on the 8,000 large estates was a true picture of the whole institution of slavery. The "Letters from Port Royal" have been painstakingly edited and elucidated by Mrs. Pearson. It is interesting to know that of the small group of writers to whose letters she had access, nearly all still survive. Mr. E. G. Philbrick, the principal figure in the executive work in the islands, died in 1889.

Thought and Things: A Study of the Development and Meaning of Thought; or Genetic Logic. Vol. I. Functional Logic, or Genetic Theory of Knowledge. By James Mark Baldwin. New York: The Macmillan Co. $2.75.

We will say, at once, that this is a most earnest, profound, laborious, systematic analysis of cognition, such as cannot fail to be of continual utility to students of psychology. But this does not mean that the work is fundamentally sound; for the imperfection that belongs to all human works necessarily appears in a philosophical doctrine in the form of error. Now, Professor Baldwin's book, although it is a work of psychology, and although it is the boast of modern psychology that it is a special science, like any other, yet undertakes to solve the deepest problems of philosophy, just as Wundt and many other psychologists profess to do; just as biologists often attack these problems under their several special lights.

What is meant by "Genetic Logic"? This is a hard question. The author devotes an introductory chapter of five and twenty pages to it, without affording any satisfactory reply, although, of course, he supposes that he has done so. Everybody knows what the science of logic, in its proper sense, means. It is the comparative anatomy of arguments. Everybody who has anything like an inside acquaintance with any of the successful sciences knows that an essential to the well-being of any science—its bread and butter, so to speak—is the restriction of every technical word to its strict meaning. Each new scientific conception calls for the manufacture of a new word. Extensions of the application of terms ought to be marked as extensions. When chemists talk of "alcohols," the plural suffices to show that they are not speaking of spirits of wine merely, but when mathematicians speak of symbolical "multiplication" and logicians of logical "multiplication," their practice begins to be rash. Although generalization should be as free as air, still generalization ought to find some modified form of expression showing that it is generalization. The reflections of any mind that takes its part in the present life of science must bring all this home with insistence; but before the days of Young and Lavoisier, or when Buffon was at the head of biology, it had not yet become manifest; so we can find ample excuse for Kant, that, having a multitude of new conceptions to introduce into philosophy, he should have sought to render them acceptable by giving them the names of more or less obsolescent conceptions more or less analogous to them. Along with much still worse wrenched nomenclature, he spoke of "transcendental logic"; and Professor Baldwin's "genetic logic" is by no means unlike an elaboration of that part of Kant's "transcendental logic" which was omitted from the second edition of the great "Critik"; and was omitted, not, we take it, because the great philosopher thought its substance erroneous, but because he thought it irrelevant even to "transcendental" logic.

It would be interesting to trace out the history of logic from a little before Kant until to-day, and to show how, as physical ideas acquired predominating influence, and as the so-called "moral" sciences aped the physical sciences, the original idea of logic as the study of how reasoning ought to proceed sank to the idea of how the human mind normally and regularly does proceed. The old-fashioned or pure logician will tell you that the question whether an argument is sound or not has nothing in the world to do with how men think, but is simply and

solely whether the being of the facts virtually premised (including the facts of the order and effect upon the mind of its experiences), does or does not include the fact inferred. These things the psychological logicians hardly discuss. They analyze the process of development of thinking; how, precisely, from sensation we come to perception, from perception to memory, from memory to imagination, from imagination to fancy and playing, and so on to thought. One of Professor Baldwin's reasons for calling his investigation "Genetic Logic" is that he undertakes very minutely to trace out this "progression" or series of "progressions," as he holds that it takes place in the mind of every man, every time he thinks.

But he has a further reason. Professor Baldwin's studies of the minds of two children are famous, all the world over. He believes, and many psychologists, no doubt, believe with him, that he accurately interpreted all the stages through which the consciousness of those children passed, from birth until they became as easy of study as are the minds of grown persons. Now, without being explicit, he pretty plainly thinks that the stages of growth of the child's mind are, to an important degree, reproduced in the "progressions" of the mental representations of the grown person, every time he thinks. In this second respect his "logic" is genetic. But it is more than inconvenient that it should be called logic. After explaining, none too lucidly, in his first chapter, what he means by "genetic logic," the author remarks:

> There will doubtless be many who refuse to follow the use of the term logic here suggested, especially among those who find it impossible to give up the tradition. . . . [Tradition is simply everything in the use of words, and especially of terms of science.] Those who wish to call it Psychology, or Epistemology, may be free to do so with no fear of doing the work injustice. As to names, *chacun à son goût*.

Ah, but here is a great misapprehension. It is by no means a question of taste; for the fact is that Professor Baldwin does not call this "logic" as if he had called it "subcutaneous pneumatics," or by any other meaningless vocable. He calls it so under the impression that it is a legitimate generalization of the traditional meaning of the term "logic." He is evidently quite unaware that he and the pure logician inhabit different universes. They not less do so than two persons of whom, throughout a long debate on "reminiscence," one by that term should understand the beating of brains in the effort to recall experiences, while the other should all the time mean the events remembered.

What the real nature of Professor Baldwin's book is, so far as a careful study of the published third of it discloses, is a psychological analysis of the operations of cognition; and so considered, it appears to the reviewer to be a signal setting forward of science, what the Germans would call, by an exaggeration customary with them, an "epoch-making" work. This judgment by no means implies that the theory is true in all its details: it rather implies the contrary. Indeed, we venture to think that at least one error permeates the whole, while many of the steps of the proposed progressions are open to no slight nor vague doubt, even if we grant, what the author has by no means proved, that there is any one invariable process by which thought is developed. But the reason why, in our opinion, the publication must serve as a precious landmark in future investigations, is that it lays down, for the first time, a definite project of structure of the theory of cognition in great detail. When one has to build a house, at length a definite plan is drawn, in which all the conditions—the utilities, the prices of one and another kind of masonry, the sizes of timber that are staple, etc.—are duly considered; and this first plan becomes, from the time of its execution, the focus of study out of which the veritable building plan is to be evolved. It is a plan to be pulled to pieces, to be patched up, and perhaps, at last, to be discarded. Yet otherwise than by the aid of such a preliminary plan, a thoroughly satisfactory house can hardly be had. Just such a preliminary project it is, with which Professor Baldwin has now enriched the psychology of cognition. The mere vocabulary of well-considered new technical terms—some fifty in number—that this volume expounds is in itself a precious gift to psychological investigation. For with each of these new terms there goes a valuable new conception.

We fear the reader of this volume, who has most likely found it pretty difficult and complicated, will be almost staggered when we say that we believe the prevalent fault of the theory to be that it makes the structure of thought and of ideas to be too simple. We only mean, however, that it is too simple in a certain definite respect; namely, that what the author calls "dualistic"—that is, referring to two subjects, or objects—is sometimes rather triadic; while the projective consciousness which he admirably describes, but which according to him involves no dualism and we grant does not explicitly recognize two subjects, must, as we venture to think, in order to be projective, regard the objects perceived as differing from others by their insistent presence. If so, there must certainly be a dualism, however little it be recognized. For insistence implies something resisted, and where there is resistance there must be effort, and effort with its correlative resistance is clearly dualistic. Moreover, the author frequently speaks of the "meaning" of an "object." It appears to us that meaning belongs exclusively to signs; and a sign, as the medium between two minds or between an object and an idea, and being so regarded, however obscurely, must involve a triplet.

A *Tour of Four Great Rivers, the Hudson, Mohawk, Susquehanna, and Delaware, in 1769.* Being the Journal of Richard Smith of Burlington, New Jersey. Edited, with a short history of the pioneer settlements, by Francis W. Halsey. New York: Charles Scribner's Sons.

Smith's Journal called for just such an editor as Mr. Halsey, who has the topographical mind, and has made the paths of long ago clear if not straight. It is conceivable, however, that another editor might have compressed his preface, which is nearly half the book, into a closer narrative of the settlements later considered in the Journal, and used a large part of what was left as direct elucidation, by way of foot-notes. It would not then be necessary for the reader to carry in memory the whole body of what the editor has to say in explanation of a long and somewhat intricate story.

Richard Smith (brother of Samuel Smith, the early historian of New Jersey) was only thirty-four when he took this journey with the definite object of surveying the Otego patent of 69,000 acres on the Susquehanna, which included large parts of the present town of Oneonta and Otego, south of Cooperstown. The charm and value of his Journal is its remarkable directness. Mr. Smith went out to inspect land, and he stuck to his task with a self-restraint as commendable as rare in a diarist. The situation, the character, the possibilities of the land are carefully noted, its accessibility, the nearness to water, the outlook for timber, and the possible crops. He was not, however, unobservant of the incidents of the journey of 676 miles, made between March and June, through a country which seemed new and wild to his eyes, though, as Mr. Halsey says, it had all been known to Europeans for a much longer period than that from the Revolutionary war down to the present day.

The enormous holdings of the great patroons of the Hudson Valley and elsewhere—the Van Rensselaer, Philipse, Van Cortlandt, Livingston, or other manors—all impressed our traveller. Mr. Halsey's observations on these great estates, and the sparseness of the population, lead him to the conclusion that such a system of land-holdings "retarded the growth of the Hudson Valley." He might justly have added that the evil effects of this system can still be discerned in such spots as Burden, or Staatje.

Smith's writing shows him to have been possessed of a mellow temper, and a mind of some cultivation. Even without Mr. Halsey's historical companionship, the *Journal* (not hitherto unknown, but now printed entire for the first time) would have been good reading. The several plates of houses and scenes with which the editor has enriched his volume, if not novelties to the historian, bear republication and illustrate the text very well. Several unfortunate blunders of the printer or the proof-reader disclose themselves in the Introduction, but the *Journal* itself is a satisfactory reproduction of a valuable manuscript. The index, too, calls for a good word: it is full, yet not complicated; but why, pray, was it not strictly alphabetical?

Sidney Herbert, Lord Herbert of Lea. A Memoir. By Lord Stanmore. With portraits and illustrations. 2 vols. New York: E. P. Dutton & Co. $7.50 net.

Never did luckless biographer advertise his embarrassments and misgivings more frankly than Lord Stanmore. He had "somewhat rashly" promised Lady Herbert years ago to undertake this memoir, but did not then know how great were the difficulties of the task. Sidney Herbert's life was short, and not highly eventful. "His name is not connected with any great and striking act, either of domestic or foreign policy." He was, by the testimony of all who knew him, a man of singular personal charm and sweetness of character, but how can the delicate aroma of such a nature be

conveyed to a later generation, especially when the written material at hand is so meagre? In such circumstances, says Lord Stanmore, the only recourse is a "bare recital of outer events" with "a sketch of the times in which he lived"; though he admits that the consequent product "can hardly be classed among true biographies." Nevertheless, having pledged his word, he puts his pen to the work, "though I fear the result will be as unsatisfactory to my readers as it is to myself." This is a portentous *caveat* to nail up on the door to 900 octavo pages!

The net impression could have been better made in one-third the space. The terrific *longueurs* about Herbert's work in the War Office relate mostly to such obsolete technicalities and burned-out controversies that they pall horribly on the reader. The personal side of the man is attractively brought out. There was strength in his sweetness. His political sagacity was excellent. Of all the little group of Peelites that survived dolefully under Derby and Palmerston, looking so long in vain for a rest for their feet, none was more shrewd in counsel than Herbert. Sir James Graham was constantly deferring to him. Gladstone frequently consulted him. Several new letters of Gladstone's are given in these volumes. He was a fast friend of Herbert's from Oxford days, and deeply mourned his premature end. But when it is said that Herbert was a man of winning grace and thorough chivalry—well named after that Sir Philip Sidney from whose family the Pembroke Herberts are proud to trace their descent—and that he had talents for public life which, had length of days been granted him, might have made his name eminent, all has been said.

The Cambridge "Apostles." By Frances M. Brookfield. New York: Charles Scribner's Sons.

This is a book that it would be pleasant to speak well of, if that were possible, from the kindly feeling towards the Brookfields raised by "Mrs. Brookfield and Her Circle," and the interest attaching to many of the characters discussed—Hallam and Tennyson, Milnes and Maurice, Trench and Sterling. If it had been entitled "Sketches of William H. Brookfield and his Friends," it might have passed muster as a chatty volume, not very deep in matter, and not always pure in style, but fairly amusing. But to handle the Cambridge "Apostles" rightly is quite another thing; and to one behind the scenes this is not a good book.

A cynic—*i. e.*, a Harvard senior—once said in an essay that when a man had a secret to keep he simply said nothing about it; if a woman had one, she informed everybody that she had a secret, and then set to work keeping it hard. There is a similar distinction between the Cambridge Apostles and the "secret" societies of American colleges. The Apostles are secret because they never talk about themselves or each other among outsiders; never announce their meetings, wear no badges, and act as if they had never heard of such a thing. There was not the same secrecy in the early days of the society, the twenties and early thirties, which is the period Mrs. Brookfield has tried to write about, and which she proclaims as the heroic and golden age—nay, the only real existence of the society. But it is so now, and it has been so for sixty years. The Cambridge Conversazione Society, which is still its official name, savoring of a bygone age, was founded in 1824 by George Tomlinson, afterwards bishop of Gibraltar (whom for some inscrutable reason Mrs. Brookfield calls Henry). The date is significant, for had it been in existence a few years earlier, Macaulay would surely have been a most prominent member. The object was discussion with absolute freedom, entirely released from the conventional shackles which fettered almost all thought among those who claimed to be gentlemen and scholars. Among the early Apostles the discussions were mainly on literature, particularly poetry; later they have turned more to metaphysical and moral subjects.

The society was never large, and what determined the election of any member is known only to the members. They will not tell, and the outside herd could not understand if they did. Mrs. Brookfield not only makes her father-in-law head the book as "the Friend of the Apostles," but gently hints that one great claim of the Apostles to distinction is that they were his friends. Yet he was not a member of the society. She gives no reason; one can easily be given. They did not think him sufficiently Apostolic.

For several years after its institution the society maintained no particular secrecy. It is a tradition that the various elections and rejections made it extremely unpopular. Moreover, a theory was started that when its members left Cambridge they all became members of the Sterling Club, which was firmly believed to be a society of avowed infidels, as may be seen by any one who will read "Mr. Brown's letter to his nephew" in Thackeray's Miscellanies. At all events, the society in Cambridge dwindled to William Vernon Harcourt and James FitzJames Stephen, both men with infinite capacity for everything, especially making themselves disagreeable. When they ceased to reside, the word went about that the Apostles had ceased to be, in the present or future—only they had not. They simply stopped all publicity and became absolutely secret, to eye or ear. Since then they have numbered members fully worthy to compete with those whom Mrs. Brookfield considers peerless. F. W. Farrar, Ernest Bowen, Henry and Arthur Sidgwick, George Trevelyan, Henry Jackson, Frederick Pollock, Gerard Balfour, are not men for anybody to look down upon. There have been three American members, of whom the second, alas! is no more—William Everett, Frank Eustace Anderson, and George Lockhart Rives.

If any one asks to know more of them, he had better go to Cambridge University as an undergraduate, show without the least attempt at canvassing, and particularly without ever talking about the Apostles, that he can see things as they are; let him be learned without pedantry, argumentative without prolixity, a disputant who never gives offence, an independent thinker who enters into others' thoughts; as warm-hearted as Cicero, as good-humored as Ariosto, as humble as Newton, as fearless as Bentley; in short, let him give his days and nights to the biography of Henry Sidgwick.

Science.

The Electron Theory: A Popular Introduction. By E. E. Fournier d'Albe. With a preface by G. Johnstone Stoney. New York: Longmans, Green & Co. $1.50 net.

Fournier d'Albe writes perfect English, agreeably and lucidly; and his book could be mastered by an intelligent boy. It would be easier to read, however, if the author would not interrupt his train of thought with paragraphs and even pages whose substance, however essential to the whole theory, forms no part of the matter he is endeavoring to communicate in the particular context. Thus, in one place, having mentioned how a certain quantity can be calculated by successive approximations, he breaks off and gives several pages to what amounts to an elucidation of the catch about Achilles and the tortoise. So likewise Mr. Fournier interrupts reasonings which nowise depend upon the magnitudes of the objects, to tell us in terms of quadrillions and quadrillionths how they compare with familiar quantities, as if we were in truth familiar with quadrillions. Nevertheless, to those who know what to skip for a time, turning back to it afterwards, he presents a clear conception of the consequences of the truth of the Electron Theory.

It is not the extreme form of that theory that is here presented, that form which demands that one should uproot all his conceptions of matter, and that leaves one drifting in a dimly lit ocean without compass or rudder. The theory as here set forth demands no admissions beyond such as every physicist must confess to be, if not quite proved, yet to be recommended by experimental confirmations of virtual predictions required by the theory. The theory itself consists of half-a-dozen clauses. From these follow the multitudinous phenomena of electricity and magnetism, so simply and clearly that no other way has yet been suggested in which they can all be so clearly held together before the mind. Even if the theory were known to be false, it would be of high utility as enabling one to grasp, in a unitary way, all the effects of electricity. But the supposition that it may be false is a mere fanciful possibility.

Of course it can be, and most likely is, false in the sense in which every similar representation is false; namely, in implying that there are no differences, distinctions, details, where such there really are. For example, atoms were once supposed to be indivisible wholes; but now we learn that even an atom of hydrogen consists of at least a thousand independent corpuscles, while other atoms contain more in proportion to their atomic weights. The electron theory supposes all the electrons to be absolutely alike; or rather, it does not suppose them to be unlike. But as atoms have been proved to be complex structures, the science of the future, if it does not disappoint conjecture, will find that the same is true of the electron. We must expect that time will show the electron theory to be in one respect and another insufficient. Yet, in that sense in which the atomic theory, crude and ill-supported as it was, and tottering like a

"rocking-stone," nevertheless still stands, we may with well-grounded confidence put our trust in the endurance of the new theory. At any rate, of one thing we may be well assured—that there is no avenue except the electron theory, as it is expounded in this little volume, through which one can so easily gain an acquaintance with all the phenomena of electricity—with the Seebeck effect, the Thomson effect, the Peltier effect, the Hall effect, the Ettinghausen effect, the Leduc effect, the Zeemanu effect, and all the rest—and render their relationships to one another as familiar to our minds as those of all our aunts, our nephews and nieces, our second cousins, and cousins by former wives. There are other books on the subject that are more pretentious, but to our average reader we recommend this as most accurately meeting his probable wants.

"The Principles of Microscopy" (The Macmillan Co.), by Sir A. E. Wright, is a scientific treatise on the optical technique of the microscope, exclusive of actual microscopic work and study. The theme is illustrated at every step by an exhaustive series of experiments, leading from simple to more complex optical problems, culminating in the demonstration of the actual stage-picture and the magnified image. Eighteen full-page colored plates, a large number of text cuts, and a tiny diffraction grating in a pocket at the end of the volume are additional aids to the elucidation of this difficult subject. An exhaustive index leaves the critic with nothing but praise for the thoroughness which marks every step in the treatment of the subject. Every microscopist whose interest in his work extends beyond the objective material will obtain from this book not only a clear conception of optical laws, but many useful hints for improving the microscopic image and rectifying optical errors.

Nos. 94 to 96 of the Communications from the Physical Laboratory of the University of Leyden, by Prof. Dr. H. Kamerlingh Onnes, director of the laboratory, have just appeared, and well maintain the character of the series. The special note of the work of this, perhaps the greatest, centre of cryogenic work in the world is thoroughness and accuracy. A few titles will indicate the scope of the series: A Modified Cryostat; A Cryostat for temperatures —252 degrees to —259 degrees; Purification of Gases by Cooling and Compression; How to Obtain Baths of Constant Temperature by means of Liquid Hydrogen; Comparison of the Thermo-Element Constantin-steel with the Hydrogen Thermometer. All are in English. In an early number, Professor Onnes gave his reasons for preferring English to French in these Communications.

"L'Annuaire," published by the Longitude Bureau at Paris, and "Annuaire Astronomique et Météorologique," by Camille Flammarion, both for 1907, are at hand. In addition to the usual data and information contained in the first, noted in these columns in previous years, may be mentioned three appendices of importance. One of them relates to the diameter of Venus by Bouquet de la Grye. The second is a note by the same writer upon the fifteenth conference of the International Geodetic Association at Budapesth last September. The third paper is by Henri Deslandres upon certain researches on the sun as related to the stars. "L'Annuaire" continues to be the most compact manual for scientific information anywhere published.

Three pamphlets have recently been issued by the director of the Solar Observatory on Mount Wilson, California, Prof. George E. Hale. The first is his report, taken from the fifth Year Book of the Carnegie Institution of Washington, for the year ending September 30, 1906. It is illustrated, and records a number of interesting advances. He announces a gift of $45,000 from John D. Hooker for a mirror 100 inches in diameter and fifty feet focal length. Already the observatory possesses a sixty-iuch reflector, and its work is so satisfactory that this larger one is peculiarly welcome. Completion of the instrument is not expected before the end of four years, during which time it is hoped that funds for its mounting will be forthcoming. The first of the other two pamphlets relates also to the new 100-inch reflector, and the second to a vertical cœlostat telescope which is to be employed on certain solar problems for which present appliances are not especially adapted.

Circulars 123 and 124 of Harvard College Observatory are concerned with (1) photographs of very faint stars, and (2) stars having peculiar spectra; also eighteen new variable stars. Information is frequently desired regarding extremely faint stars, and astronomers having collections of photographs showing these objects are urged to publish their material, or to send the information to Cambridge.

Volume II. of the Annals of the Royal Observatory of Edinburgh, just received, contains a catalogue of stars for the epoch 1840, based on a new and independent reduction of the meridian observations made at the old site of the observatory on Calton Hill by Thomas Henderson, the first astronomer royal for Scotland.

The first volume of memoirs from a new observatory at Tortosa in Spain has been issued. The institution is under the direction of Father R. Cirera, S.J., and attached to a college of Jesuit fathers. The present volume announces that the observatory has been established largely to study the relationship between solar activity and terrestrial phenomena of an electric and magnetic character.

England has an Association for the Promotion of Flight. To be certain that no mercenary or merely commercial motives shall have influence, its successes will be practically handed over to the nation free of cost. The provisional committee includes the Hon. C. A. Parsons, F.R.S.; Sir William Crookes, F.R.S., and Major B. F. S. Baden-Powell. The latter, now president of the Aeronautical Society, explains in the London *Times* how this new association is to differ from the earlier clubs. Its appeal for funds will be to the public, its results for them.

An Oceanographical Laboratory was formally opened in Edinburgh on January 16 with an address by the Prince of Monaco. The gathering together and arrangement of the material have been going on for years, and represent the work of eight scientific expeditions in the Arctic and Antarctic seas.

The *Geographical Journal* for February contains, under the felicitous title "The Snows of the Nile," the Duke of the Abruzzi's account of his exploration of Mt. Ruwenzori given to the Royal Geographical Society last month. The principal results we have already published. It is illustrated by a map and six plates. J. S. Gardiner contributes information in regard to the inhabitants and the agricultural products, especially vanilla, of the Seychelles archipelago, as well as to its history, fauna, and flora. Since it is a possible link between India and Africa, it presents innumerable problems to the oceanographer and the student of evolution and geographical distribution. Having apparently had no human inhabitants till modern times, it appears to be producing, out of French and Anglo-Saxon elements and blacks from India, Madagascar and every part of Africa, a new race of mankind with a peculiar tongue. The archipelago is absolutely free from fever and malaria. In a population of 21,000 nearly half the deaths are from old age. Other articles are a summary of the results of a nine years' survey and exploration in northern and central China by Lieut.-Col. Wingate, and notes of a journey through the western Himalayas by Dr. T. G. Longstaff.

In the *National Geographic Magazine* for February our minister to Ecuador, the Hon. J. Lee, gives an account of a trip from the principal seaport, Guayaquil, by railway and diligence to Quito. Owing to the great differences of elevation there is every variety of climate and agricultural products, from cocoa, cotton, and bananas in the coast land to wheat and corn on the high plateaux. For developing these industries he emphasizes the need of foreign capital. The bathing and burning ghats at Benares, India, are graphically described by Miss E. R. Scidmore. The important problem of the duration of our coal supply is discussed intelligently by M. R. Campbell of the Geological Survey, with the aid of several diagrams and a chart, from which we learn that "the coal fields of Montana are more extensive than those of any other State." His conclusion is that if the "appalling" increase of consumption during the past ninety years be maintained," our coal will practically be exhausted within one hundred years." An interesting review of Scott's "Voyage of the Discovery" is illustrated by twenty remarkable pictures of Antarctic scenery.

Prof. Henri Moissan, who last December received the Nobel prize for his experiments in the isolation of fluorine, his researches into its nature, and his application of the electric furnace to scientific uses, died last week Wednesday, after an operation for appendicitis. He was born in Paris in 1852, and in 1879 he became connected with the École supérieure de pharmacie in Paris. Later he was professor of mineral chemistry at this institution. He won the Lacaze prize in 1887 for his valuable experiments with fluorine, which he was the first to isolate and liquefy. His most striking success was the artificial production of diamonds by the sudden cooling of molten iron or silver impregnated with carbon (1893-94). More practical was his simplification of the production of acetylene gas.

He wrote many articles on the results of his researches, beginning with "Étude de la respiration végétale," 1874.

Prof. Alfred Kirchhoff, naturalist and geographer, has died at Leipzig. Born in 1838, he studied at Jena and Bonn, and in 1873 was appointed professor of geography at Halle. Among his books are "Schulbotanik," "Schulgeographie," and "Schulzgebiete des deutschen Reichs."

A committee representing the city and university of Bologna, and numbering among its members many distinguished foreign scholars, has sent invitations to the colleges and universities of this country to join in commemorating the three-hundredth anniversary of the death of the eminent Bolognese naturalist, Ulisse Aldrovandi. The exercises will be held June 12, 1907, the assumed birthday of the University of Bologna.

Drama.

MANSFIELD IN "PEER GYNT."

Richard Mansfield's stage version of "Peer Gynt"—at all events it is called the Richard Mansfield acting version—which was produced in the New Amsterdam Theatre on Monday eveniug, must have proved a bitter offence, or a great disillusionment, to the majority of Ibsen worshippers, who had assembled in great force to witness it. To the ordinary theatregoer, unversed in the Norwegian drama, it must have brougbt disappointment and probably bewilderment. Seldom have managerial mountains in labor produced a much feebler dramatic mouse. The simple fact is that the stage adaptation of the work has been conceived and carried out upon entirely wrong principles, although it does not follow that even the most judicious treatment could convert an essentially undramatic satirical poem into an effective play. "Peer Gynt" is for the library, not for the stage. Under the most favorable circumstances it would be almost impossible to get much of its broader meaning across the footlights, while the satire and the humor in it leave too much to the imagination to exercise their full force in the theatre. As for the finer poetical and literary qualities, they, of course, disappear or, at most, survive only in a very weakened degree.

It would be difficult to exaggerate the injustice which Ibsen has suffered. Even those who least admire him must resent such reckless misrepresentation. The earlier acts, with all the troll business—which seems rather puerile in action for all its satirical significance—are given in something like their proper shape, althougb many of the more serious and significant passages, which lend a sort of dignity to what is otherwise rather trivial, are suppressed, but, in the last half of the drama, scene after scene is skeletonized or thrown out altogether, without reference to sense or proportion. Only a few of these ruthless cuts can be mentioned here. Scarcely anything is left of Peer's soliloquies in the desert after the destruction of his yacht; the entire Anitra episode is cut out, together with the Memnon, Sphynx, and Madhouse scenes; the shipwreck incident ends with the sinking of tbe vessel; not a word is given of the sermon over the body of tbe young man who had mutilated himself—one of the very finest bits in the whole book—while all the closing scenes have been so furiously slashed as to be incoherent and ridiculous. Speaking broadly, it may be said tbat from first to last the adapter's chief motives seem to have been to keep tbe star as much in the middle of the stage as possible, and to subordinate everywhere mere literature to theatrical or scenic opportunity. Consequently, the representation, although striking as a spectacle and interesting in its local color, was of very small account as drama and largely negligible as a manifestation of Ibsen. There were only one or two points at which tbe spirit of the poem was caught, such as the fight with the Boyg and the shipwreck scene. The legitimate effect of Ase's death was missed, Mr. Mansfield not grasping the spirit of it. In acting Peer he clearly appeared to be more anxious to secure the good will of the audience than to bring out the significance of the character. Whether a stage performance of Ibsen's fantastic work, in whole or in part, is desirable, in the interests of art, is uncertain. The merits of this present experiment can not be judged by its success, which must be ascribed chiefly to curiosity.

On March 4, Ben Greet's players will begin their season at the Garden Theatre, offering Shakespearc, with a maximum of text and a minimum of scenic adornment. Mr. Greet will begin here with "The Merchant of Venice," which will be followed by "Macbeth," "As You Like It," and "Julius Cæsar." In Holy Week he will revive "Everyman," when the leading character will bc played by a young man.

Only two weeks more remain of the engagement of Miss Julia Marlowe and E. H. Sothern at the Lyric Theatre. In general it has proved successful, not ouly in an artistic, but in a commercial sense. The house has been full at every performance, the public, as usual, showing itself ready to support drama of a higher quality than that which is ordinarily provided. The demand for Shakespeare is particularly noteworthy.

The death is announced, at the age of eighty-four years, of the veteran English actor, Arthur Augustus Wood, the associate of most of the famous players of at least two generations. He was a highly intelligent and useful performer in almost every variety of comedy. He supported Macready and the elder Farren.

Dr. Max Nordau's play, "A Question of Honor," has been translated by Mrs. Mary J. Safford, and will soon be published by John W. Luce & Co. of Boston.

Music.

Thirty Piano Compositions by Felix Mendelssohn. Boston: Oliver Ditson Co. $1.50.

There was a time when every schoolgirl was singing the songs of Mendelssohn and playing his "Songs Without Words" on the pianoforte. That was during his lifetime and the quarter-century following his death. Then came a reaction. As the more thoroughly romantic works of Schubert, Chopin, and Schumann came more into vogue, Mendelssohn fell into neglect. His songs and instrumental pieces seemed faded; much use had made them threadbare. But this temporary neglect proved a blessing in disguise; within the last five years there has been a noticeable disposition to try this music again and see whether it really is obsolete; and many have found, to their pleasant surprise, that a considerable proportion of it had been buried alive and is capable of resurrection.

The inclusion in Oliver Ditson's Musicians' Library of two volumes devoted to Mendelssobn's pianoforte pieces, is in itself proof of the renewed interest. One of these volumes, now in press, contains the "Songs Without Words"; the other, which lies before us, has eight of these instrumental "songs," the other pieces being chiefly selections from the sonatas, tbe characteristic pieces, the capriccios, the preludes, studies, and sets of variations, including the best of all his piano pieces, the "Variations Sérieuses." The volume is edited by Percy Goetschius, who has supplied useful hints regarding fingering and interpretation, and Daniel Gregory Mason, who is responsible for the introductory essay.

Mr. Mason does not attempt to conceal Mendelssohn's shortcoming. He concedes that there is a lack of virility; that "his blood was not red, his feelings were not impetuous, his passions were not deep." His expression is generally either gay and brilliant, or sentimental and sweet; "it is surprising how he harps on these two strings." His style is marred by a similar monotony: "He sticks to a key, . . . as a bee sticks to a flower." Yet, after all, it is only emotionally that he falls short; "in symmetry of form, in purity of style, in all those invaluable qualities, in a word, that are traceable to the mind rather than to the heart, Mendelssohn is undeniably great." Perhaps he would not have fallen into temporary neglect had he not, thougb naturally inclined to romanticism, shown such a strong distaste for some of the most striking aspects of romanticism, the *tempo rubato*, for iustance. Mr. Mason refers to the "simple, unfurbelowed loveliness" of Mendelssohn's melodies, but fails to call attention to the fact tbat it is this melodie charm whicb pleads most eloquently for the restoration of his music to popular favor in these days of melodic drought.

Some years ago G. Schirmer printed a "Catalogue of Musical Literature and Theoretical Works," making a pamphlet of 116 pages, with special sections devoted to English, German, and French books, followed by a subject index. This pamphlet has now been reprinted, preceded by a supplement of 61 pages, containing a list of the important publications of the years 1903 to 1905, under the same arraugement. The more important titles are usually followed by a few lines of comment, which help to make the catalogue a valuable gulde to students and amateurs.

Oscar Hammerstein's zeal for reviving operas that once were popular is not likely to last very long if he has a few more experiences like those which attended his

production of Thomas's "Mignon" and Delibes's "Dinorah." The interest in the Thomas opera, which had a fairly good cast, did not suffice for two paying audiences, while "Dinorah," with a mediocre cast, did not draw one such audience, wherefore the manager wisely decided to drop all but the second act (together with the splendid overture with chorus) and present that on Saturday evening, together with "Cavalleria Rusticana," and the fifth act of "Faust." An occasional procedure like this does no serious harm to art, and it must be conceded that, on the whole, Mr. Hammerstein has kept his performances at a high artistic level. It is, therefore, a pleasure to record the fact that the financial results of his first season have been sufficiently encouraging to warrant his making arrangements for a second season. More attention, he promises, is to be paid next winter to the Wagner operas. As a sample, we are to have "The Flying Dutchman," with a cast including Mme. Melba and MM. Dalmores and Renaud. On Melba nights the Manhattan is always crowded.

The programme for the seventh concert of the Philharmonic Society at Carnegie Hall, Friday afternoon and Saturday evening, includes Schumann's "Manfred" overture, Mendelssohn's "Italian" symphony, Grieg's poetic piano-forte concerto, which will be played by Mme. Samaroff, and Beethoven's "Leonore" overture.

Lovers of *a cappella* singing will have the opportunity of hearing sacred and secular music sung by the choir of the Musical Art Society on Thursday evening, March 7, when the second concert of the fourteenth season will be given in Carnegie Hall. Examples of the old Flemish and German masters and of Italian and Russian and German composers of more modern days will be sung. An "Ave Maria" by Mendelssohn for eight-part chorus, soli, and organ, and the Elegy by Beethoven, with string accompaniment, will be given.

Art.

The Collector's Manual. By N. Hudson Moore. With 336 engravings, and with borders by Amy Richards. New York: Frederick A. Stokes & Co. $5 net.

This is a valuable guide to the study of such decorative objects as are commonly sought by collectors. The book has somewhat the air of a "parlor-table book" of not the highest character, with a would-be ornamental border for the letter-press and another for the photographic plates. These borders increase needlessly the size and weight of the volume: it measures 8x 10¾ inches, and it might well have been two inches shorter and narrower. Yet no prejudice excited by these features should keep any one from examining the book, for each chapter will probably help a person who would know what wise and experienced collectors are in search of. The chapter on glassware, for example, which we select almost at random, contains a surprising amount of useful suggestion. Only now and then a very well-informed student will note some omission. The arrangement, to be sure, is not methodical; the qualities and peculiarities of cut-glass, engraved glass, "Bohemian" glass, Venice glass, and the rest are not treated under separate heads, as in a book of reference. For this chapter there are thirty-nine separate photographs representing perhaps sixty different objects, arranged on sixteen plates; and these half-tones are fairly good, and are large enough to illustrate the text. Among the specimens there are few of very splendid or precious wares; but such pieces as the collector may find in the better shops and now and then at auction sales, are well presented.

Chapter i. deals with furniture—side-boards and dining-tables; ii., pottery and some rather modern porcelains—Spode and Parian, Bristol, and Crown-Derby; iii. returns to furniture, such as chairs, arm-chairs, and sofas; iv., glass; v., chests, wrought iron and wood, cuphoards and cabinets; vi., brass hollow-ware, and candlesticks. Pewter does *not* follow next, but is put after two detached chapters on wooden furniture and one on pottery, as well as the essay on old clocks. And so, by a disorderly advance, one reaches chapter xiii. at last, and some potteries of special kinds—Staffordshire dogs, Crown-Derby shepherdesses, Pennsylvania birds, a cow and a poodle from the Bennington works in Vermont, and cottage-ornaments and toys of various provenience.

The book is evidently the work of a practised and ardent pursuer of this peculiar game, one, moreover, who can point to what exists in old books about his favorite sport. The extracts from Elizabethan and Jacobean authors, for instance, are much to the purpose. And yet the space occupied by rather useless borders might well be filled with careful footnotes. There is a full list of illustrations and a satisfactory index.

"A Book of English Gardens," by M. R. Gloag, illustrated by Katharine Montagu Wyatt, is published by the Macmillan Co. It is more than possible that the text of this attractive volume was written to fit the pictures, and hence it is not surprising that there is a misfit here and there. But despite the imperfect coördination, the treatise is admirable in its way. The formal, or geometrical, style of laying out gardens has more than once been carried to excess. Largely owing to the fact that the formal style, taken all in all, is rather more costly than the so-called natural, or English, style, and always suggests extravagance, it has become a favorite among the suddenly rich, who desire to impress their neighbors. Italian gardens, as some of these creations are improperly called, are thrust into the rigors of a northern climate where neither skies nor soil can ever be propitious. There has been an inevitable reaction in favor of a more natural method, which has in turn become absurd; the freedom of natural combinations has degenerated into a license of tangles and thickets. In revolt against extreme formalism, some architects have gone so far as to reject all hints of it; a few, both in England and France, have even destroyed old formal gardens, in order that the space might be covered by the other type. It is against this bad radicalism that the author and artist protest, and they make out a good case. In no branch of decorative art is the golden mean more to be desired—a mean well expressed by Trollope: Decorate constructions, but do not construct decorations.

"The Garden Beautiful: Home Woods and Home Landscape" (imported by Charles Scribner's Sons), is another of W. Robinson's interesting contributions to garden literature. He is an attractive writer, who knows how to put sound advice in a telling form, and hence, both as editor and as author, has had a large following of enthusiastic amateurs. The only trouble with his books is the marked tendency to repetition; but this cannot well be avoided where allied subjects are under consideration. The present volume is more or less composite, as if articles from diverse magazines had been brought together without much regard to order or duplication. But, for all this, the book will serve an admirable purpose in directing greater attention to the treatment of woods on large estates, for the sake of beauty rather than mere utility. In many instances the woods constitute the most important feature of the home landscape, and they ought to afford gratification to all who are brought into contact with them. Mr. Robinson has been singularly successful in beautifying an estate; and no doubt much of the counsel here given is based not only upon his extensive acquaintance with current horticultural and arboricultural literature, but upon his own large experience. The volume is in a class by itself, in that it has no illustrations. Practically every other recent treatise on gardening is well filled with excellent reproductions of photographs either in color or in plain black and white.

Salomon Reinach, in a recent address before the Académie des Inscriptions, has presented in a new light the two versions of Leonardo da Vinci's Virgin of the Rocks. In the Louvre example, generally accepted as the original, the angel looks out of the picture and points at the kneeling St. John; in the version of the National Gallery, usually regarded as a copy by Ambrogio da Predis, the angel looks towards the Child. This brings about a certain concentration—an evident improvement in the composition, and the fact has been used to prove that Leonardo introduced this amendment in the cartoon for the replica. M. Reinach's studies lead him to a different result. He suggests that the pose of the angel in the Paris picture was topical, being peculiarly intended for Florentine worshippers. The angel points to the adoring St. John, their patron saint, and bids them emulate him in worship of the Saviour. When Ambrogio da Predis made the copy for a Milanese parish this gesture was changed, less as a conscious correction, than in view of its comparative lack of meaning in the Lombard capital. Incidentally this theory confirms the prevailing view that the Paris Madonna is the earlier and was painted before Leonardo went to Milan in 1483; and also gives an instructive example of a highly sensitive genius conforming itself to what we too scornfully think extra-artistic considerations. M. Reinach's lecture is published in epitome in *La Chronique des Arts* for January 19.

An important canvas by Baldovinetti has

been discovered in an unfrequented corridor of the Church of San Marco at Florence. It is a crucifixion with San Antonio of Florence kneeling at the foot of the cross. The dimensions are about nine feet by five, the medium tempera, much injured by flaking and repaint. The identification is made by Odoardo H. Giglioli, who describes the picture in the *Rassegna d'Arte* for February.

It is planned to remove to the Hall of the David, in the Accademia, Florence, certain works of Michelangelo at present obscurely or unworthily placed. Already one may see there the torso, in stucco, of a reclining River God, recently ceded by the neighboring Istituto di Belle Arti. Through the generosity of the King, the four unfinished Slaves so fantastically included in the decorations of the Grotto of the Boboli Gardens will also soon be transferred to the Accademia. It is suggested that a similar disposal be made of the other unfinished statues, the Viceroy in the courtyard of the Bargello, and the St. Matthew in the courtyard of the Istituto di Belle Arti. The convenience of such a concentration to students would be considerable, but it is a question whether the pleasures of the art lover would not be diminished by such a reform.

A Reuter telegram from Athens announces that excavations at Thebes have brought to light the ruins of what is believed to have been the palace of King Cadmus, the legendary founder of Thebes. Some remains of the ancient walls of the Cadmea, the acropolis of ancient Thebes, were visible as late as 1890, but seem since to have disappeared. Leake, who visited Thebes in 1805, speaks of having seen thirty yards of ruined walls, more than twenty-eight feet in thickness, the masonry of which is formed of roughly hewn masses of stone, not unlike that of ancient Tiryns. The report from Athens indicates that the palace within the acropolis bounded by these walls has been discovered. The clearing of the Cadmea would be of great value in supplying us with another "Mycenæan" acropolis. The undertaking, however, is made especially difficult by the fact that modern Thebes is built on that site.

Among the dealers' exhibitions of art in this city may be noted early English masters at Ehrich's till March 1; oils by Irving R. Wiles, Arthur Hoeber, Paul Cornoyer, Frank Fowler, Lyall Carr, M. Peterson, Richard Maynard, F. J. Wiley, Fred L. Stoddard, and Georgia T. Fry, at Powell's till March 1; paintings by Ernest C. Peixotto at Clausen's till March 2; recent paintings by T. W. Dewing and D. W. Tryon at Montross's till March 9.

James P. Silo conducted in this city on Friday and Saturday night an auction of 143 paintings collected by Eugène Fischhof. The highest price paid was $23,600 for Nattier's portrait of Mme. Adelaide, daughter of Louis XV.; and the next highest price, $23,050, for Corot's Don Quixote. The total amount received from the sale was $293,845. Among the more interesting prices were the following: A. Monticelli, Fête dans un Parc, $1,700; F. Thaulow, The River, $1,600; Cazin, Landscape, $3,000; Fromentin, Moorish Caravan in Camp, $8,500; Diaz, Visit to the Gypsies, $9,400; La Fée des Fleurs, $3,900; J. B. C. Corot, The Shepherds, $9,000; Italian Girl, $1,900; Landscape, $2,800; C. Troyon, The Farm, $2,600; Normandy Well, $2,300; Royhet, A Burgomaster, $1,500; Rehearsing, $1,600; Santerre, Portrait of the Marquise de Ruhel, $2,600; Sir J. Reynolds, Portrait of Mrs. Hales, $6,500; T. Gainshorough, Portrait of William Petty, First Marquis of Lansdowne, $12,500; Watering the Horses, $1,800; Van Dyck, Portrait of a Lady, $4,800; Tocque, Portrait of Louise-Henriette de Bourbon-Conti, $4,450; G. Romney, Portrait of Lady Hamilton, $3,700; Grassi, Portrait of the Princess Thecle Jahlonowska, $2,500; Sir P. Lely, Portrait of the Duchess of Alhemarle, $1,600; Portrait of the Duchess of Rutland, $1,550; De La Tour, Portrait of the Comtesse de Montaign, $1,900; Sir T. Lawrence, Portrait of Lady Eldon, $8,600; Miss O'Brien, $1,800; Landseer, The Little Actress, $1,700; Turner, Landscape, $1,800; Romano, Virgin and Child, $1,800; Rousseau, Sunset, $2,800; Constahle, Landscape, with Old Bridge in Suffolk, $2,700; J. Hoppner, Portrait of Frederick, Duke of York, $5,850; Portrait of Mrs. Angerstein, $5,800; F. Cotes, Lady Reeves and Her Children, $3,450; Sir Harvey and Lady Smith and their Son, $1,800; N. Largillière, Portrait of J. B. Oudry, $1,550; Portrait of Comtesse de Longeais, $7,400; W. A. Bourgereau, Young Girl, $3,100; F. Ziem, Constantinople, $2,650; G. Jacquet, La Romance, $2,325; E. Van Marke, Return from Pasture, $9,900; Feeding the Chickens, $2,400; J. L. E. Meissonier, L'Atteinte, $3,150; J. H. Fragonard, The Wagered Kiss, $13,500; N. Lancret, Concert Champêtre, $4,000; J. B. Greuze, Innocence, $4,700; M. W. Peters, The Fortune Teller, $3,350; R. Tournières, Portrait of the Comtesse d'Imecourt, $2,800; J. Van Ruisdael, The Cascade, $3,300; J. L. Gérôme, Street Scene in Tripoli, $4,500; Henrietta Rae, Diana and Her Nymphs, $3,600; C. Allori, The Betrothal, $1,800.

At a sale in Christie's auction rooms, London, on Februáry 9, a drawing by Rosa Bonheur, Les Longs Rochers, Fontainebleau, brought £577. The following prices were paid for paintings: Luke Fildes, Douhts, £330; Dolly, £283; T. S. Cooper, A Group of Five Cows and Two Sheep, £346. An important collection of ancient and modern pictures was sold at Christie's last Saturday afternoon. Among the more notable pieces were the following: Cuyp, A Dutch Farm, $19,950; Lawrence, Portrait of Miss West, $21,000; Morland, Happy Cottagers, $14,700.

At a sale of old masters at the Hôtel Drouot in Paris on February 7 Romney's Portrait of a Young Lady, in white dress and blue sash, brought 41,000 francs; Rignaud's Portrait of Nicolas de Launay, 6,000.

Finance.

GOLD PRODUCTION AND RISE IN PRICES

A correspondent writes to the *Nation* as follows:

According to all your teachings, as I understand them, there is now going on a rapid decline in the value of gold. All commodities are much higher than they ever were before, while gold is the only cheap commodity on the market. Why has your paper not touched upon this subject? Can I be so wholly mistaken in my supposition, or is it too delicate a subject for you to handle for fear of its effect upon the business interests of the country?

No subject in economics is "too delicate" to be dealt with, and even the business interests are not likely to be disturbed by stating the facts regarding a "decline in the value of gold." When we speak of a decline in the value of one or of all other commodities on the world's market—including securities, real estate, and wages—we mean that their value measured in gold has declined. What economists mean, when they speak of "depreciation" or "appreciation" of gold itself, is that the value of gold measured in commodities—in other words, the purchasing power of gold—has decreased or increased. If a given amount of gold will buy less of all sorts of commodities to-day than it did a month ago, or a year ago, or ten years ago, then it is economically correct to say that gold has depreciated.

But in the light of this reasoning, it should be manifest that the statement, Gold has depreciated, is only another way of saying that commodity prices have advanced. Therefore, so far from its being singular or paradoxical that "all commodities are much higher than they ever were before, while gold is the only cheap commodity on the market," the second phenomenon is the necessary complement and sequel to the first. If one arm of the scales rises, the other must fall. Even when commodity prices have risen through an accident of nature, through a harvest failure, through a war, through a protective tariff, or through reckless speculation on the markets, it will equally be true that gold has depreciated. A dollar will buy less than it bought before. If every commodity were to rise as a result of any or all such influences, gold would by that fact become "the only cheap commodity on the market." There is much obscure thinking, loose reasoning, and misleading definition, which needs to be swept aside before this subject can be intelligently considered.

What the writer of the above inquiry has in mind, however, is probably the question whether it is not primarily or solely the increased production of gold which has raised the price of commodities and has thereby indicated depreciation of the precious metal itself. The two phenomena have at all events been coincident. In 1896, the London *Economist's* "index number" of commodity prices was 1947; at the end of 1906, it was 2499—the highest since 1880. The world's gold output, which our Mint authorities estimated in 1896 at $202,251,000, it figured out in 1905 at $376,000,000, and, with last year's great increase in this country and in the Transvaal, production for 1906 is believed to have exceeded $400,000,000. It is commonly asserted, therefore, that this remarkable increase in annual gold production is the cause of the rise in prices. That it is at least a partial and contributing cause, is generally admitted. John Stuart Mill's declaration that "if the whole money in circulation was doubled, prices would be doubled," is frequently quoted. Mill, however, carefully qualified his statement, first by limiting its application to the quantity of

commodities on sale and the number of times those commodities are resold; second by restricting it to "a state of things in which money—that is, gold or silver—is the exclusive instrument of exchange and actually passes from hand to hand at every purchase, credit in any of its shapes being unknown."

As a matter of fact, such qualification of the rule is peculiarly necessary nowadays, because a larger part of the world's business than ever before is done through book credits, international barter, and offsetting accounts at clearing houses. But granting, for the sake of argument, that these other influences remained the same, while the production of gold, let us say, was doubled, the question of its effect on prices is presented in its simplest form.

New gold production exerts its influence in two main ways—through the increased power enjoyed by its possessors to buy more commodities, securities, land, or what not, and through the increased credit facilities, made possible on the money market through the heaping-up of the new gold in bank reserves. Both of these effects, however, have certain limitations. Professor J. E. Cairnes, reviewing in his "Essays in Political Economy" the exact influence of the Australian discoveries of half a century ago, showed clearly how the successful miners spent the new wealth obtained by their gold discoveries, and, in so doing, created a demand which Australian markets could not meet, and for which they drew upon European manufacturers. This new demand affected one class of commodities after another, and as Europe's ready supply of goods was drained by it, prices of the commodities in question rose, not only in Australia, but in Europe. In the long run, this influence extended to many commodities in the purchase of which neither the miners nor Australia had any part whatever. Now the first and most obvious point to notice is, that conditions nowadays do not altogether square themselves with Professor Cairnes's demonstration. The richest gold-producers—notably in the Transvaal—are great corporations. They pay high dividends, but their stock is invariably inflated. The actual South African mine-worker receives wages so low that, when the Kaffirs lately proved inadequate to carry on the work, Chinese coolies were imported. The real owners of such mines are largely men who are rich already, and whose purchase of necessaries will not be increased in proportion to the new gold output. Such new buying power as is created by the increased gold production, does not therefore wholly or chiefly converge on commodities. Its beneficiaries are large buyers of securities, and to meet their enlarged demand, enormous amounts of new securities are issued, chiefly consisting of old stocks doubled or trebled by the process of "watering."

In other words, although some real effect is produced on demand and prices for commodities, through the simple fact that investors in mine shares have been thus suddenly enriched, the influence is easy to exaggerate. A much more obvious and direct result may be traced through the flow of the new gold into the vaults of banks. It does not always follow that banks will lend more freely and that business will grow more active, merely because bank reserves have increased; the largest ratio of New York bank reserves to liabilities in the country's history occurred in 1894, when industry was and continued to be completely prostrated. But granted a hopeful and speculative disposition on the part of the business community, increase of bank reserves, at an unusually rapid rate, means that credit will be easy, that money may be borrowed for all sorts of purposes, without fear of having it suddenly called back, and that, therefore, business men will embark more readily and daringly in productive enterprise. Such undertakings—successfully carried out, and helped by the new wealth available for investment in securities—result necessarily in larger demand for materials and labor, and in larger expenditure by the laborer, and by nearly all classes of society connected with the enterprises, for necessaries and luxuries. As these people spend more for clothing, cotton crops which used to be more than sufficient for the world turn out to be inadequate. As they spend more for food, the world's annual wheat crop may increase by hundreds of millions of bushels, and still there may be less left over, at the end of the twelvemonth than in former years. Meantime the increased manufacturing ventures add to the demand for metals and building materials; railways with more stuff to carry have to buy more cars and rails, and so long as demand for all these products outruns supply, prices go up.

This, within due and reasonable limitations, is the connection between increasing gold output and rising prices. The mistake commonly made lies in supposing that the one is a necessary and inevitable result of the other. In the five-year period from 1886 to 1890 inclusive, the world produced $564,474,000 gold, and, in general, those were years of trade expansion. In the next five years, ending with 1895, $814,736,000 gold was produced, yet those were years of business reaction, commercial panic, and falling prices. If supply of commodities, grown or manufactured, overtakes demand, prices will cease to rise; they may even, as in 1857, decline violently in the face of a maximum gold production, and lead the way to a period of actual depression.

Victor S. Clark's Labor Movement in Australasia

A book written in a simple untechnical and very impartial fashion, and one that is full of very valuable suggestions affecting our own labor troubles. 327 pp., $1.50 net; by mail $1.63.

"Useful and timely . . . Mr. Clark will perhaps disappoint alike the extreme radicals who regard Australasia as a workmen's paradise and grow enthusiastic over the progress made there by socialism, and those other extremists who like to be told that Australasia is doomed to bankruptcy and famine and demoralization as the result of socialism and the violation of 'natural law.' He writes judiciously and fairly, and indulges in no extravagant prophecies of either sort. . . . the book is very valuable for its facts and the impartiality with which they, and the conditions to which they are due, are presented."—*Chicago Evening Post.*

Hobhouse's Morals in Evolution

By the author of "The Labor Movement," "The Theory of Knowledge," etc. 2 vols., $5.00 net; by mail $5.30.

"Replete with data for the student and material of unique interest for the less informed layman. . . . The early religion of Egypt furnishes much so grotesque as to be undeniably amusing. . . . Fascinating sections are devoted to tracing religion in India. . . . The wonder of these immense volumes to the lay reader who opens the covers with trepidation is that they should be so intensely readable. It is impossible to suggest the multitude of quaint reflections evoked by a perusal of the work and the general widening of one's mental horizon. One cannot but enjoy the curious side lights thrown on our own beliefs and superstitions. . . . Most entertaining."—*Times Saturday Review.*

JUST PUBLISHED

Practical Physical Chemistry

By ALEX. FINDLAY, M.A., Ph.D., D.Sc., Lecturer on Physical Chemistry, University of Birmingham. With 92 Figures in the Text. Crown 8vo. $1.20.

LONGMANS, GREEN, & CO., New York

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Nation.

NEW YORK, THURSDAY, MARCH 7, 1907.

The Week.

President Roosevelt's proclamations, adding some 17,000,000 acres to the forest reservations, were issued under date of March 2. That was just before he signed an act of Congress forbidding such reservations hereafter to be made except by Congress itself. Obviously, it required a good deal of determination on the President's part thus to set himself against the declared wishes of Congress, yet we think he was justified. There was no question of his lawful power. He was acting under the statute of 1891. And, as he points out, the studies and surveys for these particular reservations had been long under way, and the preparation of the papers necessary to create the reserves had been ordered, in many cases, two years ago. If the next Congress chooses to review and reverse the President's action, it can do so; but meanwhile a sound and established land policy has been pursued. We believe, with the President, that the time has come to conserve the remaining forests, with other unexploited resources still under Government control, so that their product may be used in the best way possible for coming generations. The old plan of indiscriminate and wasteful exploitation was perhaps inevitable in the earlier stages of our national growth, but we have now got beyond that. When the whole policy comes to be better understood, we have little doubt that the country will sustain Mr. Roosevelt's course in the matter.

But two of the latest changes in President Roosevelt's much-changed Cabinet excite much interest. The retirement of Secretary Hitchcock deprives the public service of a man who has made a high reputation for courage, honesty, and justice. His successor, Mr. Garfield, will have Mr. Hitchcock's fine record before him both as a standard and a spur. He can scarcely expect to equal it in the two years he has to serve, but he may be expected to bring to his work frankness, quiet industry, and the ability demonstrated in his oil report. Far more important may easily prove to be Mr. Cortelyou's accession to the Treasury Department. Unlike Mr. Garfield, he will have to note his predecessor's footsteps, mainly to avoid following in them. In addition, we may count upon Mr. Cortelyou's putting into force those excellent administrative ideas in which he has been officially bred, and which he has exemplified in his other positions. For his ideas on financial policy, we shall have to wait. Apparently, he will have plain sailing, for a year at least. Almost anybody can administer an overflowing Treasury—"any ass can take Rangoon," said Wellington. It is stress or crisis or panic that brings out the great financier.

The withdrawal of the Subsidy bill by Senator Gallinger without a vote, an hour before the expiration of the session of Congress, ended in a fitting way a dubious legislative chapter. It may fairly be said that none of the ordinary arguments against the propriety of talking a bill to death under sanction of the Senate rules, applied to Mr. Carmack's good-humored filibuster. Republican Senators were openly expressing their view of the folly of jamming through so important a measure in the closing hours of the session. If this had been the same bill which the Senate passed at the last session, the case would have been different. The House had not only trimmed the measure out of all recognition, but had then reversed itself on the question of passage, voting first one way and then the other. If it is a perversion of the rule for a member to hold the floor and prevent a vote on the bill in the Senate, it is no less a technicality to wait for five Democrats to leave the chamber and then secure a second vote at the other end of the Capitol. No one has so much as suggested that any mandate of the people, or even deep Congressional determination, has been defeated in the failure of this measure. Aside from the immediate beneficiaries, the whole country will be disposed to acquiesce in the outcome.

The only piece of Philippine legislation of this year, the bill creating an agricultural bank, has the unusual distinction of becoming law without the Speaker's approval. No one will blame Mr. Cannon for assuming, as he did, that there was not nearly enough interest in Philippine relief to secure the necessary two-thirds majority. On that supposition, he let the bill come up, when a platoon of Democrats suddenly joined the Republicans and helped carry the bill to passage. The chief credit for this legislation, however, belongs to Secretary Taft, who worked untiringly to secure for the Filipinos an agricultural bank on the lines of that established by Lord Cromer in Egypt. His efforts obtained Democratic votes in both House and Senate. Under the terms of the act, the Philippine Commission is authorized to guarantee 4 per cent. interest on the capital stock of the bank for a period of twenty-five years, the Commission's liability never to exceed $500,000. The bank itself can make loans only for the purpose of assisting agriculture. None of its loans may exceed $5,000, and interest may not be charged above 10 per cent. That it will do much to improve the agriculture of the Philippines is the prediction of those who are most familiar with the subject. Since we are not willing to give the Filipino farmer access to our markets, this bank is at least something to be thankful for.

After devoting eight months to the plan of building the Panama Canal by contract, the President has finally announced its abandonment, simultaneously with the resignation of the chief engineer, John F. Stevens. The amended Oliver bid is rejected; for the President has discovered, with extraordinary *naïveté*, that behind such groups of contractors are large financial concerns which take the major part of the profits. But the surprises do not stop there: the whole of the canal building is now put into the hands of army engineers. Had all this shifting about and changing of plan occurred under a Democratic Administration, the heavens would ring with Republican lamentations over the demonstrated incapacity of the Democrats to do any constructive work. Yet as a whole the public will, we think, approve heartily the latest plan to turn over the task to the army engineers. That insures at least the honest construction of the canal. In the whole history of the Engineer Corps, now more than a century old, there have been only two serious scandals. So far as Major Goethals, the new head of the engineering work, is concerned, we know nothing which is not favorable. Graduated from West Point in 1880, he became a lieutenant-colonel last week at the age of forty-eight. He has had a varied engineering experience, and has also seen war service with the army, while his membership in the General Staff bespeaks his high standing with his comrades. He has had, moreover, the benefit of the personal training of Brig.-Gen. Mackenzie, the able head of the Engineer Corps, whose selection he undoubtedly is. More than that, Major Goethals has the reputation among contractors of being fair and judicial-minded, while a thoroughly capable supervisor.

The Senate committee investigating the Brownsville affair has examined between forty and fifty witnesses without obtaining a shred of evidence to connect a single soldier with the alleged outrages. It was at first thought that,

as B and D companies were quickly formed and placed in position, C company probably contained the guilty men. But the discovery that this company had only a peculiar kind of ammunition—guard ammunition—capable of carrying but 200 yards, and that not a single cartridge of this make was found in the streets, tends to exculpate these men. They turned in after the trouble the exact number of cartridges—650—that was issued to them. From the evidence thus far, any judge would instruct the jury to acquit those against whom the charges are made. Some other evidence less favorable may in time be brought out—it is to be hoped that the evidence of the Brownsville people will be thoroughly sifted. But enough has come out to show how inexcusable was the President's haste.

After a hard fight, the Alabama House of Representatives receded from its position in regard to the proposed immigration bureau and consented to provide an immigration commissioner at a salary of $2,400, to be under the direction of the Governor and the Commissioner of Agriculture and Industries. Other Southern States may now be expected to fall into line, and there will be an increase in the speculation as to the effect of a large foreign immigration upon the negro problem. This is a case where the old advice to catch the hare first is worth considering. But if many foreigners should be brought in, the negro may be helped; at least, it is hard to believe that the newcomers would at once absorb the bitter prejudices of the South in regard to the black man. The latter may also be stimulated and improved by a sharp competition in his own field. Whether the cliques which control Southern politics to-day would look with favor upon the rapid naturalization of many foreigners is also doubtful. The whole tendency of recent years has been in one way or another to cut down the number of white men exercising the suffrage. What the negro will lose in some directions he may gain in others.

The New Jersey Legislature has passed a bill which, in the form of a local option measure, is expected "to mark the banishment of the voting machine from the State." The State will stop buying the machines on its own account. The argument which seems to have carried most weight is that, by listening to the clicks, a bystander can tell whether a split or a straight ticket is being voted. On this point the whole voting-machine question at present hinges. Yet on the voting machines which have been exhibited in this city, the possibility of voting with practically no sound has been demonstrated. But the average man who records his vote carelessly is likely to make a noise for every pull of the lever. The time spent in the booth is also evidence as to the kind of ticket voted. The point made by the voting-machine companies that a straight voter can simulate the splitting of a ticket is irrelevant, because that is a thing the straight voter never by any chance wants to do. If a split-ticket voter could pretend to vote straight, the argument would be more satisfactory. In the cities of this State which have used voting machines, there has been much favorable and little adverse comment—except for the breakdown at Elmira. The quick and sure ascertainment of results has made the device popular in a State cursed with a clumsy and uncertain system of tallying, and perennial election contests. Nevertheless, certain objections to the voting machine will continue to exist so long as the law provides a partisan form of ballot. Adopt the Massachusetts-Australian ballot, or even a party-column ballot, without provision for voting a straight ticket at one stroke, and it would not matter if every movement of a lever exploded a bomb-shell. The number of detonations is the same, no matter what manner of ticket is voted, and the secrecy of the "ballot" is protected. That the adoption of the voting machine without any change in the form of ballot would be an improvement on our present system is a very general opinion. This is not equivalent, however, to saying that we ought to install voting machines everywhere at once. We have expressed the opinion before that a reform of the ballot is the first requisite. That will remove the chief valid objection to machine voting.

The argument for increasing the salaries of our teachers, especially those in college, was urged with much force by President J. G. Schurman at the dinner of the Cornell alumni in this city Saturday night. He is the third or fourth college president who within a few months has laid this subject before New York graduates; it has also been discussed in the magazines—notably by Prof. J. B. Fletcher of Columbia in the January issue of the *Educational Review*. President Schurman's plea was not specifically for Cornell; he spoke rather in behalf of the general cause of education. The average salary of college and university professors in the United States is, as he pointed out, only $1,500. "The maximum salary is seldom more than $3,000 or $4,000, and then only in or near great cities, in which the $5,000 to $7,000 actually paid represents no real increase." This income is far below that of engineers, lawyers, and physicians. Indeed, the salaries of college professors have remained practically stationary for two decades, while the cost of living has increased 50 per cent. President Schurman would not make the pay of the professor so large that it would "serve as a bribe" to those who do not feel the "inner call." He and all who have studied this grave problem know that the salaries are always likely to be too low rather than too high; but he utters a plain warning that the salaries must suffice to provide the ordinary comforts of life for the teacher's family, must supply him with necessary books, and educate his children. On any other terms ambitious men will be frightened away from the profession. And, he adds, "if the ablest young men of the country cease to become teachers in our highest institutions of learning, the training of the rising generation will suffer, ideas will become stagnant, and the boundaries of knowledge will cease to expand." In fine, the evidence is irresistible that the time has come when our college benefactors can perform the greatest service, not by devoting their money to buildings and material equipment, but to strengthening the teaching force.

The theory of the life insurance presidency is apparently still in a nebulous condition. In certain circles it is imagined that the office requires a great financier, at a salary of from eighty to one hundred and fifty thousand dollars a year. In Ohio, on the other hand, the prominent business men of Columbus are investing their money in a new company which is content to lodge its presidency in the hands of the already busy president of the State University. One can hardly regard this extreme as preferable to the other. Unless Dr. William O. Thompson gives to his new position an amount of attention entirely incompatible with his duties to the old, he is very likely to be pained, some day, with the discovery that an honored name has been used to cover transactions which its bearer cannot approve. Honest insurance does not need the costly services of a "high financier," but it does need the undivided attention of an exceedingly watchful and competent head, merely to avoid recurring temptations, if there were no other reason.

Few, if any, writers can show so long a list of books, all marked with the hand of the skilled craftsman, as W. D. Howells. And now, having passed his seventieth birthday, he may properly sign himself Dean of American Letters. If a vote could be taken by his fellow-countrymen, perhaps they might not declare him most honored, but they certainly would most loved, of all our literary men. To readers in England especially, as may be observed in the British reviews, Mr. Howells has for many years held a position somewhat apart. Per-

haps they are keener than we are to admire the old-fashioned care and conscientiousness with which his work is turned out, so different from the robustious insouciance of most of our younger authors. In this respect his only peer is Henry James. It would be curious to contrast the artistic career of these two novelists, who began with a style so much alike and have gradually drifted so far asunder. How much has the transplanting of Mr. James had to do with his gradual loss of grip on the homely realities of life? The question, almost answered by the consistent and unchanging realism of Mr. Howells, might be proposed to the present holder of the Editor's Easy Chair in *Harper's*.

The appeal of Alexis Aladyin to the people of the United States not to give to the Russian Government the financial help which it may fail to get in London or Paris, hut rather "to shut off Russia from the money markets of America, in the name of your glorious past," was in all human probability unnecessary. Russia has knocked at the door of Wall Street many times, and with little success. Some half-dozen years ago, when the American market was subscribing freely for British consols, German Imperial bonds, and even the loans of Continental cities, the Russian Government became urgent in its appeal. As a result, some $1,100,000,000 new Russian bonds were formally placed on the New York market. Two friendly life insurance companies, with something of an axe to grind in Russia, purchased respectively twelve and three millions; hut this was a hagatelle. The real appeal to the puhlic came when the New York Stock Exchange committee solemnly "listed" the billion-dollar Russian loan, and the Czar sent to the "listing committee," as a token of his pleasure, a valuahle silver vase. Thus the loan was launched, hut from that day to this not a single transaction in it has occurred on the Stock Exchange. If this was a fair measure of the disposition of American investors at the high-tide of their enthusiasm, the chance of drawing them into the game to-day is surely slender. Whether Mr. Aladyin is correct in his idea that Russia can float no more external loans in Europe, is another question. Despite official denials, it is entirely probable that another Russian loan will presently be offered in Paris, and possibly in Berlin. Recent experience has taught that Government some interesting lessons. It learned in Octoher, 1905, that it could not float a loan, even in friendly Paris, while the Russian people were in insurrection; it learned in April, 1906, that it could do so if the Czar made at least a show of bowing to the popular will and summoning a Parliament. Last April, M. Witte was shrewd enough to use the enthusiasm over tho Duma to the full; he horrowed from Paris and London no less than $440,000,000, of which the final instalment was paid to the Government only last month. The floating of a Russian foreign loan during the anarchy of last autumn would have been inconceivahle. The 5 per cents of last April then sold on the Paris market 6 to 8 points below even their issue price. All this means that, in their own particular interest, Europe's investment communities will scan suspiciously the Russian political situation before taking new and extensive risks.

Gen. Smirnoff's revelations as to the conditions which prevailed within Port Arthur during the siege, have already been discounted by newspaper accounts of the conduct of the generals chiefly responsible. At the same time, a severer indictment of Gen. Stoessel, from the military point of view, could hardly he drawn. Such total incapacity and indifference are the proper measure of that demoralization of the Russian army, which had begun long before the Japanese war. The statements of Gens. Kuropatkin and Smirnoff completely refute the charge that if the Russian people had been whole-souled and patriotic in their support of the army, the Japanese victories could not have occurred. Ohviously, the Russian defeat was foreordained, and the Japanese were doubtless fully informed as to the exact degree of jealousy, immorality, and incapacity to be expected among their opponents. But this bursting into print of the conquered generals is surely novel. In a democracy, as in ours in 1898 and 1899, we look for something of the kind. In an autocracy, however, it was not to be expected that the generalissimos would fall foul of one another in the press.

In adding the question of Church disestablishment to the long list of reforms the British House of Commons has drawn up for itself, the Liberal party would seem, at first sight, to be horrowing unnecessary trouhle. There is, of course, no prospect of any serious attempt at the separation of Church and State for years to come; that the Government admitted when it refused to assume responsibility for tho motion for disestablishment and disendowment. This was carried hy a vote of 198 to 90 in a thin House. Such motions, however, serve the purpose of the Liberals in raising another issue for the Unionists and the Lords to worry over, and also in tending to cement the allegiance of the various groups in the Government party by offering them recognition of their principles. That the party in power is bound to grow weaker with time is evident, and its policy is to give battle as soon as possible. At the same time, there is little probability that the Liberal Ministry will disappear hy attrition in the course of many hye-elections, like the Balfour Government. It will go down in a great *dćbâcle* or win another overwhelming triumph.
